Although every activity involved in the merger was being carried on under a pressure consistent with an all-out war effort, and although realizing the benefits of centralized control and economy of operation made possible through the establishment of a single agency necessitated a complete reorganization of all of the activities, there was not the slightest interruption in the performance of any of the functions.

GREATER EFFICIENCY—CUT COST OF COMBINED AGENCIES IN LESS THAN HALF

After the reorganization was completed the functions were carried out with a greater efficiency, and even though at the end of the war they were all at as high a peak of operation as they had been at any time and several new functions had been added, the administrative appropriation for the one agency was less than half of the aggregate of the administrative appropriations for the various agencies concerned at the time of the merger. These agencies were responsible for the handling of a total of $35,000,000,000 of Federal funds.

The range of problems with which Mr. Crowley had to deal in the Foreign Economic Administration differed widely from those to which he had been accustomed in his own private business and in his previous governmental experience, yet he handled them with great skill and dispatch. The soundness of the President's decision to place him in one of the most difficult administrative positions in Washington, involving the most extensive governmental reorganization that has ever been made and coming in the midst of the war, was amply justified by what was accomplished.

As the war drew to an end Mr. Crowley contributed very materially to solving the problems involved in our wartime international economic relations. He pointed out the dangers that would inevitably result from commitments and actions that seemed at the moment to be the expedient thing but that later on would jeopardize this country's world position.

He established basic plans in working out settlements with some of the countries with which we had become so heavily involved during the war that should serve as models in completing many additional international agreements. He was instrumental in securing the passage of the legislation expanding the lending powers of the Export-Import Bank to $3,500,000,000. In his testimony he laid down principles for the operation of the bank that should serve as policy guideposts throughout its existence.

The high esteem in which Mr. Crowley was held by men of all political parties was demonstrated in the Senate on October 15, 1945, the day on which Mr. Crowley's resignation became effective. In my own remarks I said:

"His administration as chairman of the board of the Federal Deposit Insurance Corporation has been an outstanding success.

"He took charge of that very important responsibility against a background of the bank failures which swept over the country in the depths of the great depression. He has administered the Corporation without regard to political considerations and in the public interest. He has also had other heavy responsibilities. In each of them he has attempted to protect the best interests of the United States. During his service Mr. Crowley has won the confidence of Members of the House and Senate. His untimely departure from the public service will be regretted by the Congress and the people."

PRAISED IN SENATE—RECALLS EULOGIES BY BARKLEY, VANDENBERG, WAGNER

Senator BARKLEY said:

"Mr. Crowley has been unselfish in his service to the people of the United States and in his cooperation with the executive and legislative branches of the Government. It is really a source of genuine regret to me that he is now departing from all connection with the Federal Government as an officer."

Senator VANDENBERG, who has always been a staunch and outstanding supporter of Federal deposit insurance, had this to say:

"I think Mr. Crowley has rendered one of the great, outstanding services of our time to the American people. * * * It is a source of very great regret to me that he is leaving. I hope that the spirit in which he has administered the Federal Deposit Insurance Corporation will live after him. If it does, it will continue to be a benediction to the American people. * * *

"Mr. Crowley has done many other things in his service for the Government. He has occupied many difficult and responsible fiscal positions, and in every instance, Mr. President—and this is, I am afraid, a somewhat unique record—in every instance he has been absolutely faithful to the intelligent self-interest of the United States."

Senator MCKELLAR, before whose committee Mr. Crowley appeared many times in connection with appropriations, said:

"As an official of the Federal Government he has no superior. As my colleagues have said, he has met every task in a fair, frank, open, sensible way, and I do not believe any man in our country could have filled better or more successfully the various positions he has held here during the last few years."

Senator WAGNER said:

"It is no exaggeration to say that Mr. Crowley was at the head, at one and the same time, of more important agencies of Government than any other administrator, and the whole country recognized his invaluable service, not only to the country, but to the whole world."

Senator WHITE summarized his statement about Mr. Crowley with the following:

"In the long years in which I have served in the Congress I have known no man who so completely merited the confidence of his fellow Americans and the Members of both branches of the Congress as did Mr. Crowley. He has worked with amazing industry. He has had sure and sound judgment upon public questions. He has always had courage in reaching and giving utterance to his beliefs upon public affairs, and at all times he has had the highest standards of public duty and the highest conceptions of public service."

An editorial in the Washington Evening Star on the day of the announcement of the acceptance of Mr. Crowley's resignation concisely summarizes some of the qualities that have made him so successful. This editorial states in part:

"Mr. Crowley has been so quietly efficient and so well organized that his multiple operations have had the appearance of being easy because they have been so smooth. Exceptionally gifted as an executive, he has been blessed, in addition, with a natural ability to get along with people, a fact which has made him outstanding as a noncontroversial figure in an era of controversy. He has rendered long and distinguished service, and as he returns to private life the accolade accorded him by President Truman might fittingly be echoed by the Nation at large, Well done."

Palestine Problems

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Baltimore Sun of December 24, 1945, containing a statement by Hon. Sumner Welles, former Under Secretary of State:

WELLES URGES PALESTINE AS TASK FOR UNO—FORMER DIPLOMAT ACCEPTS MARYLAND COMMITTEE CHAIRMANSHIP

Sumner Welles, former Under Secretary of State, urged yesterday that Palestine prob-

lems be taken out of the hands of the British-American Commission and given to the Council of the United Nation Organization, and that a Jewish commonwealth be established in Palestine.

The former diplomat's statement was made on the occasion of his acceptance of the chairmanship for Maryland of the American Christian Palestine Committee, an organization born as the result of the merger last year of the American Palestine Committee and the Christian Council on Palestine.

ROOSEVELT VIEW ASSERTED

Urging unrestricted immigration into Palestine, Mr. Welles declared that President Roosevelt never believed that the establishment of a Jewish commonwealth in Palestine was in any sense hostile to the Arab peoples; that, on the contrary, the late President thought such a solution would prove beneficial to both Arabs and Jews.

"I cannot feel," he stated, "in view of the dire need of finding an urgent solution of the question, that the British-American Commission which has now been appointed can have any truly beneficial result * * *. A lasting and just result can only be obtained through the determination of all the United Nations."

VICE PRESIDENTS OF GROUP

A number of prominent Marylanders have accepted office as vice presidents of the new group. They include:

William J. Casey, vice president of the Maryland Trust Co. and chairman of the Commission on Governmental Efficiency and Economy.

Joseph P. Healy, manager for Swift & Co., in Maryland.

Francis A. Davis, president of F. A. Davis & Co.

Dr. Lena C. Vanbibber, retired professor of history at the Maryland State Teachers College.

Dr. Gertrude C. Bussey, professor of philosophy at Goucher.

The Reverend Don Frank Fenn, pastor of St. Michaels and All Angels' Church.

Prof. William Foxwell Albright, professor of Semitics at the Johns Hopkins University.

Mr. Welles said in his statement:

"I have been greatly honored by my selection as chairman for Maryland of the American Christian Palestine Committee. I gladly accept the designation."

ONE OF THE GRAVEST PROBLEMS

"I have accepted the chairmanship of the Maryland committee because of my belief that the question of the future of Palestine constitutes one of the gravest problems with which the free peoples of the earth are today confronted. I do not believe that any peaceful or orderly world can be envisaged unless a humane and just solution of this problem is found.

"To many millions of people throughout the world an independent Jewish commonwealth of Palestine represents a symbol of hope and of passionate conviction.

"The Government of the United States is officially committed to the establishment of a Jewish national home in Palestine. Any failure on the part of this Government to assume its full share of responsibility for the realization of this ideal can only dangerously increase existing international tensions and destroy the one hope which is left to many thousands of homeless and destitute Jews in Europe who cannot return to their former homes."

PITIFUL SURVIVORS

"The rescue and resettlement of the pitiful survivors who escaped extermination at the hands of the Nazis is a moral obligation which rests upon the conscience of all free peoples. There is no method which would prove more truly conducive to the practical discharge of this obligation than the equitable solution of the problem of Palestine.

"The commonwealth of Palestine can only come into being if the United Nations Organization decides, as it should, that the establishment of a Jewish commonwealth in Palestine is essential to world peace and to world stability. The International Trusteeship Council soon to be set up by the United Nations Organization should be charged with the obligation of carrying out this decision promptly. Only the United Nations Organization can possess the necessary authority to achieve a final and just solution of the Palestine problem."

UNO ARMED FORCES

"From the moment the Council assumes jurisdiction, the United Nations Organization should make available whatever armed force may be required to give assurance of security to all of the inhabitants of Palestine.

"Once this step has been taken, the International Trusteeship Council should set up a broadly representative provisional government of Palestine and entrust it with all necessary authority until such time as free elections can be held and an independent and democratic government can commence to function.

"The Council should permit unrestricted immigration into Palestine and, in particular, that of those European refugees who still so tragically await deliverance from the camps where they are now located. Therefore, immigration should only be interrupted if the International Trusteeship Council or the future government of Palestine decides that such restriction is required for economic reasons."

WHAT ROOSEVELT BELIEVED

"President Roosevelt never believed that the establishment of a Jewish commonwealth in Palestine was in any sense hostile to the Arab peoples. He believed, on the contrary, that such a solution would prove beneficial to both Jews and Arabs. He further believed that the fair way of finding a lasting solution of the problem of Palestine would be through negotiations in which every opportunity would be given representatives of both Jews and Arabs to be fully heard.

"I cannot feel, in view of the dire need of finding an urgent solution of the question, that the British-American Commission which has now been appointed can have any truly beneficial result.

"The problem is not one which can be solved by the findings of a commission consisting of the representatives of any two nations. A lasting and just result can only be obtained through the determination of all the United Nations that such a solution must be found and found promptly."

HOPE IN UNITED NATIONS

"It is for that reason that I earnestly hope that the United Nations Organization will assume the responsibility for finding such a solution as soon as the organization is constituted.

"I wholeheartedly endorse these words contained in the declaration issued by the World Zionist Conference at London last summer:

" 'Any delay in the solution of the problem, any attempt at half measures, any decision which, however favorable, remains on paper and is not faithfully and speedily implemented, will not meet the tragedy of the hour and will only increase suffering among Jews and tension in Palestine.'

"The question is one which truly concerns all Americans of whatever faith they may be. If the Government of the United States exercises the moral influence of this Nation, a just solution of the problem can be swiftly found."

New Jersey Farm Production

REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. EATON. Mr. Speaker, the State of New Jersey, although third smallest in area, is one of the great industrial sections of this country both in volume and value of its products. While our industry is being bedevilled by the present revolution, I call attention, with pride and satisfaction, to the fact that our farmers have been patriotically carrying on against great difficulties and have performed a miracle of production measured by our farm area and population. Last year we produced on the farms of New Jersey over $228,000,000 worth of food. I include the following record of this remarkable achievement for the delectation, information, and encouragement of the downtrodden and oppressed Members of this House:

ALL-TIME MARK SET IN 1945 BY FARM PRODUCTS IN JERSEY

TRENTON.—The total farm value of New Jersey farm products last year established an all-time record of approximately $223,970,000, compared to $221,000,000 for 1944, indicating an increase of nearly 4 percent. According to D. T. Pitt, supervisor of statistics, State department of agriculture, the increase prevailed for most items with the exception of eggs, tree fruits and berries, which averaged slightly less than in the preceding year.

VEGETABLES LEAD

Leading all other New Jersey agricultural commodities in respect to farm value in 1945, vegetables are hailed as the foremost product of the Garden State last year.

The survey made by the State department's statistical chief reveals that vegetables brought New Jersey farmers an income of $48,800,000 in 1945, representing a gain for growers of more than a million dollars over 1944.

Closely following vegetables in order of value to growers are milk, estimated at $42,800,000 (Government subsidy payments excluded); eggs, $33,500,000, representing a slight decrease; and poultry, $21,450,000 figured as a 21-percent increase since 1944.

POULTRY GAINS

The greatest gain in farm value was made by poultry, according to the statistical study. Authorities attribute the demand for poultry during the red-meat shortage last year as the main reason for the substantial increase in poultry income. Eggs dropped slightly lower in value because of the reduction in laying flocks and consequently smaller volume of that product.

According to estimates of the 1945 crop year, other New Jersey agricultural products ranked in farm value as follows: Nursery and greenhouse, $17,250,000; white potatoes, $17,000,000; grains, $14,800,000; hay, $10,900,000; meat animals, $10,000,000; tree fruits, $6,600,000; berries, $4,875,000; and miscellaneous, $1,000,000.

The preliminary survey of ranking farm products has been made available to Statewide farm organizations meeting in Trenton during Farmers' Week, January 21 through January 24.

Labor and Management

REMARKS

OF

HON. WILLIAM W. LINK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. LINK. Mr. Speaker, Members of Congress, just a few weeks ago I completed my first year in Congress, and I am proud to say that I have not missed any important session or vote on any important bills or amendments.

I listened intently to the arguments, pro and con, especially those involving management and labor.

We have just successfully concluded the most gigantic and terrible war in all history, and we thank God from the bottom of our hearts for that.

It was won at a terrific cost. Our fighting forces from a nonmilitary nation proved to be the best fighting machine in history.

Our soldiers were the best fed soldiers.

Our equipment was the best of any army—yes—even better than the German equipment.

Our fliers were the best fliers in the world, and they were equipped with the best planes.

Our Navy is the most powerful in the world's history.

Now, this was not the result of just haphazard planning.

This was the result of very careful planning on the part of our Government in cooperation with management and labor. It was a union of these three which made this possible, and behind it all, was the foresight of that great man, Franklin Delano Roosevelt.

Our fighting forces must be given top credit for this victory, but in all fairness, they must share this credit with our production forces, for they supplied them with equipment far superior to that of any other nation. Yes, we can truthfully say that labor has performed a miracle of production.

Now, was this miracle of production accomplished by the old free-enterprise system—where the foreman would walk out and choose his help from the lowest bidder? No, it was not. Production miracles were never performed by that method.

This miracle of production was performed by labor organized for the job; organized and watched over by men elected from its own ranks, skilled in the job it had to do and always willing and able to do a good day's work for a good day's pay, and thus kept work stoppages at the lowest level ever attained. It was this kind of organized labor that produced this unlimited and superior equipment for our fighting forces.

It was this combination of our fighting forces and our production forces that won this war and won it so decisively.

The Nazis were completely licked.

The Japs were being slowly but surely eliminated throughout the islands in the South Pacific, but it looked as though we still had a long road to Tokyo.

Then the Russians struck Manchuria.

Atomic bombs were dropped on the Japanese mainland and the very scared Japs, even though millions of their well-equipped men were in the field, got cold feet and quit, and the war ended sooner than was anticipated.

Millions of dollars worth of equipment was on hand and no use for it.

So the War Production Board stopped production and people were thrown out of work.

Now the war is over, and we face the same old bugaboo—no jobs.

Management no doubt has done a fine job, but it was a whole lot simpler for management to do it than for labor. Management had unlimited credit from the Government and guaranteed profits, yet labor had to fight every inch of the way to get a fair day's pay.

Now management sits smugly back in its seat, counting its profits.

Just a short time ago, Congress passed a bill removing all taxes on excess profits, and with that tremendous cushion of money in the bank, management can safely sit back without any loss to itself, for a year or more; but labor whose wages are just about enough to keep going from day to day, cannot outlast that excess-profits cushion. So naturally management thinks this is a good time to weaken the unions, but surely there is no need for this.

The United States is the only country that can swing into production in a very short time.

It will take years for European countries to be in a position to do the same.

Germany, our chief competitor in heavy industry, is out and must be kept out for a long time to come.

We are in the golden seat.

We have made our tariff laws flexible enough so that we need have no fear of ruinous competition.

All the world needs our products and we will be in a position very shortly to supply them. But these countries are in a deplorable situation.

They have been ruined by the war; they need everything—food, clothing, farm equipment, machinery, and so forth—but they have very little money.

In my opinion, the best investment we can make for the welfare of the world is to give worthy nations credit.

When and if we do give these nations credit, they will be our customers, and, in order to have full employment in the United States, we must have many customers.

These nations were our allies and helped win the war.

To turn them down now would be a big mistake.

We did not hesitate to send them millions of dollars' worth of equipment and food and clothing and many other things during the war.

So I feel it would be a very good investment, now that the war is over, to give them credit, and in this way to keep them as our customers.

The machinery for this is already set up.

The Bretton Woods proposals are a part of this machinery.

After this delay in reconversion, caused by the sudden stoppage of the war, the United States should, and I believe will, have an era of prosperity such as it has not had in many years.

The Government and Congress should work hard to make this reconversion period as short as possible, and the bills pending in Congress are all working toward that end.

The $25 weekly compensation for 26 weeks for those who are willing and able to work, but who cannot under any circumstances find suitable work, is one of the things that will hurry reconversion, for there is no profit for Government, for management, or for labor, if money is given just for existence and gets no returns in goods or the like.

Then there is the 65-cent minimum hourly rate bill.

This bill, in my opinion, is one of the most important, and will do as much or more good for the United States as a whole, than any other legislation.

The standard of living in our United States is quite spotty. Where the workingman is organized and where there is a demand for his labor, he receives fairly good compensation. But where he is left on his own, he gets barely enough to exist on.

There is no reason why some sections of our country should try to use cheap labor to compete with other parts of our country.

The workingman down South and in some other States, can and will produce about the same average as he does in the North.

Why that man should be given lower pay than in other sections is just not right.

If that man's wage is brought up to a certain minimum, that man will have a greater purchasing power and that State will benefit by this greater purchasing power.

Now, the full employment bill is before the House, and after the accomplishments of our soldiers and our workingmen, it is only fair and natural that there should be work for both our service forces and our working forces.

The full employment bill is not a force bill, because it does not force management, labor, or Government to do anything. It is a guide for Government to keep up the high standard of living in our United States by a high standard of full employment. And all the opposition and ridicule on this bill is unwarranted.

In order to keep labor employed, and in this way to keep a high standard of living in the United States, we must have a floor to wages.

If we do not embody all these safeguards around labor into law in a very short time, we will have a depression which will dwarf the depression of the thirties. The pinch is here right now and Congress must act now. Party lines should not be considered. Both political parties should work together now as they did during the war, for this is just as critical a period in our country as during the war.

I thank you.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Honolulu Star-Bulletin of January 17, 1946:

SEEKING STATEHOOD FACTS

No one could attend the public hearings on statehood held here for the past week without being profoundly impressed with the attitude of the congressional committee.

It is an earnest, conscientious, industrious, competent group of congressmen.

Within the necessary limitations of time (and time was always an element, with many witnesses to be heard), it has gone deep into the statehood question, dug hard for facts as well as for opinions.

It has listened with patience—yes, tolerance—to witnesses who wandered far from the issue and could not be held to it.

Its members have not hesitated to ask probing, even sharp questions on any matter germane to the subject and of any witness.

It announced at the opening its policy as one of desire to let everyone speak who wants to speak, and everyone file a statement who wants to file a statement.

By its friendly attitude toward the people of Hawaii as well as its conscientious attitude toward its duties as an investigating committee, it has convinced those who attended the hearings that it takes very seriously the urgent appeal of Hawaii for statehood.

Moreover, it has repeatedly emphasized that to present this appeal properly and effectively before the full House committee, and before Congress it must have all the information possible, all the pros and cons, all the arguments for and all the arguments against admission of Hawaii as a State.

With the last of the Honolulu hearings today, it cannot be said that anyone has been denied the opportunity to speak.

It has been a public forum, and a good one. The standard set by Chairman HENRY D. LARCADE, Jr., of Louisiana, and his colleagues in the conduct of a public hearing has earned and will hold the respect of Hawaii, as the Congressmen individually have won the esteem and aloha of the islands.

Union Discrimination Against Returned Veterans

REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. ANDERSON of California. Mr. Speaker, I received a communication from a returned veteran yesterday that makes my blood boil. The man who writes me has been denied the right to make a living by a picket line which has been placed around the stockyard where he is employed. He has addressed a letter to the American Federation of Labor in San Francisco, and I wish to quote from that letter:

I am employed in the stockyard, tending livestock, to which your members are allowed to enter and work, but to which I am refused admittance. I was not asked to cooperate, but I was told that I could not enter.

I am a veteran of 3½ years service, fighting for a government of free people and to live one's life as a free individual. Ten months of my service time was spent in a prison camp, and it was there that I made plans for my future should I return to the United States. And now your union denies me this privilege.

Mr. Speaker, I call on William Green and the American Federation of Labor to cease this policy of discriminating against our returned servicemen who are entitled to the right to earn their living as free American citizens.

The letter follows:

BURLINGAME, CALIF., *January 21, 1946.*
AMERICAN FEDERATION OF LABOR, LOCAL 508,
San Francisco, Calif.

GENTLEMEN: Under date of January 16, 1946, I was refused admittance to Armour & Co., Virden plant, South San Francisco, Calif., by your picket line.

I am employed in the stockyard, tending livestock, to which your members are allowed to enter and work, but to which I am refused admittance. I was not asked to cooperate, but I was told that I could not enter.

I am a veteran of 3½ years' service, fighting for a government of free people and to live one's life as a free individual. Ten months of my service time was spent in a prison camp, and it was there that I made plans for my future should I return to the United States. And now your union denies me this privilege.

In March I am entering college, after which I plan a career of livestock buying. Up until March 1 I would be obtaining knowledge of handling stock, and the wages earned would help toward this goal. Armour & Co. have given me this advantage. The time lost in learning you cannot repay, but the wages can be repaid, and I expect your union to reimburse me for my earnings lost during your strike.

Your immediate response will be appreciated.

Very truly yours,
RICHARD J. DUNN.

Copy to Congressman ANDERSON.

A Demobilization Problem

REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. PHILBIN. Mr. Speaker, I desire briefly to bring to the attention of the House an unusual and outstanding example of inefficiency in the demobilization program.

A high-point veteran from my district who had served for a long time in the CBI theater, received his going-home orders in the middle of last June and was on his way to a port of embarkation when a radio order came out of headquarters to freeze all personnel of his group so that an investigation of some apparently trivial irregularities concerning GI purchases in Burma might be conducted. The investigation was completed in the middle of September and all the while these boys were being detained as witnesses in a court martial that developed from the investigation. The offenses set forth were allegedly minor and insignificant and were based on the fact that some of the GI's had purchased more trinkets and gems from the natives than permitted under Army and Navy regulations.

Now, this is the gist of the situation. After more than 8 months, 30 or more boys eligible for discharge have been held to await this court martial. My independent investigation of the case indicates that the principal, the one who is to be tried, is here in the United States on a 30-day emergency furlough while the witnesses against him are still cooling their heels deep in the Orient. I have requested the Army to correct this situation at once.

Pertinent parts of the letter I received from my constituent follow:

I received my going-home orders in the middle of June and was on my way to a port of embarkation when a radio order came out of headquarters to freeze all personnel of this group pending the outcome of an investigation that was being started by a unit called the CID (Criminal Investigation Division). It seems that the CID received a report from headquarters that our organization had cashed in a large number of Burmese currency at our unit finance department. The investigation was instigated to determine the source of this Burmese currency.

The investigating agents were of the opinion that this currency might have been derived from the sale or disposal of Government equipment or some commodity intended for use by military personnel. Thank goodness, there was none of that. They did find, however, that some of the boys had taken a few civilian commodities to Burma with them for trading for gems, souvenirs, etc., this being in violation of some theater directive of December 1943. The investigation was completed by the CID in the middle of September and the facts were turned over to the Judge Advocate General in Calcutta for whatever disciplinary action they deemed necessary.

As I told you above, it was shown that most of the boys were merely interested in picking up a few stones and souvenirs, and, so, most of us were just reprimanded, including myself. I received my reprimand about a month ago and thought I'd be clear to go home, but was told that I was being held as a witness in one other case that they intended to try. Just a few days ago the principal in this case was sent home on emergency leave for at least 30 days, which leaves a few of us witnesses more or less high and dry.

This whole thing has been very poorly and inefficiently handled, as is shown by the ridiculous length of time it has taken to bring the whole thing to a head. The headquarters people know the facts and the people involved and were highly in favor of disposing of all personnel with a reprimand and sending them home immediately, but the theater headquarters people at Delhi insisted that some of the personnel involved be tried. So far they have not even produced the necessary witnesses from Burma, and we don't know when they'll be available.

There are 19 officers and 11 enlisted men, all former members of the group, being held for this case, which has dragged for 6 months now.

The Civil Air Patrol

EXTENSION OF REMARKS
OF
HON. HATTON W. SUMNERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. SUMNERS of Texas. Mr. Speaker, under leave granted, I tender to be printed a statement with reference to the Civil Air Patrol, which statement has been prepared by a person thoroughly familiar with the services rendered by this fine organization of patriotic civilian volunteers:

Almost alone out of the war-born agencies which were formed to mobilize civilian support for our war effort, the Civil Air Patrol is carrying on intact and even is expanding, in order that the air supremacy which we have won will not be lost in peacetime as after the last war.

This patriotic flying and ground-training corps is composed entirely of civilian volunteers who buy their uniforms, furnish most of their own equipment, and arrange their local meeting places as a personal contribution to the cause of aviation and of national security.

Early in the war they flew out with bombs beneath their little planes to drive away the U-boats which had all but cut the vital supply lines to our hard-pressed troops and allies overseas. They patrolled our borders, carried urgent cargo between Army posts, and otherwise served in any way they could to relieve military planes and airmen for urgent duty overseas.

These warlike missions were discontinued bit by bit as the Army and Navy were supplied with airplanes. But CAP carried on in the recruiting of tens of thousands of alert young Americans for the manning of our air forces.

Today the Civil Air Patrol, in all of the 48 States, is continuing its preflight training of 100,000 CAP cadets. At the same time, it stands ready as an aerial home guard to go into action in disaster areas, to fly in search of lost planes, and to perform many other duties which will be just as important in peacetime as in war.

The result has been to maintain the headway of civil aviation through the war years by keeping airports open and by building public interest in local development, so that a great surge of activity is ready to go forward now, when it is vitally needed.

If we were starting from scratch to build for the air age, there could be no better plan than to begin at once to set up just such an organization as Civil Air Patrol. Since that organization is now in being, we should give it every recognition and support.

FUTURE AIR RESERVE

As an air reserve, the CAP is teaching military and aviation subjects to the young people upon whose abilities and patriotism the future security of our Nation will depend. We may now have a great surplus of veteran fliers but modern combat is a task for the young. Our great air forces would soon be over age without a source of young recruits.

After the atomic bomb and the hints of other weapons yet to come, we cannot at once foresee the exact number and kind of reserves America will need. But there are two things we do know. We are aware, and we must never cease to be aware, that air power can strike quickly at any point. No spot on the globe is safe against attack. Our defenses, therefore, must be made strong and kept strong at every strategic center.

We know also that future weapons will require a greater technical knowledge than ever before among those who use and produce them. Atomic energy, jet propulsion, and supersonic speeds may call for some radical changes in the training of the more highly skilled specialists. But fundamentals regarding wind and weather and aerodynamics and discipline will remain.

The two vital requirements—for wide dispersal of our reserves and for technical training—are served by the civil air patrol. It is not enough to rely on the reserves which we may in future decide to support by Federal funds. In a total war everyone will be a combatant. To prevent such a war we must keep alive the volunteer spirit, which is our strength.

All the other large nations—England, Russia, Germany, Italy, and Japan—started years before we did in the development of mass movements to train young people in aviation for the manning of their air forces. The civil air patrol, on its own initiative, created such an organization in the American way. Other nations, except for those which we have occupied, are continuing to foster and encourage aviation interest among their youth. If we have learned anything from the lessons of the war, we will be second to none in thus sowing the seeds for our future progress and security.

RECONVERSION

Regardless of what the future needs may be, this program is of great significance in the months just ahead. Our air forces and our air industries are now going through a difficult period of shrinkage and readjustment. The cancellation of contracts at the end of the war means a cut in aircraft production of something in the magnitude of 80 percent. Hundreds of thousands of aircraft workers and veterans of the air war are being released.

Both for the maintenance of air supremacy and in justice to the veterans who won it, we as a nation must bridge the reconversion as rapidly as possible so that the curve of air progress will again turn upward. We may count on commercial air transport only to a limited extent. The air lines went through the war with a fleet of only about 200 planes. Although several times that number will be in service within the next 2 or 3 years, the opportunities for employment will be small as compared to our wartime air forces with their tens of thousands of planes.

But private flying can move much faster. As the development of the family car, rather than of the trucks and busses, boomed the automobile industry after the last war, the light plane offers the quickest and broadest opportunities for employment-creating activity in aviation. Just as the building of a network of rural highways made possible the mass demand and thus the mass production of automobiles, the construction of thousands of home-town airports can pave the way to the air age.

AIRPORTS

In this, the spirit of volunteer action in communities large and small across the country is just as important for the fast development of air facilities as it is for the manning of our reserves.

Large Federal airport appropriations are contemplated. But such a program offers immediate employment merely to construction workers. It will not create any great volume of aviation employment, either directly at the fields or indirectly in the aircraft plants, until the airports are finished and that will be a matter of years.

To be of any real help to the veterans and the aircraft workers who want jobs today, our plans for Federal aid must be supplemented by immediate local initiative. Necessary as a national airport program may be, just as the Federal-aid highway program proved a wise national investment, we must ask the question whether the promise of Federal funds may not discourage more construction than it creates, by influencing State and local governments and private groups to conserve their own money in hope that Uncle Sam will foot the bill.

The self-reliant spirit of the Civil Air Patrol has shown how to overcome the attitude of "wait and see." Even under the difficult conditions of wartime, many CAP groups have spurred local demand or through their own unaided efforts have acquired the land and have leveled grass fields so that flying is an accomplished fact at scores and perhaps hundreds of communities that would still be grounded were it not for Civil Air Patrol.

FLIGHT TRAINING

Another great need is for civilian pilot training. Unlike the automobile driver who can take the wheel after a few hours of practice, the airplane pilot must undertake many complicated studies and many hours of supervised flight instruction before he can fly safely across country.

Some interests, as in the case of airports, would place the initiative and responsibility upon the Federal Government through grants to finance training of private pilots. Here, as in the case of airports, Civil Air Patrol has not waited but has pioneered its own local programs to develop flyers without asking for a cent of public money.

CAP does not give flight training. That is a job for private enterprise. But CAP's volunteer instructors give preflight training free and thus prepare tens of thousands of men and women, young and old, to become safe and practical flyers. In many areas CAP units have secured donations for flight scholarships so that the cadet and adult members who are most outstanding, and have thus proved their ability, are assisted in buying the necessary flying time from commercial airport operators.

In these and other phases of our planning for the air age, CAP has shown the way. This earnest and loyal group of good Americans, who are giving unstintingly of their time, money, and effort, deserve every possible encouragement from the Federal Government, from the States, from the aviation industry, from the civic groups, and from all citizens. Our future security is in air power founded on a vigorous and self-supporting program of civil aviation in every area of the United States.

The Way to Industrial Peace

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. BAILEY. Mr. Speaker, may I again call the attention of the Congress to the imperative necessity for immediate amendment of the Federal Revenue Act of 1945 by striking from this law the carry-back provision on excess-profits taxes, as provided in H. R. 5180 now in the Ways and Means Committee.

I want, in this connection, to call attention to an editorial in the daily PM for Wednesday, January 23. The editorial follows:

At a time when workers are stamping up and down in the cold on picket lines in Pittsburgh and Detroit, it may seem strange for PM to dive into the jungle of technicalities that constitutes our tax laws.

But PM believes one obscure provision of these laws holds the key to current strike difficulties. We refer to the carry-back section of the excess-profits tax. We invite

Congress to consider its curious consequences. We propose its revision as a means of removing the greatest single obstacle to peaceful settlement of labor disputes in the reconversion period—as the way to bringing an end to all the big strikes which have been forced on the workers of this country.

Thanks to the carry-back, Mr. Benjamin F. Fairless, of United States Steel, can walk into the White House and defy the President. And then go next door to the United States Treasury and draw a reward for his recalcitrance. The carry-back subsidizes stubbornness. It guarantees big industry as much in tax refunds as could be made in profits.

Imagine the outcry if the United States Treasury proceeded to pay full salaries to workers on strike! When steel workers go on the picket line they do not draw even unemployment compensation; payment of jobless insurance to workers on strike has been forbidden in most States, severely restricted in all but one or two of the rest.

But United States Steel can precipitate a strike by rejecting the decision of a Presidential fact-finding board, it can shut down its mills and make as much on the carry-back provision of the tax law as it could by operating its business. The carry-back provides a $20,000,000,000 kitty for big business, a princely strike fund on which it can draw while it sits down to starve out the labor movement, and disrupt America's hopes of a swift and successful reconversion.

CAN COLLECT FROM THE TREASURY

What is the carry-back? It was written into the 1942 excess-profits tax law to protect business men against the uncertainties of the war-production program. (Never, to paraphrase Churchill, were so many safeguards established for so few uncertainties.)

The law provided in substance that if in any one war year a corporation's profits fell below its average prewar profits, the corporation could collect the difference from the Treasury in the shape of a refund from the excess-profits taxes the corporation had paid in the previous 2 years.

Last year Congress repealed the excess-profits tax law. But it did not repeal the "carry-back." This means that in 1946 businessmen no longer pay excess-profits taxes. But they can draw on excess-profits taxes paid by them in 1944 and 1945. These total $20,000,000,000. The size of this profit backlog will be better appreciated if it is recalled that total net corporate earnings in 1929 were only $9,000,000,000.

This is the $20,000,000,000 kitty on which United States Steel and General Motors and other industrial recalcitrants can draw if they fail to make "normal" profits this year because of strikes. Under the circumstances, why should they be in any hurry to settle? They have a chance to break the labor movement at the Treasury's expense.

It should be understood that the Government was under no obligation to keep the "carry-back" provision in the law, whether the excess-profits tax was repealed or not. No constitutional restrictions are involved; the ex post facto clause applies only to criminal law, not to tax measures. The excuse for retaining the "carry-back" after repealing the excess-profits tax was that it would help American industry to meet legitimate costs of reconversion.

A strike precipitated by the refusal of United States Steel to accept the decision of a Presidential fact-finding board should hardly constitute a legitimate cost of reconversion. United States Steel does not have to accept that decision, we do not have compulsory arbitration. But there is no reason why its defiance of the White House should be subsidized by the Treasury at the expense of other taxpayers—for the rest of us will have to make up for the refunds United States Steel draws.

"CARRY-BACK" SHOULD BE REPEALED

Congressman Bailey, of West Virginia, has introduced a bill in Congress to repeal the "carry-back" provision of the law. He told the House on Monday the "carry-back" makes the Treasury "a silent partner in what appears to have all the earmarks of a conspiracy on the part of a few to destroy our economy in their frantic efforts to crush organized labor." Bailey is no novice at tax questions. He was State director of the budget for four years in West Virginia.

PM believes it would be better to repeal the "carry-back" altogether than to permit its present abuse. PM believes it would be even better if the "carry-back" privilege were left available for companies genuinely hard-pressed by loyal efforts to abide by the decisions of Presidential fact-finding boards in labor disputes or in collective bargaining.

PM believes that adjustment in the higher wage levels so necessary to America's prosperity in the postwar period is a legitimate cost of reconversion. PM proposes that the "carry-back" provisions be amended. PM suggests that the "carry-back" be allowed only to companies which can show that wage increases justify their use of this tax privilege.

If Congress changed the tax law in this way, it would encourage industrial peace instead of industrial war. It would stimulate cooperation with the President's program instead of subsidizing economic sabotage.

I. F. STONE
(For the Editors of PM).

National Agricultural Legislation

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Thursday, January 24 (legislative day of Friday, January 18), 1946

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which it was my privilege to make in Trenton, N. J., on Monday, January 21, at the twenty-seventh annual convention of the New Jersey Farm Bureau. This was the opening address the first day of the convention.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The most important attribute of anyone in public life is to retain a sense of proportion and also a sense of humor. For me to speak to a group of farm experts, which include the distinguished presiding officer of today, my good friend, Herb Voorhees, seems almost like bringing coals to Newcastle.

And yet, although I was trained as a lawyer and have more of a business background than an agricultural background, there is a certain fitness that I should be speaking to you, because my ancestors for a number of generations were producing farmers in the State of New Jersey. My father was a physician, but back of him my grandfather, great-grandfather, and great-great-grandfather, as far as I can check up from the records, were North Jersey farmers and lived in or near Newton in Sussex County. Furthermore, I lived in the West myself prior to World War I, and although I was engaged in the practice of law in the West, I was also profoundly interested in irrigation, and even was a partner for a time, until disaster overtook us, on a ranch that raised hogs.

My subject today is National Agricultural Legislation, but before considering the farmers' problems specifically, I want to emphasize my deep conviction that what we need more than any other single thing in the United States today is a determination that we all pull together in this difficult and challenging postwar period. Fundamentally, the interests of all our people are the same and the well-being and prosperity of any of us should mean the well-being and prosperity of all of us. Those forces that tend to divide us at a time like this must be very definitely opposed, and the self-interest pressure groups must subordinate their particular desires to the welfare of all of our people. Discriminations because of prejudices must be eliminated, and we must think in terms of equality of opportunity for all, irrespective of race, creed, or color.

Our experience of the war and of the depression in the thirties has taught us that probably the most important factor affecting farm prosperity is the general income level of the people in our cities and towns. This means employment at good wages. For this reason it seems to be important to the farmers for the Government to support policies that will make for the highest possible level of employment with high wages in keeping with fair returns to capital and to management. In years past our farmers have suffered when we were in the midst of Nation-wide depressions because at such times it is not possible for the masses of our people, who are on the borderline economically to buy adequate foodstuffs for normal nutrition. When times improved and when the national income rose, statistics show that the consumption of foodstuffs increased way out of proportion even to the increase in prosperity, and our farmers under such conditions enjoyed good times with the rest of our people. In the early thirties at the very height of the terrible depression, when there were some 14,000,000 people unemployed, the income of our farmers was only $2,000,000,000 out of the total national income. On the other hand, in 1944 during the war, when practically all our people were employed, the income of our farmers was in the neighborhood of $12,000,000,000.

The problem facing the administration and the Congress is how we can maintain or increase the present farm income and keep the proper relationship between the share that the farmer gets of the national income and the share that other employed persons get.

Let me suggest certain matters that we in Washington are keeping our eyes on as guideposts to a national farming policy:

1. Farmers have kept faith with the Government during the war by doing everything in their power to produce what the Government requested them to produce to help win the war. The Government must now keep faith with the farmer by making good on its price-support commitments for the promised 2-year period after the war. But beyond this, the Government must plan now for the kind of agricultural policy that will give the farmers the prosperity they deserve when the 2-year price-support period is ended.

2. As I stated above, our experiences of the war and of the depression in the thirties have taught us that probably the most important factor affecting farm prosperity is the general income level of our people in the cities and towns. This means employment at good wages. This might mean, of course, that farmers might have to pay high wages for their help, but in the long run they are undoubtedly better off with prosperous conditions and high wages than when labor is plentiful and cheap and when the income of the worker is low.

3. The administration is still committed to some form of price policies which it feels should be elastic enough to recognize changing conditions so that a proper relationship

can be maintained between farm prices and the price of goods and services the farmers have to buy. This is the so-called parity price problem. While I am personally in accord with maintaining price policies for a time until we can get back to normal living, generally speaking I am afraid of Government price controls, either on the incentive side or on the ceiling side. It has not yet been demonstrated to my satisfaction that man-made planners can operate in the field of prices more effectively than the laws of supply and demand, and it is my own conviction that we will come more quickly to solving the farmers' problem by the road of everybody working, with high production and high national income, than we will by either subsidies or price restrictions, so far as the farmers' production is concerned. Certainly, it hardly seems to make sense that the OPA at the moment should be putting controls on cotton when the Government holds a 14-million-bale surplus which could very readily be put on the market in the event of any threatened run-away cotton prices. And with the crying need for foodstuffs in practically every corner of the world, I can see no immediate purpose in limiting the production of our farms.

4. From the standpoint of food consumption on the home front it should be the policy of the Department of Agriculture to encourage the production of plenty of food for a truly adequate diet for our entire population. If we have full employment in business and industry and adequate wages, this situation will practically take care of itself. But in order to insure proper distribution of food, and especially take care of our growing children, who particularly need high standards of nutrition, supplementary Government measures, such as the school-lunch program, might well be included in our national policy.

5. There is no doubt that in this country we have the capacity to produce certain farm commodities such as wheat and cotton far in excess of our domestic needs, and this justifies the development of foreign-trade policies where we can find increasing world markets. Wheat and cotton are the two outstanding crops that have been embarrassing to us in years past. In the case of wheat, the principle of the ever-normal granary can be defended, provided the carry-over for a period of years is not too great. Doubtless over the years we would be able to take care of the normal surplus.

In the case of cotton, I am inclined to feel from my limited study of the subject that it may be necessary to encourage the raising of other crops in the cotton area so that that area will not continue to depend upon one crop in the future as it has in the past. The war has doubtless stimulated the growing of cotton throughout the world and the southern United States will probably no longer be the principal cotton-producing area from a world-wide standpoint. I certainly question the wisdom of continuing indefinitely the present administration's policy of subsidizing the growing of cotton.

6. Production for war has put a great drain on the soil resources of the country and we could not properly continue such a drain for an indefinite period. I am in accord with the present policy of the Department of Agriculture to expand and intensify our soil conservation policy as a means of producing more efficiently at lower costs and of preserving our soil resources for future generations.

The administration presents certain broad observations which we can all doubtless approve in order to bring about a well-balanced and prosperous economy. These observations may be summarized, as follows:

1. Production of plenty of food at fair prices to establish a high level of nutrition;

2. Increased efficiency in production, processing, and marketing of farm products;

3. Accomplishments of complete job of conservation of our natural agricultural resources—soil, water supply, and forests;

4. An expanding, free-moving trade with other nations to broaden the base of our economy.

The administration is constantly talking about 60,000,000 jobs and a national income of $150,000,000,000 upward. Should such a national income be the result of actual production of needed foods and other articles for a high standard of living, it would of course mean the goal that we would all like to see attained, and there would be very little need for us to be concerned about the problems of our farmers.

I feel that it is within the bounds of possibility to attain a goal of this kind, but not at once. It will come, in my judgment, in progressive stages, and will depend in large degree, as I stated in my opening remarks, on the extent to which the different groups in our society can recognize the needs of other groups and all of the activities of our people can be united. This, in my judgment, does not mean Government planning or Government control. At its best, such a result could be brought about by the decentralization of our activities so far as the freedom of the individual is concerned, but with the over-all knowledge and advisory direction by a government competent to watch the trends of the times and to give sound advice through its local representatives. In the field of agriculture this means the so-called extension service and the county agents whose functions must be to advise and not to command. This may be a slower process than the totalitarian method of bureaucratic direction, but the very slowness of the process may be the price of human freedom which the farmers of our country have been the particular champions of.

While we must look to our farmers to feed the rest of us and help feed the world, I always like to think of farming as a way of life, rather than as a mere production industry. The family farm of America appeals to me as the sound unit of our living, and if we look through our history we will see that from the farms have come in large measure those boys and girls who in later life have moved into positions of leadership in our State and Nation. This can be fostered by sound farmers' organizations, such as your own New Jersey Farm Bureau, and I cannot speak too highly of programs of cooperation among farmers, such as you are fostering, whereby the benefits of mechanization and intelligent marketing can be enjoyed by the smallest farm.

I have faith in America and in the individuals who compose it. If each of our groups who are striving to find their place in our postwar civilization, can see the position of the other fellow and the need of national unity, the skies will begin to clear, and those differences that divide us will begin to melt away in the over-all objective for a sound American economy.

Mount Alto Veterans' Facility

EXTENSION OF REMARKS

OF

HON. JAMES P. GEELAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. GEELAN. Mr. Speaker, my attention has been called to the deplorable conditions existing at the veterans' facility known as Mount Alto.

A movement has been in progress for some time by the American Veterans of World War II to correct the admittedly inadequate facilities in existence at that hospital by the erection of a new, modern hospital at or near the location of the present hospital of sufficient size and with up-to-date equipment to care for the thousands of veterans who as a result of their service-connected disabilities will need such hospitalization and care. As a result of this campaign on the part of the Veterans of World War II the Veterans' Administration has announced that it intends to have constructed a new hospital to cost $7,000,000 to replace the present facility at Mount Alto.

While this certainly is good news there is some cause for concern inasmuch as the article states that the present facility will be torn down, and that the new facility will not be completed before October 1, 1947.

It is certainly to be hoped that despite the lack of a sufficient number of beds and proper equipment at the old facility, it should not be torn down until the new hospital is completed, and not then if at that time the need for its use for a further period of time appears necessary. At this point I would like to insert in the RECORD a statement by Mr. J. H. Leib, national legislative director of the American Veterans of World War II, concerning this matter; also a letter which he had written to President Truman on the subject, and a newspaper article from the Washington Times-Herald of January 23, 1946, and for the purpose of reference the dates on which articles pertaining to this and kindred subject matters were inserted in the CONGRESSIONAL RECORD and the names of the Members who inserted them:

AMVETS GET QUICK RESPONSE FROM THE WHITE HOUSE AND VETERANS' ADMINISTRATION IN DEMAND OF A NEW NATIONAL MEDICAL CENTER

(By J. H. Leib, national legislative director, Amvets)

On January 10, 1946, this writer addressed a special-delivery letter to the White House calling the President's attention to the unfortunate condition that exists in the National Capital in regard to inadequate veterans' hospitalization and medical care. In this letter attention was directed to the many promises that have been made by Government officials, both publicly and otherwise, on numerous occasions relative to the establishment of a national medical center for needy and disabled veterans and it was respectfully urged that the Chief Executive use his good offices to see to it that some definite action was taken to correct this deplorable situation.

Oddly enough, a reply came—13 days later—not from Mr. Truman or General Bradley, but from the newspapers after the Veterans' Administration rushed to announce that construction of a $7,000,000 hospital to replace the existing facility would be completed by October 1, 1947, mind you, more than 21 months away.

It is even more amusing to note that the Veterans' Administration rushed into print to proclaim that it was speeding up the construction of the hospital, giving for the first time a definite date as to when the institution would be erected, but explained that no exact site had been agreed upon.

Getting a new veterans' hospital in the Capital to replace the shamefully overcrowded, inadequate, and gloomy veterans' facility known as Mount Alto has been a heartbreaking affair. Everyone admitted the great need for such an institution—a model hospital for the whole Nation to behold and be proud of—yet nothing was done about it. In fact, every

attempt to start the ball rolling was met with a firm rebuff.

Now it is good to know that after several years of justifiable criticism, the veterans of this war have finally gotten a definite date as to when the hospital is scheduled to be completed. The following letter and newspaper clipping speaks for itself:

JANUARY 10, 1946.

Hon. HARRY S. TRUMAN,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: More than a year ago I had inserted in the CONGRESSIONAL RECORD a number of articles relative to the urgent need of a new medical center for veterans here in the National Capital.

General Hines, then Administrator of Veterans' Affairs, assured me of the great need of such a hospital. On May 29 he publicly urged the construction of this center. Three months later General Bradley assured newspapermen that he would end overcrowding at Mount Alto.

In today's Washington Star there appeared a story that Mount Alto "is classed as one of the most overcrowded veterans' hospitals in the country. De Griffith said the hospital was still operating over its authorized capacity of 327 beds."

Mr. President, the District of Columbia should have the finest and most modern hospital in the whole country as a model and example of medical care for veterans. Instead it is probably the worst of all such Government institutions.

Is it not about time that something is done about this unfortunate situation?

Sincerely yours,

JOSEPH LEIB,
National Legislative Director, Amvets.

[From the Washington Times-Herald of January 23, 1946]

VET HOSPITAL PLANS SPEEDED

Construction of the new $7,000,000 veterans' hospital to replace Mount Alto will be completed by October 1, 1947, General Bradley announced yesterday.

Although the site of the new 750-bed general medical institution has not yet been selected, Veterans' Administration officials indicated it might be built on the Wisconsin Avenue location now occupied by Mount Alto.

Here are a few of the articles that appeared in the CONGRESSIONAL RECORD regarding Mount Alto:

"Urgent need for veterans' hospital and bed," by Representative SPRINGER, November 16, 1944.

"Hospitalization and medical care of veterans," by Representative DOYLE, January 31, 1945.

"General Hines admits need for District of Columbia veteran medical center," by Representative GILLIE, February 27, 1945.

"The truth about Mount Alto and the Veterans' Administration," by Representative GILLIE, June 19, 1945.

"The facts behind the veterans' hospital scandal finally comes to light," by Representative SPRINGER, July 3, 1945.

Relief Program for Italy

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

ITALY AND UNRRA SIGN $450,000,000 RELIEF AGREEMENT IN ROME

A $450,000,000 program of relief for hard-pressed Italy was agreed on in Rome yesterday by Premier Alcide de Gasperi and Spurgeon M. Keeny, head of the United Nations Relief and Rehabilitation Administration delegation there. Most of the money will be spent for food and for revival of Italian industry.

In announcing here last night that the agreement had been signed, UNRRA headquarters, on the basis of a cabled report from Rome, quoted Premier de Gasperi as saying:

"Gratitude is a rare article in this world, but you will find it in Italy and will be able to use it for the peace of the world."

SUPPLEMENTS EARLIER ACCORD

The new UNRRA program, designed to bring relief to all Italians in a land suffering from the worst crop failure of 25 years, supplements an earlier limited one, approved at the UNRRA conference in Montreal in September, 1944, under which aid was limited to children and nursing and expectant mothers.

UNRRA authorities estimated last night that, compared with the two vessels monthly which have been arriving in Italy with relief supplies, 100 Liberty ships a month will be employed in carrying out the enlarged program. Realization of the new effort was made possible by Congress' recent authorization of a second $1,350,000,000 for the UNRRA program.

In addition to food, UNRRA plans to send to Italy coal for railroads, public works, and essential industries. These shipments are expected to average between 400,000 and 500,000 tons monthly.

ALL PROCEEDS FOR RELIEF

Also, Italy is to receive 75,000 tons monthly of liquid fuels—gasoline, oil, and kerosene; raw cotton and wool to alleviate the acute textile shortage; and fertilizers, seed, and agricultural machinery to increase food production.

The Italian Government in signing the agreement with UNRRA, undertook to spend all money received from the sale of supplies on relief and rehabilitation projects.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report:

REPORT OF THE SUBCOMMITTEE OF THE COMMITTEE ON TERRITORIES, THE UNITED STATES HOUSE OF REPRESENTATIVES, ON STATEHOOD FOR HAWAII

The Honorable HUGH PETERSON,
Chairman of Committee on Territories, Washington, D. C.:

The first congressional committee to hold hearings on the question of admitting Hawaii to statehood visited the Territory in October 1935. After extensive hearings the committee "found the Territory of Hawaii to be a modern unit of the American Commonwealth, with a political, social, and economic structure of the highest type. Its educational program is an advanced one, with a large proportion of the tax dollar being spent for the training of its youth. Even during the period of the depression this program was neither relaxed nor reduced, and its school facilities compare favorably with those of the most advanced States. Hawaii's economic standards are high, with an industrial and agricultural development forming a sound basis for the continued growth of the Territory." Nevertheless, the committee concluded that considerable further study was necessary before a favorable report might be made on a proposal to admit Hawaii as a State.

In October 1937, pursuant to a concurrent resolution of the Senate and House of Representatives, a joint congressional committee visited the Territory of Hawaii. The committee reported that while great progress had been made by the people of Hawaii, the question of statehood, because of disturbed international conditions, should again be deferred by the Congress until further study and consideration could be given. It was the committee's view also "that unmistakable evidence that a substantial majority desire statehood should precede affirmative action by Congress." A plebiscite to determine the wishes of the people was authorized by the Territorial legislature in 1939. Of those voting on the question at the general election of November 5, 1940, 67 percent favored statehood and 33 percent opposed it. A Gallup poll held on the mainland in 1941 revealed that opinion in the continental United States for and against statehood for Hawaii was in almost the same proportions as the Territorial view expressed in the plebiscite.

During the war years, Congress was not able to give renewed consideration to Hawaii's statehood ambition. But with the end of the war in sight, the duly elected representatives of the people of Hawaii in the Territorial house and senate adopted, by overwhelming vote in each house, resolutions that the Congress of the United States take immediate action on admitting Hawaii to statehood. Pursuant to this request and to House Resolution 236 of the House of Representatives, dated April 30, 1945, the chairman of the Committee on Territories appointed a subcommittee to visit Hawaii, to hold hearings, and to make recommendations on H. R. 3643, introduced by Delegate FARRINGTON "to enable the people of Hawaii to form a constitution and State government to be admitted into the Union on an equal footing with the original States."

The subcommittee appointed by the chairman consists of HENRY D. LARCADE, Democrat, Louisiana, chairman; JAMES J. DELANEY, Democrat, New York; GEORGE P. MILLER, Democrat, California; HOMER D. ANGELL, Republican, Oregon; DEAN P. TAYLOR, Republican, New York; and JOSEPH R. FARRINGTON, Republican, Territory of Hawaii. Irwin W. Silverman, chief counsel of the Division of Territories and Island Possessions, Department of the Interior, was assigned by the Secretary of the Interior at the committee's request to serve as counsel of the committee.

On December 20, 1945, just prior to the committee's departure, the Secretary of the Interior, whose Department has jurisdiction over the Territories, issued a statement endorsing statehood for Hawaii.

The counsel of the committee, Mr. Silverman, arrived in Hawaii several days before the committee to make preparations for the hearings and to arrange for the scheduling of the large number of witnesses who had indicated their desire to appear before the committee. The committee arrived in Honolulu on Sunday, January 6, 1946. Hearings were held in the Throne Room, Iolani Palace, on Monday, January 7, and continued through Thursday, January 10. In order that residents of all the islands comprising the Territory might be given an opportunity to be heard, hearings were held on Maui on Friday, January 11; on Molokai on Saturday, January 12; at Kona on Sunday, January 13; and at Hilo on the Island of Hawaii on Monday, January 14. The committee returned to Honolulu on Monday, January 14, and held hearings in Honolulu from Tuesday, January 15, including a night session, through

Thursday, January 17. It held hearings at Kauai on Friday, January 18, and left for the mainland on the 19th.

Prior to and at the beginning of the hearings the committee stated that full opportunity would be given to every person who desired to appear before the committee to present his views on the question of statehood and upon any other matter relating to the welfare of the Territory. About 100 witnesses were heard and examined by the members of the committee. In addition, a large volume of memoranda, statements and statistical materials on the social, political, and economic problems of the islands was prepared and submitted by the heads of Federal and Territorial agencies, as well as by experts representing industrial, trade, labor, and civic organizations. The committee gave special attention to population trends, land ownership, concentration of wealth and labor conditions.

FINDINGS

On the basis of the detailed and voluminous record made before it, the committee finds:

1. That the population of the Territory of Hawaii in 1945 was 502,122, of which 10,988 or 2.2 percent of the total population were Americans of Hawaiian ancestry; 61,422 or 12.2 percent were part-Hawaiians; 9,090 or 1.8 percent were Puerto Ricans; 172,583 or 34.4 percent were Caucasians; 30,005 or 6 percent were Chinese; 163,300 or 32.5 percent were Japanese; 7,042 or 1.4 percent were Koreans; 46,464 or 9.3 percent were Filipinos; all others, 1,228 or 0.2 percent.

2. That the number of pure Hawaiians has declined from an estimated 300,000 persons in 1778 to 10,988 in 1945.

3. That the Caucasian population has increased steadily since 1878, when the precentage of the total population was only 5.09 percent.

4. That persons of Japanese ancestry in 1890 numbered 12,360 or 13.7 percent of the total population. By 1920 the percentage increased to 42.7 percent, but had declined to 37.9 percent in 1930 and continues declining, to date being only 32.5 percent, or 163,300 persons at present.

5. That since 1912 the proportion of interracial marriages has increased from 14.1 to 38.5 percent, the trend being accentuated by the recent war, during which over one-third of the children born had two or more racial strains.

6. That well over 85 percent of the present population was born in Hawaii or on the mainland.

7. That the war record of Hawaii is in every respect commendable. Hawaii had a full-scale organization for civilian defense and volunteer defense units sponsored by the Army, and participated in Red Cross, USO, blood bank, and similar activities, making liberal contributions to the war chest and oversubscribing its quota for war bonds. The Territory established a number of emergency agencies, such as a Bureau of Registration and Identification, Office of Food Control and Food Production, and a commercial rent control program.

8. That Hawaii did its part in contributing men to the armed forces. Selective Service did not apply to Hawaii during the first 2 years of the war, because of the Territory's crucial position and shortage of manpower. Since the application of the draft, Hawaii has met its full quota. Hawaii had two National Guard regiments which were called into the Federal service on October 15, 1940. In all, 33,000 of the citizens of Hawaii served in the armed forces. Americans of Japanese ancestry were rejected from March 1942 until February 1943 but made up for this as soon as they were accepted. Although Americans of Japanese ancestry constituted only 36 percent of the registrants under selective service, 52 percent of the total inductions from December 1940 to September 1945 came from this racial group, because of the large number of volunteers. Because of the Army policy of organizing and segregating units composed entirely of citizens of Japanese ancestry, it is possible to follow their activities and to see how they proved unwarranted the mistrust initially shown by the military commanders. Hawaii residents of Japanese ancestry constituted the entire original One Hundredth Infantry Battalion and by far the major part of the original Four Hundred and Forty-second Combat Team. The record of those units, made in major offensives in the European theater, includes 5 Presidential unit citations, 1 Meritorious Service plaque, 65 Distinguished Service Crosses, 290 Silver Stars, 782 Bronze Stars, 10 Croix de Guerre (French), 3 soldiers medals (Italian), 50 Army commendations, and 82 division commendations.

9. That, according to Robert L. Shivers, Federal Bureau of Investigation agent in charge at Honolulu, there was not one single act of sabotage or fifth-column activity committed in Hawaii before, during, or after the attack on Pearl Harbor. Hawaii's people of various racial ancestries can and do work together, and what goes on in the countries of their ancestors is of minor concern to them, compared to their interest in the United States. People of all racial ancestries cooperated in preparing for and prosecuting the war, and Hawaii, despite its polyracial composition, is essentially American in thought, purpose, and action.

10. That the people of the Territory of Hawaii are a law-abiding people. Its different racial groups live together with a minimum of friction and no recial clashes; life and property are as safe in Hawaii as in any section of the mainland.

11. Such evidence of bloc voting as exists indicates that the practice has not assumed, and is not likely to assume, serious proportions. Members of the Territorial legislature whose ancestry is Japanese constitute normally less than 20 percent of the total membership, although 32.5 percent of the total population of the islands is of Japanese descent.

12. That in 1944, 71,704 of 84,326 registrants, or 85.03 percent, voted in the general election. The percentage of registered voters of Hawaiian ancestry declined from 33.8 percent in 1932 to 24.7 percent in 1940; Caucasian voters declined from 38.2 percent in 1932 to 30.1 percent in 1940. The Japanese showed an increase from 17.6 to 31.1 percent. With few exceptions, the percentage of registrants voting in each general election ranged between 85 to 90 percent.

13 That of the Territory's 4,118,400 acres, 1,762,050 acres, or 42.78 percent, are in public ownership and 2,356,350 acres or 57.22 percent are privately owned. The largest single owner holds 8.87 percent of the total of privately owned lands and the 10 largest owners (including the largest owner) together hold 30.11 percent; the 50 largest owners (including the 10 largest owners) hold 39.55 percent, and all other owners hold 17.67 percent of all privately owned lands.

14. That the largest owner is the B. P. Bishop estate, holding approximately 370,000 acres. This is a charitable trust, founded by a Hawaiian princess for the support of the Kamehameha Schools, which are devoted to the education of Hawaiians and part-Hawaiians, and the expenses of administering the trust are paid from trust funds.

15. That of the Territory's total 4,118,400 acres, 2,947,330 acres are devoted as follows: 1,045,085 acres are devoted to forest reserves; 164,205 acres to national parks; 84,040 acres to Army, Navy, or other public use (including territorial and county purposes but not including highways); 1,350,000 acres to pasturage; 220,000 acres to the growing of sugar cane; 63,000 acres to the growing of pineapples, and approximately 21,000 acres to the growing of other crops, including: 6,760 acres, truck farming; 4,000 acres, coffee; 2,090 acres, fruits; 2,067 acres, taro and field crops; 770 acres, macadamia nuts; and 5,438 acres for miscellaneous crops.

16. That in 1940 there were 2,094 farms of less than 5 acres, and 4,724 farms of less than 100 acres (including those less than 5 acres).

17. That in 1944 Hawaii produced 874,946 tons of sugarcane, the crop being valued at $65,498,532.

18. That in 1940—the latest year for which complete figures are available—Hawaii produced 22,341,429 cases of pineapple valued at $45,851,706.

19. That the coffee production of the islands in 1944 totaled 7,656,000 pounds, valued at $1,091,000.

20. That the Territory has consistently paid into the United States Treasury a considerably larger amount than the Federal Government, exclusive of military expenditures, has spent upon the Territory; its 1945 contribution amounting to $173,999,227.22.

21. That in 1944 and 1945 Hawaii exceeded several States in the total of its internal revenue collections.

22. That the finances of the Territory have been very well managed. At the end of the last biennium, on June 30, 1945, total budgetary resources of the Territory amounted to $68,339,384, with total obligations and reserves in the amount of $57,873,691, leaving an unappropriated surplus of $10,465,693. The bonded debt of the Territory as of December 31, 1945, was $16,520,000, with $7,151,344 in the sinking fund, leaving a net amount of $9,368,656.

23. That during the calendar year 1945 the following tax revenues were produced from the following sources:

Real property	$6,568,605.43
Personal property	3,697,620.65
Income, personal and corporation	23,529,447.21
Public utility	1,897,497.05
Liquid fuel	1,932,749.57
Compensation and dividend	8,819,507.92
Bank excise	50,000.00
Liquor	1,906,979.50
Tobacco	422,664.86
Gross income and consumption	10,460,310.25
Unemployment compensation	1,888,749.18
Business excise, poll, public welfare prior years)	96,468.83
Administered by tax commissioner	41,272,600.45
Inheritance and estate	661,274.16
Insurance	451,472.58
Miscellaneous licenses	10,252.63
Administered by Territorial treasurer	1,122,999.37
Total	42,395,499.02

24. That there are 35 sugar companies operating in the Territory with a total capitalization of approximately $175,000,000 and with stock held by approximately 16,000 persons. There are five corporations, known as the Big Five which act in the capacity of factors or agents for practically all of these plantations, and to some extent have substantial stockholdings in the plantation companies. The companies, with the number of plantations represented and the approximate percentage of sugar production for each group of plantations, are as follows:

	Number of plantations represented	Approximate percentage of total sugar production
American Factors, Ltd	9	30.8
C. Brewer & Co., Ltd	14	23.5
Alexander & Baldwin	4	20.8
Castle & Cooke, Ltd	3	14.5
Theo. H. Davies, Ltd	4	6.9
Total	34	96.5

The agency system is not used to such a predominant extent in the pineapple industry, although some of the "big five" are connected with that industry through stock ownership or other affiliation. The "big five" have other interests as well.

25. That the commerce of Hawaii with the continental United States exceeds that between the mainland and all but a few foreign countries. From 1935 to 1940, only five foreign countries—the United Kingdom, Canada, Japan, France, and Germany—bought more from the mainland than did Hawaii. In 1940 the value of the Territory's imports from the mainland totaled $127,539,539, while the value of exports to the mainland was $102,145,130.

26. That bank deposits have increased from $4,662,131 in 1901 to $499,295,940 in 1945, much of the increase being due to the presence of Army and Navy personnel.

27. That Hawaii's gross assessed value of real property is over $500,000,000—higher than that of any State at the time of admission with the exception of Oklahoma.

28. That as of December 1945, 36,875 corporations, firms, or individuals were engaged in 54,412 different enterprises as employers or self-employers.

A. There were 12,916 persons or companies engaged in retailing, representing the following subdivisions:

Appliances, 66; auto dealers, 42; auto supplies, 69; bakeries, 61; barrooms and saloons, 380; books and stationery, 34; building materials, 10; chemicals, 17; cold drinks, 206; confectionery, 205; curios and novelties, 298; department stores, 12; drugs, 151; dry goods, 222; electric supplies, 21; equipment, 43; fish dealers and fish markets, 532; food products, 481; fountain and lunchrooms, 444; fruit and vegetable, 713; furniture, 91; general merchandise, 1,135; groceries, 641; hardware, 61; household products, 15; jewelers, 185; liquor stores, 173; lumber, 10; meat dealers and meat markets, 333; mill supplies, 11; music stores and composers, 23; newspapers, 25; nurseries, 88; office equipment and supplies, 27; optical, 17; poultry, 636; radio and radio supplies, 67; restaurants, 952; service stations, 387; shoe stores, 68; toilet articles and cosmetics, 55; wearing apparel, 172.

B. There were 2,999 companies or persons engaged in wholesaling, including the following types of wholesaling:

Appliances, 14; auto dealers, 14; auto parts, 36; bakeries, 55; beverages, 11; block printing, 19; boatbuilding, 10; bottle dealers, 21; building materials, 7; coconuts, 9; confectioneries, 23; curios and novelties, 137; drugs, 39; dry goods, 42; electrical appliances, 19; equipment, 16; feed, 9; fish dealers, 273; florists, 41; food products, 109; fruit and vegetable dealers, 280; furniture, 26; general merchandise, 264; groceries, 44; hardware, 12; household products, 5; jewelers, 70; junk dealers, 8; lauhala weaving, 166; leis, 19; lumber, 5; magazines, 7; meats, 56; music, 9; tobacco, 6; toilet articles and cosmetics, 11; toys, 10; wearing apparel, 32.

C. Eight thousand three hundred and fifty-eight companies or persons were engaged in producing raw products, including:

Dairies, 66; farming, 1,051; fishing, 350; flower growers, 214; hog raisers, 589; poultry producers, 811; sugar growers, 2,135; vegetables and fruits, 1,542.

D. One thousand four hundred and twenty-six persons or companies were engaged in manufacturing, including:

Alcoholic beverages, 12; bakery products, 86 block printing, 17; chemical and fertilizer, 30; clothing, 27; concrete, lime, and stone products, 11; confectionery, 20; curios and novelties, 88; foods, 137; footwear, 21; furniture, 35; jewelry, 16; mattresses and springs, 12; nonalcoholic beverages, 38; soap, 7; wood products, 37.

29. That out of a total of 170,000 employees (not including part-time work by school children under the schools' temporary program established to meet the manpower shortage) the sugar industry employs about 24,500 workers. Pineapple agricultural labor (not including the canneries) totals about 4,750; 11,300 are employed in manufacturing (excluding sugar); 10,700 in transportation, communication and other utility services; 23,000 in wholesale and retail trades; 13,500 in various service industries; 7,400 in diversified agriculture; 6,600 in construction and quarrying, and 3,000 in financial, insurance, and real-estate establishments; 59,500 are in Government service and 4,075 in domestic service.

30. That since 1937 the Territorial legislature passed a number of labor laws, creating the Department of Labor and Industrial Relations, and dealing with such matters as apprenticeship, child labor, vocational training, vocational rehabilitation, unemployment compensation, regulation of employment agencies, minimum wages and maximum hours, payment and collection of wages, workmen's compensation, and safety regulations.

31. That the Territory's Department of Labor is considered by the local representative of the Federal Labor Department as doing an able job, and the Territory's labor legislation as comparing very favorably with that of many progressive States and in some respects is in advance thereof. Hawaii's unemployment compensation law provides more liberal benefits than that of any State with the possible exception of New York.

32. That the average cash wage paid to sugar employees in 1945 is in excess of $5 per day for unskilled labor not including the value of perquisites, which include housing, fuel, water, lights, and medical and hospital services. The cash wage paid in the pineapple industry is comparable. Wages paid industrial workers have advanced in Hawaii more than on the mainland during the period 1940–45 and Hawaii now is on a par with the mainland.

33. That a standard 8-hour day is in effect throughout the Territory.

34. That Hawaii is the only Territory or State with the exception of Wisconsin to pass a little Wagner Act, extending collective bargaining to agricultural labor.

35. That unionization of labor has made strides during the past 10 years both in industry and agriculture; nearly all major industries, including the sugar and pineapple industries, are now organized or organization is pending therein.

36. That there are 46 organizations in the Territory affiliated with the American Federation of Labor, 68 with the CIO, 2 independent unions, and 5 Government employees' organizations.

37. That in 1940 there were 7 strikes involving 502 workers with 33,217 man-days lost; in 1941 there were 16 strikes involving 2,530 workers resulting in 34,241 man-days lost; in 1942 there were 2 strikes involving 49 men resulting in 67 man-days lost; in 1943 there were 4 strikes involving 202 workers resulting in 716 man-days lost; in 1944 there was 1 labor dispute involving 6 men with 60 man-days lost; and in 1945, up to November, there had been 9 strikes involving 1,047 men with 8,876 man-days lost.

38. That at the last Territorial election a majority of those elected to both houses were endorsed by organized labor.

39. That illiteracy in the islands among native-born citizens is almost nonexistent. Hawaii has well-equipped schools throughout the Territory, most villages and hamlets being provided with proper educational facilities.

40. The standards of instruction, according to United States Chamber of Commerce, are the same as on the mainland and higher than those in many States. The average number of pupils enrolled per teacher is 27.9 in Hawaii as compared with 31.4 in the United States urban schools and 26.1 in rural areas. The average pay per teacher in Hawaii is $2,014 annually as compared to $2,013 in urban centers and $1,018 in rural areas of the mainland.

41. That there is a public library on each of the principal islands. There are 82,435 registered card holders. Each island library owns a bookmobile serving rural schools and homes, and approximately $620,000 is spent annually on library facilities.

42. That the University of Hawaii compares favorably with many State universities. For the year 1944–45 there were enrolled 1,463 regular students and 1,145 graduate students. The university had financial support in the amount of $3,126,028 for the biennium 1943–45, of which territorial appropriations from general revenues provided 50.8 percent, university income 27.46 percent, and Federal grants 21.74 percent.

43. That the level of the Territory's spiritual life is in the best American tradition.

44. That in 1945 the board of health spent $1,623,385 or a per capita cost of $3.23 as compared with $1.66 in 1937.

45. In 1943, Hawaii's death rates from 18 causes were below the national median. The rate was higher for syphilis, tuberculosis, and accidents, including automobile accidents. The mortality rate of infants under 1 year had declined from 87 per thousand in 1930 to 30 per thousand in 1945; the number of maternal deaths for 1,000 living births had declined from 7 in 1932 to 1.6 in 1945.

46. That the venereal disease infection rate per 1,000 in Hawaii declined from 175 in 1911 to 7.5 in 1945. On the mainland the rate has declined from 163 in 1911 to approximately 43 in 1945. In Hawaii the locally acquired rate was 1.4 in 1945.

47. That according to the Social Security Board, Hawaii's public assistance program is based on "liberal, progressive legislation." Hawaii has no maximum limitation of public assistance; and the Territory has thus placed itself in a position to make payments to needy individuals commensurate with need, and to give recognition to changes in living costs. Hawaii also has a medical and dental care program, and provides other forms of public assistance for which no Federal grants are given.

48. That in 1945 Hawaii ranked thirty-ninth in the average grant for old-age assistance, fifteenth in the average grant for aid to dependent children, thirty-fifth in average grant for aid to the blind, and fifteenth in the average grant for general assistance.

49. That the territorial legislature has enacted legislation comparable to that of many States. Hawaii has adopted 20 of the mainland uniform laws. In addition to laws mentioned above, Hawaii has a civil-service law, a modern retirement system for all employees. In the field of public health the Territory has enacted a crippled-children's act, created a bureau of mental hygiene, passed a uniform narcotic-drugs act, and established compulsory vaccination for smallpox, typhoid, and other diseases. In addition to the existing public medical-care program the legislature in 1945 provided for a study of health-insurance and hospital facilities. In 1935 the legislature created the Hawaii Housing Authority, passed the Federal Housing Act authorizing the acquisition by any Federal agency of property suitable for housing projects, and an act entitled "Government Aid for Housing Projects" authorizing the Territory and its political subdivisions to aid in the planning, construction, and operation of housing projects.

CONCLUSIONS

On the basis of the record and in view of the foregoing, the subcommittee concludes:

1. That Hawaii with its population of over 500,000 has a larger population than any other State at the time of admission to the Union with the exception of Oklahoma.

2. That the heterogeneous peoples of the Territory live and work together amicably, democratically, and harmoniously.

3. That the mixed racial complexion of Hawaii existed at the time of annexation, was not regarded as an obstacle to annexation, and should not now be considered an obstacle to Statehood.

4. That the percentage of persons of Japanese ancestry reached its peak in 1940 and has steadily declined since then due to prohibition of immigration, lower birth rate, and the increasing immigration of other peoples.

5. That the people of Hawaii have demonstrated beyond question their loyalty and patriotism to the Government of the United States.

6. That on the record of their behavior and their participation in the war, American citizens of Japanese ancestry can be little criticized.

7. Such evidence of bloc voting as exists among Americans of Japanese ancestry is not likely to assume serious proportions in our opinion because they, like all other peoples, are divided amongst themselves by differences, political, social, and economic.

8. That Hawaii has been a Territory for 46 years, during which the people of Hawaii have shown themselves fully capable of self-government.

9. That there is a concentration of land holdings in the hands of a few persons, companies, or estates, but efforts have been made to improve this situation. The 1943 legislature created a Land Laws Revision Commission, which recommended the creation of a public corporation for the acquisition, subdivision, and sale of lands for home sites. A bill of this character, known as the Hawaii Home Development Authority Act, was introduced in the last session. Although it failed of passage then, and no further steps have been taken, it may in the near future be enacted into law. It provided:

"The authority is directed to acquire by purchase or eminent domain, undeveloped lands suitable for residential purposes on the island of Oahu, where the acute shortage of home sites exists. Lands thus acquired are to be subdivided into residential lots and offered for sale to those of the public most in need of houses. The development projects contemplated by the act are self-sustaining in nature. The act calls for an initial loan to the authority to be repaid to the Territory as the authority secures funds from its bonds, the issuance of which is provided for by the act."

10. That the Big Five dominates a great portion of Hawaii's economy; but this economic dominance has not prevented the establishment of many varied businesses, and there are good prospects for small business in Hawaii. Further, the influence of the Big Five has not prevented the enactment of progressive legislation in the field of labor, education, health.

11. That in every community of similar size, business policies are formulated by a relatively small number of individuals who hold positions of responsibility. There is no occasion to believe that these positions are maintained through stock control either directly or by means of proxies in Hawaii to any greater extent than is the case on the mainland. The committee's investigations were in the main confined to statehood, but in all the evidence presented to it, nothing indicated the existence in business life of collusion or fraud or any agreement or combination in restraint of trade.

12. That labor has made great strides since 1937 and has contributed greatly to the Territory's progress in the field of social and economic legislation.

13. That there is a growing mutual respect and confidence between management and labor in industrial relations.

14. That the school system of Hawaii has been successful in instilling into people of many races and backgrounds the objectives and ideals of democracy, and has produced a literate population capable of discharging the duties of citizenship.

15. That modern inventions have annihilated distance. Honolulu today is closer to the American mainland in time than the cities of Boston and New York were to the Capital in the early days of the Nation. Hawaii is closer to the seat of the Government today than all but the immediately adjacent States were when Washington first became the Capital of the United States. With efficient and rapid communication by cable, radio, or telephone, and 12- to 18-hour service for mail or passenger planes to the mainland, Hawaii can no longer be characterized as isolated.

16. That a majority of the people of the Territory are in favor of immediate statehood. No organized group has appeared in opposition. If a plebiscite were again held on the statehood question in our opinion the people would vote for statehood in the same proportion as they did in 1940.

RECOMMENDATIONS

Therefore, since—

1. The people of the Territory of Hawaii have demonstrated beyond question not only their loyalty and patriotism but also their desire to assume the responsibility of statehood; and since

2. The policy of the United States Government is one of self-determination: that peoples be allowed to choose freely their form of political status; and since

3. Hawaii's strategic location in the Pacific plays so large a part in our country's international position in this area; and since

4. The Congress of the United States has through a series of acts and committee reports indicated to the people of the Territory that Hawaii would be admitted into the Union when qualified; and since

5. The Territory of Hawaii now meets the necessary requirements for statehood:

It is the recommendation of this subcommittee that the Committee on Territories give immediate consideration to legislation to admit Hawaii to statehood.

Post Office Building Program

EXTENSION OF REMARKS
OF
HON. BUTLER B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. HARE. Mr. Speaker, under leave of unanimous consent to extend my remarks in the RECORD by including therein the statement made before the Committee on Public Buildings and Grounds, October 31, 1945, I submit the following:

STATEMENT OF HON. BUTLER B. HARE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF SOUTH CAROLINA

Mr. HARE. Mr. Chairman and gentlemen of the committee, I appreciate the opportunity to appear and to present my views on the proposed building program. I have prepared a short statement, and I think, Mr. Chairman, I can expedite your time by probably referring to my statement, or notes, with the understanding that you may feel at liberty to interrupt or make inquiry at any time.

I shall not attempt to go into any great detail as to the various proposals but will confine myself to title I of the bill, which provides for the construction of buildings at certain post offices, particularly second-class offices. The policy of the Government to provide suitable buildings to accommodate offices after the receipts exceed $10,000 per annum was established many years ago. I think I could be more accurate and say that in 1926 Congress provided that thereafter post offices with $10,000 annual receipts would be eligible for a building. The assumption is that Congress felt that if the office had receipts amounting to $10,000 annually, there was a need for a building and that that was sufficient justification for the program. The Congress at irregular intervals has provided funds for the construction of such buildings as offices became eligible up until 1938 or 1939, when the last legislation for this purpose was enacted. Of course, the program has been delayed on account of the recent World War, but I understand that your committee is now planning to renew the program.

The justification for such a program has been heretofore well established, and I assume the purpose of your committee at present is to determine whether you shall authorize and make provision for the construction of buildings at all offices recently declared by the Post Office Department to be eligible under existing law, or whether it will be more advisable to make provision for the construction of these buildings over a period of years. Mr. Chairman, for a number of years I have insisted, and my purpose here today is to further insist, that Congress should now provide authorization for the construction of a building to accommodate all second-class offices now eligible and as they may hereafter become eligible. Then it would only be necessary for the Department, in its regular request for annual appropriations hereafter, to submit justifications for the construction of such buildings as may become eligible in the future. In this way provision would be made for furnishing postal facilities to every community where business is sufficiently large to justify such a building. Practically every agency in the Government is now and has been working for the past 2 or 3 years on some kind of postwar program that would provide employment for the unemployed. There are some, of course, who would like to go back to the original WPA program, but I think a great majority of people now feel this program was too expensive for the benefits derived. Briefly, therefore, I am suggesting that the authorization be made and funds requested to provide for the immediate construction of a suitable building to accommodate all post offices approved by the Post Office Department as being eligible for such buildings under existing law.

Mr. MCGREGOR. Congressman HARE, don't you believe that if they were to base eligibility on the receipts of a post office in the last 2, 3, or 4 years, or during the emergency, a large percentage of them would become eligible, whereas when we got back to normal times they probably would not be eligible. What would you suggest we should use as a basis for the determination of their eligibility?

Mr. HARE. The year preceding the passage of this act.

Mr. MCGREGOR. If we pass it in 1945, then it would be 1944, or if we pass the bill in 1946 then take the postal receipts of 1945 as a basis of determining eligibility. Do you not think that the receipts of various post offices would be larger in 1944 than possibly in 1942 or 1943?

Mr. HARE. My suggestion is that you provide for the offices that have become eligible heretofore and that you hereafter keep current in the building program.

Mr. McGREGOR. You would not go back into an emergency period to determine a fair or average eligibility, would you, which would be the case if you used a year before this act was passed?

Mr. HARE. I would certainly not go back to a depression period, but I think probably I will get to that a little later.

The total annual rental costs of these offices at present approximate $7,300,000, which is approximately 2½ percent interest on $285,000,000; and from the standpoint of business economy, the saving in rentals alone at the present rate would liquidate the investment I am suggesting within a little less than 40 years. Therefore, as a business proposition your committee and the Congress can well justify the suggested appropriation at this time.

In the second place, I want to emphasize it would be a good business investment for the Government; it would furnish employment, legitimate employment, honorable employment, employment that would in no way place the Government in competition with private enterprise, to many thousands of people. This would mean full employment for thousands of people per annum in the actual construction of the buildings; and, in addition, the program would furnish employment to many more thousands who would be engaged in the production of building materials such as lumber, nails, lime, cement, paint, bricks, etc.

In fact, Mr. Chairman, I can see no good reason, in the light of the established policy of our Government and the situation as it now exists throughout the country, why we should not report a bill that would provide for the immediate erection of a suitable building to accommodate each post office declared eligible.

Mr. McGREGOR. Congressman, do you have any idea as to the number of post-office buildings that would be needed to meet that requirement?

Mr. HARE. Yes, but I will get to that in just a moment.

I suggest further that the building, in addition to providing accommodations for post offices proper, when erected at county seats should be large enough to accommodate other permanent agencies of the Government that may be located there. This would not only be a saving to the Government in the long run but would be a great advantage to the public. That is exactly in harmony with Judge Hobbs' suggestion. Such offices as county agent, home demonstration agent, public health service, and other governmental activities that appear to be permanent, would all be in one building, and people interested would know where to find them.

I find from my own observation that this would be a great saving not only in rentals, but it would be a great service to the public. I go into a little town, where there may be 4,000, 5,000, or 6,000 people or less, and you have all of these agencies scattered out among the four corners of the village or town. The people have difficulty locating them, and if you want to visit two or three of these offices in one day, it takes all day to find them. But if they are permanent agencies of the Government, and we find that it is to the best interests of Government to house Government employees at county seats, the building should be large enough to accommodate all of them.

Now, Mr. Chairman, a hurried summary of the smaller post-office buildings shows the number to be about 2,100—and I gather this from the report submitted by the Department and filed with your committee may be constructed at an estimated cost of $85,000 each, or a total cost of approximately $178,500,000. Then there are about 900 listed with an estimated cost of $95,000 each, or a total cost of $85,500,000, making approximately 3,000 buildings at an approximate cost of $264,000,000.

I call attention to this list of eligible buildings for the reason that the need and justification for them have already been passed on by Congress and for the further reason that they are to be found in practically every nook and corner of the United States and will, therefore, distribute a service from the Government to practically every locality in the United States, many of which have never had an opportunity to see and realize the magnitude of our great Government and their relationship to its functions and responsibilities. There will be some people in these localities who will learn as never before to appreciate the significance of the American flag and what the Stars and Stripes really stand for. As they go about their daily work and see the Stars and Stripes waving to and fore in the breeze above these little buildings, the sensation will certainly arouse their devotion and loyalty to our great system of government as never before. Such a building and flag will contribute to the civic pride, and many a returned soldier within a few years will be able to create a feeling of pride, loyalty, and devotion in his children toward their Government when he points to that flag and relates to them how he followed it as his pillar of fire by night and pillar of cloud by day as he advanced through France, Italy, or Belgium on his way to Berlin, or as he sailed the uncharted seas of the Pacific and followed his leaders at Bougainville, Leyte, Luzon, Saipan, Iwo Jima, or Okinawa on his way to Tokyo.

Mr. WILSON. The thought that struck me, Mr. HARE, while you were speaking, is that a tiny flag flying from the homes of 12,000,000 ex-service men and women, and the pride of ownership, which I contend is the basis of Americanism and democracy, would mean a lot more toward the preservation of our form of government and of our way of living than a flag flying over a Federal building in these respective communities, and I would say that your statement fades into insignificance when we make that comparison.

Mr. HARE. I am not prepared to argue that question, but you may be correct in your observation.

Mr. McGREGOR. Getting back to the dollars and cents and the practical end of this program, it is my understanding that you feel that 3,000 post offices will take care of the needs of those which might become eligible under the limitation of $10,000 annual receipts.

Mr. HARE. Yes; approximately that.

Mr. McGREGOR. You calculated it at 2,100 buildings at $85,000 and 900 buildings at $95,000?

Mr. HARE. Yes; that is correct.

Mr. McGREGOR. From my own memory, we certainly have a lot of small towns which can qualify under this $10,000 annual receipts requirement, and certainly we can build a post office in these small towns for much less than $85,000 or $95,000. I think possibly your figures are very high.

Mr. HARE. I am glad to have that expression, because I was not attempting to place a minimum cost on construction, but my observations were based on the number of offices said to be eligible and the estimated cost as fixed by the Federal Works Agency at $85,000 and $95,000 respectively.

Mr. McGREGOR. I think that that was figured—and if I am wrong Mr. Reynolds will correct me—simply as a maximum figure, and I imagine that it is intended by the Department that some would be built at much less than that.

Mr. REYNOLDS. That is quite correct, sir.

The CHAIRMAN. Have you drafted an amendment?

Mr. HARE. Yes. I will come to that in just a minute.

I have referred so far only to a certain class or type of building, namely, those to be used primarily to accommodate postal facilities ranging in cost from approximately $85,000 to $95,000 each. Of course, this is only part of the building program suggested in the report submitted by the Postmaster General and the Public Works Agency. In round numbers there will be about 3,000 of these smaller buildings, and then by count or estimate there will be in addition about 1,000 miscellaneous buildings, at an estimated cost of about $521,000,000; that is, the construction cost of about one-fourth of the 4,000 buildings will be about twice as much as the remaining three-fourths. I am assuming that the latter buildings referred to are essential, but I have not had an opportunity to review the justifications or the grounds upon which they are recommended; but I want to emphasize the point that the 3,000 buildings to which I have specifically referred are found to be eligible upon a standard fixed by this Congress on June 25, 1926, and the committee, therefore, should have no difficulty in reaching a conclusion about authorizing their construction.

Mr. ARNOLD. With reference to the $85,000 and $95,000 building that you just mentioned, is that a building that is supposed to take care of, in addition to the post office, the production and credit association, the extension agent, and the Farm Security Administration office that we have in a lot of these towns?

Mr. HARE. My thought is that the additional cost attached to a building at a county seat can be offset by the reduction of the cost of housing the people in the other buildings; that is, some of these buildings may be constructed at a cost of $40,000 or $50,000 instead of $85,000 or $95,000, and this difference would provide the additional space required by those at county seats.

Mr. ARNOLD. Is it your idea that all of these different Government agencies such as have been mentioned here are to be gathered into the post-office building and housed there?

Mr. HARE. That is correct. And my thought is it would mean a saving in rent, fuel, heat, light, and a dozen other things.

Mr. ARNOLD. Let me ask you this: Do you expect to make provision for a Congressman to have an office where he can go, to take care of his business?

Mr. HARE. Not for the next few years, because I think he will be here in Washington. [Laughter.]

Mr. McMILLEN. Do I understand that you would confine the use of these buildings entirely to Federal use or to some local use having to do with health or other governmental matters?

Mr. HARE. Purely Federal.

Mr. GWINN. Are you not assuming that we are going to have the Federal offices permanently when you make such a proposition as that?

Mr. HARE. Yes; that is the assumption. My assumption is that the county agents will continue.

Mr. GWINN. Why have the county agent continue as a Federal agent from Washington, rather than a county or State agent of his own community?

Mr. HARE. He has always been a Federal agent.

Mr. GWINN. Why should he operate as a Federal servant, and why should we construct a building for him when he is a county agent in Indiana, or Wisconsin, or some other place, or from Washington?

Mr. HARE. My suggestion was based upon the action of Congress when it provided many years ago—about 1915, if I recall correctly—for the creation of the Extension Service, for the services now performed by persons referred to as county agents because their operations are generally confined to a county. The same is true of the home demonstration agent. The Government has provided for the establishment of public-health services in practically every community or county in the United States, and I assume that before we could take any contrary action it would be

necessary for the Federal Government to rescind its action.

Mr. GWINN. I understand. You are talking about a long-time investment of the Federal Government.

Mr. HARE. Yes; certainly.

Mr. GWINN. As though we are certain that these agencies that you mentioned are a fixed part, as a permanent concept of what the Federal Government should do. Now, your building will not be a very good investment if you build on that assumption and we change our minds. I think that this business ought to be scattered and that the counties and States ought to manage their own county agents. Take Federal funds, if you want, and appropriate them, but why should we manage from Washington a county agent growing grass in the dairy areas of New York State, rather than have that county agent in the county office building and subject to the department of agriculture of New York State, spending the funds at home instead of spending them through Washington.

Therefore, I would question the soundness of making an investment on the theory that we are always going to do business, in the next 30, 40, or 50 years, the way that we are doing it now.

Mr. HARE. I am sure that I could not argue with you on that, Mr. GWINN, because if you are assuming that all of these offices are going to be turned back—that is, that the Congress is going, by affirmative action, to turn all of the agencies or activities or offices over to the counties and States—then I do not think we should provide housing accommodations for them. But some of them have been in existence for 20 years, and I do not know of any outstanding movement to discontinue them, and you are correct in saying that my suggestion is based upon the assumtion that they will be retained and managed and financed by the Federal Government because the Federal Government now pays rent for their offices.

Mr. GWINN. Mr. Chairman, in connection with the good investment that the Congressman speaks of, many of our business enterprises—chain stores, for example—find that it is much better business to rent quarters because their business changes, increases or decreases, and they are able to adjust themselves to less cost according to the changing volume of business. Isn't that true of post offices?

Mr. HARE. No; but I have found cases where that is correct. I have found many farmers who felt it was cheaper for them to rent land than to own it. I have found many merchants who have found it cheaper to rent space than to own it. But, on the whole, I have found that it is better for the country and better for those engaged in agriculture if they can own their homes, and I have found that merchants and other business activities have been more efficient and successful by following the same policy, and I feel that our Government is going to be a continuing agency for many years to come, and I feel further that if this Government is going to render services to the people provision should be made to enable it to render those services in the most efficient way and at the least possible cost. I believe that if a good businessman were placed at the head of our postal facility he would find he could own his buildings and furnish the service more efficiently and cheaper than he could by renting them and assuming the responsibility of robberies, fire hazards, etc. I think that it would be cheaper and better business in the long run, and if it is cheaper for one agency I think we could save money by bringing these four or five or six agencies, whatever they may be, into one building than to rent separate and distinct places for them.

Now, on page 2, line 11, I have this amendment to offer; strike out all of the words following the word "made" and the period thereafter, and then strike out lines 12 to 15, inclusive, to the word "provided," and insert the following:

"New projects for the foregoing purposes shall include all post offices listed and contained in the revised report made by the Federal Works Agency and the Postmaster General dated September 25, 1945, including any supplements thereto which may have been made by the agencies named in the meantime."

The CHAIRMAN. Do you suggest any amendment with reference to the conditional authorization of the amount of money?

Mr. HARE. Should the suggested amendment be accepted, other changes should be made to harmonize with the amendment. I have to admit I am not sufficiently familiar with estimating costs, and so forth, but if the committee in its judgment, good judgment, should decide to accept this amendment, then other parts of the bill should be amended to coincide with the amendment.

Mr. MCGREGOR. Might I inquire of Commissioner Reynolds if he has any idea of the approximate cost of Congressman HARE'S amendment?

Mr. REYNOLDS. I do not, Mr. MCGREGOR, because some of the projects that would be included in this list are already in the document and would be provided for under the present limit of cost that was suggested. I would have to make some study of it, and report back.

Mr. MCGREGOR. Would it require a lot of work to do so, or could you do it conveniently?

Mr. REYNOLDS. Oh, yes; I could do it without difficulty.

Mr. HARE. Permit me to state there that I believe that this list referred to was compiled probably since July 1, and there would not be many additional buildings required under this amendment, beyond those set out in the report.

Mr. MCGREGOR. It is my understanding this bill covers a construction program of approximately 3 years.

Mr. REYNOLDS. We have never called it a program for any number of years; we have called it an initial program following the war, and it is our opinion that it will take at least 3 years to carry it out.

Mr. MCGREGOR. What period of time does your full report cover?

Mr. REYNOLDS. The report covers all buildings eligible as of the date of the filing of the report, and we are suggesting certain changes in that report, and we will have them for you in executive session.

Mr. HARE. Mr. Chairman, about the only argument I have heard against this proposal of authorization for immediate construction, and I mean by "immediate" as soon as circumstances and conditions will permit, is that we would not have a sufficient amount of building materials to complete this program under 6, 8, or possibly 10 years. My thought is that that estimate is too long, and I inquired of the Bureau of the Budget as to the expenditures for building purposes by the Government for the past 5 years and I am advised that within that time we have expended upward of $1,800,000,000 for the construction of Government or public buildings. Of course, we know that most of those were for the promotion of the war.

Mr. MCGREGOR. Does that include buildings constructed in the District of Columbia?

Mr. HARE. Yes.

Mr. MCGREGOR. The Pentagon Building is included?

Mr. HARE. Yes. It includes all buildings constructed or erected by the Federal Government in the past 5 years, or a little less than 5 years. My thought is that in the 5 years through which we have just gone, we have had the tightest labor market in the history of the country; we have had a greater scarcity of building materials than at any time in the history of our country; and yet the Government, through its different agencies, has been able to construct buildings costing more than twice as much as is contemplated in this whole program, including buildings in the District of Columbia, all of which were constructed within less than 5 years. They found the labor; they found the material; they were able to purchase the sites; they were able to make the surveys; they were able to prepare the blueprints; and they were able to complete all of these buildings.

Mr. MCGREGOR. Do you not believe that private industry and private property owners have suffered because of that?

Mr. HARE. I do.

Mr. MCGREGOR. You do not recommend the carrying on of that program?

Mr. HARE. No; I do not think it will be necessary. I do not know that this program can be completed in less than 2 years, or in 1½ years, but I think that the program for the next few years, as contrasted with the program for the past 4 years, should be reversed; that is, instead of the Government obtaining priorities for the promotion of this program, the priorities should be given to the people and to private industry.

That would be my answer, Mr. Chairman, to the question that you propounded to Mr. HOBBS, who preceded me.

The CHAIRMAN. Well, a statement to that effect has been placed in the record by Mr. Reynolds, that that was his purpose.

Mr. HARE. That completes my statement.

The CHAIRMAN. We thank you very much. We are glad to have your suggestions.

Mr. Speaker, it will be observed that my remarks before the committee were not in behalf of a building at any specific point or at any specific office, but in behalf of a program that will include all eligible offices, not simply for my district, but for the entire country. I admit that if the committee recommends the inauguration of the program suggested it will include a building for every office in my district eligible under the law of 1926. According to the records of the Post Office Department the following offices in my district are now eligible: Belton, Edgefield, Honea Path, Johnston, Liberty, McCormick, Ninety Six, Pelzer, Pickens, Piedmont, Saluda, Seneca, Walhalla, Westminster, Whitmire, and any other office that may have become eligible on January 1 or by the time the funds herein requested should be made available. I sincerely trust the committee will change the program of 1928 when it authorized only one building for each congressional district per annum. To bring in a similar bill now would be perfectly absurd, for if we undertake to follow that program it will require 15 years or longer before the present eligible offices in my district would all receive a building and by that time there would probably be a dozen more offices eligible.

Referring further to the suggestion that the building at county seats should be large enough to accommodate other Federal agencies, I might suggest that in many places this would not be necessary for the reason they already have accommodations for such agencies. I am pleading primarily for a suitable building at every second-class post office that is eligible under the policy adopted in 1926, regardless of any other agency, because I do not know of a single one of these offices but what would, with a Federal building, be able to render more efficient service to the public and in the long run be much cheaper for the Government.

Radio Discussion Over WLW, Cincinnati, Ohio, on the World Front Program

EXTENSION OF REMARKS
OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. BUFFETT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio discussion over WLW, Cincinnati, Ohio, January 20, 1946, in which Mr. Frank Scriven, national executive secretary of Amvets, participated:

Mr. CHAMBERLAIN (the moderator). Five million American war veterans have returned home since the defeat of Germany and Japan. About that many more are still to come. The veterans' readjustment to civilian life, and the Nation's readjustment to them, is and will continue to be for some time one of our more important problems.

For an insight into this matter, today's broadcast of the World Front seeks the advice and counsel of a spokesman for Amvets, the American Veterans of World War II He is Frank Scriven, national executive secretary of Amvets, and himself a veteran of the war. Amvets is the largest veterans' organization composed exclusively of men who took part in World War II. Welcome to the World Front, Mr. Scriven.

Mr. SCRIVEN. It is my pleasure, representing Amvets, to have had the honor of appearing here with you.

Mr. CHAMBERLAIN. Many Congressmen who returned to Washington the past week report that the voters are demanding some sort of congressional action about strikes. Do you believe that the majority of the people are actually greatly concerned about the industrial-labor situation?

Mr. SCRIVEN. The strike situation has had an unhappy effect on the returning veteran. It has not been helpful in his readjustment to civilian life. He is deeply concerned and hopeful that a solution may soon be found.

Mr. CHAMBERLAIN. A question now for our World Front guest observer. It's about the GI bill of rights. Mr. Scriven, what is Amvets' opinion of this measure? Does it go far enough in protecting the returned veteran?

Mr. SCRIVEN. Few of us have forgotten the bonus march to Washington. We know what caused that mass agitation. It must not happen again.

Thousands of veterans have been led to expect high-salaried jobs, money with which to buy homes, ample loans to finance new businesses. They were told that an education was open to them with all expenses paid.

That was the so-called GI bill of rights—a grossly exaggerated piece of legislation.

In spite of high promises, job-hunting veterans are getting little help. Those who seek medical care often get pushed around. The same delay and confusion is experienced by men anxious to buy farms or open businesses of their own.

It was reported to Amvets, in illustration, that only 30 students of a group of 500 had been receiving their benefits under the bill at a university in Washington, D. C.

Mr. CHAMBERLAIN. How about the housing provisions of the GI bill?

Mr. SCRIVEN. Red tape attached to the loan provisions for home ownership puts the veteran in the position of receiving a final O. K. to purchase his home 6 to 18 months after his original application. He is extremely lucky, then, if it is still available. On the home-ownership provision alone, Amvets' stand has been to endorse the pending Wagner-Ellender-Taft bill. This liberalizes the old FHA provisions, with priorities for veterans. And it is to be remembered under the old FHA, homes were built and not with too much red tape involved. If and when this bill is passed, Amvets believes that as far as home ownership is concerned, the present GI bill will be largely ignored by the veteran.

Mr. CHAMBERLAIN. What is Amvets' position on the bonus question, Mr. Scriven? Do you advocate the payment of cash payments to all veterans regardless of injury. In other words, is mere service in the Army or Navy enough to warrant payments of such cash benefits?

Mr. SCRIVEN. Amvets has not thought of a bonus. When we convened in Chicago last October, nobody mentioned the idea. Amvets were preoccupied with such questions as housing, jobs, and world security. The veteran feels his position should not be prejudiced by his service for country. A convention resolution adopted stated—a veteran applying for a civil-service job (city, county, State, or Federal) should be entitled to land the spot he would have attained if he had not been inducted.

Mr. CHAMBERLAIN. Today's guest observer on the World Front is Frank Scriven, national executive secretary of the American Veterans of World War II, Amvets.

Also joining our discussion is General Edmonds, Milt Chase, and William H. Hessler.

Sitting in at today's session of the World Front is Joseph Leib, national legislative director of Amvets, who accompanied Mr. Scriven on his trip to Cincinnati for this broadcast.

Mr. Leib is also a veteran of the war, and was a well-known Washington free-lance writer before joining the Amvets' organization.

Right here, I would like to ask Mr. Leib a question about Amvets' policy on the industry-labor matter. Has the organization taken a stand on this question?

Mr. LEIB. Amvets' position on this question was set forth last October at the national convention in Chicago. Our statement of principles includes the following passage: Amvets demands that both industry and labor clean house and establish responsible leadership and labor-management policies and procedures based on merited mutual confidence and integrity. We believe that both industry and labor have a paramount duty to the American people to reestablish their faith by denouncing and removing from their ranks and leadership professional racketeers, labor haters, labor agitators, regardless of what names they go by or what positions they occupy.

Mr. CHAMBERLAIN. Let's return to our guest observer for more information about the American Veterans of World War II. What is Amvets' program for the veteran? What are your long-range goals?

Mr. SCRIVEN. Amvets wishes to assist in building a bigger and better United States, in reestablishing the veteran when he returns to civilian life, in getting jobs, looking after the welfare of the veteran's family, sponsoring education Amvets is working for the greatest over-all benefits of the veteran of World War II, so long as such benefits are not prejudicial to the welfare of the country as a whole.

If Amvets does nothing more than bring back to this Nation a feeling of confidence in its democratic Government and in one's fellow man, it will have served a great purpose. Amvets staunchly opposes a dog-eat-dog civilization in America. Amvets has polled its membership about peacetime military training. The verdict so far is in favor, but the returns are incomplete and not conclusive.

Mr. CHASE. Can you list some of Amvets' achievements to date on behalf of war veterans?

Mr. SCRIVEN. For the benefit of disabled soldiers, we have sponsored the procurement of the finest obtainable artificial appliances. Amvets' investigations resulted in the Justice Department's indictment of many of the Nation's artificial-limb manufacturers.

Amvets secured the elimination of the age limit under the educational provisions of the GI bill of rights.

As for adequate housing facilities, at reasonable cost levels, Amvets is sponsoring a complete housing program, part of which is already enacted. Amvets has initiated a program of securing present Government housing projects under a nonprofit, mutual corporation plan and that proposal is under consideration. Amvets has sponsored legislation to freeze the sales of such projects until Congress clarifies the veteran's preferential status.

Concerning the preferential treatment of the veteran in surplus-property disposal, Amvet-sponsored legislation is pending to investigate the disposition of the surplus to date, and to establish a system where the veteran's priority right has a meaning.

As for the Veterans' Administration—their lack of facilities and personnel—Amvets influenced the passage of the needed appropriations over the heads of the committee which had deleted Veterans' Administration funds.

Correspondence courses for hospitalized veterans.

Mr. Scriven, how deep is the cleavage between servicemen with combat experience and those who remained in this country or in other noncombat areas during the war?

Mr. SCRIVEN. The only type of rivalry Amvets has noticed between overseas veterans and the stay-at-homes is the friendly type. There seems to be a full realization that a man in uniform served where he was told to serve—that orders were orders. Likewise, a good many veterans who didn't get overseas repeatedly asked for field duty abroad—but were kept at home.

Mr. CHAMBERLAIN. How about the Army-Navy caste system, the strict separation of officers and enlisted men? Does it go too far, in your opinion?

Mr. SCRIVEN. "Enlisted men should have the privilege of being represented on courts martial, as defense counsel, trial judge advocate, or members of the court itself" was the wording of a resolution passed at the Amvet National Convention. This resolution was the only expression of feeling on this matter. Amvets' membership is made up of ex-officers, ex-enlisted men and women. Whether they have been generals, admirals, or buck privates—they become just plain Amvets.

Mr. CHAMBERLAIN. What is Amvets' position on the recent demonstrations by homesick GI's all over the world?

Mr. SCRIVEN. Is our own home front so happy? Might not GI demonstrations abroad be only an expression of desire to get home and help correct existing conditions? Has proper explanation been given by the diplomatic part of our Government? Has the whole story been told? These questions come to Amvets' minds.

Amvets feels that every possible effort should be made to expedite the return to this country of the veterans whose points are sufficient to warrant their return. And this does not mean preferential treatment of a choice few. Amvets hopes that Regular Army personnel will take over the occupation job—men who want to make a career of soldiering. If return of those with sufficient points can only be accomplished by increased induction—then increase it.

Amvets does not feel that the needs for occupation forces should in any way be jeopardized by the removal of necessary troops. But let the men know of these needs, if they are real. We only plead that induction and training programs be so expanded as to permit the eligible man's return at the time of his eligibility.

National Freedom Day

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. BARRETT of Pennsylvania. Mr. Speaker, I would like to call the attention of the House of Representatives to the unanimous acceptance by many nationally known men of the proposed National Freedom Day as an annual holiday. As you know, I introduced House Joint Resolution 77, paralleling Senate bill 40, requesting the President of the United States to designate February 1 as National Freedom Day, as an annual commemoration of the signing of the Emancipation Proclamation by President Lincoln. The same spirit underlies this bill as that which brought together the United Nations at the San Francisco Conference in June 1945. The late President Roosevelt's secretary in January 1945 wrote to the Citizens Committee for National Freedom Day that:

> Your celebration of National Freedom Day this year transcends its usual significance. It is more than a tribute to a great people and a great nation; it is a beacon to oppressed peoples everywhere. The progress of Negroes in America since February 1, 1865, only emphasizes to the world the possible achievements of free people in free countries everywhere. I know you will continue to make this example even more outstanding in the years and generations ahead.

The idea of a National Freedom Day germinated in the brain of Maj. R. R. Wright, Sr., of Philadelphia, born a slave 90 years ago, whose rise in the educational and financial fields has been phenomenal. It is characteristic of a determined man to overcome all obstacles of race hatred, intolerance, and poverty; and justly places him in a niche alongside of Booker Washington and George Washington Carver. He has worked tirelessly in the interest of this National Freedom Day and at last his efforts are on the threshold of fruition.

The major attended the recent San Francisco Conference as the official representative of the National Freedom Day Association and was graciously received by many of the dignitaries of the various nations.

He was admitted to all the conferences except the closed committee meetings, and a luncheon in his honor was given by a number of bankers in San Francisco.

Gov. Ellis Arnall, of Georgia, and Governor Meadows, of West Virginia, have endorsed the proposed holiday. Governor Meadows appointed the president of West Virginia State College as a delegate to the 1945 Freedom Day celebration in Philadelphia in 1945. Letters were received by Major Wright from two-thirds of the Governors of the United States, endorsing National Freedom Day, by sending delegates to the Philadelphia conference. Both houses of the Legislature of the State of Pennsylvania have unanimously adopted the House Joint Resolution 77, and Governor Martin of Pennsylvania has issued his Proclamation setting aside February 1 as National Freedom Day.

Eighteen Members of Congress wrote commendatory letters to Major Wright. The following letters are typical of the letters received from many of the Members of both Houses:

UNITED STATES SENATE, COMMITTEE
ON AGRICULTURE AND FORESTRY,
April 28, 1945.

Mr. R. R. WRIGHT, Sr.,
President, Citizens Committee,
Citizens and Southern Bank and
Trust Building, Philadelphia, Pa.

DEAR MR. WRIGHT: I have your letter of April 25 expressing the interest of your organization in the bill before the present Congress which is the same as Senate Joint Resolution 153 introduced in the Seventy-eighth Congress by my good friend, the former Senator, James Davis.

I enclose a copy of Senate Joint Resolution 40 which I am advised is the measure to which you refer. I always held Senator Davis in high esteem and had great confidence in his judgment. Furthermore, I think this resolution embodies a constructive move and it will have my support and my vote if it reaches the floor of the Senate for such action.

Sincerely yours,

ARTHUR CAPPER.

EXECUTIVE DEPARTMENT,
Atlanta, January 9, 1946.

Maj. R. R. WRIGHT, Sr.,
President, Citizens Committee, Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

DEAR MAJOR WRIGHT: February 1 marks the anniversary of the adoption of the thirteenth amendment to the Constitution. It is an occasion upon which all Americans might profitably think upon two things.

First, that it is good that our country is a country of freemen, dedicated to the ideal that everywhere in the world all men must be free. Second, that harmony and mutual understanding between all races in this country is necessary and can be achieved by economic fair play and by mutual forbearance.

I am sure that those attending this celebration are mindful of these two things and are prepared to help maintain them.

Very sincerely yours,

ELLIS ARNALL,
Governor.

STATE OF MARYLAND.

Mr. R. R. WRIGHT, Sr.,
President, Citizens Committee, Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

DEAR MR. WRIGHT: I have your letter this morning advertising that National Freedom Day will be celebrated on Thursday, January 31, 1946, and February 1, 1946. You may be sure that I am pleased to cooperate as I have in the past because I feel that the movement which you are sponsoring is of such incalculable good that it gives great impetus to the most desirable race relations.

We have been so fortunate as to have two able representatives, Messrs. Willard W. Allen and Josiah F. Henry, Jr., and I would like very much to designate them again this year. Both of them, incidentally, hold important positions in our State administration and, for that reason, I feel would very capably represent the citizenry on the occasion of your meeting.

With compliments of the season, I am

Sincerely yours,

HERBERT R. O'CONOR,
Governor.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 17, 1946.

Maj. R. R. WRIGHT, Sr.,
President, Citizens Committee, Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

DEAR MAJOR WRIGHT: It has given me much pleasure to learn that the Honorable WILLIAM A. BARRETT, Member of Congress from the First Pennsylvania District, has introduced in the House of Representatives, House Joint Resolution 77, requesting the President to proclaim February 1 as National Freedom Day.

I recall your visit at my office some months ago and the interest which you expressed in this proposal at that time, and I want you to know that Mr. BARRETT's resolution will have my active support and that I will gladly cooperate with him in any way I can in efforts to bring about its enactment.

Sincerely yours,

HERBERT J. MCGLINCHEY,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 15, 1946.

Maj. R. R. WRIGHT, Sr.,
President, Citizens Committee, Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

DEAR MAJOR WRIGHT: I have been interested to note that the Honorable WILLIAM A. BARRETT, who represents the First Congressional District of Pennsylvania, has introduced in the House of Representatives House Joint Resolution 77, requesting the President of the United States to designate February 1 as National Freedom Day, to commemorate annually the signing of the Emancipation Proclamation by President Lincoln.

Being aware of your interest and of your activities in the National Freedom Day movement, I take this occasion to assure you that the proposal has my hearty support, and it will afford me pleasure to cooperate in every way possible in bringing about the adoption of this resolution.

Sincerely yours,

WILLIAM T. GRANAHAN.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 23, 1946.

Maj. R. R. WRIGHT, Sr.,
President, Citizens Committee, Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

MY DEAR MAJOR WRIGHT: With reference to your interest in the establishment of a National Freedom Day, to be celebrated on February 1, I wish to advise that I fully concur in the provisions provided in the resolution introduced in the House of Representatives by the Honorable WILLIAM A. BARRETT, to proclaim February 1 as National Freedom Day.

You have my personal assurances that I shall render every assistance in the enactment of House Joint Resolution 77.

Sincerely yours,

JOHN EDWARD SHERIDAN.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C. January 22, 1946.

Maj. R. R. WRIGHT, Sr.,
President, Citizens Committee, Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

MY DEAR MAJOR WRIGHT: As I know of your great interest in the establishment of a National Freedom Day, to be celebrated on February 1, it is with pleasure that I advise you of my intention to wholeheartedly support the resolution introduced in the House

of Representatives by the Honorable WILLIAM A. BARRETT requesting the President to proclaim February 1 as National Freedom Day.

I shall be happy to cooperate in any way possible with Mr. BARRETT, and other Members of the House who are interested in this proposal, and I trust it will be possible to bring about the enactment of House Joint Resolution 77.

With kind regards,

Sincerely,

WILLIAM J. GREEN, Jr.,
Member of Congress.

LIST OF GOVERNORS WHO HAVE APPROVED ESTABLISHMENT OF NATIONAL FREEDOM DAY

Gov. Chauncey Sparks, Alabama; Gov. Earl Warren, California; Gov. John C. Vivian, Connecticut; Gov. Walter W. Bacon, Delaware; Gov. Dwight H. Green, Illinois; Gov. Ralph F. Gates, Indiana; Gov. Robert D. Blue, Iowa; Gov. Jimmie H. Davis, Louisiana; Gov. Horace Hildreth, Maine, Gov. Herbert R. O'Conor, Maryland; Gov. M. Q. Sharpe, South Dakota; Gov. Jim McCord, Tennessee; Gov. Mortimer R. Proctor, Vermont; Gov Edward Martin, Pennsylvania; Gov. Raymond E. Baldwin, Connecticut; Gov. William M. Tuck, Virginia; Gov. Clarence W. Meadows, West Virginia; Gov. Lester C. Hunt, Wyoming; Gov. Maurice J. Tobin, Massachusetts; Gov. Harry F. Kelly, Michigan; Gov. Phil M. Donnelly, Missouri; Gov. Sam C. Ford, Montana; Gov. Dwight Griswold, Nebraska; Gov. Charles M. Dale, New Hampshire; Gov. Walter S. Edge, New Jersey; Gov. John J. Dempsey, New Mexico; Gov. Frank J. Lausche, Ohio: Gov. Earl Snell, Oregon; Gov. John O. Pastore, Rhode Island; Gov. Ellis Arnall, Georgia.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES.

Maj. R. R. WRIGHT, Sr.,
President, Citizens Committee,
Citizens and Southern Bank and Trust Building, Philadelphia, Pa.

DEAR MAJOR WRIGHT: Reference is made to your letter relative to the joint resolution introduced in Congress by Representative WILLIAM A. BARRETT to make February 1 the anniversary of the passage and signing of the thirteenth amendment by President Lincoln National Freedom Day.

It is quite natural and appropriate at a time like this, when our boys are giving of themselves so unselfishly in order that all men and women may walk the earth as free people, for us to dedicate by definite act our belief in the high and lofty principles of freedom. I think I understand in some small degree what this occasion means to you and your race, its significance, and what it commemorates. Americans everywhere are more conscious than ever of what liberty implies to the average man.

National Freedom Day could serve a real purpose by focusing the attention of all the people on the advantages of freedom and the imperative need of vigilance if our liberties are to be protected from attack, either directly or by subtle means.

Your interest in bringing this matter to my attention is appreciated.

Yours sincerely,

SAMUEL K. MCCONNELL, Jr.

Mr. Speaker, the Post Office Department has issued the thirteenth amendment stamp in recognition of this day, the design for which was selected by that great humanitarian, Franklin Delano Roosevelt.

The outstanding proponent of this National Freedom Day is Maj. R. R. Wright, Sr., president of the Citizens Committee for a National Freedom Day. Major Wright, a most striking personality, has been a leader and a great credit to the Negro people. The Morning News, of Savannah, on March 27, 1945, had a synopsis of the April 1945 Reader's Digest condensation of an article from the Progressive. The biographical sketch of this enterprising 90-year-old man which appeared in the Reader's Digest reads as follows:

"MASSA, TELL 'EM WE'RE RISING"

(Condensed from the Progressive)

(By Webb Waldron)

THE EXTRAORDINARY CAREER OF RICHARD R. WRIGHT, BORN A SLAVE, AND NOW LEADING NEGRO BANKER OF THE UNITED STATES

When Richard Robert Wright had taught school for 50 years he decided to quit. Born a slave, he had risen to be president of a Negro college in the South, a distinguished member of his race. Now he thought he'd better give younger teachers a chance. But Wright was only retiring from teaching, not from life.

"For years I had been telling my graduates to get into business," he says. "But they would come back and tell me there were too many handicaps for a Negro. I realized that the worst handicap was a firm belief among both whites and Negroes that the Negro hadn't any head for business. I thought it was up to me to disprove it."

So at 66 Wright became a banker. That was in 1921. Today at 90, a trim, vigorous man with fine-cut features, white hair, and sharp dark eyes, Wright is the leading Negro banker of the United States, president of the Citizens & Southern Bank & Trust Co., of Philadelphia. He thinks that his best years are still ahead.

Every working day from 8:30 to 6 o'clock Wright sits in his small, crowded office, busy with telephone, correspondence, Negro and white callers discussing loans and payments, the affairs of his race.

To get the full drama of this man's accomplishments, glance back to the day more than 80 years ago when news of Negro freedom came to a south Georgia plantation. Harriet, Dick Wright's mother, went to her mistress. "Are we really free?" she said fearfully. Reassured, she gathered up her children and wandered, afoot, 200 miles northward. After many months, near Atlanta, she found a school that had been opened to teach Negro children to read and write. Dick, then aged 11, entered at once.

One day the head of the Freedmen's Bureau, Gen. O. O. Howard, visited the school. "What message shall I take from you children to the people in the North who are helping you?" he asked. A boy rose in the back row. "Massa, tell 'em we're rising!"

That striking answer of little Dick Wright reached the ears of John Greenleaf Whittier, fighter for human liberty, and Whittier immortalized the phrase in his poem, Howard at Atlanta. Thousands of times the words of Dick Wright have been repeated in lectures, sermons, and songs. They became the slogan of a rising race.

Dick Wright pushed on through school, finally graduated from Atlanta University. Then he started a school of his own for Negro children, tuition 50 cents a month. One day a mother came with 25 cents—one "ition," she said, half the money for her little girl's first month's schooling. Soon she brought in the other 25, making it "tuition."

When Dick Wright was appointed first president of Georgia State College for Negroes, Dr. Oliver Wendell Holmes sent him a message: "Man, you're not rising, you're risen!" Wright was president of that college for 30 years, fighting for the right of Negro boys and girls to an education not only in handicrafts and farming, but in science, languages, and the arts.

Then came the decision to start a bank. In his teaching days Wright had organized a national Negro teachers' association. Now he wrote several hundred Negro teachers all over the United States, asking whether they'd like to buy shares in a new bank to be owned and run by Negroes. Entirely on his name he raised $156,250. Then he visited various cities to determine where to locate the bank. Finally he fixed on Philadelphia. To a man, the leading bankers of Philadelphia advised him against it. There were enough banks in Philadelphia, they assured him, and besides he didn't know anything about banking. "That just made me determined to go ahead," says Wright.

He had three grown sons, all college graduates, and he persuaded the youngest, Emanuel, to join him in the banking adventure. Father and son enrolled in a course in banking at the University of Pennsylvania. Meanwhile, Wright bought and remodeled an old building in a section of Philadelphia that was predominantly Negro.

The Citizens and Southern opened with $125,000 capital and 300 Negro stockholders. From the start Wright used his bank as a means of creating better relations between white and colored people. For instance, the streets in that area were unpaved. Wright got up a petition to the city fathers which was signed by hundreds of people, black and white. Ultimately the district got everything it asked for, pavements, street lights, traffic lights. "That bank is the best thing that ever came into this part of town," said a white shopkeeper.

Wright promotes thrift among the people of his district, colored and white. "The Negro is often said to be thriftless and unreliable," he says, "but as a banker I have never been able to see any difference between white and Negro. There are thrifty and thriftless people among them both in about the same proportions."

He encourages individual initiative by lending money to ambitious youngsters. One time four young white men came to ask his advice about starting a hat factory. "I looked them over. They had saved about $400," he says. "I told them when they had their plans ready to come back and tell me what they needed. Ultimately I lent those boys $10,000. They made good, and paid back every cent of it."

Another man who wanted to start a sweater factory looked all over the city for credit before he came to Wright. "I thought he had character," Wright told me. "Character is more important than collateral. So I lent him $300 to get started. Last year that man banked $219,000 with us."

Dozens of small Negro enterprises in Philadelphia, such as laundries, dry cleaning establishments, groceries, bakeries, and schools, have got started or survived crises by the help of Wright's bank.

"Of course, there are handicaps for the Negro in business," Wright said, "but I always say to a young man starting out, 'Don't have a chip on your shoulder, don't be aggressive. Go ahead straightforwardly as if you expected to be treated like anybody else, and you usually will be. Your ability and honesty will do more to put you ahead than your color will hold you back.

"In the South it's different," he told me. "But the South today is going ahead more rapidly than the North in tolerance and fair play for the Negro. I predicted 25 years ago that this would be true, and it is."

The president of a large downtown Philadelphia bank, after telling me that he'd be proud to walk up Broad Street with Wright because he admired him so much as a man, added hesitantly, "But I don't think he's hardboiled enough to be a good banker. Why the other day the Major"—everybody

calls Wright "Major" because he was a paymaster with that rank in the Spanish-American War—"the Major came in here asking my advice about making a certain loan. 'Major,' I said, 'you'd be crazy to make such a loan. That man hasn't got anything!' "

I repeated this remark to Wright. "Well," he said, "maybe I'll make that loan anyway. I think the man has character."

A member of Wright's board of directors told me that sometimes when the board has turned down a loan Wright goes ahead anyway.

"Of course," the Major commented, "every bank in the world gets fooled on borrowers and loses money, but it's a curious thing that on those loans we've never lost a cent."

One time a group of Negro professional men formed a corporation, borrowed money from Wright's bank, hired a manager, and started a laundry. It looked like a sure thing. But the management was bad, and the business failed. Since it was a corporation, no individual was liable for the debt. Yet the incorporators raked up all available assets and repaid the bank in full. "I failed to make sure the company had good management," Wright says. "But my estimate of the character of those men was right."

Loans to churches are often considered by banks in the nature of charity. Wright's bank has loaned money to over 100 Negro churches in and around Philadelphia, and every obligation has been met.

Recently he called in 20 white businessmen who had banked with him for years and asked if they had any kicks or suggestions. "Yes, I have a kick," one of them said. "Why did you ask only white men here today? The next time get some Negro businessmen, too. We're all dealing with you together." Wright's ceaseless efforts to break down barriers between the races in a business way has had its effect.

In the 1933 banking crises, the Citizens & Southern was one of the first Philadelphia banks to reopen. "Some of those big downtown banks whose presidents had advised me to stay out of banking," said the Major with a humorous squint, "didn't reopen at all."

Today the bank's $125 shares are worth $143 in open market. The bank has some 10,000 Negro depositors, 1,000 white depositors. Total deposits are $2,312,000. A small bank for a big town, perhaps, but a big bank in its implications for the Negro people. Today the United States has 11 Negro banks. The other 10 are in the South.

On the wall of Wright's office is a photograph of the first meeting of the National Negro Bankers Association, which Wright organized. Here is a picture of the airplane that Wright bought in 1939 and sent, with a Negro crew, on a good-will flight to Haiti and then on a trip around the Negro colleges in the South. That trip did much to promote the enlistment of Negro youth in our air forces.

And here is a picture of this year's celebration of National Freedom Day, the day on which President Lincoln signed the joint resolution of Congress proposing the thirteenth amendment, and thus insured the legal end of slavery. The major originated the idea of celebrating this day—February 1—and already it is observed in many States. As he and his associates conceive it, National Freedom Day is not only a celebration of Negro freedom but a day to challenge bondage everywhere, to assert the right to freedom of all men.

So, "Tell them we are rising" has a constantly widening meaning as the major repeats it.

Mr. Speaker, the Morning News of Savannah also stated that as president of Georgia State College, Professor Wright was esteemed by all the white people who knew him, which is also true in Philadelphia.

Our late President, Franklin Delano Roosevelt, was the first sponsor of this bill, and at that time Mr. Truman joined heartily in the request that the President proclaim February 1 as a National Freedom Day.

It is interesting to note that President Truman on December 28, 1945, signed Public Law 290, calling for public observance of January 5, 1946, in honor of George Washington Carver, the noted Negro scientist. The President's proclamation also calls for the display of flags on all Government buildings in commemoration of the scientist's achievements.

Mr. Speaker, I am proud to be the author and sponsor of this bill and to be included in the list of Members of Congress who have already given written and verbal support to this proposed annual National Freedom Day.

A Book That Should Be Published

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. VOORHIS of California. Mr. Speaker, there is a manuscript of a book which sets forth the full story of the machinations of the I. G. Farben Industry of Germany as an integral part of the Hitler war machine which up to date has not been published.

This book was written by Howard W. Ambruster, of Westfield, N. J., a man who has spent a great part of his life collecting the facts about the operations of this and other great cartels. Publisher after publisher has praised this book in the highest of terms, tentatively agreed to publish it, and then for reasons never clearly set forth, decided to reject it. This has happened so many times as to make no conclusion possible excepting that it is due to extreme pressure from the powerful interests associated with this huge cartel and to the likelihood that these interests would press suits against the publisher, using some of the great resources at their command for this purpose.

Over and over it has been stated by people competent to judge that the material contained in this book is not subject to suit for libel, but there is apparently fear that although the suits would ultimately be won by the publishing houses, the pressure against publication has so far been sufficiently strong to prevent any publisher from giving this information to the American people.

I am placing these remarks in the CONGRESSIONAL RECORD primarily because of my faith in the publishers of America and my belief that the time cannot be far distant when one of them at least will be courageous enough to publish this book. My interest in the matter is naturally not one of concern over what happens to Mr. Ambruster's manuscript, but rather with the importance of an adequate exposition of the operation of cartels, particularly the grandfather of all cartels, namely the one presided over by I. G. Farben and still a powerful factor in world industry and politics.

To indicate some of the opinions expressed by publishing house editors about the book, I quote directly here from a number of their reports. Each of the following reports is from a different publishing house and all of them are substantial companies well known throughout America.

Is full of dynamite. The author names names—and some of the names are in very high places indeed. The material appears to be well documented and I found it absorbing reading.

It is an absorbing and important story that deserves an early and widespread publication. * * * A tremendous contribution to peace for America and security for the ordinary man in the world.

Astounding revelations of the activities of I. G. Farben * * * a book that should be read and pondered by every intelligent American today who has made up his mind that the mistakes of the past quarter of a century should not be repeated.

Ambruster has done a magnificent job of uncovering the very important facts which have made the book possible.

The book contains a bombshell the detonation of which may help to prevent World War III.

All agreed that the material is significant and that Mr. Ambruster's contribution is an extremely valuable one.

One publishing house went even further and wrote to Mr. Ambruster the following letter concerning publication of the book:

This will say "thank you" for your thoughtful and courteous letter of November 8. We, too, are delighted that everything is working out so well in connection with the forthcoming publication of Hitler's Tar Baby. There are a few things to be decided and then we will be in a position to determine the month of publication. We fully appreciate your reasons for wanting the book published as early as possible. Bearing that in mind, but more important, thinking of the best interests of the book, we will arrange a time of publication which will enable the book to have every help in getting properly started.

However, the considerations which no doubt influence the publishers against putting out the book are summed up in part of a letter written by attorneys for one of the publishers.

The reason you have had so many rejections on this book and the reason why we ourselves do not want to publish it has nothing to do with our feeling about the veracity of the facts involved. My own hunch is that everything that Ambruster has written is probably true, but it is equally apparent that there would be not one but a number of expensive lawsuits involved and that the cost of publishing the book would be far beyond any profits which might accrue from that publication. I don't mean by that that I think the suits would be lost; I merely mean that our lawyers' fees in defending those suits would run to staggering sums. Some day I hope our court system will be changed so that an unsuccessful plaintiff has to pay the defendant's legal fees; that would make the publication of a book like Ambruster's a practical undertaking.

At this point I should like to insert the full text of two letters written to Mr. Ambruster by Amos S. Basel and Nathan Frankel, both of them competent attorneys who had examined the book with care in order to determine whether or not any of the material therein was libelous. A considerable number of other letters of similar import are available and could be submitted as well.

DEAR MR. AMBRUSTER: I have read your book, Treason's Peace, for libel. I have examined the documentation upon which the facts therein stated are based. In my opinion, the book is entirely free from any libelous statements and could be published immediately without any fear whatsoever on the part of anyone connected with its publication that an action for libel could be sustained.

I might add that I represent a stockholders' committee of the Standard Oil Co. (New Jersey), which committee was formed for the express purpose of fighting the management's cartel policy. In connection with said work, I have had I. G. Farben upon American industry and I can authoritatively state that your book is a truthful and accurate picture of the operations of Farben and its American affiliates.

In the event any publisher who is interested in your manuscript wishes any further information from me regarding my opinion in this matter, please don't have him hesitate to call upon me at any time.

Sincerely,

AMOS S. BASEL.

DEAR MR. AMBRUSTER: The question you have asked me, whether the publication in book form of your manuscript concerning I. G. Farben and other cartels would or would not be followed by a suit for libel by persons unfavorably mentioned, may be answered simply.

The episodes recited in your study are obviously based on facts brought to light during hearings of legislative committees or in reports of official bodies made matters of public record and available generally. The copy which I had the privilege and pleasure of reading was annotated with marginal notations in pencil, indicating next to each statement alleged as a fact the particular source. I understand that at your home you have on hand, available for anyone's inspection, all the documents constituting the source from which you have pieced together the whole story. I assume that in no case has it been necessary for you to go beyond the documented facts. Some of the facts I recall having myself read in the public press and elsewhere.

Under the circumstances, the publication of such material, if it constitutes a fair transcript of the report of a legislative, executive, or judicial body, is deemed privileged in this jurisdiction, and immune from attack as a libel in a civil suit for damages, regardless of the truth or falsity of particular allegations made during the course of the hearing or report.

Any prospective publisher of your manuscript could assure himself against the successful outcome of a possible action in libel by having his attorney simply check the references you have supplied. In border-line statements, where he might be in doubt as to whether they constitute a fair comment or transcript of the public proceeding, the doubt might be resolved by a change in terminology.

My best wishes for the early publication of your valuable work.

Sincerely,

NATHAN FRANKEL.

I wish also to quote from the body of a letter written by Mr. T. H. Tetens, author of the book called Know Your Enemy. Tetens is a distinguished anti-Nazi German scholar who escaped from Germany after a number of arrests by the Nazis, and is now director of the library on Germanic and related problems at Columbia University:

As I told you repeatedly, I am of the opinion that Mr. Ambruster's book about the I. G. Farben octopus in the United States should under any circumstances be published and widely distributed in the United States. The Allied efforts to destroy the industrial apparatus of the I. G. Farben in Germany do not solve the problem with which Mr. Ambruster deals in his book. What Professor Foerster said years ago about pan-Germanism holds good for this book—we have to defeat them militarily on the battlefields of Europe and politically in the United States.

Provided that the most important plants of the I. G. Farben octopus in Germany are destroyed or transferred to Russia or other European countries as reparations, nevertheless the powerful world-wide octopus of the I. G. Farben is still in existence. This is exactly what Mr. Ambruster says in his book, by proving how the I. G. Farben resumed their dangerous economic and political activities after the First World War. We know today that the I. G. Farben agents, the "synthetic American citizens," as Ambruster calls them, are more firmly entrenched in the United States than ever before. In addition to that, long before the military collapse the I. G. Farben center in Germany transferred its best experts, its formulas, assets, and all its political and economic secret plans to Spain and Argentina. This development is the more dangerous because there are only a very few persons who are able to look behind this smoke screen.

There is no doubt that the I. G. Farben stooges in the United States are the chief backers of the anti-Russian, anti-British, and pro-German propaganda in this country. Mr. Ambruster should stress this point more emphatically than he does in his manuscript.

I here repeat the suggestions which I made during our conference:

1. The introducing chapter should be extended and should show the black records of the world-wide I. G. Farben conspiracy. The thesis is that this I. G. Farben plot in favor of pan-Germanism could not have been so complete without the tremendous economic and political support of the I. G. Farben influence in the United States.

2. The following chapters should show the record of the I. G. Farben machinations in the United States. These chapters of the manuscript need hardly any changes. They deal with the I. G. Farben record during the First World War and with their maneuver under the leadership of Herman Metz to get their assets back during the twenties.

3. The third part of the book should show the extensive political and economic corruption of the I. G. Farben in the United States. These chapters are a main part of Mr. Ambruster's present manuscript. On some places I think it should be somewhat shortened, and lengthy documents should be taken out and form part of the appendix.

4. The concluding chapter should wind up with an accusation of the I. G. Farben promoters in the United States and with an effective warning to the American public not to overlook the inevitable third plot of the I. G. Farben octopus and pan-Germanism.

The book should be published as soon as possible. I am convinced that it could serve as an important weapon in our fight as long as the vital economic and political problems have not yet been settled. I have no doubt that this book will exercise decisive influence on American public opinion. Makers of public opinion, such as journalists and commentators, will be strengthened and uplifted by the facts presented in Mr. Ambruster's book. They will understand why certain American monopolists and their agents are so eager today to revive Germany's industry.

The publication of this book would be an effective political action, and you would have done a grand job.

Sincerely yours,

T. H. TETENS.

Mr. Speaker, as I stated earlier, it is my confident belief that the day will come when the material contained in this manuscript will be made available to the American people. It will be a monument to the courage of some publishing house when this happens. It is evident from the material which I have included, even in this brief extension of remarks, that the book is not libelous, that it is of great value as a source of information, and that only threats and attempted intimidation have so far caused it not to be published. For such a situation to continue indefinitely would be a sad commentary on freedom of speech and the press in the United States.

Good-Neighbor Policy in Korea

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. ELLIS. Mr. Speaker, I submit for the consideration of the Members of the House a copy of a letter received from a United States soldier in Korea.

It tells a sordid story, and is another link in the long chain of evidence that the good-neighbor policy of the administration has failed in its objectives. However, for some reason unknown to most of us, we continue wasting good American dollars and materials.

The letter follows:

KOREA, *January 2.*

DEAR SIR: The article you enclosed with your recent letter concerning the meeting at Moscow, and the reactions of the Koreans to such, exposes some of the mistakes and farces of our leaders very mildly. One could spend a lifetime itemizing similar cases and much worse ones after being in the service and overseas for a time.

This very day the Government is spending millions of dollars building roads, airfields, petroleum storage, pipe lines, buildings, streets and sidewalks, and all sorts of nonmentionables right here in Korea which will all be outright gifts to a people who don't even care for them and the modern living of our Western World. That is not to speak of the lives and years of many of the servicemen's wasted years. At the very same time we find crowds, mobs, and numerous political factions carrying on demonstrations in the street with banners reading Independence or Death.

Meanwhile, a goodly number of GI's have been knifed, beaten to death, and the rest are all confined to their billets by a curfew, by 8 o'clock in the evening after working all day on the afore-mentioned comforts, under constant danger of being knifed or stoned by independence-seeking Koreans.

That is the story after we were greeted with "Welcome" signs and "Americans—Angels of Peace." Next they unloaded old stocks of junk for souvenir-seeking Yanks at ridiculously high prices. By this time they may have run out of stock and have plenty of yen baled from profits realized from black

marketing of our Government merchandise sent over here for "our dear boys."

Some day we liberators of the world will get everyone liberated, but only to return to our own great land to find it and our wealth well spent away, dissipated and scattered all over the face of the globe.

Right now I have but one ambition and that is to get out of here. I hope to leave here and any time now either on points or my 4 years' service. Of course many men with as little as a year's service have gone home. They are the ones who were "unfortunate" and couldn't get in the service, they were married, they had children, or worked long hours in war plants at time and a half and double time thus assuming great responsibilities. We, who are single, apparently have no responsibility and have plenty of time for our future. That is just a vague picture of what we have fought for not to speak of what we are going back to.

We have had snow on the ground for quite some time and it is flying quite thick now. The winds are much stronger and much colder and damper than we have in West Virginia. They seem to originate in Manchuria and have a terrific cutting power.

I hope to return and see you soon.

Sincerely.

Columbia Valley Authority—Rebuttal

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by Robert W. Sawyer and Richard L. Neuberger from the Sunday Oregonian of December 23, 1945:

CVA—REBUTTAL

AGAINST

(By Robert W. Sawyer, publisher, Bend Bulletin)

The differences between Captain Neuberger and me in the matter of the Valley Authority issue are best explained, I think, by saying that in his affirmative statement he discussed an idea, while I, for the negative, considered the manner in which it was proposed to put that idea into execution. He, that is, wrote in large and general terms about the TVA and the applicability of the TVA idea to the Columbia Valley. I considered the question of TVA's success and, in particular, examined Senator MITCHELL'S CVA bill (S. 460), which has been widely endorsed by Valley Authority advocates.

The Neuberger approach is, perhaps, the proper one to use if you are too hurried to get down to brass tacks. In this debate, however, when we have before us, as Secretary Ickes has said, "a major step in the basic reorganization of the Government of the United States as we have known it for the last 150 years," it seems to me that we must discuss the fundamentals as they are presented in the bill by which it is proposed to effect that basic reorganization. Hence my concern over what is to be found in S. 460.

Captain Neuberger, I have noted, does not mention the Mitchell bill. He does refer, however, to "the Mitchell-Jackson bill" and there he has me. Jackson is a fresh name in the Valley Authority argument. Does its introduction mean that something new is to be added of which my worthy adversary has advance knowledge?

Mitchell bill escapes mention, publisher avers

Captain Neuberger, I repeat, does not mention the Mitchell bill, S. 460. As a matter of fact, I doubt that he has even read it. The general evidence to that effect appears in his constant reference to the Columbia Valley, the resources of the Columbia River, and so on, and his complete failure either to mention the other Oregon and Washington rivers covered by the Mitchell bill or to offer justification for their inclusion.

Particular evidence is found in his statement that "the three directors of CVA could make a decision * * * without having to report to any Cabinet officer." "They would be responsible," he continues, "to the President and Congress. No Cabinet officer could stand between CVA and the elected representatives of the people." Certainly, Captain Neuberger would not have made that statement had he read S. 460 and noted section 6 (a) thereof, which provides: "All the powers of the (CVA) corporation shall be exercised by the board of directors subject to the powers of the National River Basin Development Board. * * *" In section 5 (a) appears the provision that "the Secretary of the Interior shall act as Chairman of the National River Basin Development Board." In the face of those provisions how would the CVA directors bypass the Secretary of the Interior? The Secretary of Agriculture, by the way, is also a member of that Board, and the Secretary of War is represented on it by the Chief of Engineers of the War Department.

Captain Neuberger's flair for the dramatic appears in the opening paragraphs of his article in which he tells us that in spite of a near 30-year crusade "for the Federal development of the vast resources of the Columbia River" nothing has happened until President Roosevelt entered the White House "pledged to the systematic and orderly improvement of America's great river valleys."

"During those decades," Captain Neuberger says, "leading citizens of the Northwest tried to work through such old-line Government agencies as the War Department and the Department of the Interior for the construction of dams at Bonneville and Grand Coulee. But not an ounce of concrete was poured, not a single rivet driven home. The old-line agencies, competent though they were, failed utterly to put over the projects."

Agencies get appropriations by act of Congress

In those sentences that I have just quoted, Captain Neuberger gives his readers the impression that it was the duty or the responsibility of "the old-line agencies to put over" construction projects and that they are to be blamed for failure to do so. I regret the need of taking space to set out the facts.

The facts are, of course, that the "old-line agencies" have no such responsibility. Their duties have always been and still are, obedient to the direction of Congress and through the bureaus and agencies they control, to investigate, and report. Then, when authorized by Congress and furnished by it with the necessary appropriations, they have the further duty to build.

The Portland Chamber of Commerce, for which Captain Neuberger has so slight regard, was the organization that sought the construction of the Bonneville Dam. The Spokane chamber led the effort to bring about Grand Coulee. In each there was involved, were the construction work to go forward, the expenditure of public funds. Those "old-line agencies" had none. Funds, in ordinary course, Congress would have provided. Congress required, however, in these as in other projects, the background of investigation and report.

It is true, as Captain Neuberger asserts, that "countless reports were written." It is fortunate that they were. It is fortunate that the chambers of commerce pressed for the studies and investigations that were back of the writing of those reports, for had they not done so, had not the reports been written, the construction ordered by President Roosevelt would have languished while the material of the reports was being assembled. But it is not true, as implied by the captain, that only the accession of Mr. Roosevelt to the Presidency brought about the dam construction.

It was the existence of a tremendous business depression, the surrender by Congress of its authority and control over expenditures and its handing its power to the Chief Executive that gave the President the opportunity to start the work. The Neuberger argument is for the continued abdication by Congress, even in normal times, and the grant to others of its hitherto accepted function of examination into and appropriation for specific projects. That would be a long step toward totalitarianism. Remember, please, that while Captain Neuberger is writing only about the Columbia Valley, Secretary Ickes has told a Senate committee that Congress will not do less for one river valley than another.

"Are we to leave the future development of our region to political caprice?" asks Captain Neuberger, suggesting that only through the establishment of "a permanent, continuing regional board with authority and responsibility to develop all the resources of the Columbia River Valley on a coordinated basis" will such a condition be avoided. Well, I venture to urge that there is no magic in a three-man board that will prevent decisions on the basis of political caprice. It was political caprice that, at times, guided President Roosevelt. The Nation will not avoid such caprice by creating valley authorities. There is bound to be what may be called politics and caprice in any Government agency. Most Americans, I believe, if they think the thing through, would rather deal with it in Congress than anywhere else.

Congress held essential in our country

Yes, Congress is slow. Yes, Congress is ponderous. Yes, Congress at times seems inefficient. Yes, Congress is unbusinesslike. Yes, Congress is subject to regional and special interest and to political pressure. Nevertheless, Congress is a representative body. It is responsible to the electorate. It is always on trial. Through its committee procedure and its annual study of appropriations it is constantly examining the affairs of the country and the needs of the people. It is and should remain the national authority.

To confute the charge that a valley authority would endanger the rights of the States, Captain Neuberger cites the statements of governors of Tennessee Valley States collected by a St. Louis newspaper. Let us agree that no rights of any of these States have been affected by the TVA. Our question is whether the legislation proposed for the Columbia Valley region would affect rights now enjoyed by and in the States of the Northwest. One has only to examine western water law in comparison with that of the Tennessee Valley to find his answer. If he would seek further let him ask the port commissions, the highway commission, the State engineer, the county courts whether the Mitchell bill proposes encroachments on State rights.

Instead of quoting these Tennessee Valley Governors, Captain Neuberger should observe what Senator O'Mahoney, of Wyoming; Representatives Case, of South Dakota; Lemke, of North Dakota; D'Ewart, of Montana; and Governors Vivian, of Colorado; Ford, of Montana; and Sharp, of South Dakota, said about States' rights and valley authorities in the hearings on the Missouri Valley Authority bill (S. 555), similar in many respects to the Mitchell bill.

Captain Neuberger quotes the late Ben T. Osborne in support of a Columbia Valley Authority modeled after the TVA. The statements quoted were made by the labor leader in the course of an appearance before the Pacific Northwest Regional Planning Commission. I am glad the captain introduced this matter. He thereby gives me the opportunity to point out that that planning commission, consisting of Marshall N. Dana and Ormond R. Bean, of Oregon; J. S. James, of Montana; B. H. Kizer, of Washington; and Will Simons, of Idaho, doubted "the wisdom of proposing a Columbia Valley Authority with duties duplicating the TVA." "Duplication of TVA not advisable in Pacific Northwest," is the subhead over a section of the commission's report. With all due regard to Ben Osborne, I suggest that the commission's views, as set forth in this report, are those to which deference should be paid.

I am glad, too, of this statement by Captain Neuberger, "A few years ago the old United States Biological Survey was consolidated into the Fish and Wildlife Service along with many other agencies." The assertion is made to show how easily Federal agencies can be combined, as they would be in a CVA, and continue to function efficiently. Now, there were only two, rather than "many," agencies involved in that consolidation—the Biological Survey and the Bureau of Fisheries—and the present head of the new agency has insisted that it be left out of any authority consolidation. Under the Mitchell bill it would be taken over by the Authority. That head of the Fish and Wildlife Service, by the way, is an Oregonian, Ira N. Gabrielson.

Captain Neuberger writes of the "whole galaxy of Government agencies" that operate in the Columbia Valley, and asserts there is no coordinating point. "Would you run a hotel," he asks, "with one kitchen for salads, another for soups, still another kitchen for meat orders, and so on?" The figure is an unfortunate one for a valley authority advocate to use, for while it is true that you would not run a hotel with numerous kitchens, it is the fact that hotels and restaurants have single kitchens that are staffed with cooks charged with various independent duties. Such is the case today in the Columbia Valley kitchen, and nobody has pointed to any lack of coordination.

Lilienthal quoted on remarks about TVA project

"We are told," says the captain, "that because of the difference in acreage (between the TVA and the CVA) we of the Northwest cannot have a regional authority." "This," he continues, "is nonsense." No one, I think, has said that we cannot have an authority in the Northwest. Chairman Lilienthal, of the TVA has said, however, that "regions should not be so large that they are not, in a management sense, of workable size." He has also said, in effect, that substantial additions to TVA's present 81,000 square miles would impair its effectiveness. The proposed CVA, you will remember, contains 279,000 square miles. This, on Mr. Lilienthal's testimony, would be too large, and thus it develops that on this point of the too-great size of the CVA, Captain Neuberger's argument is not with the chambers of commerce or the power companies, but with the head of the TVA.

I quote again from the Neuberger argument in support of the CVA: "During the immediate prewar years," he writes, "retail sales for the whole country climbed 54 percent, in the Tennessee Valley 67 percent. The income of the entire country went up 29 percent, in the Tennessee Valley 39 percent. Wages for the whole country increased 46 percent, in the Tennessee Valley 56 percent. Yet we of the Pacific Northwest now hear the propaganda that an agency like the TVA would be a bad thing for the Columbia River Valley." I cannot follow the argument. There is no meaning for the Pacific Northwest in the fact that retail sales, income and wages in the Tennessee Valley were higher than "in the whole country." The figures for the Pacific Northwest are the ones that concern us. What were they? Whatever they were the figures for the Tennessee Valley are easily explained. They were the result of the spending by the TVA of hundreds of millions of dollars. And the widespread approval of TVA, said to exist in that region is based, without doubt in large part, on the synthetic prosperity resulting from that spending.

Journal does not offer full approval

Captain Neuberger asks if we in the Northwest shall discard "the outstanding example of the TVA" or "coordinate the development of the * * * resources of the Columbia Valley in a single, integrated agency?" and he then says that "The Wall Street Journal, organ of business, can set us right on the subject." This assertion he follows with a quotation from the Journal and he would have the reader conclude, from the quotation, that that paper approves the TVA. "The proposal for TVA's in every important watershed in the country has a logical foundation," he quotes, and continues from the Journal, "If TVA has been a good thing for the Tennessee River region, it should be a good thing for every other river region."

By failing to follow that statement with the phrase "in which conditions are the same," the Journal departs from its usual logical accuracy. In using it as evidence of the Journal's acceptance of the TVA, Captain Neuberger fails to note that the paper uses the word "if." "If TVA has been a good thing," says the Journal and then follows with a sentence that the captain does not quote, "How good TVA has been for the region it occupies might be debated. * * *" In other words, the Wall Street Journal by no means has concluded that "TVA has been a good thing."

And since that organ of business has been mentioned, let me offer its opinion on the TVA electric rates as providing "a true yardstick" for measuring reasonable service rates. "The TVA yardstick," says the Journal, "isn't made even of a good synthetic rubber, but of a special nonhardening plastic."

Throughout Captain Neuberger's argument he speaks disparagingly, if not with scorn, of chambers of commerce and private power utilities. The fact that such organizations and business interests oppose a Columbia Valley authority is sufficient in his mind to damn them and to prove the authority idea to be sound.

There are honest men who believe in private power, in private enterprise, who support and work through chambers of commerce for pay rolls and for general community development and prosperity. There are men of integrity who see in the valley authority proposals an unwise, an unnecessary, even an unconstitutional extension of Federal control. They see in them an abrogation of the powers of Congress and a piecemeal destruction of representative government.

I invite Captain Neuberger to believe that not all who hold to ideas contrary to his are unworthy citizens and businessmen.

I invite him, so that this valley-authority question may receive the national attention that it deserves, to seek an authority in every valley region in the country, preferably under one general legislative act. Thus there will be developed a Nation-wide debate.

If the idea has been proved good it should be made effective at one time all over the United States.

CVA—REBUTTAL

FOR

(By Richard L. Neuberger, Portland author)

The argument over the proposed Columbia Valley Authority resolves itself down to a fundamental question: Do we want our region developed on a unified basis for the benefit of all the people or should we trust to a piecemeal, uncoordinated administration of the resources of the Columbia River watershed?

Whether he realizes it or not, Robert W. Sawyer's protests against a Columbia Valley Authority follow almost word for word the criticisms directed against Bonneville and Grand Coulee Dams by eastern financial interests and their sympathizers in Congress.

Mr. Sawyer believes that the Tennessee Valley Authority has been a failure. Thus he is opposed to extension of the TVA idea to our own region. He claims the TVA does not pay taxes. He claims TVA is subsidized by the taxpayers. He claims TVA is guilty of false bookkeeping.

These are identically the same charges that have been voiced year after year on the floor of Congress in an effort to block further appropriations for Grand Coulee Dam and the Bonneville Power Administration.

Mr. Sawyer quotes approvingly the attacks made against the TVA by Representative ANDREW J. MAY of Kentucky. Does Mr. Sawyer know that this same Representative MAY is also opposed to the Bonneville and Grand Coulee Dams? Does Mr. Sawyer approve of his stand in this respect, too?

Mr. Sawyer's criticism of the TVA follows nearly to the letter, word for word and comma for comma, the denunciations made of Bonneville and Grand Coulee by many Congressmen from the Eastern States. One can reasonably wonder whether the opponents of a Columbia Valley authority actually believe in developing our region at all.

Neuberger declares power should be cheap

Mr. Sawyer makes a point of the fact that the TVA residential rates are not as low as those charged by some private utilities in the Pacific Northwest. This is a wholly misleading claim. Power rates in the Northwest should be cheaper, for electricity can be generated at lower cost in this area of deep rivers and high mountains than in any other place in America. I doubt if Mr. Sawyer would care to offer a more logical comparison—a comparison between the private utilities and the publicly owned plants right here in the Northwest.

Such a comparison would reveal, of course, that the private power companies charge far more for electricity than such public systems as Tacoma, Eugene, Forest Grove, and similar communities.

Mr. Sawyer makes much of the fact that the TVA includes only 81,000 square miles, whereas the Columbia Valley Authority would take in 279,000 square miles. Because of this difference, he concludes, a TVA type of organization would not work in the Northwest. Does Mr. Sawyer realize that such an argument could have been used, for example, to keep the State of Oregon out of the Union?

The State of Connecticut has only 5,009 square miles. Would a State form of government work in Oregon, with 96,981 square miles? Of course, the answer is "Yes." Mr. Sawyer contends that a regional authority would not succeed in the Columbia Valley because it is so much larger than the Tennessee Valley. Why not? With equal logic, one might claim that a State type of government, suitable to tiny Connecticut, would not prove effective in so vast an area as Oregon.

Mr. Sawyer is disturbed because the three directors of the CVA would need only the qualifications of American citizenship and a belief in the act. He neglects to point out that under our democratic form of government, these are the only qualifications necessary for membership in the United States Senate or on the United States Supreme Court. Any citizen can be a Supreme Court Justice. Why should not any citizen be entitled to a directorship of the CVA? That is what democracy means.

Appointments sustained by writer as American custom

Mr. Sawyer is also disturbed because the Directors of the CVA would be appointed by the President of the United States for 9-year terms, subject to Senate approval. One wonders what can possibly be wrong with that. It is a method in the best American tradition. Cabinet members, Federal judges, the Chief of Staff of the United States Army—all receive their posts in this same fashion. If Mr. Sawyer is opposed to this system of selecting the CVA Directors, he is certainly against a time-honored American practice.

Mr. Sawyer claims that a Columbia Valley Authority would take away all present protection of the water rights of irrigationists. This, too, is a false contention. The CVA bill sponsored by Senator MITCHELL and Representative JACKSON conforms almost exactly to the original United States Reclamation Act of 1902. It safeguards amply both existing water rights and State laws for the appropriation of water.

Throughout Mr. Sawyer's argument against CVA runs the word "socialistic." How familiar this ancient charge sounds. When the late President Roosevelt first proposed social security laws we heard that old-age pensions were "socialistic." When Grand Coulee Dam was started the late Representative Culkin, of New York, said it was "socialistic." History books tell us that the first public schools in America were greeted with the charge of "socialistic." Woodrow Wilson's crusade for a graduated income tax was denounced as "socialistic."

Mr. Sawyer also uses the word "totalitarian" with respect to CVA. One is pressed hard, indeed, for logic when he begins to rely on such wild and reckless charges. Does Mr. Sawyer think CVA would be "totalitarian" because it might encourage public ownership of electric power? For years the people of Portland have owned their municipal water system. Does Mr. Sawyer think that is "totalitarian"? What is the fine distinction between water which enters your house via a wire and that which enters via a pipe?

With respect to decentralization of government, Mr. Sawyer both runs with the hare and holds with the hounds. He praises the splendid decentralized administration of the United States Forest Service. Then in the next breath he fulsomely lauds the highly centralized administrative methods of Secretary Ickes, who has been carrying on bureaucratic warfare against the Forest Service for nearly 15 years. The Forest Service and Secretary Ickes have diametrically opposite policies so far as decentralization is concerned, yet Mr. Sawyer blithely indorses both of them. This is a trick-riding feat worthy of Ben Hur or the late Buffalo Bill.

CVA listed as important to region's growth

Mr. Sawyer claims to be in favor of decentralization. He lists Oregon citizens who should control their own destinies. Then in the next paragraph he demands that the resources of the Columbia River be in the hands of the Chief of Engineers and the Director of the Bureau of Reclamation, two officials who are 3,000 miles away in Washington, D. C. How can this square with any faith in decentralization and local control?

If Mr. Sawyer wants local rule, let him come out in favor of a Columbia Valley Authority. CVA headquarters would not be a continent removed from our region. They would be right in the Northwest—in Portland or Spokane or some other Northwest city. That is why all seven governors in the TVA region insist that TVA has not infringed on State's rights; the headquarters of TVA are in the river valley itself. CVA would operate in similar fashion.

Mr. Sawyer attacks the statement made by William L. Chenery, the publisher of Collier's, that TVA pays State and local taxes. Mr. Sawyer wants the TVA to pay more taxes. How does Mr. Sawyer feel regarding other Government agencies in this respect? Does he want the Army engineers to pay Federal taxes on Bonneville Dam, the Bureau of Reclamation to pay Federal taxes on Grand Coulee Dam? Does he want the War Department to pay taxes on Fort Lewis, the Navy to pay taxes on Puget Sound Navy Yard?

Why does Mr. Sawyer single out TVA—and through TVA, the proposed Columbia Valley Authority—for the payment of Federal taxes?

Mr. Sawyer's case against CVA depends strongly on such charges as "socialistic" and "totalitarian." Listen to the words of a Wyoming bank president who went to the Tennessee Valley to investigate for himself the truth of such careless claims. "I do not regard the TVA as a trend toward socialism," the banker reported; "rather it appeals to me as a change in the administrative set-up of a large number of Government bureaus who needed to have their activities tied in together by a decentralized management more familiar with the problems of the region than Washington bureaucrats."

Mr. Sawyer favors the Washington bureaucrats in the War and Interior Departments. I favor a regional authority, the Columbia Valley Authority, with headquarters right on the banks of the Columbia River. And when we hear that a CVA would be "socialistic" and that TVA is subsidized by the taxpayers, I hope we remember that exactly these same claims have been voiced again and again in an effort to block our own Bonneville and Grand Coulee projects.

A Columbia Valley Authority means progress for the Pacific Northwest and prosperity and jobs for all the people.

Steelworkers Need a $2 a Day Increase

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include facts on the present steel strike as presented by Philip Murray, president of the United Steel Workers of America, Steelworkers Need a $2 a Day Increase:

A TRUE HISTORY

Once upon a time there was an industrial giant. So powerful was it that it could hold lesser giants in the palm of its hand.

No tall building could be built; bridge could not span river; boat could not be made to sail the ocean; railroad track and telegraph wire could not bind the earth, unless the giant willed it.

The giant prospered. But while the giant prospered the source of its wealth did not. The truth is that this giant drew its great strength from a million men and women. They formed its girders and spun its cable and cast its metal, but they prospered not. Their tables were bare; their clothing old and worn.

Six of the fattest, most prosperous years the giant had ever known went by. Still the giant hoarded its wealth. And all the smaller giants followed the example of the big giant.

Wealth piled up in the counting-houses, only a trickle went to the people. Food stayed on store shelves, clothes and goods did not move out of the factories. The wheels of industry slowed while the giant and the lesser giants took a vacation.

The great depression came. Men stood on street corners selling apples.

Moral: Undistributed excess profits can glut our economy. When wealth piles up and purchasing power declines, the result is depression.

STEELWORKERS NEED A $2 A DAY INCREASE

The steelworkers have been seeking a wage increase ever since December 1943.

December 1943: The United Steelworkers of America asked the steel companies for a general wage increase.

January 1944: Negotiations broke down.

February 1944: The War Labor Board appointed a panel to find the facts.

August 1944: The panel issued its report to the National War Labor Board.

November 1944: The Board decided to send a report on the wage matter to the President.

February 1945: The Board issued a lengthy factual report to the President.

August 1945: The President changed the National Wage Stabilization policy and returned wage controls almost completely to collective bargaining.

September 1945: The War Labor Board declared that the wage clauses it had provided now permitted a reopening of the wage issue. The union asked the steel companies for a $2-a-day wage increase.

October 1945: Negotiations with the companies broke down after the union spent 2 days presenting its case and the United States Steel Corp. merely handed the union a letter which said "No."

November 1945: Two invitations by the Secretary of Labor to the United States Steel Corp. and the union to confer further with aid of a United States conciliator were accepted by the union and rejected by the corporation.

November 28, 1945: Steelworkers voted 5-1 to strike to back up the wage demand.

December 1945: Unable to get the steel industry to engage in collective bargaining, the union's policy committee voted to call a strike for January 14 at 12:01 a. m.

January 14, 1946: Strike scheduled, more than 2 years after the initial attempt by the union to obtain a wage increase. Volumes of material have been submitted by both parties, volumes of Government reports have been prepared on the issue, no general wage increase has been granted to steelworkers since the increase effective February 1942.

THE STORY

The United Steelworkers of America demand for a $2-a-day wage increase is justified because—

(a) Steelworkers need the increase to enable them to have a standard of living consistent with the minimum requirements of health and decency.

(b) The steel industry can pay the increase and still make greater profits after taxes than in the extremely prosperous war years.

(c) Unless the need of the steelworkers is met and the income of the industry distributed more equitably, America will be plunged into the worst economic collapse of our history.

I. Steelworkers need the increase

The end of the war deflated steelworkers' earnings. Deprived of a single general increase in basic wage rates for 4 years, the steelworkers keenly feel the removal of special wartime factors which had artificially inflated the pay envelope.

As a result, the average wage of steelworkers in 1946, assuming the absence of a wage increase, will command less purchasing power than did the average weekly wage of the steelworker in January 1941. In fact, the real wage (measured in terms of effective purchasing power) will be $4.15 a week less than in 1941, a drop of 12.4 percent. Increased living costs, increased taxes and the discriminatory wartime wage stabilization are responsible for this decline.

(The average weekly pay, based on a return to the scheduled 40-hour week from the wartime 48-hour week, will be $42.70, as compared with $56.32 in April 1945, and $33.60 in January 1941.)

The present 1946 prospect will result in an inadequate standard of living. This conclusion results from examination of wage levels as against standard budget requirements.

The Heller Committee for Research in Social Economics of the University of California develops the most authoritative budget for the average family. That budget shows that $58 a week is required for a minimum standard of health and decency.

The present wage rate of steelworkers will produce average earnings for 1946 which fall $15.76 a week below the $58 requirement. A majority of the workers in the industry receive hourly and weekly wages below the industry average; therefore, the majority will be more than $15.76 below the minimum requirements.

An increase of $2 a day would still leave the average wage of steelworkers $6 a week below the minimum requirement and would leave common labor in the northern steel plants $16.80 below the $50 level.

Thus, it can be seen that steelworkers urgently need the $2 a day increase to provide for their families.

II. The steel industry can pay

Despite abnormal wartime taxes and costs, the high-level wartime operations have demonstrated that the industry can pay the $2 a day wage increase and still prosper. In fact, the assured high level of 1946 operations would result in higher profits than those realized during the war years even after the wage increase.

Here is what happened during the war years:

The steel industry netted $2,000,000,000 in acknowledged and hidden profits, after payment of all taxes. Reported profits totaled $1,225,000,000, or $245,000,000 a year—113 percent more than the $115,000,000 annual average for 1935–39.

Acknowledged profits, before taxes, were 276 percent above the 1935–39 level—$700,000,000 a year on the average as compared with $187,000,000.

Steel profits in 1945, including carry-back gifts from the Government and postwar excess-profits-tax refunds, will have kept pace with or exceeded wartime earnings.

The total assets of the industry increased more than $1,000,000,000, or 22 percent, between 1939 and 1945, from $4,860,000,000 to $5,910,000,000.

Amortization beyond the legal peacetime rate of 5 percent per year totaled about $636,000,000 for the steel industry, thereby concealing an even greater profit-making capacity during a normal amortization period, such as 1946, and thereby resulting in a stronger earning position because of new wholly paid for facilities.

Dividend payments totaled $765,000,000, which exceeds the 1935–39 total of $419,000,000 by 82 percent.

The industry's funded debt decreased 28 percent, from $903,000,000 at the end of 1939 to $652,000,000 at the end of 1944.

Here is what 1946 looks like:

The industry will operate to the full extent of its profitable capacity. Orders will exceed production. A wide variety of sources all agree that during 1946 there will be about 85,000,000 ingot tons of steel production. This will be accomplished without the most obsolete high cost 10 percent of capacity (8,000,000 tons) and with those new facilities which are low-cost in operation (11,500,000 tons). Thus, the obsolete is replaced by the most efficient, new facilities. And much of the latter have been paid off in full by accelerated amortization permitted by congressional wartime tax legislation.

The product mix will be as profitable as in 1944 with ship and carbon plates de-emphasized in favor of the highly profitable flat-rolled and strip-mill products.

The reduction of abnormal wartime labor costs, reductions in Federal income-tax rates, and increased productivity will enable the industry to pay a wage increase of 43 cents an hour:

(a) An average of 10 cents an hour is saved through the return to the 40-hour workweek with the subsequent elimination of overtime payments.

(b) An average of 5 cents an hour will be saved through downgrading (more frugal administration of wage policies, an end to higher than scheduled rates, slowing down of promotions, etc.).

(c) An average of 17 cents an hour will be saved through the elimination of the excess-profits tax and the reduction in the normal corporate income-tax rate.

(d) Increased worker productivity and the replacement of the obsolete with modern low-cost facilities will permit an additional 11 cents an hour.

These savings, incident to change from war to peace, add up to an average of 43 cents an hour per worker.

In addition, if one considers 1944 as the last full year of war production and if 1946 projections are based on comparison with 1944, it is important to note that price increases on some products granted to the industry by OPA during 1945 add profits of $100,000,000 a year, thereby further improving the industry's outlook.

Should the industry, or a company in the industry, only break even in 1945 or 1946, carry-back tax refunds are available, and additional tax refunds are available should an operating loss be incurred during 1945 or succeeding years.

In the light of these circumstances, it is clear that the profit outlook for 1946 looms brightly for the steel industry. Computing all known factors against the commonly accepted production anticipation for 1946 leads to the conclusion that the industry can pay the $2-a-day wage increase and still make profits after taxes of $482,880,000 in 1946. This is $154,065,000 more than the profits for 1944.

III. The increase is essential to national welfare

The profit outlook for the steel industry is so favorable that failure to grant the union's wage demand will seriously endanger our whole economy.

The steel industry sets the pace for wage movement in American industry. If steel wages are frozen or if increases are insufficient, wages generally will fail to rise substantially.

However, profits will rise substantially. It is estimated that corporation profits after taxes for 1946 will be $10,200,000,000 to $11,000,000,000 which exceeds the all-time high of $9,900,000,000 in 1944.

Meanwhile, just as the weekly take-home pay of the steelworker has been drastically cut, so also has the pay check of millions of other workers throughout the Nation. Furthermore, the number of workers employed has been reduced since VJ-day. Others have been downgraded. Shifts from higher-wage to lower-wage industries have been extensive.

Consequently, the 1946 national pay envelope will be $20,000,000,000 less than the pre-VJ-day level. In addition, the Government pay roll is undergoing severe reductions due to curtailment of war agencies and demobilization of the armed forces. Thus 1946 pay rolls—public and private—will be approximately $35,000,000,000 less than the pre-VJ-day rate.

This shrinkage of the national pay envelope amid rising net profits is ominous. Industry cannot provide full employment unless this cut is restored. This need is underlined by the fact that the steel industry alone is now able to produce the same amount of steel as in the prewar years with 50,000 fewer workers. To make up for the purchasing power thus lost, a wage increase is essential to provide the remaining steelworkers with sufficient income to create employment for those displaced.

A sustained high level of production requires a purchasing power sufficient to buy the goods being produced. To provide such purchasing power, the proceeds of industry's production must be properly distributed. Labor's share must be fair and adequate.

During the war years, production increased, national income increased, but labor's share lagged considerably behind.

The increase in money wages during the 1941–45 period was only 16 percent. While some studies show a larger increase in average earnings for manufacturing industry, the component of what makes up industry and the distribution of workers as between one industry and another is extremely variable. Very sharp shifts took place during the war in the light of the emphasis on war industry and further sharp shifts take place now, in a reverse direction, since the war's end.

Therefore, the change in basic wage rates, increased primarily by general wage increases and specific adjustments of job rates, is the only sound measurement of increases in wages which can be projected ahead into 1946.

During this same period when basic wage rates rose 16 percent, the cost of living rose 45 percent. Even the conservative Government estimates show a rise in prices (a consideration considerably narrower than a measurement of total living costs) of 33 percent.

Therefore, not only have living costs risen more sharply than wage rates, but the increase in prices results in increased corporate income per unit produced, a fact important to determination of labor's share of income.

During the war years, productivity in manufacturing industry rose 23 percent. Thus, four workers can now produce what five workers had formerly produced. This fact, carefully adjusted so as to include only those increases in productivity which will continue from war production into peacetime production, further increases the income to be distributed in relation to the number employed.

To permit the worker to merely continue his 1941 share, it is necessary to increase basic wage rates 54 percent, or more than twice as much as the steelworkers request. (The increased price level times the increased productivity level divided by the increased wage rates results in the 54 percent figure.)

To the degree to which the required increase is withheld does labor's share of industrial production lag behind the 1941 levels. That lag spells danger to America.

Place these facts together:

(a) The national pay envelope declines.

(b) The ability of labor as a whole and of the average worker to purchase goods is curtailed.

(c) Labor's share is drastically reduced.

The result is a picture of dangerous proportions. If people do not have enough to provide necessary purchasing power, the economy of the Nation is headed toward disastrous internal break-down.

Look back at 1924–29, the boom years that led to the world depression in our history.

Steel profits for the 5 years following 1924 exceeded the 1924 level of $181,000,000 by a total of $492,000,000. Production rose 46 percent. Average earnings per employee, including incentive payments, rose 3 cents an hour, common labor's rates remained fixed at 44 cents an hour, and not one penny was added to basic wage rates.

The experience of the steel industry was typical. For 1924–29, manufacturing industry increased production 27 percent, labor

productivity rose 24 percent, net profits rose 72 percent, and average hourly earnings rose only 5 percent. There was no wage increase of national significance.

Income rose, production of goods increased, but labor did not receive its share. Consequently, the crash of '29 and the depression of the thirties.

The $2-a-day wage demand is a major weapon in the fight against drift toward another, more disastrous depression.

The high level of steel production for 1946 and the tremendous scheduled increase in income and profits of the steel companies must lead to the prompt grant of the union's demand if we are to avoid a lag of purchasing power behind production.

Steel sets the pace for wage movement in American industry. The grant of the union's demand will be a decisive step toward increasing purchasing power. Increased purchasing power will make more work available as a response to an active consumer's market and prevent the piling up of goods on store shelves.

The alternative is described in a speech by Mr. David F. Austin, vice president in charge of sales, the United States Steel Corp. In a speech to a group of salesmen (Steel, Nov. 26, 1945, page 71) he said:

"Full employment may actually be more important to you and to me than the success or failure of our own companies * * * If this time we fail to find a means of staving off wide unemployment, I'm afraid that the world will turn to some other method. And that will not be good for you, nor for me, nor for the people who will be persuaded to take the other road."

Whose Fault?

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. ANDREWS of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dothan (Ala.) Eagle of January 21, 1946, edited by Mr. Horace Hall, of Dothan, Ala.:

WHOSE FAULT?

There couldn't be a more inopportune time than now for the United States Senate to get tangled up in a filibuster. But southern Senators have a king-sized talking marathon under way to block passage of a bill that would establish a permanent Fair Employment Practice Commission with full status as an arm of the Federal Government.

All business in the Senate will stop while the Senators talk, talk, and talk. Vital legislation must wait. If Congress has the power and the brains to get the country out of its present turmoil, then that must be shunted aside while the filibuster goes on. And in the meantime more decisions, of national and international import, remain in the balance.

And whose fault is it? Is it the fault of those southern Senators who vow a fight to the death against the FEPC? Or is it the fault of those advocates of this unworkable proposal inspired by spite, intolerance, and viciousness, whose interest in the national welfare is so infinitesimal that they chose this time of uncertainty to put their pet bill through Congress?

Obviously it is the latter. They knew full well that when they brought this legislative monstrosity into Congress that it would stop all other business. But they hoped that the state of the Nation would be so acute that opponents of the FEPC would retire and let the bill become law rather than jeopardize passage of the many vital and essential proposals now pending.

Knowing of the bitter opposition to them, knowing the determination of the southern bloc to fight this measure, they projected their own pet fight into the turbulent national scene. They knew full well the consequences of their action. And now that they have stopped the wheels turning in Congress, the blame is theirs. They cannot lay the blame at the door of those men who are resisting the FEPC.

A filibuster was forced on foes of the FEPC. Had the issue not been brought up now they would not have invited one.

But backers of the FEPC wanted the filibuster, in the hopes that the wrath of the voters would break it for once and all and open the way for them to get this proposal into law. They asked for it and they are getting it. If they are willing for all else to wait, so are those who are opposed to the FEPC.

And President Truman, who professes to be so vexed with Congress for not enacting his program into law, is not without personal blame for the present mess. He has been encouraging a permanent FEPC, and listing it as one of the "musts" during this vital period of national recovery. He, as much as anyone else, is responsible for constructive business in the Senate being at a standstill during such a critical period in the country's history.

History of the United States Junior Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. HINSHAW. Mr. Speaker, in 1915 a group of young men from St. Louis, Mo., were concerned over the apathy of citizens in conducting an improvement project around the civic center. Under the leadership of Henry Giessenbier these young men organized the Young Men's Progressive Civic Association and through personal effort, secured the passage of a needed bond issue that resulted in the desired community improvement. From this start a great number of civic projects were carried on in St. Louis. These received considerable publicity around the Nation and in 1920, by mutual consent, a group of 22 young men's organizations gathered together in St. Louis to organize the first junior chamber of commerce. It was so named in honor of the president of the St. Louis Chamber of Commerce who provided the encouragement and financial assistance that made the new organization possible.

Each year, beginning in 1920, a convention was held in some leading community of the Nation. A national president was elected and a program of expansion set forth. The leadership of the junior chamber for this 25-year period came from the following cities:

Henry Giessenbier, of St. Louis, Mo.; George O. Wilson, of Dallas, Tex.; Roy Wilber, of Boston, Mass.; Harry B. Mortimer, of Chicago, Ill.; Louis J. Arland, of Los Angeles, Calif.; E. Fred Johnson, of Tulsa, Okla.; Robert E. Condon, of New York, N. Y.; H. Grady Vien, of East St. Louis, Ill.; Ernest Baetz, of San Antonio, Tex.; Herbert F. McCulla, of Lincoln, Nebr.; Durward Howes, of Los Angeles, Calif.; George H. Olmsted, of Des Moines, Iowa.; Courtland Otis, of New York, N. Y.; Leslie B. Farrington, of St. Paul, Minn.; E. Richard West, of Los Angeles, Calif.; Allen Whitfield, of Des Moines, Iowa; Walter E. Holman, of Portland, Oreg.; Roswell P. Rosengren, of Buffalo, N. Y.; Philip C. Ebeling, of Dayton, Ohio; Perry P. Pipkin, of Memphis, Tenn.; Mark S. Matthews, of New York, N. Y.; Walter W. Finke, of Minneapolis, Minn.; William M. Shepherd, of Pine Bluff, Ark.; H. Bruce Palmer, of Flint, Mich.; Mearns T. Gates, of Pomeroy, Wash.; Henry Kearns, of Pasadena, Calif.

The growth of the junior chamber, while it has been rapid, has been retarded by two depressions and by the war. The organization is unique in that it is composed exclusively of young men. The age limit, 21 through 35, is rigidly adhered to and the basic principles of the organization in all the hundreds of communities where it is functioning are identical. The membership is open to young men regardless of their occupation, their station in life, their religious beliefs or their racial connections. Practical experience has demonstrated that those young men who have leadership qualities and who have a desire to progress, would automatically become local, State, and national officers. A constant refining process is carried on which automatically eliminates men who have no desire to serve their community.

The combined experiences of the several hundred junior chambers over the past 25 years provides an unlimited challenge to the future progress of young men. At the close of the first quarter century of service, the greatest desire of junior chamber leadership throughout the Nation is that of expanded activities and the increased opportunity to progress.

In commemoration of the twenty-fifth anniversary, the following letter was received from the President of the United States:

THE WHITE HOUSE,
Washington, January 10, 1946.

MR. HENRY KEARNS,
President, United States Junior Chamber of Commerce, Chicago, Ill.

DEAR MR. KEARNS: I want to congratulate you and the members of your organization on the accomplishments of the United States Junior Chamber of Commerce during its first 25 years. The junior chambers of commerce all over the country have served their communities well by virtue of their fresh ideas and their willingness to do something about putting their ideas into practice.

The years immediately ahead present a greater challenge than ever before to all the businessmen of America, and I expect the young men belonging to the junior chambers of commerce to provide progressive leadership in the thinking and doing of the business world.

I know that they will do everything possible to spur this country on to a full realization of its magnificent potentialities.

Very sincerely yours,

HARRY S. TRUMAN.

The address by Henry Kearns, president of the United States Junior Chamber of Commerce, in observance of the twenty-fifth anniversary, delivered at Kaufman Memorial Hall, Minneapolis, Minn., follows:

YOUNG MEN AT WORK

The acme of good citizenship is found in the individual's participation in the affairs of a public nature. The United States Junior Chamber of Commerce is observing its twenty-fifth anniversary of service to the Nation. This organization is composed of young men, ages 21 to 35, and has as its principal foundation for growth three objectives: First, the training of leaders; second, individual community service; and, third, stimulation of active citizenship. In those three objectives we find the true exemplification of real Americanism. We would like to tell you how they affect the welfare of the Nation and are important to the future.

Every business, every community, and every State is constantly thirsting for leaders—people who are able and willing to assume a responsible position, who have the ability to make a decision, who have the ability to develop trust and confidence, and who have the ability to "get things done." Thousands of young men throughout the Nation in the past 25 years have found in the junior chamber of commerce the training ground wherein they can secure this leadership ability. Through personal participation in projects of a community nature, the young man has the opportunity of analyzing representative business transactions, of managing men, and of exercising every type of human cooperation. The community project requires the same planning, ingenuity, and ability needed in producing a successful business venture. This opportunity is given the young man through participation in junior chamber affairs. He gets the leadership habit; he learns to get along with his fellow men, and, above all, he gets things done.

In the field of community service every locality in the Nation has hundreds of jobs to be done—jobs that make that community a better place in which to live—jobs that add value to the community life—jobs that offer progress in learning, and in most cases these jobs must be done by volunteer workers. The junior chambers of commerce in thousands of communities throughout the land, are daily producing such projects that "get the job done."

In the field of juvenile delinquency, several hundred junior chambers attacked this problem with enthusiasm, energy, and intelligence. The organization of teen-age clubs, big brother activities for first offenders, the development of recreational and sports activities, production of money-making programs for young people, are among the activities carried on by junior chambers of commerce in the interest of the youth of our Nation. No less of an authority than J. Edgar Hoover acknowledges the true value of junior chamber activity in reducing juvenile delinquency and potential crime.

Public safety, fire prevention, public health, sports, and recreation, all find an active place in junior chamber affairs—each sharing a great number of specific projects participated in by hundreds of young men who voluntarily give of their time and of their energy to make their community a better place in which to live; this is true community spirit.

Active citizenship may be a trite term but we believe that it has a place in the life of every citizen. In it we refer to the young man who not only goes to the polls and votes but one who will take 1 to 2 hours each week to study and discuss matters of national interest; who will inform himself upon the broad affairs of government; the young man who will become acquainted with his representatives in State and National Government; the young man who will take the time and energy to interest his neighbors in public affairs. Yes, we're talking about the young man who will offer himself as a candidate for public office; who will make full use of the leadership training that he has received through participation in junior chamber activities. In junior chamber, active citizenship means an informed public; a public that will read, speak, and act upon affairs of a national interest; a public that knows that an individual has a job to do, if we are to maintain our American way of life.

From the humble beginning in St. Louis 25 years ago, the junior chamber of commerce has become an organization of widespread interest in every State and in every major community. It is composed of a true cross-section of American life. It is composed of young men, some who have reached the top rung in the economic scheme of things, and others who truly believe that they have the right to do so. They are willing to put forth the energy and the ability to lead. Among the ranks of junior chamber men are found labor leaders and major industrialists; are found cooks, doctors, lawyers, and storekeepers—young men of a common interest—young men who are looking forward toward the future with optimism and determination.

The junior chamber of commerce is about to embark upon its second quarter century of service. It is fitting that at this moment we observe an old junior chamber saying, "Take your hats off to the past and your coats off to the future."

A Marine Speaks Out on China

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I wish to call the attention of the House to a letter from Pfc Frank Bromley, one of the marine heroes stationed in China, which was published in the newspaper, Greenwich Time, Greenwich, Conn., December 26, 1945.

In his letter Private First Class Bromley sharply raises the question of what our troops are doing in China. It is clear from his letter that they are not carrying out our stated policy of disarming the Japanese. It is clear, too, from his eyewitness account that at least on one occasion our military practices in north China were certainly not conducive to good relations between the United States and the peoples of China. I repeat from the article, to impress on Members present, the words of this marine:

We proceeded to blast this small village in the Chinwangtao area unmercifully. * * * How many innocent people were slaughtered in that small village is still unknown to us who did the slaughtering. If the Germans or Japs had done this who'd scream about the brutality of it first? This is merely one "incident" which was oiled up and sugar-coated in the newspapers for civilian consumption. The whole mission of the American forces in China has been oiled up and sugar-coated. I fought for my country on Okinawa, was ready to die for it, and nearly did often enough. * * * But whose country will we be dying for over here if, and it seems likely we will, become involved in actual warfare in China?

Mr. Speaker, these are the words of an American marine in China. Today there is a truce in the civil war in that Nation. But unless that truce is productive of real democracy and internal unity, and unless we are busy today disarming the remaining 300,000 Japanese instead of using them to guard railroads alongside our own forces, and unless we bring home our men from this theater, other marines, like Pfc Frank Bromley, will wonder why they die in an internal war in China, fighting on the side of reaction.

For that reason, I am including with these remarks the entire article from Greenwich Time, including the text of the letter from Private First Class Bromley. It follows:

PECK PROMISES COMPLETE REPORT ON TEMPORARY HOUSING SITUATION BEFORE TONIGHT'S TOWN MEETING—GREENWICH MARINE BITTER, ASKS WHY WE ARE KEEPING FORCES IN CHINA—PFC FRANK BROMLEY VOICES BITTERNESS OF CONFUSED GI'S—SCORES POLITICIANS, OTHERS WHO IGNORE SITUATION IN CHINA

Pfc Frank Bromley, of 44 Greenwich Avenue, a member of the Seventh Regiment, First Marine Division, now stationed in Linsi, China, wants to let his fellow townsmen know what some of the American soldiers still in China think about the role they are playing, or scheduled to play. In a letter to the editor of Greenwich Time he paints a rather dismal picture of conditions there and voices the bitterness that many soldiers there must feel.

Private First Class Bromley's letter, dated December 6, follows in full:

"DEAR SIR: However much I would like to see this letter published, I don't expect there is enough sense of justice left in the minds of the American people for you to endanger the circulation of your paper by printing what they evidently prefer to close their eyes to. But we realize the war is over now and we who met the Jap face to face can expect to be left holding the bag while the civilian celebrates. Still, here are the thoughts of just one GI in China.

"What are we, the United States Marines doing in China? Why are we here? What useful purpose are we serving? We were told our mission was to disarm the Japanese, but we are not disarming the Japs. We were told we would not become involved in China's internal affairs but now we find ourselves so involved that who can say when we can pull our meddling noses out of China and come home?

"So we are here to disarm the Japs, are we? The Chinese Army, the largest in the world in manpower, is not capable of this job? So we, one division strong, are sent to do it for them. I guess maybe I didn't realize what supermen we are. The Chinese could have very well accomplished this as anyone with an ounce of common sense must admit. So, the question remains, Why are we in China?

"I am a bazooka man with the Seventh Regiment, First Marine Division and have not personally participated in the disarming of any Japanese, have not seen the actual disarming of any Japanese, and know of no member of this regiment who has done either.

"The American people have been told that we would not actively assist the Nationalists in their struggle with what has become commonly referred to as the Communist Forces, but today, among the arms carried by the Chinese National forces can be found in large numbers American Garand rifles, mortars, flame throwers, tommy-guns, and even American pack howitzers, all of which are being turned against Communist forces in undeclared warfare.

"American ships transport Central troops, American planes patrol Communist territory, United States troops guard coal trains transporting coal for Government use, bridges which are strategic only to the Nationalist cause, power plants, property of the Central Government. Perhaps all this is not actually assisting the Chinese Nationalists in their internal struggle against the 'Commies,' but if it isn't perhaps you can tell me what would be 'assistance.'

"Who can blame the Chinese Communists (if one wants to refer to them as such) for their resentment against our two-faced policy, for our interference in an internal situation which has prevailed in China since 1927?

"And eventually when American lives are lost in China, who will do the screaming and screeching about an 'unprovoked attack by Communist forces against the poor marines who were only minding' somebody else's business? What blind man can't see that our policy in China is leading us straight to active participation in an impending civil war?

"I took part in the bombardment of a small Communist-held village in retaliation for the 'alleged' firing on of an American general by Communist forces—but here is the enlisted man's version of this incident, and, remember, we were on the spot.

"A train bearing an American general through Communist territory (where an American general had no business, in the first place) is halted by a break in the tracks, Communist instigated, and a repair crew of Chinese coolies are put to work repairing the break.

"A volley of shots were fired over the heads of the Chinese workers as a warning. No one was hit. It was quite evident that such was not the desire of the "Commie" shooters. But the American general, in a manner which only a general can assume, ordered his escorting guard to return the fire, and directed it to be sent at random into a cluster of small houses from which the initial fire was presumed to have come.

"In carrying out this order a heavy stream of automatic fire was poured at random into the small settlement. This brought one return volley, a few bullets of which struck the general's train. (I personally counted six bullet holes in one unoccupied car). Now, in a scream of outraged vanity this general ordered out the nearest Marine garrison under full combat equipment and prepared for a pitched battle.

"We moved up, a few shots came from the small village. Our heavy 81 mm. mortars were set up, the smaller 60's were set up, and we proceeded to blast this small village in the Chinwangtao area unmercifully. Two men, innocent or guilty, were cut down by machine-gun fire as they ran from a burning house. How many innocent people were slaughtered in that small village is still unknown to us who did the slaughtering. If the Germans or Japs had done this who'd scream about the brutality of it first?

"This is merely one incident which was oiled up and sugar-coated in the newspapers for civilian consumption. The whole mission of the American forces in China has been oiled up and sugar-coated. I fought for my country on Okinawa, was ready to die for it, and nearly did often enough. But I had a fairly good idea why I was fighting, and if need be, dying. But whose country will we be dying for over here if, and it seems likely we will, become involved in actual warfare in China?

"I'm ready to fight for my country again but I thought we won our war, at least I saw enough of my buddies die at Sugar Loaf Hill, Shuri Castle, and other places. But they died for their country. Whose country will we die for in a civil war in China? Surely America wouldn't be endangered by a Communist (a more fitting name would be 'Chinese peasant') and Nationalist struggle in China.

"What sort of propaganda would the money-grabbing politicians back home cook up for an explanation to the people when they found us in it? Or would an explanation be necessary to a people so unconcerned about it all now that their real danger has passed, as to let their government meddle in this mess until they find themselves back in war plants again. And when that time comes, I suppose we'll be 'heroes,' etc.—while now they let us sit out here and rot because, 'What the hell, the war is over now.'

"We did our fighting and now we'd like to come home. We risked our lives for you people and we don't want praise or thanks. We came over while you made your fortune in high wages. We came to the Japs so they couldn't get to us and you. Now we don't ask for praise or thanks, and we don't want anyone calling us heroes. All we want is to come home.

"So what are the people doing, letting us sit out here for 6 or 9 months more 'til we're all so disgusted with you that we won't ever want to come home. Well, let us sit here then, and look for the suckers to fight the next one some place else."

A Monthly Memorial and an Unusual Request

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, I am introducing a bill to provide for the payment in a lump sum to the Montana State College of the national service life insurance granted the late Ralph Coldwater.

This young man, a graduate of the Montana State College, designated as beneficiaries his father, Lipman Coldwater, and his brother, Capt. Elliott Coldwater. They have asked me to present this bill to the Congress so that the remaining unpaid installments of the national service life insurance granted the late Ralph Coldwater to them be granted in a lump sum to the Montana State College for the purpose of establishing the Ralph Coldwater Memorial Scholarship in industrial engineering at that institution.

This unselfish act on the part of the Coldwater family is not only unusual but extremely meritorious. I want to congratulate the family for taking such a position and to express the hope that the scholarship will not only serve as a fitting memorial to Ralph Coldwater but to the hundreds of thousands of others who, like Ralph, gave their lives that this country and its people could live.

New Homes for Veterans

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 24, 1946

Mr. STEWART. Mr. Speaker, in order to combat extravagance and watered profits in the construction of new homes, a group of ex-servicemen in Oklahoma City have banded together to form a construction company to build homes for veterans. They are determined to build homes at a minimum cost even if they have to go to the forests, quarries and wherever raw materials are to be found and process them, themselves. Their organization is known as Veterans Associated, GI Home Builders, and their president, Mr. C. Harold Brand, represented them January 12 when our Oklahoma congressional delegation met with veterans in Oklahoma City to discuss their critical housing problem. Mr. Brand, recently released from duty as a captain with the United States Army Air Forces, has been actively engaged in rea. estate sale and development since 1931. He is a past president of Oklahoma State Real Estate Association, member of the National Board of Directors Real Estate Association representing State of Oklahoma, and the only veteran now a member of the Oklahoma City Real Estate Board. I was so impressed with the dogged determination of these ex-servicemen that I asked Mr. Brand to give me further details of the plans of his group and under date of January 12 I received a letter from him which I desire to insert in the RECORD, as follows:

VETERANS ASSOCIATED,
GI HOME BUILDERS,
Oklahoma City, Okla., January 12, 1946.

Congressman PAUL STEWART,
Washington, D. C.

DEAR CONGRESSMAN STEWART: Encouragement was felt in the hearts of every veteran who recently listened to the public hearing you and the Oklahoma congressional delegation gave to the veterans' service organization various financial lending agencies, materialmen, etc., with reference to the critical housing problem of returned veterans.

We are writing you to put on record and explain a little more fully the movement which got a spontanecus start when Congressman MONRONEY recently was confronted with highly technical, theoretical, and just plain excuses when he explained to the City Council of Oklahoma City the elements and issues involved in converting the Will Rogers Air Field barracks into temporary veterans' family housing units.

This country having fought this war on a basis of putting the important objectives first and the less important matters second, it is difficult for the returned veterans, as well as more sincere citizens, to understand the indifference and at times almost affirmative opposition which is being encountered throughout the Nation by all returned veterans in being unable to find such an elemental and necessary thing as a place to live.

We realize that there are many complicated problems such as production and regulatory bottlenecks and other deterrent influences which stymie the production of homes for veterans on today's market and which fails to give the GI a full 100 cents for his dollar.

This problem of the homeless veteran demands immediate action. To solve this problem in Oklahoma City a large group of veterans has organized a construction company known as Veterans Associated, Inc.—GI home builders, with trained leadership, inspired veteran labor, desirable land, and more adequate finances to construct our own homes.

Give us the priorities and the materials and this group of determined, mutually associated veterans will work day and night and if need be, 7 days a week to break this production bottleneck on veterans' houses. We invite and will work first with local, State-wide, and then Nation-wide material agencies to obtain the component parts of each house, but if there is an inadequate supply from these sources, we now propose to go to the source of raw materials with newly organized veteran-owned supply agencies, and cut the lumber from the trees and haul it in surplus GI trucks to the building site to be processed by assembly-line power-production methods to create these homes.

If a scarcity of brick, tile, or concrete blocks develops, GI veterans on nearby farms assure us they will quarry from the hillsides and from their GI-owned stone companies will haul this building stone for us day and night to furnish the four walls of these homes.

Naturally we cannot produce cast-iron pipe, plumbing, and electrical fixtures by our own hands locally, nor can we manufacture the hardware, nails, composition roofing, or other component parts necessary for the construction of these homes. We simply point out these facts to show our determination to pursue a down-to-earth simple and sensible remedy for our dilemma.

Our construction company is based upon sound, economic principles. Each workman will share mutually in a cash bonus based upon the completion and sale of the various houses. A hundred percent of the ownership of this company is vested in a group of veterans, veterans with financial, material, construction, and expediting experience; men who were construction experts in the various crafts before the beginning of the war and who were called to the service for their construction abilities in the far-flung battlefields of the world and who are now entering our company with their first connection and job since their return. These sincere leaders and construction craftsmen from the ditch digger to the president of the company will not allow any influence to stop them short of accomplishing their mission—building themselves homes and likewise for fellow GI's.

Statistics show that labor constitutes well over 60 percent of the cost of a home. With this inspired and determined GI labor and leadership we can attain the goal of giving that ex-serviceman his full dollar's worth. The war was won through an all-out offensive and an all-out campaign, particularly in production and manpower, and we veterans propose to win the peace on the same basis and utilizing the same methods.

In the old-fashioned days each farmer harvested his crop or built his farm home in the pioneer cooperative spirit, with each member of the community coming in and assisting him in building that sacred home. Mutual helpfulness in their activities began at dawn and ended after dark, with the moon in the skies. The farmers then exchanged labor to gather that food for winter and rainy days. We believe that threshing time has come—that the ripened grain is in the field.

We want to start our homes now. We have the leadership, the labor, and the capital raised among ourselves, and the determination to start with our hammers and saws. Regardless of regulations, restrictions, or bottlenecks or influence to the contrary, we shall succeed because we must. We are a cooperative group. We are ex-members of the Seabees who built toilet seats out of native mahogany. We have rebuilt plants on foreign soils under hostile gunfire and adverse climatic conditions. In China we boiled every drop of water to cool our parched lips.

Our veterans in wartime actually threw their bodies into gaping holes of sinking ships to keep them afloat. We GI's today are equally as determined to apply our own individual brawn now to conquer this similar housing emergency—housing.

On Monday, January 14, our first construction crew wil break ground to construct immediately our headquarters' building at Northwest Second and Walker, Oklahoma City, which will be a convenient location for our construction workers and veteran home seekers.

One of Oklahoma City's leading banks and an outstanding building and loan association have opened their money bags with the fullest assurance that they will back us from top to bottom in addition to the personal funds we have subscribed. We mean to serve every veteran from the $3,000 home buyer to the $10,000 maximum. Many of the more successful young veterans returning, upon their leaving home felt that a $6,500 home was a palace and would fulfill his needs for years to come. We are shocked, overwhelmed, horrified, and unreconciled to people throwing $10,000 homes at us which are poorly constructed and located in unattractive neighborhoods which make us feel we are almost tramps, because we have no such finances. Our pledged word means too much to assume such an obligation unless we intend to pay it. We sold our comfortable homes when we departed for the services for a mere four to six thousand dollars to find upon our return that these same homes are now bringing, on the competitive market, with no other supply available, ten to twelve thousand dollars.

Also we are faced with the fact that numerous civilians during the war have sold their homes at current inflated prices and have moved into rental units, thus depriving us of that source of supply.

Again it is our desire and intention to serve every veteran by building him a home, be he an owner of a building site in his own chosen desirable neighborhood or be he a three-, four-, or ten-thousand dollar home seeker with no site.

We will give our all to break a bottleneck or any other obstacle in the best Army, Navy, Marine, Coast Guard, and Seabee tradition.

If the veteran wishes to live near his friends whom he acquired before leaving for the service, we propose to build him a home there. (We are substituting the service motive for the profit motive we found existing when we returned.) Our aim is to house the veteran, giving him his choice as to material, as to price range, location and neighborhood, and nearness to his established family ties and other neighborhood connections before he departed for the services, which logical location he will cherish and treasure with continued home ownership for life.

* * * * *

VE- and VJ-day came through the cooperative offensive waged by everyone in the armed forces and home front. Unbelievable accomplishments in production were attained to win that goal. If we achieve the building of homes for veterans this month, next month, or the next—every piece of governmental red tape and every restriction must be brushed aside to give us materials, for that is all we need here now to build our homes. We feel the critical situation in our community is similar to the same problem existing in all other American communities today.

We firmly believe that you, Members of Congress, are actually supporting a critical existing human need and particularly since this housing project will be of the veterans, by the veterans, and for the veterans.

Hats off to the victorious past. Coats off and sleeves rolled up to the glorious future.

Respectfully submitted to the honorable Oklahoma congressional delegation from your Oklahoma constituents.

Nebraskans' Letter to Their Congressman

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. STEFAN. Mr. Speaker, by leave granted me I include a letter sent to me by two of my constituents who represent the feelings of many of the people in my district:

DEAR KARL: Me and Marthy was listening the other night when our President, Mr. Truman, asked us to write to our Congressmen and tell them a few things. Now, we ain't hardly got the courage to write to our Senators, seeing as they is holding such high positions, but you, Karl, always seems a little more like one of us, and it would be like writing to one of our own folks, so we're taking pencil in hand to do the same. In the first place, Karl, before you get to worrying, we aim to tell you we ain't got no complaints to make as far as your representin' us is concerned and we even want to thank you for the good job you have done, but, Karl, there's a lot of queer things there in Washington a going on and we'd like to ask you some questions about the same and maybe you could get around to explaining them.

It looks like our country is pretty well broke financially, and a owing upward of $300,000,000,000, then where is the money coming from to loan to England the $4,000,000,000 she's a asking for and with Russia and China and what have you, a still figuring on their lists of what they're going to need? We thought we won the war, but it looks like we're paying the reparations bill anyway.

The economists is telling us we have to give England the money so's she can buy goods from us, but what is wrong with selling some of that goods to us home folks first, seeing as the shelves and storerooms of the country is empty of things we're really needing. We was to Winside yistiddy a looking for overalls and shirts and hoping to find a pair of stockings for Marthy. Well the only shirt in the store was a green silk velvet one, size 15½, price $6.50, which I suppose was OPA ceiling. Now, there wouldn't no farmer be caught dead out in public in no such shirt, and if a body was to wear such a rig out to do chores, I reckon the hogs would laugh their selves sick, and they been sick twice already this winter with flu, so we ain't taking any chances. The store hadn't had no overalls in 4 months' time, and the only stockings for Marthy was cotton fancy at $1.39 OPA ceiling, so Marthy didn't buy none. Millions of our boys went to war, and some of them, Karl, didn't come back, yet one man, Byrnes, can go to Moscow and, in settling the peace, give terms and mostly just give, to Russia and to England and to China a letting them have their way, when we think that ain't a one man's job. How did this Byrnes get to be a super-President? We don't recollect having voted for him and we kind of figger that kind of treaty making and deciding about the atom

bomb and such belongs to Congress, which was elected. We been wondering, Karl, if Congress was to take a damp sponge and wipe out all these bureaus and boards and commissions and such, and start with a clean slate, that maybe the country could settle down to producing, and to working, and letting Congress do the lawmaking for a change, just kind of let the country get back to normal. We could all quit worrying a little maybe and have a little time to spend on the real problems we got to home.

Sincerely,

PAUL AND MARTHY
(Mrs. W. S. Hupp, Carroll, Nebr.),
(Bloomfield Monitor).

Stream Pollution and Sewage-Disposal Systems

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert a letter I have received from Charles S. Rhyne, executive director of the National Institute of Municipal Law Officers, and a resolution adopted by that organization:

NATIONAL INSTITUTE OF
MUNICIPAL LAW OFFICERS,
Washington, D. C. December 28, 1945.

Hon. BRENT SPENCE,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE SPENCE: At the annual conference of the National Institute of Municipal Law Officers held in Washington on December 3, 4, and 5, 1945, a resolution was unanimously adopted which recorded the approval of the legal representatives of American boroughs, towns, and cities of your bill, H. R. 4070, on the matter of stream pollution and sewage-disposal systems. Copies of this resolution are enclosed and, as you can readily see, city attorneys from all over the country feel most strongly about this question and will be most gratified upon the passage of your bill.

It would be greatly appreciated if you will arrange for the publication of the enclosed resolution in the CONGRESSIONAL RECORD in order that other Congressmen may know how their cities feel about this matter.

Thanking you for past courtesies, I remain,

Sincerely,

CHARLES S. RHYNE,
Executive Director.

STREAM POLLUTION—SEWAGE DISPOSAL SYSTEMS

Whereas the official reports of the United States Public Health Service department disclose that water pollution is one, if not the greatest, of the health menaces which threaten the people of this Nation; and

Whereas it is estimated by health experts and competent engineers skilled in this class of work that the combined sewage and industrial wastes pollution of the United States as a whole approximates the raw sewage contributions of not lesss than 100,000,000 people; and

Whereas it is estimated by these same experts that the annual cost of present water pollution is $100,000,000 per year on the basis of its total economic damage; and

Whereas it is estimated that a reasonable program of pollution abatement throughout the Nation would cost about $2,000,000,000 and require 10 to 20 years for its completion; and

Whereas, because of the very large measure of public interest involved in water pollution abatement, Federal and State aid in financing such projects is justifiable to fully the same extent as is true of other forms of public-works improvements affecting large areas of the Nation; and

Whereas we are now in the postwar era where it is important to have worth-while jobs for our returning servicemen in the construction of public works which will result in the most good for all the people of this Nation, of which a sewage-disposal system is clearly one on account of its effect on public health; and

Whereas the cities and other governmental units are in need of Federal financial aid in order to prevent stream pollution by constructing sewage-disposal systems; and

Whereas there is now pending in Congress H. R. 4070, which by its provisions, if enacted by Congress, would furnish the necessary financial aid and relieve this health menace to the entire Nation: Now, therefore, be it

Resolved, That the National Institute of Municipal Law Officers hereby records its approval of H. R. 4070 and urges its passage without delay, be it further

Resolved, That copies of this resolution be forwarded by the executive director to all Members of Congress.

NLRB Election Procedure in Canning Industry

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. ANDERSON of California. Mr. Speaker, last week I called the attention of the House to a serious jurisdictional dispute which threatens the canning industry in the State of California. This controversy has been brought about as the result of an election ordered by the National Labor Relations Board in the California canneries last October. The election was held at a time when cannery employment was at a low ebb and only about one-fifth of the cannery workers in California cast ballots. Unless the dispute is properly settled in the near future, the farmers of California will suffer serious losses, the workers in the canneries will be without jobs, and the cannery operators will have to close down. Under leave to extend my remarks in the RECORD, I include the following communication from the Secretary of the California State Federation of Labor. I trust that the cognizant congressional committees will conduct an immediate investigation of the charges brought by Mr. Haggerty:

CALIFORNIA STATE FEDERATION
OF LABOR,
San Francisco, Calif., January 21, 1946.

Hon. JACK Z. ANDERSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ANDERSON: Following my telegram regarding the discriminatory action taken by Joseph E. Watson re the NLRB election procedure followed in the fruit and vegetable canning industry, whereby the AFL was denied the elementary and lawful right of a hearing pertaining to irregularities involved, I am hereby submitting additional information.

Not only was this hearing denied by Mr. Watson, but he has been unmistakably antagonistic toward the AFL, and he has on many occasions expressed such hostility. He has lost all semblance of objectivity in the discharge of his duties as director of the NLRB in this region, and we believe that it is high time that Mr. Watson's actions be investigated by the proper agencies before a mass of indignation develops which will seriously disrupt the stabilized labor relations prevailing in California.

It is unfortunate that a man of Mr. Watson's responsibilities should administer his office in such a prejudicial manner. We do not believe that the American Federation of Labor and its affiliates should be victimized by his predilections, which apparently and indisputably are sympathetic toward the CIO. We believe that an investigation will reveal that Mr. Watson is incapable and should be replaced by someone who is impartial and will administer the duties of this important position as is prescribed by law.

Sincerely yours,

C. J. HAGGERTY,
Secretary.

Wisconsin: Nation's Leading Dairy State

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include an article by Lewis C. French, which appeared in the Milwaukee Journal, January 20, 1946. This article tells a thrilling story. It is the story of agriculture in the State of Wisconsin. It is the story of agriculture in a free America. It is the story of the courage and the faith of the American farmer. It is proof to all the world of what is possible in America under a system of free enterprise. It should put to flight those so-called prophets who now and again arise among us to try to put fear in our hearts and make us believe that the American system and way of life have failed. To them and their fellow travelers I say, "Look at the record."

The article follows:

WISCONSIN OUTSTRIPS RIVALS IN DAIRY INDUSTRY ADVANCE—STATE HAS 2,577,000 DAIRY COWS; TURNED OUT 15,500,000,000 POUNDS IN 1945

(By Lewis C. French)

Increases developed during the war put Wisconsin so far out in front as the Nation's leading dairy State that its supremacy is no longer seriously challenged.

Few appreciate the might, volume, and wealth of the Wisconsin milk jug. And it is one of the many marvels of this war how the dairy farmers, crippled by shortages, were able to increase production to meet war needs.

The State starts the new year with more than 2,577,000 dairy cows.

In 1945, Wisconsin produced 15,500,000,000 pounds of milk worth around $418,000,000.

This one State now is producing about 12.5 percent of the total milk produced in the entire United States and selling every pound it can produce.

These monthly milk checks accounted for nearly half of the $770,000,000 gross farm income and, with the Government and subsidy payments, swelled the farm revenue totals to around $830,000,000 for last year.

Wisconsin's neighbor, Minnesota, is second in production with around nine billion (8,500,000,000 in 1944) and New York third with more than 8,000,000,000 pounds of milk.

Backtrack less than a century and you will appreciate the progress made and the swift changes—more cows, more milk, more dairy plants, the start of the big processing plants—all adding up to agricultural wealth and farm stability.

PICKETT SISTERS MADE CHEESE IN LAKE MILLS

In 1860, just 20 years after the Pickett sisters, Armine and Anna, started making marketable cheese by pooling the neighborhood milk from the Lake Mills settlement, there were only 250,000 dairy cows in the State. Most of these pioneer cattle were dual purpose and of nondescript breed, draft animals that were turned out to pasture, with the best cows milked. There were only a few more thousand dairy cows when Chester Hazen started the first cheese factory in Ladoga, in Fond du Lac County, in '64 to open the door to the more standard commercial processing and rapid expansion.

MORE CATTLE THAN PEOPLE

At the turn of the century, there were only around a million dairy cows in the State, and now there are 2,500,000—more cattle than people, counting the beef breeds as well as strictly dairy cattle.

K. G. Weckel of the department of dairy industry of the University of Wisconsin College of Agriculture has issued an interesting factual bulletin on just how big Wisconsin's dairyland has grown. During the last 5 years, Wisconsin has pulled away from other States, for at one time both Minnesota and New York were right on the heels of the Badger State for national leadership.

The intensity of the manufacture of dairy products is shown by the fact Wisconsin now produces:

Fifty percent of the Nation's cheese, 474,000,000 pounds.

Thirty percent of the canned milk, 1,053,000,000 pounds.

Thirty per cent of the powdered milk and cream, 287,000,000 pounds.

Ten percent of the national butter supply, 125,000,000 pounds, one of the few manufactured products to decline during the war.

And in addition to filling the milk and cream bottles in the State, 676,000,000 pounds of fluid milk is shipped out of the State, mainly to Chicago. During the war, more eastern and southern States have been reaching to Wisconsin for their sweet milk and cream supplies—Philadelphia, New York, Boston, and even Miami, Fla., getting some of their fresh milk shipped in big tank cars and trucks from northern Wisconsin. And in another year they'll be shipping supplies in the big cargo planes using high altitudes for refrigeration, carrying fresh milk and cream from Wisconsin to any place in the United States and parts of Mexico.

STATE DAIRY EXPANSION IN 10 YEARS CHARTED

The manner in which Wisconsin has expanded in markets for processed dairy products and milk in the last 10 years is shown in this table:

	Millions of pounds	
Product:	1935	1944
Butter	155	125
Condensed milk	55	196
Evaporated milk	725	1,053
Cheese	315	474
Powdered whole milk	4	12
Powdered skim:		
Human food	70	165
Animal food	43	38
Malted milk powder	10	33
Cream shipped out	5	35
Fluid milk shipped out	240	676

About the only products in which rival dairy States exceed Wisconsin are butter and ice cream and the byproduct, cottage cheese.

Minnesota ranks as the top butter State, producing 251,614,000 pounds in 1944, or nearly 17 percent of the output, followed by Iowa with 212,482,000, accounting for 14.2 percent, and then Wisconsin with 124,966,000, for around 10 percent of the production.

Led by Pennsylvania, which produces close to 50,000,000 gallons, Wisconsin ranks eleventh for ice cream, making 11,714,000 gallons. The three leaders for frozen dairy products are Pennsylvania, New York, and then California, which accounts for more than 28 percent of the national production. It is the shipment of cream to the eastern ice cream manufacturers that is partly responsible for the sharp drop in butter production.

METHODS HAVE CHANGED

The last 10 years have brought changes in dairy manufacturing, with motortrucks and stainless steel tank cars expanding milksheds and technical improvements bringing an era of big, flexible plants.

In 1920 there were 2,770 cheese factories and 780 creameries. The check made by Weckel shows the number of plants has dwindled to 1,500 cheese factories and 430 creamery plants, but those remaining are bigger and turn out far more volume than the crossroads community plant.

Before the war the production of dehydrated whole milk and skim milk was pretty much a side line—the drier being over in one corner of a plant and neglected until something had to be done with the periodic surpluses of milk.

No market developed swifter than that for dried milk powder during the war; 144 different plants have driers. It is noticeable that the amount of skim milk sold for human food went up from 70,000,000 pounds to more than 165,000,000 pounds, and that sold for animal feeds went down from 43,000,000 to 38,000,000 pounds between 1935 and 1944.

This trend, say dairymen, came from the greater appreciation of the nutritional values of milk without butterfat and the tremendous lend-lease shipments of powdered milk.

HIGH PRODUCTION MADE BY THE SMALLER FARMS

This Niagara of milk is from a lot of moderate-sized farms and not from the superherds so common in the Milwaukee milkshed. There are about 170,000 dairy farmers, and the average dairy herd is from 10 to 15 cows.

The survey shows that 35,000 dairy farms account for 20 percent of the milk with but 10 to 12 cows; 70,000 farmers account for 40 percent of the volume, with less than 10 cows; and 65,000 farmers have more than 10 cows.

There are a number of factors that enable Wisconsin to outmilk any other State in the Nation.

One important reason is that when a number of States were almost neck and neck with Wisconsin this State did not hesitate to adopt sanitary methods that were long opposed in the rival States. Wisconsin started the area test to eradicate bovine tuberculosis when Illinois farmers fought the test, and as a result Wisconsin moved right into the Chicago market when laws were passed requiring that city milk be from tested and approved cattle.

Another factor is that the dairy plants and cooperatives were quick to utilize refrigeration to conserve a highly perishable food, and kept the quality up.

QUICK TO IMPROVE

Then, too, the dairymen, through their livestock breed associations and marketing groups, were quicker to improve and meet advanced requirements. Add the leadership and aids of the college of agriculture and State departments and Wisconsin dairymen really made progress.

"There will be still further improvements in use of the newer principles and practices coming from research and new techniques," said Weckel.

For one thing, those in charge of dairy development are bearing down on quality. Milton H. Button, director of the State department of agriculture, and Harvey Weavers, chief of the dairy division, are in full accord with the quality program to make Wisconsin's milk and dairy products known.

UNITED STATES GOOD SALESMAN

"We want all our dairy products a little-better than the best competing States produce," said Weavers.

When the war ended, the dairy industry was fretting over the possibility of surpluses—what to do with the tremendously expanded wartime production. During the war, the Government took from 30 to 40 percent of the total production, but the minute the military orders eased off, civilian markets stepped right in to take over all available dairy supplies, and the rush to find butterfat continues.

"Uncle Sam was the greatest dairy salesman," said one dairy leader, citing the fact that millions of servicemen came home converts to milk and milk products. The startling fact to the dairyman is the surge in sales of fresh milk and cream, every important market showing sharp increases as soon as the limitations were lifted. This increased sale of fresh milk and cream took the play from the butter market—the prewar barometer of dairy prices.

Butter has been in reverse gear, reaching more than 161,000,000 pounds in 1942 and dropping to 124,000,000 in 1944, with the production last year drastically reduced almost half in some months.

But as the production of butter went down, the shipment of fresh cream and the civilian sale of cheese, canned milk, and ice cream sailed up. Because of price differentials, much of the butterfat that would have gone into churns was shipped as sweet cream.

"As long as the market stays strong and there are market voids to fill, the farmer is not showing any interest in culling or reducing his herd," say the dairy leaders. "They are keeping the last stanchion filled and squeezing out every pound of milk they can. The test will come when store shelves are filled, they start aging cheese and the flow of milk through the driers halts. Until then, there are no worries."

Immigration

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. ELLIS. Mr. Speaker, today I submit for the consideration of my colleagues a resolution adopted by the national legislative committee of the Veterans of Foreign Wars of the United States, meeting in Washington January 14 to 16, 1946, with which I am, in a general sense, in agreement. This is additional evidence that the people of this country are disturbed about the immigration situation:

SUSPENSION OF ALL IMMIGRATION

Whereas the critical shortage of housing in the United States is such as to require a period of 10 years for construction of new homes before the housing accommodations will meet the demands of the population of the United States; and

Whereas the United States has an obligation to first furnish employment to the men and women of the armed forces who have defended this country, and also furnish employment to the other employable citizens of the United States; and

Whereas unrestricted immigration to this country will intensify the critical housing shortage and prevent the furnishing of employment to returned veterans and employable citizens: Therefore be it

Resolved by the Veterans of Foreign Wars of the United States, through its national legislative committee, meeting in Washington, January 14, 15, and 16, 1946, That Congress be requested to immediately enact legislation prohibiting immigration from all countries for a period of 10 years; be it further

Resolved, That a copy of this resolution be forwarded to all Members of the House of Representatives and the Senate of the United States, with a request for an early pronouncement of their position on this issue.

Iowa Centennial Postage Stamp

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. TALLE. Mr. Speaker, the CONGRESSIONAL RECORD dated December 28, 1945, contains my remarks entitled "Iowa at Ninety-nine" in which I called attention to the fact that 1946 is the centennial year of Iowa's statehood.

Gov. Robert D. Blue has appointed a centennial committee to make plans for the observance of this noteworthy event in which all citizens of Iowa are genuinely and enthusiastically interested. The committee: Mrs. Robert Pike, Sioux City; Mrs. Myrtle Fellingham, Council Bluffs; Hugo Saggau, Denison; Homer Stephens, Clarinda; Mrs. R. R. Roberts, Britt; Lester Milligan, Mason City; Bert Stolpe, Des Moines; John W. Ganaway, Grinnell; Mrs. Mary Humeston, Albia; William Peterson, Iowa City; Ross Burman, Burlington; Mrs. Celia Gernand, Volga; E. W. Williams, Manchester; Ralph Evans, Davenport; J. N. Darling, Des Moines.

Mr. Speaker, on January 7, 1946, I sent the following letter to the Postmaster General:

Hon. ROBERT E. HANNEGAN,
The Postmaster General.

MY DEAR MR. POSTMASTER GENERAL: Nineteen hundred and forty-six is the centennial of Iowa's statehood.

The people of Iowa want to observe this important event in an appropriate manner, and it occurs to me it would be fitting that a 3-cent postage stamp be issued in commemoration of this significant anniversary.

I should like to suggest further that the centennial committee appointed by the Governor of Iowa be given an opportunity to propose a suitable design for this stamp.

Your attention is invited to these suggestions, and a statement setting forth your decision will be appreciated.

Thanking you, I am,
Sincerely,

HENRY O. TALLE,
Member of Congress.

To this letter the Postmaster General replied under date of January 23, 1946:

Hon. HENRY O. TALLE,
House of Representatives.

DEAR CONGRESSMAN: I thank you for your letter of January 7, concerning the provision of a statehood stamp to mark the one hundredth anniversary of Iowa's entrance into the Union and suggesting that the centennial committee appointed by the Governor of Iowa be permitted to submit a suitable design.

In conformity with past policy the Department will doubtlessly recognize this occasion by means of a special issue and will be very glad to have the benefit of the committee's views as to effective subject matter.

Sincerely yours,

ROBERT E. HANNEGAN,
Postmaster General.

Mr. Speaker, the State of Iowa was endowed by nature with resources that have been and will continue to be a source of rich blessings to the American people. In the next 12 months these blessings and their significance will be the subject matter of countless articles, essays, editorials, and speeches. It is most appropriate that a postage stamp be printed and distributed as a memorial to the labors of the citizens of Iowa during the past 100 years.

Assembly of the United Nations Organization

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, January 25 (legislative day of Friday, January 18), 1946

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the subject of the first assembly of the United Nations Organization, published in New Yorker magazine of January 12, 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Make an original and four copies, Miss Eberhard, one for each delegate. A delegate, on his way to assembly, carries two sets of instructions—one dictated by his own conscience (but not read) and one handed him by his constituents. Herewith we hand to each delegate to the first assembly of the United Nations Organization his instructions:

When you sit down sit down as an American if it makes you feel comfortable, but when you rise to speak, get up like a man anywhere.

Do not bring home any bacon; it will have turned rancid on the journey. Bring home instead a silken thread, by which you may find your way back.

Bear in mind always that foreign policy is domestic policy with its hat on. The purpose of the meeting, although not so stated anywhere, is to replace policy with law, and to make common cause.

Make common cause.

Think not to represent us by safeguarding our interests. Represent us by perceiving that our interests are other people's, and theirs ours.

When you think with longing of the place where you were born remember that the sun leaves it daily to go somewhere else. When you think with love of America think of the impurity of its blood lines and of how no American ever won a prize in a dog show.

Carry good men with you in your portfolio, along with the order of the day. Read the men with the short first names: Walt Whitman, John Donne, Manny Kant, Abe Lincoln, Tom Paine, Al Einstein. Read them and weep. Then read them again without tears.

If you would speak up for us, do not speak up for America, speak up for people, for the freeman. We are not dispatching you to build national greatness. Unless you understand this, and believe it, you might better be at the race track, where you can have a good time simply by guessing wrong.

Never forget that the nature of peace is commonly misstated. Peace is not to be had by preventing aggression, for it is always too late for that. Peace is to be had when people's antagonisms and antipathies are subject to the discipline of law and the decency of government.

Do not try to save the world by loving thy neighbor; it will only make him nervous. Save the world by respecting thy neighbor's rights under law and insisting that he respect yours (under the same law). In short, save the world.

Observe that chapter IV, article II, paragraph 3 of the Charter asks the General Assembly to "call the attention of the Security Council to situations which are likely to endanger international peace and security." We instruct you, accordingly, to call the Council's attention to the one situation which most consistently endangers peace: absolute national sovereignty. Remind the Council of the frailty, the insubstantiality, of your own Organization, in which members are not people but states.

Do not be confused by the noise of the atomic bomb. The bomb is the pea shooter come home to roost. But when you dream, dream of essential matters, of mass-energy relationships, of man-man relationships. The scientists have outdreamed you, little delegate, so dream well.

Be concerned with principles, not with results. We do not ask for results, merely for a soil-building program. You are not at a chess game, even though it has the appearance of one; you are at a carnival of hope.

For bedside reading we prescribe the opening remarks of Justice Jackson at the Nuernberg trial: "The idea that a state, any more than a corporation, commits crimes is a fiction. Crimes always are committed only by persons." (Yet the UNO has been chartered to stop states from committing crimes.) And further: "That fictional being, 'the state,' which cannot be produced for trial, cannot plead, cannot testify, and cannot be sentenced." We instruct you to compare these words with chapter II of the Charter, which says that the members of your Organization are states. If, as Justice Jackson points out, your membership is a fiction, then your first task should be to become more factual, less fictional. Your task will be to introduce people into the pie. Eventually you will have to supplant states with people, policy with law, diplomacy with legality, internationalism with federal union, and you probably haven't as much time as you like to think you have.

As talisman, do not carry a colored flag for the special occasion; carry a white handkerchief for the common cold. Blow your nose frequently and listen to the universal sound.

Finally, now that the Emperor has disclaimed divinity, we charge you to believe in yourself and to love truth. Build the great republic. The foundation is inescapable. The foundation is unity. It is what your initials suggest: UNO.

Capt. Dorothy C. Stratton

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mrs. SMITH of Maine. Mr. Speaker, under unanimous consent to extend my remarks on Capt. Dorothy C. Stratton, director of the SPARS, who was presented with a Legion of Merit, January 15, 1946, by Admiral Joseph F. Farley, Coast Guard Commandant, I include therein citation signed by the Secretary of the Navy, James V. Forrestal. The admiral explained that this honor was being conferred upon Miss Stratton "for exceptionally meritorious conduct in the performance of outstanding services to the Government of the United States as Director of the Women's Reserve of the United States Coast Guard Reserve."

Her accompanying citation, signed by James Forrestal, Secretary of the Navy, reads:

Responsible for initiating, reviewing, and recommending all policies and proposals for the procurement, training, and utilization of members of the Women's Reserve of the United States Coast Guard Reserve, Captain Stratton readily cooperated with the Chiefs of the various divisions of the Office of Personnel and, skillfully integrating women into the basic structure of the Coast Guard, carefully selected, trained and properly assigned SPARS as replacements for men in shore establishments. Under her inspiring leadership, the organization expanded to include approximately 1,000 officers and 10,000 enlisted women assigned to shore billets at the peak of the Coast Guard war program.

A brilliant organizer and administrator, Captain Stratton demonstrated a keen understanding of the abilities of women and of the tasks suited to their performance and, by her consummate tact in fitting women into a military organization, succeeded in directing the efforts of women of the Reserve into channels of the greatest usefulness to the Coast Guard and to the country, thereby contributing to the successful prosecution of the war.

Captain Stratton gave the Coast Guard Women's Reserve the name, SPAR, which she coined from the first letters of the Coast Guard motto, "Semper paratus," and its translation, "Always ready." She was the first "Spar," having been sworn into the Coast Guard with the rank of lieutenant a few hours after the bill creating a Women's Reserve had been signed by the President. Previously she had been a Wave, a member of the first class at the United States Naval Training Station, Smith College, Northampton, Mass. She left the Coast Guard on January 16, 1946, after over 3 years' service as director of the Spars.

In accepting the award, Captain Stratton said:

I am glad that this medal is called the Legion of Merit, for it is to the Legion that it is awarded, the Legion of 11,000 who volunteered to do a wartime job. As a representative of the Legion of Spars, I am happy to accept this award and to say how much we have appreciated the opportunity to serve in the Coast Guard.

The Coast Guard utilized the highest percentage of women of any of the services. This is adequate testimony to the adaptability of the Coast Guard and to the ability of the women who entered its service. We have liked serving in the Coast Guard, and we shall always be interested in its future.

Before she started her service career, Captain Stratton was dean of women and professor of psychology at Purdue University, Lafayette, Ind. She has five degrees—bachelor of arts from Ottawa University, Ottawa, Kans.; master of arts—psychology—from University of Chicago; doctor of philosophy—student personnel administration—from Columbia University; and the honorary degrees, doctor of laws from Ottawa University, and doctor of humane letters from Russell Sage College.

She was born in Brookfield, Mo., daughter of the late Reverend Richard L. Stratton and the former Anna Troxler.

Disgusted With Strikes

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Omaha Daily Journal-Stockman, entitled "Disgusted With Strikes."

Mr. Speaker, I believe this editorial reflects the thinking of the farmers in the Midwest, upon strikes. I have repeatedly urged that this Congress adopt legislation which would help to settle the labor-management disputes in this country. We do need legislation to make labor and industry responsible for their contracts. There is no question but that in the recent steel strike, labor broke its contract not to strike until October 1946. Labor treated their contract with steel, as just another scrap of paper. Mr. Murray shouts from the house tops that big business is trying to destroy the unions. He does this in the face of the facts that the increase offered to the steelworkers was the largest increase in pay they had ever received. The steelworkers have received, since 1940, approximately 40-percent increase in their pay. It can hardly be said that you are breaking unions when their pay is being raised.

It is a terrible situation, Mr Speaker, when our Government must first consult with labor to ascertain if they will return to work before attempting to seize industry. This was done in the packing industry. The AFL said they would return to work; the CIO hesitated. Of course, the CIO will return to work, because one of the best cards the Communists have is that of urging Government to seize all business. They want State and Government control of industry.

The time has arrived, Mr. Speaker, when this Congress must enact legislation to protect the citizens of this country. No labor union or industry should have the right to break their contracts, call a strike and throw the whole country into a distressing turmoil. No group should have special privileges and exemptions under the law.

The editorial follows:

DISGUSTED WITH STRIKES

To say that farmers are disgusted with the strike business is putting it mildly. They know that there is no wealth except in production, and they realize that the country needs wealth today as never before, to meet its accumulated obligations. They face a labor shortage worse than ever before because they can't meet the competition of industry, with their incomes restricted by food price control. They see a labor monopoly reaching out farther and farther for political and business control. They see the Government (politicians) knuckling under to organize labor's demands. And their patience is about exhausted.

One farmer suggests that all farmers just stop shipping for a time, till "labor and the politicians come to their senses." That would at least be the severe punishment, and might even be a cure. "I have a belly full of strikes and I think the general public has, too," writes another. Then there's the 90 percent—"the steady, hard-working, reliable men (men whom you and I could be proud to have as friends and neighbors), letting the 10 percent run their affairs for them. When the 90 percent get mad enough, the strike problem will be solved, and not before." And there is the element of fear, too, in this free land our ours. An Iowa farmer expresses it when he says, "I'd sure like to write a letter to Congress to let them know how we feel about strikes, but I am afraid to use the words I'd like to use for fear of getting in bad."

So the comments run. Farmers are reasonably inclined in the matter. They want to see labor well employed at good wages. That makes good markets for their products. But they can't see any sense in the current strike fever, where men lose more in lost wages than they can make up in a year or two, even if their demands are met in full. The Gencral Motors employees have been out of work since November 21, and have lost upward of $70,000,000 in wages. Some of the workers are keeping body and soul together on savings, some on credits extended by stores, and more and more are seeking relief. They got no union dole and they get no unemployment insurance while on strike.

A tragic thing about it is that the majority of the strikers want to work. But they are no longer freemen; they are slaves, with their destiny in the hands of a little coterie of self-perpetuating leaders concerned not so much for workers or the wages paid them as for more and more power, in politics and in business. They are determined to run the country and the business of the country, and the only power to stop them is in Congress. That is why it is important that Congress hear from the country. That is one place where a farmer's letter—and a farmer's vote—still carries weight.

All Our Postage Stamps Should Bear the Name "The United States of America"

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, recently there has been called to my attention a circumstance that perhaps the average person does not

know exists. Apparently, a number of recent issues of postage stamps by the Post Office Department do not bear the full legal designation of the name of our country, "The United States of America."

The Oklahoma Philatelic Society has just brought this circumstance to my attention. They have written the Postmaster General on the same subject, and I am pleased to quote a resolution which the Oklahoma Philatelic Society has adopted and submitted to be, as follows:

Whereas the term "United States" on the postage stamps of our country is not completely descriptive, inasmuch as there are the United States of Mexico, United States of Brazil, United States of Colombia, and others;

Whereas the official name of our country, "The United States of America," is used on all official documents and on all money issued by our Government (article "the" is usually omitted on coins and on other items of restricted space);

Whereas a number of recent issues of postage stamps of our country bear the designation "United States of America," for example, National Defense (three values), 1940; Emancipation, 1940; Vermont Statehood, 1941; Railroad Golden Spike Ceremony, 1944; Motion Picture Issue, 1944;

Whereas grammatically the words "United States of" are a descriptive term modifying the proper name "America";

Whereas alphabetically the name of our country should be carried under the A's, much as a person's name is located in a directory by his surname;

Whereas historically our country has since its independence been considered and designated as "America" and its people have been referred to as Americans: Now, therefore, be it

Resolved, That the full name "United States of America" shall appear on all future potsage stamps issued by this country.

The Oklahoma Philatelic Society does hereby respectfully petition the Post Office Department to take such steps as are necessary to secure fulfillment of this desire in order that the full name of our country may be read on postage stamps wherever the mail of the United States of America shall be delivered.

No Belt Tightening

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids (Mich.) Press of January 22, 1946:

NO BELT TIGHTENING

President Truman may have set a lasting precedent in combining his message on the state of the union with the budget message. This departure has received much comment, mostly favorable, though it seems more a change of form and procedure than anything else. However, in the sense that it draws attention to the economic crisis ahead for all the people of the United States, the combination of the two messages may have its values.

The first apparent objective of the message is to turn the public eye to the dangers of inflation. The president makes the point that—by using 1945 funds unspent for war due to the end of hostilities—he is reducing the national debt slightly and offsetting from these so-called savings the $4,347,000,000 he proposes that we spend above income in the year beginning July 1. If that represents the setting of a Government example of belt tightening, it is not a very strong one. Furthermore, it is common knowledge that we may very well have to loan Britain more than $4,000,000,000 if we are to take even a minimum step in getting the orderly expansion of foreign trade under way again; and this very important bit of international pump priming is given no consideration in Mr. Truman's estimates.

Setting aside the very great factors for producing money inflation which are under way, and which Melchior Palyi in his press article Monday contended were having a far greater effect than all the opposite attempts of OPA to hold down commodity prices, a natural question after reading the President's message is whether he is seriously aware of the price inflation forces which exist today.

The whole Nation, to halt the inflationary trend, would have to tighten its belt and produce the greatest amount at the lowest possible costs. Industry would have to speed reconversion and risk its money on necessary building and renovation in order to increase production. Labor would have to go to work with a single will to increase productivity of every man and hold down unit costs. Government would have to cut taxes on production in order to encourage industry to expand and risk. Incentives to increase supply at the same or lower costs would have to be matched by speed to prevent further piling up of unmet demand, with its desperate willingness to pay black-market prices.

The President's message, sincere in purpose as it may be, offers no leading in these directions. The Government does not propose to tighten its taxation belt at all. The President continues his demand for vastly expensive cradle-to-grave health service. He does not abandon his support of "ability-to-pay" as a basis for inflationary wages. He asks arbitrary increases in wage minimums. He proposes the further venture of the Federal Government into housing, the retention of its centralized control of employment, expansion of unemployment-insurance benefits with all their unfortunate effects of delaying return to work, a similar expansion for veterans, establishment of universal military service despite the atom-bomb lesson, and a number of other items which—far from representing a belt-tightening program—actually mean the loosening of the Nation's belt. They mean encouragement of inflationary influences continuance of strikes through tacit Federal support for the economic fallacies behind them, and the sure increase of Federal Government responsibilities for high-cost activities in social ventures.

Then the President proposes that we drop this highly inflationary program into the lap of the OPA for a continued price-contral rat race after June 30, and further implement it by continued food subsidies. We are afraid it will be a thankless job for the agencies which will be given a further lease of life.

Unification of the Armed Forces

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mr. John F. Evans, commandant of the Niagara Frontier Detachment Marine Corps League at Buffalo, N. Y., on the subject of unification of the armed forces. I think this is one of the outstanding organizations in our country, and is one of long standing. This organization is composed of men who keep abreast of the times, and I believe their opinion is worthy of consideration. They have come to a decisive conclusion after long deliberation.

NIAGARA FRONTIER DETACHMENT,
MARINE CORPS LEAGUE,
Snyder, N. Y., January 12, 1946.

Hon. JOHN C. BUTLER,
House of Representatives,
Washington, D. C.

DEAR SIR: This detachment in the Marine Corps League, organized in the year 1923, has functioned continuously as a marine veterans' organization, and now wishes to go on record, and in so doing, is in complete agreement with the Commandant of the United States Marine Corps, Gen. Alexander A. Vandegrift, as being unequivocally and unalterably opposed to the proposed unification of the armed forces of our country.

As commandant of the Buffalo detachment I am sure I bespeak the sentiments of all the seven or eight thousand men from western New York who, at one time or another, were privileged to served their country as members of the United States Marine Corps.

I assure you, Congressman, your voice in opposition to the proposed merger of the services will be greatly appreciated by all marines, and, of course, especially by those from western New York.

Thank you.

Respectfully,

JOHN F. EVANS,
Commandant.

A Lofty Ambition

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Endicott (N. Y.) Bulletin:

A LOFTY AMBITION

President Truman, in his combined State of the Union and Budget message to Congress, outlined what he called a program for national economic prosperity based on higher wages and lower prices.

The President's program, coming as it does when over a million workers are striking against management, nonetheless sounds ideal. It is a lofty goal—one that should meet with the wholehearted approval of the average wage earner—but under existing legislation and procedure relating to labor and management, it is a goal that is practically out of reach.

Ever since the beginning of the current labor-management crisis, wages and prices have been the major factors. Labor has demanded higher wages and has been fairly successful in obtaining its demands. Management has been willing to grant wage increases up to a certain point. After that, to meet labor's full demands, management has insisted on the right to increase prices.

Now, President Truman has outline a utopian prosperity program based on all of what one group demands, but less than the other party demands. Such a prosperity, or

even a better relationship between labor and management, can never be attained unless there is a just basis for compromise.

We believe, however, that the President can effect more satisfactory relations between labor and management, reduce strikes, and possibly make a long stride toward attaining its ultimate goal, by supporting legislation which would "give strikes back to the strikers."

The present procedure is usually this: As a union's contract nears its expiration date, leaders of the union inform rank-and-file members that they intend to demand an increase of 30 percent in wages. If indications are that management will deny the demand, a strike vote is taken by the rank-and-file members, under National Labor Relations Board supervision. The vote is taken before actual bargaining negotiations begin, and from that point on the rank-and-file member is a forgotten man, as the union leaders carry the ball.

While the union and management bicker back and forth, after a strike begins, the rank-and-file member sits idly by, watching and waiting while walking a picket line. He has no voice in the proceedings, although he is the big loser.

Our suggestion is to pass legislation which would guarantee the rank-and-file union members the privilege of voting—by secret ballot and under NLRB supervision—on acceptance or rejection of any compromise offer management would make during the process of bargaining.

We are inclined to believe that the average union member would rather work than strike, providing he is treated fairly by management. We believe strikes such as the one against General Motors would not continue long if the rank and file were granted, by law, the right to vote on management's compromise offer.

If such a law were passed, giving strikes back to the strikers, we are sincere in our belief that strikes would be the exception rather than the rule in labor disputes.

And if such a law were passed, we believe President Truman's goal for national prosperity based on higher wages and lower prices would be within reach of being a reality.

Not Unduly Exacting About Treaties

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mrs. LUCE. Mr. Speaker, when the Secretary of State, Mr. James F. Byrnes, reported on the failure of the London Conference last October, he pointed out the mild attitude taken by the United States toward the many demands of the Soviet Government, and summed up our approach to the mutual engagements entered upon by the United States and Russia as being "not unduly exacting."

Since October, as every newspaper reader knows, there have been a series of further concessions by the United States as to positions taken vis-à-vis the Soviets, including some undisclosed but possibly far-reaching abridgements of our policy in the Pacific and East Asia. All these steps have been presented to us as necessary to soothe Soviet suspicion of our imperialistic intent and to obtain—eventually—Soviet cooperation for peace under treaties which shall establish a codified basis for international law.

Good faith is, of course, an essential element of any treaty, and in this regard the following record of the Soviet Government's respect for treaties should be of interest to all Members of the Congress and to the American public at large:

THE TREATIES STALIN BROKE—DOES THE RECORD JUSTIFY CONFIDENCE IN BOLSHEVIK ASSURANCES?

(By Julius Epstein)

(Julius Epstein, who came to the United States in 1939, was for many years foreign correspondent in Europe for Swiss Social Democratic newspapers Das Volksrecht, Zurich; and Freie Innerschweik, Lucerne. He is the author of The Nonsense of Autarchy, Sources of Anarchism, and The Yellow Claw; Japan on the Threshold of World Domination. In June 1942 he joined the staff of the OWI. He is now a free-lance journalist.)

Stalin has broken every international treaty or agreement his Government has signed at the first moment he had the power to do so, provided he considered violating a treaty advantageous to Soviet Russia. The only question Stalin asks himself is the question, "How far can I go without the risk of serious international repercussions?" That is exactly the same question Hitler asked himself before committing an aggression. Stalin, however, is more cautious and intelligent than Hitler.

No one expressed the Stalinists' attitude toward international treaties more clearly than the Soviet Commissar for Foreign Affairs, Maxim Litvinov, when he wrote in his book Vneshniaia Politika U. S. S. R., "As a rule, a treaty of neutrality is nothing but one of the elements in the preparation for war, one of the elements in making an aggression 'harmless.'"

After having concluded the pact with Hitler, Stalin did not hesitate to share the spoils. When the German Army had overrun Poland, Stalin crossed the eastern borders of the country and occupied more than half of Poland. Molotov, Soviet Commissar of Foreign Affairs, triumphantly declared before the Soviet Parliament on October 31, 1939: "One swift blow to Poland, first by the German Army and then by the Red Army, and nothing was left of this ugly offspring of the Versailles Treaty. * * * We were always of the opinion that a strong Germany is a necessary prerequisite for the preservation of a stable peace in Europe. An attempt at another Versailles in the present international situation may end in a complete crash."

By invading Poland and annexing half of it, Stalin obviously broke:

1. The Soviet-Polish treaty of peace of March 18, 1921, signed in Riga, the treaty which Lenin called "a voluntary and just agreement to stand for all time."

2. The "treaty for the renunciation of wars as an instrument of national policy," the so-called Briand-Kellogg Pact of August 27, 1926, to which the Soviet Union as well as Poland had subscribed on February 9, 1929. The Briand-Kellogg Pact is the most solemn condemnation of war ever signed. The first two articles of this pact read as follows:

"The high contracting parties solemnly declare in the names of their respective peoples that they condemn recourse to war for the solution of international controversies, and renounce it as an instrument of national policy in their relations with one another.

"The high contracting parties agree that the settlement or solution of all disputes or conflicts of whatever origin they may be, which may arise among them, shall never be sought except by pacific means."

3. The treaty of nonaggression between the Soviet Union and Poland, concluded in Moscow on July 25, 1932, and prolonged till December 31, 1945, which read in part:

"The two contracting parties recording the fact that they have renounced war as an instrument of national policy in their mutual relations, reciprocally undertake to refrain from any aggressive action against or invading the territory of the other party separately or together with other powers.

"Should one of the contracting parties be attacked by a third state or by a group of other states, the other contracting party undertakes not to give aid or assistance, either directly or indirectly, to the aggressor state during the whole period of the conflict.

"Each of the contracting parties undertakes not to be a party to any agreement openly hostile to the other party from the point of view of aggression."

The Russian Government expressed very clearly its opinion on aggression when it signed the convention for the definition of aggression on July 3, 1933, in London. Ironically the definition used in this convention is based upon the Russian proposal. I quote:

"The central executive committee of the U. S. S. R. * * * the president of the Polish Republic. * * *

"Impelled by the desire to strengthen the peace existing between their countries,

"Believing that the Briand-Kellogg Pact (Pact of Paris) to which they are signatories forbids all aggression,

"Deeming it necessary in the interests of universal security to define as closely as possible the conception of aggression, in order to eliminate every pretext for its justification * * * have agreed upon the following provisions:

"Article 1. Each of the high contracting parties undertakes to recognize in its relations with each of the other parties, beginning with the day this convention enters into effect, the definition of aggressor outlined in the report of the security committee of May 1933 (the politics report) at the Disarmament Conference, based upon the proposal of the Soviet delegation.

"Article 2. In accordance with the above, the aggressor in an international conflict, with due consideration to the agreements existing between the parties involved in the conflict, will be considered the state which will be the first to commit any of the following acts:

"1. Declaration of war against another state;

"2. Invasion by armed forces, even without a declaration of war, of the territory of another state;

"3. Any attack by armed land, naval, or air forces, even without a declaration of war, upon the territory, naval vessels, or aircraft of another state; * * *

"Article 3. No considerations of a political, military, economic, or any other nature can serve as an excuse or justification of aggression as specified in article 2."

By attacking Poland, Stalin eventually broke—as No. 4—the Covenant of the Legue of Nations of which Soviet Russia had become a member on September 18, 1934. Article 12 of the Covenant reads as follows:

"The members of the League agree that, if there should arise between them any dispute likely to lead to a rupture, they will submit the matter either to arbitration or judicial settlement or to inquiry by the Council, and they agree in no case to resort to war until 3 months after the award by the arbitrators or the judicial decision or the report by the Council."

On November 30, 1939, Stalin attacked Finland. Again he broke the Briand-Kellogg Pact and the Covenant of the League of Nations. This time the League acted. Soviet Russia was expelled and declared an outlaw nation by the League on December 14, 1939.

The aggression against Finland was a violation of the Soviet-Finnish Treaty of Peace of October 14, 1920, and the Soviet-Finnish

nonaggression pact of January 21, 1932, valid till December 31, 1945. Article 1 of this nonaggression pact and "Pacific settlement of disputes between U. S. S. R. and Finland says:

"1—The high contracting parties mutually guarantee the inviolability of the existing frontiers between the Union of Soviet Socialist Republics and the Republic of Finland as fixed by the treaty of peace concluded at Dorpat on October 14, 1920, which shall remain the firm foundation of their relations, and reciprocally undertake to refrain from any act of aggression directed against each other."

Stalin was only too eager to use the pact with Hitler and the following events as a welcome opportunity to grab the three Baltic States—Estonia, Latvia, and Lithuania. To conquer these independent states he had only to violate the following treaties which all guaranteed the integrity and inviolability of the three countries:

1. The Soviet-Estonian Peace Treaty of February 2, 1920, signed in Tartu.

2. The Soviet-Estonian nonaggression pact of May 4, 1932.

3. The Soviet-Estonian pact of mutual assistance of September 28, 1939.

4. The Soviet-Latvian Treaty of Peace of August 11, 1920, concluded in Riga.

5. The Soviet-Latvian nonaggression pact of February 5, 1932.

6. The Soviet-Latvian mutual assistance pact of October 5, 1939.

7. The Soviet-Lithuanian Treaty of Peace of July 12, 1920, signed in Moscow.

8. The Soviet-Lithuanian Treaty of Neutrality and Non-aggression which the Russian Government signed on September 28, 1926, in Moscow.

9. The Soviet-Lithuanian Mutual Assistance Pact of October 10, 1939.

Besides these main treaties Stalin had to break a special agreement with Hitler, concluded in 1939, and concerning the division of spheres in eastern Europe. This agreement bound Stalin not to sovietize the Baltic States. It goes without saying that he broke it at the very moment, in June 1940, he thought he could do so without risk.

After Hitler treacherously broke his pact with Stalin, Russia became an ally of the western democracies, and a member of the United Nations. As our ally Stalin subscribed to a great many common declarations and special agreements. There is hardly a single one which he did not violate when he felt he could do this to the advantage of the neoimperialistic policy of the Soviet Union.

Let us proceed chronologically:

On January 1, 1942, Maxim Litvinov, Stalin's Ambassador to the United States, signed the declaration by the United Nations. By this act Soviet Russia officially became an adherent to the Atlantic Charter, the first three articles of which read:

"1. Their countries seek no aggrandizement, territorial, or other.

"2. They desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned.

"3. They respect the right of all people to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

One has only to recall the Russian annexation of parts of East Prussia and the annexation of the Kurile Islands to realize how seriously Stalin kept article 1 of the Atlantic Charter.

To describe Stalin's hundredfold violations of the two other articles of the Atlantic Charter quoted above would mean to write the gruesome history of his unilateral dealings in the Baltic States, in Poland, Rumania, Yugoslavia Bulgaria, Hungary, Austria, and the Far East.

Immediately after Hitler's attack against Russia, on July 30, 1941, Stalin concluded a pact of friendship with his new ally, Poland. Paragraph 1 of that agreement reads as follows:

"1. The Soviet Government recognizes that the Soviet-German treaties of 1939 as to territorial changes in Poland have lost their validity."

How did Stalin implement this clear paragraph?

He changed the Molotov-Ribbentrop line into the Curzon line, so keeping almost exactly the same amount of the booty he had received by Hitler's grace and forced Poland to annex land which never has been Polish.

The next in the serial of common declarations to which Stalin subscribed because he was badly in need of the second front, and therefore ready to sign every declaration no matter how idealistic it might be, was the so-called Joint Four-Nation Declaration of the Three Powers Conference at Moscow (October 30, 1943), which emphasizes:

"That for the purpose of maintaining international peace and security pending the reestablishment of law and order and the inauguration of a system of general security, they will consult with one another and as occasion requires with other members of the United Nations with a view to joint action on behalf of the community of nations."

Stalin's dealings in eastern Europe and the Balkans are nothing but the history of violations of this paragraph and the violation of the other common declarations. All these common declarations have the same contents, the promise of honest concord in the postwar period, the promise of free and unfettered elections in the liberated countries, and the promise to maintain peace and security and to remove all threats to peace, and so on. Stalin kept none of them.

The remaining common declarations of the United Nations have also been violated:

The Three-Power Declaration of Tehran (December 1, 1943).

The Yalta Declaration on Liberated Europe and Poland (February 12, 1945).

The San Francisco Charter (June 26, 1945).

The Declaration of Potsdam (August 2, 1945).

The last declaration distinguishes itself from the others because it contains not only general phrases but also two exact stipulations. The first one reads: "During the period of occupation German shall be treated as a single economic unit." Stalin did exactly the opposite. He treated his part of Germany as he pleased without asking anybody. He removed all machinery and office fittings from various American- and British-owned factories. According to a New York Times report of August 21, 1945, the Russians stole immense amounts of property legally owned by the International Telegraph & Telephone Co., F. W. Woolworth, Metals Coating Co., of Philadelphia, Anaconda Copper, International Business Machines, the Ford Motor Co., Gillette Razor Co., and various others. That's the way the Russians treat Germany as "economic unit." Furthermore they removed railroad tracks and shipped them to the U. S. S. R.

Another paragraph of the Potsdam Declaration says that the "representatives of the allied press will enjoy full freedom to report to the world upon developments in Rumania, Bulgaria, Hungary, and Finland."

The next pact Stalin broke, and this time with the approval of Great Britain and the United States, is the Soviet-Japanese Neutrality Pact, signed in Moscow on April 13, 1941. This pact obliged both countries to "maintain peaceful and friendly relations * * * and mutually respect the territorial integrity and inviolability of the other contracting party." The pact should be valid for 5 years. Article 3 says: "In case neither of the contracting parties dencunces the pact 1 year before expiration of the term, it will be considered automatically prolonged for the next 5 years."

According to this stipulation and the fact Soviet Russia denounced the pact shortly before April 25, 1945, the Soviet Union could not declare war on Japan before April 25, 1946.

On April 14, 1941, Molotov signed a "frontier declaration" attached to the neutrality pact. In this declaration "the two countries solemnly declare that the USSR pledges to respect the territorial integrity and inviolability of Manchukuo, and Japan pledges to respect the territorial integrity and inviolability of the Mongolian People's Republic."

On the morning of August 8, 1945, the Russian motorized divisions roared over the borders of Manchukuo.

As Litvinov wrote:

"As a rule, a treaty of neutrality is nothing but one of the elements in the preparation for war, one of the elements in making an aggression 'harmless.'"

While this article is going to press, Stalin's last two violations of international law became evident. They concern China and Iran.

There can be no doubt that Stalin's interference in China's internal struggle violates article 5 of the Chinese-Russian treaty of alliance of August 14, 1945, signed in Moscow, which reads:

"Article 5. The high contracting parties, taking into consideration the interests of security and economic development of both parties, agree to work together in close and friendly cooperation after the conclusion of peace and to act according to the principle of mutual respect for their sovereignty and territorial entity and noninterference in the internal affairs of both contracting parties."

No less striking a violation of international law is Stalin's most recent interference in Iran. There he first instigated a "revolt" in the Province of Azerbaijan, with the clearly voiced aim that this province may become "independent" (read, a Soviet puppet), and then prevented the Iranian Government forces from entering the Province of Azerbaijan. By this, Stalin not only violated the Declaration of Tehran in which he recognized the Iranian Government as his "ally" but the solemnly concluded treaty of alliance between the United Kingdom and the Soviet Union and Iran, signed at Tehran, January 29, 1942.

In this treaty Stalin promised in article 1 to "undertake to respect the territorial integrity, sovereignty, and political independence of Iran," and in article 6, "not to adopt an attitude which is prejudicial to the territorial integrity, sovereignty, or political independence of Iran, nor to conclude treaties inconsistent with the provisions of the present treaty."

The American people should bear in mind the undeniable facts.

Only then will we be able to answer the fateful question—can we trust Stalin's word?

Name of the treaty, date of signing, and place

1. Soviet-Polish Treaty of Peace, March 18, 1921, Riga.

2. Treaty for Renunciation of Wars as an Instrument of National Policy (Briand-Kellogg Pact or Pact of Paris), February 9, 1929, Paris.

3. Treaty of Nonaggression between the Soviet Union and Poland, July 25, 1932, Moscow.

4. U. S. S. R. Convention for the Definition of Aggression, July 3, 1933, London.

5. Convention of the League of Nations, September 18, 1934, Geneva.

6. Soviet-Finnish Treaty of Peace, October 14, 1920, Dorpat.

7. Soviet-Finnish Nonaggression Pact, January 21, 1932, Helsinki.

8. Soviet-Esthonian Treaty of Peace, February 2, 1920, Tartu.

9. Soviet-Esthonian Nonaggression Pact, May 4, 1932, Moscow.

10. Soviet-Estonian Pact of Mutual Assistance, September 28, 1939, Moscow.
11. Soviet-Latvian Treaty of Peace, August 11, 1920, Riga.
12. Soviet-Latvian Nonaggression Pact, February 5, 1932, Riga.
13. Soviet-Latvian Mutual Assistance Pact, October 5, 1939, Moscow.
14. Soviet-Lithuanian Treaty of Peace, July 12, 1920, Moscow.
15. Soviet-Lithuanian Treaty of Neutrality and Nonaggression, September 28, 1926, Moscow.
16. Soviet-Lithuanian Mutual Assistance Pact, October 10, 1939, Moscow.
17. Atlantic Charter, January 1, 1942, Washington.
18. Soviet-Polish Friendship Pact, July 30, 1941, London.
19. Joint Four-Nation Declaration, October 30, 1943, Moscow.
20. Three-Power Declaration, December 1, 1943, Teheran.
21. Yalta Declaration, February 12, 1945, Yalta.
22. San Francisco Charter, June 26, 1945, San Francisco.
23. Potsdam Declaration, August 2, 1945, Potsdam.
24. Soviet-Japanese Neutrality Pact, April 13, 1941, Moscow.
25. Frontier Declaration between U. S. S. R. and Japan, April 14, 1941, Moscow.
26. Treaty of Alliance between the United Kingdom and the Soviet Union and Iran, January 29, 1942, Teheran.
27. Chinese-Russian Treaty of Alliance and Friendship, August 14, 1945, Moscow.

Veterans Favor 10-Year Suspension of Immigration

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, there has been a great deal of discussion recently among all classes of people, and particularly among the servicemen and the veterans of World War II, with reference to further immigration to this country.

I find that the people with whom I have talked are decidedly in favor of restricting immigration to the minimum, and many believe that immigration should be suspended for at least 10 years, until after our own veterans and citizens are able to construct and establish new homes and obtain employment and security for themselves and their families.

There is much to be said in favor of the sentiment that is being crystalized in this country. Suspension of immigration for 10 years will enable us to provide the living accommodations and necessities of our own people to a large extent, and then we may consider the advisability of admitting people from other countries.

In this connection, I am pleased to quote the following resolution adopted by the Veterans of Foreign Wars of the United States through its national legislative committee in meeting assembled the 14th, 15th, and 16th of January 1946, at Washington, D. C.:

SUSPENSION OF ALL IMMIGRATION

Whereas the critical shortage of housing in the United States is such as to require a period of 10 years for construction of new homes before the housing accommodations will meet the demands of the population of the United States; and

Whereas the United States has an obligation to first furnish employment to the men and women of the armed forces who have defended this country, and also furnish employment to the other employable citizens of the United States; and

Whereas unrestricted immigration to this country will intensify the critical housing shortage and prevent the furnishing of employment to returned veterans and employable citizens: Therefore be it

Resolved by the Veterans of Foreign Wars of the United States, through its national legislative committee, meeting in Washington, January 14, 15, and 16, 1946, That Congress be requested to immediately enact legislation prohibiting immigration from all countries for a period of 10 years; be it further

Resolved, That a copy of this resolution be forwarded to all Members of the House of Representatives and the Senate of the United States, with a request for an early pronouncement of their position on this issue.

Billions in United States Supplies Scattered About Globe

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Times-Herald, Washington, D. C., Sunday, January 20, 1946, by Merrill C. Meigs, including introduction:

BILLIONS IN UNITED STATES SUPPLIES SCATTERED ABOUT GLOBE—ROUND-THE-WORLD FLIGHT REVEALS MOST WILL HAVE TO STAY AS DEAD LOSS

(EDITOR'S NOTE.—The Times-Herald herewith presents a condensed version of a round-the-world diary by Merrill C. Meigs, a member of the Army-Navy Foreign Surplus Liquidation Commission, just returned from a global inspection of United States war surpluses. He represented the Secretary of War, Robert P. Patterson, and Thomas McCabe, Chief of the Surplus Board. Mr. Meigs is vice president of the Hearst Corp. Mr. Hearst contributed the services of Mr. Meigs to the War Production Board in its early days, where he served as Chief of the Aircraft Division under both General Knudsen and Donald Nelson.)

(By Merrill C. Meigs)

CHICAGO.—I have just returned from an inspection tour of our stupendous surplus depots overseas, covering 31,000 square miles.

I went as a representative of Secretary Patterson, not as a newspaperman.

The facts presented came not only from personal investigation but from officers and men whose counsel and information I sought—responsible Americans like General of the Army Douglas MacArthur, Commissioner Paul McNutt, Ambassador Jefferson Caffrey, Generals Wedemeyer, Richardson, Henley, Cannon, Brady, McMullen, Brandt, Parker, Bedell Smith, Clay, Echols, and Giles; Admirals Townes, Spruance, Taffiner, and Hanson, plus many articulate GI's and our hard-working surplus supply men.

Upon my return I made my report to Secretary Patterson and Commissioner McCabe, who agreed that a brief synopsis of my experiences would be of interest to the American public.

Billions of dollars' worth of United States equipment is properly assorted, cataloged, and housed where possible. However, the surplus is so vast that lack of storage and personnel for its preservation and guarding subject these materials to rapid deterioration.

I saw American officers and GI's struggling to solve the fantastic jigsaw of surplus, and I saw understaffed State Department men tactfully battling the unreasonable demands of some of our allies.

GRAPHIC PROOF OF CONSOLIDATION NEED

I saw graphic reasons for a united command of our armed forces at bases where the Army and Navy had built and maintained costly establishments in duplication of each other.

I detected a sharp need for a more realistic United States outlook on surpluses and of a more realistic foreign policy. I am no imperialist, but there are strong indications that we are bending over backward to be pleasant to certain countries which screamed for our aid—and got it—but which now are reluctant even to let our commercial planes land at fields we built.

Out of the often-bewildering panorama come several thoughts:

We must either pull completely out of a majority of our foreign bases—and write off the staggering cost—or we must keep a strong staff of seasoned experts in those areas to protect and maintain our huge investments.

Our representatives in the field feel the need for a strong, simple, and understandable foreign policy, which would protect first and last the interests of the United States of America. While there are billions in surplus, there is a glaring scarcity of decisions from Washington.

If we do not remedy this situation, we are going to confirm a growing feeling in certain countries that we are a Nation of suckers.

Our air facilities overseas have been reduced to such a state that one green, if willing, hand now works where several splendidly trained experts once labored. The fabulous records we set for safety during the conflict are being dissipated daily because we simply haven't sufficient trained men to run our far-flung network of Army and Navy planes.

PLANE MAKERS GEARED FOR HUGE PRODUCTION

It must be remembered that before Pearl Harbor the United States got along nicely with 370 commercial air liners. And we were the most air-minded nation in the world. The 370 planes more than handled the country's air traffic.

This traffic, naturally, will be expanded now. More and more people—including hundreds of thousands of airmen trained by Uncle Sam—will want to fly in the postwar world. But the progress attained will not in any way parallel the tremendous strides made by United States plane manufacturers when the call came to them to build war planes.

Willow Run itself was geared to build a four-engine Liberator bomber every hour of the day and night. One can readily understand how quickly the supply would overrun the demand, and the hard times which would come upon United States plane makers if surplus bombers and transports were dumped on the American market.

HOW CAN SURPLUS TANKS BE USED?

As for tanks, guns, and millions of other items and weapons of the great conflict, how can they ever be bent into plowshares?

We apparently must leave most, if not all, of this material overseas.

If we keep any considerable force overseas, we must by all means see to it that these men continue to get the best treatment, housing, food, equipment, entertainment, and religious and recreational facilities.

I am happy to report to United States parents that their sons remain the best-fed, best-equipped servicemen in the world. They have the finest supervision and guidance and at this time their lot is being made as pleasant as is humanly possible.

Parents and wives of men overseas, however, must face this inescapable fact, that their demands that the boys be sent home immediately is stripping the Army and Navy of its technical men and experienced hands.

As the father of three servicemen, I can understand that demand. Perhaps the hidden cost of bringing the boys home, which would involve sacrificing veritable mountains of expensive gear, can be marked off as part of the price of operating our great, free country.

But, having seen what that gigantic price is, and having heard the pleas over there for new experts to replace the old, I wish that more of our leaders and more parents could have made the trip I recently made. They would then at least grasp the cost of headlong demobilization, even if they were inclined to damn the cost.

DEMOBLIZATION HAS GONE TOO RAPIDLY

In the short months since VJ-day, experienced officers told me our demobilization has been so rapid that it would take us a year and a half again to be as strong as we were on the day final victory was won.

Our surplus problems are mighty. We must dispose of tremendous mounds of perishable and semiperishable food we stored throughout the world, and the same is true of medical supplies.

We must carefully weigh myriad other supplies against the threat that will glut United States markets, retard new business here and abroad, or become tools of another and mightier war.

We must sell what we can, rather than give it away. We must outwait such powers as the French, who are biding their time against the day when sufficient sentiment in the United States will take the Americans out of France and dump desired stores in France's lap.

And we must discourage the tendency of some powers to charge us rent for storing supplies which helped save those countries from starvation, disease, and slavery.

It is nobody's fault that we piled up such stores. We had to be prepared to invade Japan with millions of men. We had to be prepared to fight the final battle for Germany in Hitler's Bavarian redoubt.

Our supply lines from home to the fighting fronts were jam-packed—a miraculous and still unsung achievement of our services of supplies. The supply pipes were filled in the manner that the pipes leading from the reservoir to your kitchen spigots are filled.

But the job is not yet finished. And we at home will be doing both our men and our country a real service if we will understand that adequate staffs are still needed overseas to solve the supply problem and other complexities of demobilization and occupation.

Riding in the plastic nose of our special B–17 Flying Fortress, jotting down these notes, I found myself wondering how the cost of it all would ever be paid; how to ease the burden on coming generations of taxpayers.

GLOBAL LOG

November 4: Left Washington 11:30 a. m., after receiving instruction in use of parachute, "Mae West," rubber boat, signals, radio.

November 5: Left Bermuda 7:13 a. m. Four hours over Atlantic, rear entrance blew off. Could not repair. Returned after 8½ hours.

November 6, 7: Awaited repairs, or new plane.

November 8: New B–17 arrived. Departed, 4:20 p. m.

November 9: Landed Santa Maria, Azores, where United States invested $20,000,000 in fine airport. Portuguese natives earn $1 a day for 10 to 12 hours. Arrived Paris. Army-operated hotel. Steam heat. Good food. Tired.

November 10, 11: Armistice Day parade reviewed by General De Gaulle. Weather reporting here unreliable, due to departure of experienced men.

November 12: No market for scrap. Miles and miles surplus guns, tanks, trucks, etc.—250,000 items.

November 13: Flew over Le Havre, Omaha Beach. Barges remain sunk off beaches. Ground pulverized. Arrived Bovington Airport, London.

November 14: Inspected base near Liverpool. Everything fine order. Surpluses carefully stacked, housed.

November 15: Fog and rain prevented departure for Germany.

November 16: To Wiesbaden at 5,000 feet. Rode in glass nose of plane. Saw Dunkirk, Liege.

November 17: Frankfort and Mainz. What demolition!

November 18: Rhine. Hitler's gleaming white yacht—United States now operates it. No transportation. People walking, walking.

November 19: Berlin and indescribable destruction. Templehofen Field. Short, rough runways.

November 20: Hitler's bomb shelter. Chancellery. Women working with shovels, wheelbarrows.

November 21: Marseille, Swiss Alps, Corsica. Beautiful, rugged, tough country. Napoleon had to be tough to live in Corsica. Surplus representative says plenty of surpluses—but short on decisions from Washington.

November 22: Rome, Vatican. St. Peter's, most beautiful and awe-inspiring sight. Beggars pilfered car. Naples. Airplane surplus property man here well posted. Knows where every plane is and condition. Ruins of Pompeii. Fly over top Vesuvius, now inactive. San Carlos Opera House.

AGENTS IN ROME HAVE NO ORDERS

We flew in over Rome and Vatican City just at sunset, a stunning sight which soon will be within reach of countless air-minded Americans.

Surplus representatives in Rome told me that they have arranged to sell some of the supplies we cannot bring home, but that Washington has not told them what to accept for money.

A trip to the Vatican is a reassuring experience for any man, regardless of his faith. Here was peace in the midst of war, a tiny oasis in a desert of savagery, corruption and abandonment of human rights.

As in the past, I find no words apt enough to describe the magnificence of St. Peter's, nor the thoughts a visit there stimulates.

November 23. Off for Cairo. Sicily barren. Steep mountains. Bengazi. Remains of battlefields.

November 24. Cairo, Sphinx. Natives share mud huts with donkeys and water buffalo.

UNITED STATES IN MIDDLE OF CAIRO FIGHT

We invested about $3,250,000 in building Payne Field near Cairo, an airport complete with runways, hangars, shops, world-wide communications, passengers and freight facilities and housing for operating personnel. But we are having considerable difficulties getting permission from the Egyptian Government to continue to operate our airport. They propose to take over our airport, Payne Field, for the training and maintenance of their own army air force, compelling us to move all our operations to their inferior municipal airport.

Some Egyptians told me that it is the British—who control Egypt—who are promoting this exchange. But Englishmen told me to blame the Egyptians for the freeze that is being put on us.

Anyway, we are in the middle, and our representatives were praying that Washington would take strong action on this case.

November 25: To Jerusalem via Suez Canal in C–54. Port Said. Egyptians hunt ducks here. Seventy-five average bag. Palestine. Bethlehem. Dead Sea. River Jordan. Jericho. Pinch myself and stroke chin. No, am not living in Old Testament. Poker with Sheik. Lost. His English excellent. Only 35 percent literate in Cairo. The Nile.

November 26: Abadan famous for oil Karachi. Skinny natives sit on heels staring. Agra, India. Taj Mahal. Next to St. Peter's most impressive. Then what contrast! Mud huts. No windows or doors. Any American jail a palace in comparison. Fine intelligent American officers.

November 27: En route to Calcutta. Bicycles. Donkeys. Oxcarts. Open, unsanitary wells. Study graphs showing surpluses. Well-planned disposal set up. Natives bathe in water holes, wash clothes, and drink same water.

November 28: Cross Hooghly in launch. Bodies of dead native float by. Visited ghats where dead are burned. Wealthy buy all-consuming fire; the poor scorch body then throw in river. Inspected 700 planes not worth flying home. No market but for few. Fifty times as many people as in one block at home—crawling over each other like ants. Walking skeletons. My impression is get whites out of here and quick, regardless of surpluses.

November 29: Glad to leave for Kunming, China. Fly over Hump of Himalayas, 13,500 feet. Terrible winds. Drafts drop plane thousand feet then drive them back up again. Ice forms on wings. Vicious looking mountains. No wonder we lost hundreds of planes here during war. Quarter in General Chennault's rambling house. Airport bisects graveyard.

November 30: Flying over China. Such great rivers. No railroads. Freight transported by boat.

December 1: Shanghai. Smiling natives. Cathay-Manions Hotel. No heat. Japs took radiators for scrap. Everyone has a cold.

December 2. Visit head of China-American Air Force. Lacks trained mechanics to keep planes repaired. Not much declared surplus because no decision yet on size of Chinese and our Army. Excellent Chinese dinner. Use chopsticks, but mostly fingers. How to get 6,000,000 Japs out of Korea and Manchuria a problem. China impoverished. We hold the bag.

December 3: Tokyo, Yokohama. Burned out. Worse than Berlin. Nagasaki, Hiroshima—complete burnout. Rice paddies. Visited General MacArthur. Says he is telling Japs the story of freedom. Cannot leave for visit home until job is done. Dinner Imperial Hotel. GI rations.

December 4: Spent day in our International News Service office. Went to Jap Diet but Diet was not in session—gone to see American movie on how they were licked. Delicious dinner. General Kenney's home but general away. Complimented Jap cooks. Response, smiles, bows.

December 5: Okinawa. Hundreds of GI units. Steam shovels eating at hillsides. Town of 25,000 destroyed. Church steeple still stands. Army-Navy cooperating. Natives uneducated—small, runtylike Japs.

December 6: Fly over Bataan, Corregidor. Feeling of awe and reverence as we think of humiliation, starvation, and death of our men.

December 7: Manila. Visit Filipino farm. No machinery. Most of work done by hand. Farmers small but strong. Clark Field. Depressing to see over 1,700 planes parked wing to wing. Many new. Most to be declared surplus and scrap representing over a billion dollars. Wrecked Jap planes. Dustiest place seen. Planes must be attended or will corrode and mildew in hot, damp climate. Organized band of thieves. Split our life rafts to get two small packages of emergency rations, tools, etc.

December 8: Visit Corregidor. Concrete forts, mortars. Obsolete as horse and buggy. Leaving we see white hospital ship laboring way home to America.

December 9: Guam. Looks pretty small on map. Hope pilot hits it. Beacon flashes welcome. Still 200,000 soldiers, sailors, marines quartered here. Supplies vast, accumulated for Japan invasion. Insufficient help retards inventory.

December 10: Guam Harbor being dredged and docks built. See giant floating drydock. Bulldozers at work. Hats off to Seabees and engineers. Picturesque coral shore. Water clear. Varicolored ocean bottom. Saipan. Saw rock where native families committed suicide at approach of Americans. Villages all have churches.

December 11: Kwajalein Atoll. Commander says surpluses not worth saving. Worn out. Johnston Atoll a speck on ocean. Room for only 5,000-foot runway. Few buildings. Water system broken. Each person allowed gallon per day.

December 12: Flying at 9,000 feet. Taking oxygen regularly. Honolulu. Pearl Harbor. Land Hickam Field. Guest of Gen. Robert Richardson, commanding general mid-Pacific area. Visit demobilizing center. Comfortable barracks. Recreational facilities.

December 13: Radio and radar control rooms. Meet Admiral Spruance and members of staff. See vast Navy installations. Same orderly condition as Army. Fine cooperation Army-Navy here. See ships sunk by Japs. Visit Signal Corps receiving and sending rooms. What equipment.

December 14: Visit square miles of shops, docks, stock piles. Surpluses. Barracks. GI Club. All excellent condition. Richardson fine administrator. Insists on good housekeeping. Is taxpayer conscious.

December 15: Smooth comfortable flight. San Francisco in sight 11 hours flat. Party all well. Congenial.

December 16: Lake Tahoe. Salt Lake. Nebraska. Just crossed Mississippi. Home in 40 minutes. Piloted plane for hour. Looked down on Iowa where grandfather came from Vermont by covered wagon in 1852—inching his way at 2 miles per hour while we fly smoothly at 200.

BILLION DOLLARS IN PLANES AT ONE FIELD

In the Philippines the surplus troubles are typical of our troubles almost everywhere. We have sent home the men best able to care for our fortune in supplies. The replacements are entirely inadequate and, of course, inexperienced.

We have some breathtaking surpluses there. At Clark Field, which is rimmed by the remains of hundreds of Jap planes, I saw over $1,000,000,000 worth of American bombers, fighters, transport, and reconnaissance planes with spares. It is a veritable sea of planes. A vast, vast majority of them will have to be broken up into scrap. Modern as some of them are, they are still outmoded, and are ill-equipped to be flown or shipped home.

Indeed, there are as many transports at Clark Field alone as the entire United States commercial system possessed at the outbreak of the war. We plan to keep a minimum number of the best of these planes in operation ready to go to work on any task here. But it is difficult even to keep these in tip-top shape. Their seasoned custodians are gone. The men had enough points, and no suitably trained men have been sent in their stead.

The thievery of our supplies is at its worst in the Philippines, for it is organized. In some countries where populaces are preying on our surpluses, some efforts are made to punish the guilty.

But at Clark Field, to name one place, the local authorities give very light sentences—which usually are not served—or dismiss cases altogether.

In one week nine carloads of meat en route to Clark Field to feed our GIs disappeared entirely. Regulations prohibit our men from shooting at thieves. They must be tackled, as gently as possible, and turned over to local authorities. Often they are set free by officials patently in on the racket.

FIGHTING LOSING BATTLE TO PROTECT TAXPAYERS

Our boys are fighting a losing battle to protect the property of the American taxpayers. I was asked repeatedly to urge Washington to send enough men to the Philippines to protect our stores, and to give our men the right to use their weapons when necessary.

Nowhere did I see a more vivid example of what General Marshall was talking about when he told Congress, "You won't have demobilization, you will have demorialization."

We have good men left in the Philippines, but there aren't enough of them.

The long-promised independence of the islands will be a trying time not only for Filipinos but their American friends. Former experienced Philippine government officials have been liquidated by the Japs.

Tax and other public records were destroyed in the battle of Manila. The Philippine government has no clear-cut plan to collect taxes.

Officials in High Commissioner Paul McNutt's office told me that if Filipinos were permitted to vote today on an independence they would vote 8 to 1 in favor of staying under the political and economical wing of the United States.

With General McMullen we visited Corregidor and were stunned by the archaic arms of the island, where General Wainwright and a handful of men and nurses so gallantly held off the overwhelming attacks of the Japs in the early days of the war.

The old guns Wainwright had—I noticed a 1903 date on one—were pointed out to sea. They could not be turned to shell the Japs a few miles away on Bataan. What a tragedy that was.

Today a work crew of 1,200 Jap prisoners stolidly clean up "The Rock," digging the bodies of brave Americans and Filipino patriots out of the caves in which they died.

The wheels of our globe-circling B-17 touched hallowed land on the way home from the Pacific—land made forever sacred in our annals by the price paid for them in American blood.

After Okinawa and Guam we swept over Saipan, where you can see the sharp-toothed reefs that stopped our invasion boats and forced our boys to swim and wade ashore through murderous fire.

A hundred ships lie in Saipan's harbor, some of them jammed with unloaded supplies we no longer need.

There is no market for such supplies in that part of the world. If we shipped them all the way home, we could never realize enough from their sale in the United States to warrant the cost of transportation.

We touched at bloody Kwajalein, too. The tiny atoll we have transformed into a vital air-passenger base.

HAWAII COMMANDER DOING EXCELLENT JOB

Another long hop over the blue Pacific brought us to a speck named Johnston Island, which American enterprise has turned into another vital cog in our Pacific air travel.

Then, as if on smooth, invisible rails, Captain Larson took us to Hawaii, where the whole bloody and bankrupting business of our war began.

General Richardson, commanding general mid-Pacific area, himself soon displayed to our party the qualities which prompted General MacArthur to place him in charge of a huge portion of the Pacific.

Best of all, from a businessman's standpoint, Richardson has a highly developed regard for American property. A story typifies that regard:

One day Richardson saw a GI misusing an army truck. "You should treat that truck better, son," he counseled. "You and I and your buddies bought it."

The kid looked at him quizzically. "The Army bought it, sir," he said.

"True enough, but the money had to come out of the pockets of Americans like yourself."

The Pacific air traveler, and there will be countless thousands of them in the coming years, is comforted by an inspection of the precautions taken for his safety.

Before we took off for California, General Richardson showed us his control air operations room, where the most modern devices keep tab on the flights of all planes leaving or arriving at Honolulu. The room is dominated by a huge map, on which tiny planes, your own among them, move majestically across the blue expanse of water—constantly checked by radar and the lastest radio safety signals. Rescue planes stand by day and night. In case of trouble they are on their way to the spot within 3 minutes.

It is plainly beyond the power of most men, including this one, aptly to describe the emotion of homecoming. I felt I was home in this blessed land when I awoke after a nap in the B-17 and looked down on San Francisco's magnificent Golden Gate.

I knew then, as never before, how great this land is, for I had behind me the example of a world that is sick and battered and despairing.

CHANGES IN AMERICA SINCE PIONEER DAYS

As these final words are written we are crossing the strong flat midland of the United States. My grandfather crossed these lands in a covered wagon 100 years ago. I was born on a farm near which this big plane just flew. I saw the first telephone wires strung to that farm, the first automobile, the first flimsy plane.

Now, in smooth comfort, I fly over these lands at 200 miles per hour. In a few years we'll be doing it at 400 miles per hour in much more comfort, for pressurized cabins will reduce the tiring effect of insufficient oxygen. Food, service, and planes will be greatly improved. In my time I have seen the world shrink as never before in its history.

As for the trip itself, here is my summation:

We must face the fact that the rapid demobilization of our armed forces is causing great disorganization overseas and at home. Boys are released before they can be replaced.

Foreign markets, at best, are scarce because the world is generally busted. Priceless weapons and warplanes are now nothing more than spent bullets. Billions in United States war goods must be scrapped.

We should clear out of such lands as India and Iran as soon as possible. We should give up such Pacific islands as are no longer needed as bases and which cannot be turned into armed places by any unfriendly power.

Appalling is the staggering cost of our overseas military machine. How long can America stand this terrific burden? Some officers expressed the opinion that the development of atomic power may greatly reduce this tremendous expense. They are hopeful for the success of the United Nations Organization but are not too optimistic.

ARMY-NAVY HANGARS, FIELDS, SIDE BY SIDE

On some islands in the Pacific I saw splendid Army and equally efficient Navy air fields resting side by side. Each was fully equipped as to workshops, hangars, barracks, hospitals, and the like. Each used different types of planes, engineered and produced individually at fabulous cost. Members of both services admit that a united command would result in great savings and added efficiency. However, Navy men feel that this could be accomplished without a complete merging of the two services.

The country should draft its highly trained retired Army and Navy officers into the diplomatic corps. They have a grasp of world affairs, and an appreciation of United States interests, second to none.

They are immeasurably better suited to represent us overseas than, say, inexperienced politically appointed diplomats.

I found that many are strongly of the opinion that we should get Caledonia from the French in exchange for the mountains of surplus supplies we will soon be obliged to give the De Gaulle government. Caledonia, lying almost dormant in the Pacific, would strengthen our Pacific defense and serve as a fine stepping stone for our California-to-Australia trade.

Most of the American embassies are entirely unsuited to house our expanded diplomatic staffs. Many suggested that we swap surpluses for more adequate and representative quarters.

NOTHING BEING JUNKED THAT COULD BE SAVED

I saw no surpluses being destroyed overseas which should not have been junked. Our intelligent officers approach all scrapping problems with an "I pay taxes, too," attitude and caution.

Congressional junkets to distant lands have often been criticized as a waste of money. My trip convinced me that such trips are not only wise investments, but the duty of Congressmen. How can they enact legislation of an international character if they do not know the world we live in?

I am convinced that America and the allies will make a serious mistake if anything is done to curb the authority of Douglas MacArthur in Japan. He is ably handling the greatest job ever heaped on a military man.

I express the hope that these articles may contribute to a better understanding of the great problems facing the American people.

The Twisted Brass

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. BYRNES of Wisconsin. Mr. Speaker, I believe we all appreciate the necessity for the maintenance of a large Army and Navy for a considerable time to come. It is my hope and prayer that this Army and Navy will be made up entirely of volunteers. I firmly believe that this can be done. It can be done by making the service attractive to the young men of the country. The Congress can make the service more attractive, and a start in this direction was made when we passed the armed forces voluntary recruitment bill of 1945. But our Army and Navy leaders must do their part. If they fail to carry out their responsibility, then the whole program fails. One thing they must do above all else is to maintain the respect of the men in the service and the people generally. I issue a word of warning to them now—broken promises do not encourage respect. It would be well for them to take to heart the warning contained in an editorial which appeared in the January 21, 1946, issue of the Green Bay Press-Gazette, which follows:

THE TWISTED BRASS

A flood of mail to the Press-Gazette last week from privates, sergeants, and captains scattered around the world was convincing that these protesting soldier boys of ours are on the right track and know what they are doing in their many complaints against their superiors.

They are not complaining of serving their country. They do not gripe about lonesomeness. Filthy villages and sunken-eyed and miserable people have not turned their heads. The glorious but far-off comforts of home have not warped their judgments.

They simply insist that men in high positions who are faithless to their words, that leaders who have made promises only to break them, must be brought to an accounting.

In the numerous Army publications from the Short Snorter through the Tacalog Times to the Daily Pacifican, there runs but one theme, one startled question, one amazing interrogatory, What has become of the code of honor of the American Army?

The detail of broken promises is simply sickening. Nor is it merely a matter of changing orders. The soldiers aren't children. They realize that orders must be altered, that ships don't always make schedules, that emergencies arise, but they vehemently protest against generals who think they can answer a just complaint with a glib excuse, can secure an objective by making a definite promise, and after the soldiers have delivered the goods forget or ignore the promise.

In anticipation that we are going to have a bigger army than ever, something very drastic will have to be done at Washington so that a general's word is hereafter respected. If the brass does not realize that an honorless army is wholly useless, the men in the ranks do. They don't want that kind of an army. They won't stand for it. And in this attitude they are wise beyond their years.

The FEPC Program

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 24, 1946:

THE FEPC PROBLEM

The Chavez bill for a permanent Fair Employment Practice Commission, now before the Senate, is recommended for favorable consideration by its avowed purpose and by the character and sincerity of its leading supporters. If the bill could actually accomplish what its proponents believe it will, we would have no hesitation in urging that it become law with the least possible delay. If its swift passage could be made a rebuke to Senator BILBO and others who propose to filibuster against a vote, there would be another argument in its favor. A filibuster at this time is an outrageous effort by a minority, at the expense of the public business, to defeat the will of a majority.

Under these circumstances it is not a pleasant duty to express doubt as to the wisdom and probable efficacy of the Chavez measure. Yet we are compelled to do so. The act would apply to every employer or labor union with more than a handful of employees or members in interstate or foreign commerce in any State, Territory, or possession of the United States. It would make it unfair for them to discriminate against any person "because of such person's race, creed, color, national origin, or ancestry." An FEPC order, if sustained, could in theory be enforced by the Federal courts, with contempt penalties, and any willful interference with the commission or its agents or agencies could be punished by imprisonment and fine.

We do not believe this act would be enforceable in any State or community where the dominant opinion ran strongly against it. Discrimination is always hard to prove, because it involves the subjective question of intent. There must be a majority will to comply if the unwilling minority are to be legally coerced. In many American communities this will to comply simply doesn't exist. It will have to be created by education, backed in time by State and local law. The Federal Government, with all its power, cannot change the climate of opinion overnight. And a new Force Act might do more harm than good to the very minorities the law aims to protect.

One clause in the Chavez bill can, certainly, stand. This clause requires the insertion of a nondiscrimination provision into Government contracts. The Federal Government may not be able to halt discrimination by direct action, but it can certainly refrain from patronizing the discriminators. For the rest, we will probably have to wait upon the civilizing influence of education in this field. People just can't be made fair and tolerant by the use of the policeman's billystick.

Walter Lippmann Writes on Basic Economic Problem

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. VOORHIS of California. Mr. Speaker, I take pleasure in including with my remarks a recent column by Walter Lippmann entitled "The State of the Union," in which, in my judgment, he goes to the very root of the economic problems of our country, both at the present time and in the future:

TODAY AND TOMORROW
(By Walter Lippmann)
THE STATE OF THE UNION

The President's decision to send one message, which includes the Budget, instead of two separate messages, as has been the custom, is in itself a highly significant event. It marks the acceptance of the fact that in these times the relation between Government finance and the private economy is intimate and reciprocal. The two cannot be considered apart and treated like two parallel lines that never meet. The day is gone, and will probably never return, when Government spending, taxing, and borrowing, can be isolated from individual and corporate spending, investing, and saving. For the

two combined, and interacting, determine the level of production, the order of prices, the quantity of employment, and the Government revenue at any given rate of taxes.

For some years before the war, in fact since 1936 when J. M. Keynes published his book The General Theory of Employment, Interest, and Money, the basic theory has been known. It has won wide acceptance among economists. But only gradually is it being understood and accepted by laymen, and only now at the beginning of the postwar period has it become possible and necessary to apply the new knowledge. The President's message, supplemented by the fifth report of the Director of War Mobilization and Reconversion, is based upon the findings of the new economic science of our generation.

The war has quickly turned what might have remained for long an academic argument into a practical problem of statesmanship. For at VJ-day the American people were producing goods and services at the rate of $200,000,000,000 a year. Nearly half of this product was bought by the Government; the other half was bought by the civilian market. No one could, therefore, dispute the enormous role of the Government in the whole economy.

Now that the fighting is over, the Government's purchases of goods and services will be reduced from the wartime peak of ninety-eight billions annually to almost thirty-five billions in the 12 months beginning July 1 of this year. Such a drastic and sudden reduction of demand by the Government would, in itself, produce unemployment and a severe decline in prices. But it is offset by the fact that during the war individuals and corporations earned much more than they were able to spend, were allowed to spend, or wished to spend. They have about $220,000,000,000 on hand. This private money not only offsets the reduction of Government spending. It hangs over the market which is not yet adequately supplied with civilian goods, and will not be and cannot be supplied until their is full civilian production. If the spending of this huge accumulation of private funds is not slowed down, it will, of course, push up prices to exorbitant levels.

These are the controlling facts with which national policy has to deal. In the near future the threat of inflation has to be countered. The threat arises from the fact that there is this huge accumulation of private funds, a long-deferred demand for goods and services, and a considerable delay in coming to full production, especially in the critical field of private housing. The problem is much money and not enough goods. The solution of the problem is more goods as soon as possible, less private spending until there are more goods, less money in circulation brought about by taxation and the control of credit and as stopgap and backstop for some time to come price control of scarce goods and Government allocation of essential materials.

The most urgent measures the President needs from Congress are, therefore, an extension of the Price Control Act and of the Second War Powers Act, both of which expire on June 30.

But while the immediate problem is that of inflation, no one who looks ahead and wishes to act with prudence and foresight can doubt that the time will come—no one can say exactly when but certainly within a few short years—when the deferred demand will have been satisfied, the private savings that will be spent and invested, used up, production will be at full capacity. Then the postwar depression will begin, and if measures have not been taken soon enough to prevent it, or at the least to moderate it, it is almost certain to be the most violent depression in our whole history. Nineteen hundred and twenty-nine was bad enough; the national income fell from ninety to forty billions. But now the national income is much larger, and if it fell to forty or even to seventy billions, the effect might well be catastrophic.

The measures to prevent this happening are among the most difficult our people have ever had to consider. The American economy will be at a level of productivity never before achieved anywhere at any time. To keep it at that level or anywhere near it, will require capital investment and consumer spending on a scale beyond anything hitherto known in time of peace. It is not easy to see, it is very hard to know, how capital investment of a wholly new order of magnitude can be brought about annually and consistently. But if it is not brought about, depression is certain, and depression of a kind which will shake the country and the world.

The success with which we master this American problem will have a profound effect on the peace of the world. An economic catastrophe in the United States, like 1929, would undermine the peace settlement. As a matter of fact the whole prospect of peace, the whole hope in UNO, all the plans of reconstruction and for liberty and democracy, rely at last upon the promise that the United States will itself achieve such prosperity that there will be increasing prosperity everywhere.

Address of Hon. Lindsay C. Warren

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Lindsay C. Warren, Comptroller General of the United States, at annual dinner of the Chamber of Commerce of Asheville, N. C., January 17, 1946:

I am glad to come back to Asheville again, and I greatly appreciate your cordial invitation to be with you. I have never felt that I was a stranger here. Aside from many friends in this section over the years, I have felt special attachments for the city and its people.

My great great grandfather, John Gray Blount, owned a part of the land on which Asheville is built. I regretfully admit, however, that not 1 foot of it ever came down to me. My grandfather was the ever loyal and constant friend of the mighty Vance, and was a member of his council of state. My father was elected as the second president of the North Carolina Bar Association here in Asheville. I bear the name of an Asheville lady of yesteryears, and for 3 years I attended the famous Bingham school, which added its contribution in those days in making Asheville North Carolina's best-advertised city.

I am also glad to be here to pay a visit to a very important part of the General Accounting Office—the Postal Accounts Division with its 900 employees. When it became necessary to move this Division of our Office out of Washington temporarily on account of war congestion, I was happy that it could be located in Asheville. I may surprise some of you when I tell you that in this office here in the Arcade building, we are making an annual postal audit of $20,000,000,000 a year, and it is kept current. I wish to pay public tribute to the capable and efficient employees of the Government who are doing this important work.

So I think I qualify in saying that I feel perfectly at home here.

I am particularly happy to be able to talk to this annual meeting of your chamber of commerce, and to your distinguished guests. You in Asheville have a wonderful opportunity to go out and sell your city and section and to promote the location of industries here. The unbounded resources of our North Carolina mountains—kaolin, mica, feldspar, other minerals, timber and the rest—should be developed into manufactured good here in our own State, not sent elsewhere for processing.

Never in all their history have our chambers of commerce been faced with more numerous and perplexing problems than today, in readjusting the life of their communities to a peacetime economy, with its changing business and manufacturing activities. Never has there been a greater need for their services in building solid foundations for civic welfare, and in guarding our democratic institutions, in defense of which so many of our dear ones have just given their lives or their health.

I take it as self-evident that as citizens, businessmen, and taxpayers you are interested in the structure and efficiency of our National Government, and its relation with our own great State, and with the other States of the Union. No longer is this a remote and academic question. In one form or another it bears upon the daily lives of every one of us. Of late there has been much discussion of the expansion of the Federal Government, of its tremendous growth in bureaus, commissions, and boards. Our people are beginning to be concerned. They are beginning to wonder when and where this expansion will end, what it will cost them, and what will be its effect upon the States and their subdivisions. I have decided, therefore, to speak to you in a somewhat general way upon the subject of the Federal Government, its finances, and its relation to the States. This relationship is the jugular vein of our system of government.

If I am at all qualified to speak upon this subject, it is due to the fact that I have looked at the problem from both sides, having served a number of years in the North Carolina General Assembly and in the National Congress. In my present official position, I have, of course, had a wonderful opportunity to study the structure and the functioning of the Federal Government. It is part of my job to see that Federal agencies stay within the limits laid down by Congress in their use of public funds. In so doing, it is often my duty to rule upon problems that affect both Federal and State Governments. In an impartial and dispassionate manner, I thought it might be worth while here tonight to make a few suggestions as to our future goals in these fields.

When our Constitution was written in 1787, the prime problem was how to combine the Thirteen Original States into one union. Many of the States were fearful that they would lose their character and liberties if they came into the Union under the new Constitution. North Carolina did not enter the Union until after the new Government was well under way. After first rejecting the new Constitution it waited until November 21, 1789, to ratify it, too late to participate in the first election of Washington, because of the lack of a Bill of Rights and the fear that a strong National Government would in time overbear State authority.

This attitude was natural. When the Constitution was written, there were no great industries. There were no great systems of communication or transportation. Our people for the most part lived a rural life. The frontier spirit ruled the new Nation, and our people looked to themselves rather than to government for aid. A slogan of the times, made popular by Jefferson, was to the effect that those people are best governed that are the least governed.

It was inevitable that conflicts would arise as to where the powers of the States were to end and where the power of the Federal

Government was to begin, and vice versa. It is well known that there have always been a few overly ambitious men in Washington who love power and who are forever trying to extend their own influence, but, in my opinion, this enormous growth of Federal authority can only in a small degree be attributed to greed and thirst for power in the Nation's Capital. Much of it has surged up from the people and the States themselves, because of either the financial inability of the States or their failure to give their citizens the necessary State functions of government.

The industrial revolution, with all of its implications in the field of big business and of transportation and communication, has made necessary and logical some extensions of the arm of the Federal Government. Bigness in commerce and industry has made necessary some bigness in government. You cannot set up great corporate powers that reach out into 48 States, and even into foreign countries, without also setting up great power in government, to see that there is fair play in the land. Railways, highways, and skyways—the telephone, the radio, and now television—have themselves brought about "a more perfect union" in this country.

Also, in times of great national emergency the people (who after all are the final arbiters of all things in a democracy) demand prompt action of a kind and character that can be performed more quickly and more satisfactorily by the Federal Government. The great depression of the thirties was an emergency of this character. Economic chaos was threatening the country. Bankruptcy and poverty were staring our people in the face. In response to the cry of distress and the demand for relief throughout this Nation the Federal Government went into action through both old and new agencies. This meant a tremendous expansion of our Federal Government. It meant the extending of the Federal hand into almost every home and every business in the country. It meant that the Federal Government would become concerned with prices paid, with wages fixed, and with what crops were to be planted. The framers of the Constitution would have been shocked and amazed at such a demonstration of Federal activity. But no person who lived through that hectic period has any doubt as to why the Federal Government took such extraordinary steps. It was in response to the dire need and the cry for help that went up from the people of the United States to their Government at Washington.

But the greatest centralizer of power in Washington is war. Under the influence of World War I, the Federal Government grew mightily and we now see, as the result of World War II, that the Federal Government towers above the States with unprecedented prestige.

Naturally my own concern has been directed to the fantastic fiscal effect of that trend. Through 10 years of plodding escape from the slough of depression, through 4 years of underwriting, then actively waging history's greatest war, your Federal balance sheet has reached such a state as any honest man must call an alarming one. Do you know for example, that the yearly bill for interest alone is greater than the entire Government budget a few short years ago? In fact, our own State's annual share of the interest charges on the national debt would operate the whole State government for well over a year.

The free-spending philosophers who insist that an enormous, backbreaking national mortgage is a good thing, call anyone an alarmist who is brazen enough to recite the facts. What are the facts? To speak in billions of dollars and Nation-wide totals—now 280 billions—is only a way to escape the uncomfortable realities, to lull us into the feeling it will be somebody else's burden. Let us put the facts a little closer to home. Simply spreading the total figure among the number of employed persons in the country tells us that you and I (and every other person employed—the people who must pay the debt) owe in round figures $4,000 as our share, which we personally or our sons or our grandsons must somehow produce and pay. Furthermore, recently I ran across the even more startling comparison that the Government debt is three times as great as all private long-term debt in this country. What would thrifty old Benjamin Franklin, whose birthday this is, say to all of this?

There are five particular avenues which I want to suggest as leading out of this financial morass. The first task is an examination of the Government itself. The Government's sails must be trimmed. The tools for this reappraisal of the Federal Government's set-up were given to the President last month when the reorganization bill became a law. It is the best measure of its kind ever passed by Congress. There is a great opportunity for the President to do an outstanding job.

I was asked to testify before the congressional committees which formulated the bill, and I took advantage of the opportunity then to point out dozens of specific situations of apparent overlapping and duplications, situations that cried out for a restudy of the Federal organization, followed up by fearless and vigorous action. The act tells the President not only that he may revise the executive organization but that he may actually abolish any particular function of the Government.

You and I know that there can be no real economy unless there be weeded out and completely abolished those governmental functions which, perhaps well-advised at their inception, have long since outlived their usefulness. But any reform can become effective only after Congress has had an opportunity to examine the plan and veto it, if it so desires. There will be ample demands from the special groups and from what are called the pressure boys that Congress vote down any plan which abolishes somebody's project. Most of the Members of Congress want economy as much as you. What Congress should have, and is entitled to have, from the body of the citizens at large is some fair expression that the people do want economy, that they will back up the Members who have the fortitude to support the common benefit of all instead of the special benefit of the few. If "eternal vigilance is the price of liberty," I say to you that even more so is it the price of economy.

However, the efficiencies and economies to be wrung out of reorganization, as necessary as they are, do not approach the larger problem. As emphasized by President Truman in signing the bill, substantial savings can come only by reducing governmental programs which were and are being created by Congress.

That brings me to my second point. Twenty-five years ago the Budget and Accounting Act of 1921 became a part of the law of the land. One of the principles of that act was that the national expenditures and the national income should be estimated in advance and that the expenditures should be balanced against the income. That is still a good principle.

For years I have carried in my pocket this recipe:

"Annual income twenty pounds, annual expenditure nineteen nineteen six, result happiness. Annual income twenty pounds, annual expenditure twenty pounds ought and six, result misery."

That homely truism Mr. Micawber gave David Copperfield nearly 100 years ago is just as appropriate today as it was then. That recipe must be applied to the Nation unless we are to resign ourselves to continuous deficit spending. Any reasonable person must know that with a low national income and widespread unemployment large deficits were inevitable in efforts to combat the great depression. So were they more than necessary to wage an all-out, total, and victorious war. The aftermath of war also calls for more vast appropriations, for as a conquering but a Christian and humane people we have vast charitable and moral obligations. The highest obligation of all, however, is to see that our returning veterans are cared for in proportion to their needs and reestablished in their proper places in our communities. But with all of that, and with a national debt that staggers the imagination, should we not have an appraisal of the never-ending succession of new programs proposing large drains upon the Federal Treasury?

While some of these programs may be promoted from Washington, too often does Congress mistake as "the voice of the people" the urgings of special pleaders, blocs, privilege seekers, and Treasury raiders. It is fashionable to blame Congress for all the ills of the body politic. They are only human and are merely a good cross-section of the Nation. The fact is they have been propagandized and lobbied so much that a good part of their resistance has been broken down. What encouragement in a legislative way do they get from home? Everyone has an advocate in Washington except the people. It would be news indeed if a chamber of commerce commended a Congressman for his statesmanship or for a negative vote rather than praising him for some Federal money he had secured for his section. I know from experience how sweet it is to the ears of a Congressman to hear the plaudits of those who wanted Federal money, and who didn't stop to think it had to be paid back. We justified a lot of this in an era of big spending but the reckoning period is now coming on.

Business, agriculture, and labor have a tremendous and equal stake in a balanced budget, for after all they are the ones who must pay on the barrel head.

Next, the mounting complexity of our national life has led the Congress to delegate more and more of its responsibility to executive agencies. As a corollary to keeping within the national income, those who spend the people's money should be impressed that it is not their money and that extravagance and profligacy on the part of public officials will not be tolerated. There is no reason why the public dollar should not be of the same value and purchasing power as the private dollar. All this means that we must insist upon having capable and efficient administrators. In my official position it has been my pleasure to deal with many such men. However, we have not reached the millenium, and there are others who through carelessness or ambition do not hesitate to place personal interest ahead of the public weal. That is the area where there is much room for improvement in higher standards of administration and more conscientious attention to the Nation's business.

Fourth, Congress should revitalize its power over the purse, a fundamental legislative prerogative under our form of government. It should reexamine the large grants of unusual administrative authority over expenditures, much of which originated in the stress and strain of war. An example of the alertness of Congress in drawing back some of this financial power to itself is the Byrd-Butler-Whittington Act approved by the President last month. That act calls for an annual scrutiny and control by the Congress of the vast and far-flung financial operations of our Government corporations such as the Reconstruction Finance Corporation, Commodity Credit Corporation, and dozens of others.

Finally, we should return as quickly as possible to a proper peacetime balance between the Federal Government and the States. I spurn the doctrine advocated by many that each State should be considered

like a county in its relationship to the Federal Government. On the other hand, we should not be blind to the fact, already accomplished, that many of the things we regarded as sacred and as belonging exclusively to the States have gone out in the twinkling of an eye in a fast expanding Nation with a Constitution whose commerce and general welfare clauses seem to know no bounds. We cannot return to the simple idea of government as expounded by Jefferson, as beautiful as his conception was. We cannot turn back the clock even if we would.

In the face of today's conditions, the cry of States' rights can indeed become a hollow cry, utterly meaningless, going back to issues long fought over and decided. Therefore, I do not come to you tonight to make a fetish of States' rights.

What then is to be left to the States? Will they in time become merely convenient areas to divide Federal activity? If this should come to pass, this Nation will cease to have the kind of government described in the Constitution. Frankly, there are many who doubt that our Nation could long survive under those circumstances as a great democracy. The history of nations tends to show that when all power and authority have been concentrated in the central government, the nation becomes ripe for regimentation and dictatorship.

I, for one, still believe that there are important functions to be exercised by the States and their subdivisions. There are highly proper and necessary contributions that the Federal Government should make, but if the States, in order to obtain Federal funds, surrender too many of their rights and functions to the Federal Government, something very precious, something very valuable and democratic, and something uniquely American will have gone out of our public service. The danger is that our people, looking to Washington indiscriminately for aid, will sell their political birthright for a mess of Federal pottage. Moreover, the States are now, for the most part, in excellent financial condition. Their budgets, unlike that of the Federal Government, are in balance and most of them have comfortable reserves. If the States will assert their leadership in their proper sphere, there will be less incentive for further expansion of Federal power. If the States wish to retain power and prestige they must assume their full responsibilities and render to their people a high quality of public service that cannot be duplicated by the Federal Government.

Can the States do this? Of that I have no doubt. Take our own State of North Carolina. I do not believe that there exists anywhere in this Union a higher quality of public servant or a better brand of public service than we have here in our beloved State. As I go about my Federal duties, it is a source of pride to me to be continually told by people from other States that North Carolina is one of the best governed and one of the most progressive States in the Union.

Governor Cherry, like other governors before him, is known personally by thousands upon thousands of our citizens. In whatever town or community he goes, there are scores of our people who call him by his first name and feel that he is their neighbor. North Carolina is not too large to be considered a neighborhood. If a citizen has a grievance, he knows where to go and what to do about it. He can talk to a public official in his community or in Raleigh who understands the background of the whole affair and is in sympathy with our traditions and our way of life. Also, if mistakes are made, our people know where to place the blame and, when credit is due, they know whom to commend.

We people here in North Carolina are so accustomed to good government in our State that we take it for granted. We should prize it greatly and not give it up lightly. In my opinion, if all the States of the Union had taken the initiative as much as North Carolina, and if all had given uniformly as good a brand of public service, there would have been less tendency to look to Washington and there would be less encroachment on the States by the Federal Government. Moreover, as to those activities that are to be carried on in the future jointly and concurrently by the Federal and State Governments, I think there should be a genuine partnership existing between the two levels of authority.

We have still much more to do in North Carolina. It can be done if we continue in our course of planning and spending wisely and within our income. We shall never tolerate a static State. In all proper functions of the State, we must keep alert and progressive, we must streamline and keep modern our governmental processes and our laws. We must promote a healthy condition of industry, labor, and agriculture, upon which the prosperity of our people depends. We, in North Carolina, under great State administrations, have met those responsibilities and we must continue to do so. In that path lies the integrity of our institutions, the vitality of our Government, and the prosperity and freedom of our people.

And then, above all, I believe we should begin to teach our people to be more self-reliant, more independent, more anxious to do things for themselves, and not to always be looking for aid from Government. This Nation has become great because of its self-reliance and frontier spirit. There is a school of thought today that would have us believe that this Nation has grown old, that we have lost the spirit of adventure and daring, in which we have carved out a great Republic and a great destiny for our people. I repudiate such a philosophy. There may be no great West to develop, but we still have within us great undeveloped resources. There are today great frontiers of the mind and the spirit which challenge youth forever to go forward, and in my humble judgment, this Nation is still young. To those who think in such narrow and restricted terms, I commend the exploration of the undeveloped natural resources of western North Carolina. If I had any criticism to make of the past history of your wonderful section, it would be that you have put too much emphasis upon your marvelous climate and too little emphasis upon the boundless energies and adaptability of your people and your multinatured, God-given resources.

While the so-called good old days are gone and will never return as we knew them, we should never forget that this country was built for permanence, and our institutions reflect that spirit. We must ever remain a Nation of freedom, of liberty, of faith, and hope that the fathers gave us.

In closing, I hope it is not too outmoded to repeat what Jefferson said way back in 1802:

"Let us deserve well of our country by making her interests the end of all of our plans and not our own pomp, patronage, and irresponsibility."

[From the Washington Star of January 20, 1946]

A LOOK AT THE LEDGER

Comptroller General Lindsay Warren, who audits the Government's books, is gravely concerned over what he sees there. He believes it is high time that every taxpayer who has not only his own welfare but the welfare of the country at heart should share his concern over the state of Federal finances. In a recent address before the Chamber of Commerce of Asheville, N. C., Mr. Warren painted a picture which should have a sobering effect on all but those whom he described as the "free spending philosophers who insist that an enormous back-breaking national mortgage is a good thing" and who brand as an "alarmist" anyone "brazen enough to recite the facts."

By that standard of appraisal, Mr. Warren is an alarmist of first degree, for he had no hesitancy in citing the facts, as only one in his official post of vantage is qualified to cite them. He pointed out that the pouring out of billions of dollars by the Federal Government in its economic war against the depression, followed by the spending of additional billions in its military war against the Germans and the Japs, has piled up a deficit so large as to be beyond the comprehension of persons not accustomed to dealing in astronomical figures. The yearly interest on the staggering total (two hundred and eighty billions) is greater than the entire Federal Budget a few short years ago, he said. And with this huge increase in deficit spending there has been an inevitable top-heavy expansion of Government, with controls reaching further and further into private industry and private homes.

Mr. Warren, though justifiably depressed over the outlook, is not without hope. But he believes that only a widespread awakening by the American people to the dangers of national bankruptcy that may lie ahead can effect a change for the better. The remedies are clear, he says, but there is little chance of applying them unless the taxpayers insist that their Government apply them. First of all, the Comptroller General pleads for a drastic reorganization of governmental agencies to eliminate waste and inefficiency. Incidentally, the President was given authority to streamline the Government under the Reorganization Act passed last month. Mr. Warren places second on the list of remedial measures a strenuous effort to balance the National Budget through a sharp reduction of Federal expenditures. This will require wholehearted support by the people of congressional economy moves. Third, Mr. Warren calls for a more conscientious type of public service by those entrusted with the responsibility of spending other people's money. Fourth, he urges a reexamination by Congress of its "blank check" grants of spending authority to certain executive agencies. And, finally, he advocates that the States assume a proper share of their responsibilities toward the Union instead of looking to the Federal Government for more and more assistance.

These suggested remedies for the Government's fiscal ills are not new, of course, but now that the war is over they deserve to be revived and reemphasized at every opportunity. For, as Mr. Warren says, it will require an aroused taxpaying citizenry, voicing a popular mandate to their legislative and executive servants, to turn the Government back on the road to sound financial policies.

Tips for Secretary Anderson

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mr. BYRNES of Wisconsin. Mr. Speaker, not so long ago the Secretary of Agriculture was traveling around the Middle West looking over the political situation for his boss and the New Deal. One thing he wanted to know was why the farmers in this area were not voting for the New Deal. I think the article by John Wyngaard, one of Wisconsin's leading columnists, which appeared in the December 23, 1945, issue of the Green

Bay Press-Gazette, will give the Secretary at least a substantial part of the answer to his inquiry and may make it possible for him to spend a little more of his time trying to look after the interests of the farmers of this country and less time looking for votes. The article follows:

MADISON

(By John Wyngaard)

MADISON, WIS.—When Clinton P. Anderson President Truman's new Secretary of Agriculture, visited in Milwaukee recently he asked what for him is a perfectly natural question about Wisconsin and middle-western politics.

Why, he wondered, should the farmers of Wisconsin and neighboring States in the Midwest who have received so many benefits from the Democratic national administration be so consistently and vigorously voting the Republican ticket? Anderson confessed that the question has bothered his chief as well as other figures in the national administration.

Perhaps the Secretary was thinking of the fact that the milk farmers of Wisconsin, most of whom have voted Republican in recent elections, will this year collect more than $50,000,000 in dairy subsidies from the National Treasury. Undoubtedly he remembered also the millions of dollars in other types of benefits that have flowed into this State in the last 12 years of New Deal agricultural programs.

And, indeed, it is something of a conundrum, if you haven't paid much attention to the discussions in Wisconsin agricultural circles and the utterances of Wisconsin farm politicians.

WHY?

This correspondent is not a farmer—and is therefore probably ineligible for the governorship or the Presidency—but the question was put to a man who is both a farmer and a shrewd and experienced observer of the political scene.

Paraphrasing what he said:

The farmer is an individualist, proud of his independent position as a producer. He is suspicious and afraid of collectivism. He is sick of restrictions and controls, and regimentation. The farmer doesn't like the idea of the millions paid in dairy subsidies, because he knows they are unnecessary. He knows that purchasing power and employment in this country reached all-time peaks, that the consumer could afford to pay for milk products the prices necessary to obtain maximum production. The farmer wanted encouraging prices in the market place, not pay from the Federal Treasury.

The farmer has a deep abhorrence of debt, personal and public. He feels that under the subsidy program he was charging to the taxpayers and the bondholders that the consumer could and should have been paying. Some of the producers figured they met particular raw deals, the cheese farmer, for instance, in the pricing of cheese, the butter farmer in the circumstances that created an artificial scarcity for which the city consumer is blaming him. Many milk producers fear what they suspect is favoritism for butter substitutes in the national administration.

There are some tips for Secretary Anderson. They may not tell the story in complete detail, but they are helpful to a degree in understanding why few farmers are Democrats.

ANECDOTAL

Our informant told a little story. "When I was a boy on a farm near Madison we saw the flames one day that destroyed the old State capitol building. The new building took 10 years to complete because the State could not bond itself for the cost, and it cost $7,500,000.

"This year the National Treasury is paying to the dairy farmers of this State seven times $7,500,000 in totally unnecessary milk subsidies."

My personal contact with the agricultural leaders in Wisconsin and my observations of the so-called spokesmen for agriculture in the Federal Government compel me to believe, Mr. Speaker, that the leaders in the Farm Bureau, the Grange, the Wisconsin Council of Agriculture, the extension workers, and, in fact, most farmers themselves have a better understanding of the needs of agriculture than any of these Federal bureaucrats.

The first thing that the present administration had better do in connection with its agricultural program is to follow the law and fulfill the commitments that they have made to the farmers of Wisconsin and the other States. The farmers of Wisconsin have been deceived altogether too many times for Mr. Anderson to expect them to relish and fall for his political agricultural medicine.

Founders of the American Navy

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, January 25 (legislative day of Friday, January 18), 1946

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Founders of the American Navy," written by Capt. Dudley W. Knox, of the United States Navy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FOUNDERS OF THE AMERICAN NAVY

(By Capt. Dudley W. Knox, USN)

Although there is no precise definition of the term "founder of a navy," the many men who were conspicuously associated with the origins of our Navy might be regarded as its "founders."

The first naval forces under Continental pay and control were those established in the spring and summer of 1775 by Generals Arnold and Schuyler on Lake Champlain, and by General Washington near Boston. The lake force saw no important service for nearly a year when under General Arnold it was defeated by a greatly superior British squadron, although the Americans had gained a vital strategic victory by delaying an invading British army.

The so-called Washington's fleet, however, was effectively employed at an early date. When General Washington took command of the Army before Boston in July 1775, the extreme shortage of powder and arms persuaded him to commission several vessels in advance of congressional approval to prey on the sea communications of the British Army in Boston, in the hope of capturing munitions. The first of these vessels was the schooner *Hannah* which sailed on September 5, 1775, under Capt. Nicholson Broughton and brought in a prize within 2 days. Commodore John Manly commanded the little fleet of seven vessels that during several subsequent months were very active off Boston and made other valuable prizes of British ships carrying munitions.

Meantime, under the leadership of John Adams, Congress resolved on October 13, 1775, that two Continental ships be fitted out. This was the legislative birth of the permanent Continental Navy. A congressional naval committee was appointed, consisting of Silas Deane, John Langdon, Christopher Gadsden, Stephen Hopkins, Joseph Hewes, R. H. Lee, and John Adams. This committee laid the foundation of the Continental Navy. It directed the purchasing, outfitting, manning, and operations of the earlier ships, prepared the legislation organizing the new naval service, and drafted admirable rules and regulations to govern its conduct and internal administration. The latter was principally the work of John Adams.

Esek Hopkins was appointed commander-in-chief of the fleet and had general charge of its preparation at Philadelphia under the supervision of the congressional committee. The work of structural alterations needed to transform the purchased merchant ships into men-of-war was placed under the naval architect, Joshua Humphreys. The rerigging and outfitting of the ships were under Capt. John Barry. The matter of obtaining crews was given the special attention of the commander in chief, Hopkins, who was necessarily so much occupied with the affairs of the fleet as a whole that the preparation of his flagship, the *Alfred*, fell largely to the lot of Lt. John Paul Jones, the second in command on board the flagship.

The captain of each of the other ships attended to various wants of his own ship more particularly. These captains, in the order of rank, were Dudley Saltonstall, Nicholas Biddle, Abraham Whipple, John B. Hopkins, John Hazard, William Hallock, Willian Stone, and Hoysted Hacker.

The first continental fleet put to sea under these officers in February 1776. It proceeded to New Providence (Bahamas) and there landed and captured a large stock of munitions which was taken to New London, Conn., for the Army. Captain Barry was not in this fleet but remained in Philadelphia and soon was put in command of the *Lexington* which did splendid service in guarding the Delaware River and its sea approaches.

Following these initial operations which virtually launched the American Navy, other ships were put in active service on the home coast and overseas. There were frequent combats in which the fighting edge of the Americans was proven to be the highest. Among the more conspicuous who might be said to have fathered the fighting spirit of our Navy in this way were Capts. Lambert Wickes, Nicholas Biddle, John Paul Jones, John Berry, Gustavus Conyngham, James Nicholson, and Joshua Barney.

After the Revolutionary War the Navy went out of existence completely. It was not reestablished until 1794, when Congress provided for the construction of six new frigates, and appointed six captains to supervise the work and to command the vessels when completed. These men were John Barry (who was the senior in rank), Samuel Nicholson, Silas Talbot, Richard Dale, Thomas Truxtun, and James Sever, of whom four—Barry, Nicholson, Dale, and Sever, were former officers of the Continental Navy.

In 1798 we went to war against the French at sea, hastily buying more ships and appointing more officers. In the subsequent 3 years of quasi-war, Capt. Thomas Truxtun especially distinguished himself in two successful and severe actions in the *Constellation* against French frigates. Lts. John Shaw and Charles Stewart also fought brilliant engagements in smaller ships. Among the squadron commanders were Capts. John Barry, Alexander Murray, Silas Talbot, Thomas Truxton, Thomas Tingey, Stephen Decatur, Sr., and Richard Dale.

Closely following the quasi-war with France came our Barbary Wars in which the most

distinguished high-ranking officer was Capt. Edward Preble. He established an enviable fighting tradition in several hard-fought attacks on Tripoli by a squadron of 14 vessels under his command, with the frigate *Constitution* as flagship. Under Preble's leadership the loosely knit Navy of that day became a unified fighting force for the first time, and this unification has lasted until the present time.

All of the persons named in the foregoing, from Washington to Preble, may be said to have had an important part in the founding of the Navy. There were also others who might be included in a group designated as the founders of the American Navy. For example, Benjamin Franklin when acting as our diplomatic representative in France, was largely instrumental in creating a squadron of American ships for operations in Europe, and there was a period late in the Revolutionary War when the Continental Navy would have disintegrated but for the financial and political aid of Robert Morris.

Relief From Stringent Naturalization Laws

EXTENSION OF REMARKS
OF
HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 23, 1946.

Hon. RICHARD B. RUSSELL,
Chairman, Committee on Immigration and Naturalization, Senate Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: I am writing to you with regard to H. R. 511, a bill which would give relief from stringent naturalization laws and which passed the House the early part of May 1945.

This legislation is needed more now than ever before. It would take care of the forgotten people who came to this great America in the 1890's—young, honest, industrious people who never really had the time or the opportunity to learn how to read and write. They married and had large families and have given the best years in honest labor. Many are property owners and taxpayers. Many had sons and daughters who served our great country in World War I and World War II. Many gave their lives in these great battles for the preservation of our free institutions. The sons and daughters of others are today in the vanguard of America's progress. Yet, these same clean-living people of America cannot become citizens unless they pass an examination that would probably flunk a high-school graduate or perhaps a college graduate. If the only requirements for citizenship were contributions to national wealth through honest labor and love for democracy, almost all of our noncitizens could easily become citizens.

There are thousands of people in the United States who have made application for their first and second papers, but who failed to pass the examination. In making application they renounced allegiance to their native countries, and yet they are not citizens of the United States. They love America, they are willing to fight to defend America and keep it democratic and free, so why deny them citizenship?

I might add that the House took favorable action on similar bills in the Seventy-sixth and Seventy-seventh Congresses and that this legislation is needed more now than ever before and urge your committee to act favorably on same.

The bill (H. R. 511) to amend the Nationality Act of 1940, is as follows:

"*Be it enacted, etc.*, That the Nationality Act of 1940, approved October 14, 1940 (54 Stat. 1137), is hereby amended by adding, immediately following section 304 thereof, a new section to be numbered 304A and reading as follows:

"'SEC. 304A. An alien, if eligible to naturalization, 50 years of age or over, who has resided in the United States continuously since prior to July 1, 1924, and who, on or prior to the effective date of this section, has made a declaration of intention to become a citizen which is not more than 7 years old, or who, within 2 years from the effective date of this section, shall make a declaration of intention, may thereafter file petition for naturalization and be admitted to citizenship upon full compliance with all requirements of the naturalization laws, except that he shall not be required to speak the English language, sign his declaration or petition in his own handwriting, or meet other educational requirements: *Provided*, That this section shall apply only to petitions for naturalization filed within 4 years after the date of the enactment of this act.'

"SEC. 2. Section 326 of the Nationality Act of 1940 (54 Stat. 1150; 8 U. S. C. 726) is hereby amended by adding a new subsection, to be known as subsection (e) and reading as follows:

"'(e) The provisions of this section shall not apply to any alien whose son or daughter is a citizen of the United States and has served or is serving honorably in the military or naval forces of the United States during the present war and who, if separated from such service, was separated under honorable conditions. For the purpose of this section, the present war shall be deemed to have commenced on December 7, 1941, and to continue until the termination of all hostilities in the present war."

"SEC. 3. The Nationality Act of 1940, approved October 14, 1940 (54 Stat. 1137), is hereby amended by adding, immediately following section 331 thereof, a new section to be numbered 331A and reading as follows:

"'SEC. 331A. A declaration of intention to become a citizen shall not be required of any alien whose son or daughter is a citizen of the United States and has served or is serving honorably in the military or naval forces of the United States during the present war and who, if separated from such service, was separated under honorable conditions. For the purpose of this section, the present war shall be deemed to have commenced on December 7, 1941, and to continue until the termination of all hostilities in the present war'."

Your favorable consideration of this bill will be greatly appreciated.

Sincerely yours,
THOMAS D'ALESANDRO, JR.,
Member of Congress,
Third District, Maryland.

UNITED STATES SENATE,
COMMITTEE ON IMMIGRATION,
January 24, 1946.

Hon. THOMAS D'ALESANDRO, JR.,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: This will acknowledge your letter of January 23. I am glad to have the benefit of your comments and observations concerning H. R. 511, and shall call them to the attention of the committee.

Sincerely yours,
DICK RUSSELL.

Henry Ford II, President of Ford Motor Co., Calls Labor Relationships a Challenge of Human Engineering

EXTENSION OF REMARKS
OF
HON. WILLIAM R. THOM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mr. THOM. Mr. Speaker, following is the complete text of an address by Henry Ford II, president, Ford Motor Co., on Wednesday evening, January 9, 1946, before the annual meeting of the Society of Automotive Engineers, at the Masonic Hall in Detroit, Mich.:

It is a great honor to be here as your guest this evening.

What I propose to do is to outline a problem. That may not be very considerate of me, but I take comfort from the fact that problems are the business of the Society of Automotive Engineers, and that you have never failed to rise to any difficult challenge. The problem, in my opinion, is one of the greatest which confronts American industry, for it concerns human relationships—relationships which can either aid or impede our efforts to achieve greater industrial efficiency. And if you can help to solve it—and I believe it needs the benefit of scientific thinking—you will have done much to increase the well-being and the living standards of America.

The ability of American industry to produce has never had the prestige it enjoys at this particular moment in history. The job of war production has been called a miracle. It confounded our enemies and drew praise from our allies. In a very short time we armed the largest fighting force ever mustered on this continent; we built, armed, and fueled combat ships and planes and tanks in quantities never before imagined; we put billions of dollars of weapons into the hands of our allies all over the world.

The mechanical principles which made possible this war-production record are not new to any of us—standardization of parts, line assembly, the use of large, high-cost machine tools. These are the principles all of us have used for many years in the manufacture of automobiles. They are the principles of mass production, and no group of men deserves a larger share of the credit for the rapid development of the mechanics of mass production than this group here tonight.

Mass production is not an end in itself, but a means to an end. It is a tool.

In war, mass production is a tool for making the weapons of war—as many as possible, as fast as possible. We used the tool better than other nations because we had more practice with it and because we were better equipped to use it efficiently.

In peacetime the use of the tool of mass production thrives best in a highly competitive democratic economy. For mass production is a tool which free people use in peacetime to make more and better products at less and less cost. It is a tool for raising the standard of living.

All of us would agree that a standard of living is not a question of money, but of things and opportunities. People are prosperous and enjoy a high standard of living, when great numbers of them can afford a great many things and services—refrigerators, automobiles, radios, homes, good food, education, recreation, and all the rest. Through the peacetime use of the tool of mass production, American industry has already made this country a land with an incomparably high standard of living.

And the use to which we can put mass production to bring millions of things and opportunities within the price range of millions of people has in no way reached its limit. It is obvious, for example, how much better off we would be in this country if it were possible to sell automobiles for half their prewar prices. Millions of people who never owned a car could have one. Families which have one could have two. Tens of thousands of private enterprises serving the automobile industry and the people who driv. automobiles would benefit, and would expand. Cut the cost of refrigerators in half, cut the cost of radios in half, cut the cost of homes, clothing, and other manufactured articles in half, and the people of America would find themselves vastly better off.

We continually talk about higher incomes, and higher wages, and more money. That is all right. A man should be ambitious. He should try to increase his income. But in our discussion of higher incomes, we must never lose sight of the universal advantages of lower costs—of more and better products brought within the budget of more and more people.

In the face of what peacetime mass production has already accomplished in raising our standard of living, in the face of current world praise of American industry's ability to produce great quantities of things in a short space of time, we may be tempted to think that the potentialities of mass production have been exhausted—that we have come to the end of this road to national well-being. Such a notion is absurd. The mechanics of mass production can still be greatly improved, and they can be more widely adapted.

But there is a whole vast area in which we are only beginning to make significant progress—what we might call the field of human engineering. Machines alone do not give us mass production. Mass production is achieved by both machines and men. And while we have gone a very long way toward perfecting our mechanical operations we have not successfully written into our equations whatever complex factor represents man, the human element.

I am suggesting, therefore, that we try to rewrite the equations to take into account the human factor. If we can solve the problem of human relations in industrial production, I believe we can make as much progress toward lower costs during the next 10 years as we made during the past quarter century through the development of the machinery of mass production.

In approaching the complex problems of human relations, I believe that management must take the initiative for developing the relationships between labor and management. Labor has a great opportunity to achieve stature through assuming greater responsibility. But I consider that management is in charge, that management must manage, and that the test of management is whether or not it succeeds.

Mass production did not invent the human equation—but it did alter it in a number of important respects which we may have been slow in taking into account. Under mass production large numbers of people flocked to the assembly line, each to perform a highly specialized routine duty. Mass production produced great concentrations of people—and a problem of communicating with them. And it produced the difficult problem of specialization, where the human being loses sight of the social usefulness of what he does.

How badly we have taken the human factor into account is indicated by many statistics. The Department of Labor shows that a total of 216,000,000 man-days were lost between 1927 and 1941 as a result of strikes alone.

I am not here concerned with the justice of these strikes or their injustice. I am saying that some 216,000,000 man-days of work were lost. This idleness was expensive—to the strikers, to the companies, and to the Nation. And that cost was part of the Nation's cost of production. Consider how many thousands of automobiles, radios, refrigerators, and other useful and needed products could have been manufactured with 216,000,000 man-days of labor. Or, to put it in another way, consider how much lower would have been the cost of the things that were manufacturerd if production had not had to absorb the expense of these work stoppages. Furthermore, when a production line stops, the jobs and purchasing power of hundreds of thousands of people in related businesses all over the country are affected.

We must remember, too, that strikes are by no means the only measure of lost time. That loss, indeed, is only a fraction of the time lost through industrial inefficiency and through mass unemployment. We are all aware of the fact that the man-days lost through unemployment during the same years—1927 to 1941—were of tremendous proportions.

Costs are also closely related to the productivity of the individual American worker. We take pride in this productivity, and as a matter of fact we in America cannot compete in world markets with our high wage rates if the American worker does not continue to be productive.

Recent statistics on productivity are confusing because of the factor of war. War necessarily brought into industry a great many less experienced men and women. The armed forces took away a great many skilled workers.

Other prewar mass-production industries have found, as have we at Ford Motor Co., that even after allowance for these unusual circumstances the recent record of productivity is not encouraging. We keep detailed records of the time it takes to perform various operations. Those I am about to cite are in every way comparable: that is, the operations have not been changed so that more time should be allocated to their performance. Let me give you the number of minutes required in December 1940 compared to July 1945 to perform certain operations.

One group of operations which took 96 minutes in 1940 took 128 minutes 5 years later. Another group which took 1,185 minutes in 1940 took, 5 years later, a total of 1,943 minutes to perform. A third group took 28 minutes in 1940 and 49 minutes 5 years later.

On the whole, productivity per worker in our plants declined more than 34 percent during the war period.

I have already pointed out that some of this was inevitable, a result of the war, and I should like to say that I am emphasizing these figures merely to demonstrate how great is the need for improvement in this field.

As we look at these problems in human relations, we feel that the solution must be found through a closer understanding between management and labor. If we cannot succeed by cooperation, it doesn't seem likely that we can succeed by any exercise of force. We cannot, for example, expect legislation to solve our problems. Laws which seek to force large groups of Americans to do what they believe is unfair and against their best interests are not likely to succeed. In fact, such legislation can lead to exaggeration of the very problem it is designed to solve. And when freemen give up the task of trying to get along with each other, and pass the buck to government, they surrender a substantial measure of their freedom.

That, then, is the problem I wanted to lay before you this evening. Let me summarize by stating it more briefly: In a free, competitive democracy, mass production is a tool for raising the standard of living by reducing costs and thereby bringing more and better products within the budgets of more and more people. We have not yet solved the problems of mass production, for our failure in human engineering is creating waste and inefficiency which handicaps the very purpose of mass production—lower costs.

I do not have the answers to this problem. But I am sure that workable solutions can be found if we will only bring to it the same insistent objectivity and willingness to experiment which you and others like you throughout industry have given to the mechanical difficulties in mass production.

In industrial human relations, then, we have a new and relatively unexplored frontier. And beyond this frontier lie opportunities greater perhaps than any of us can imagine.

There are many consideration which we must take into account as we work toward a solution of this problem. I can name some that have occurred to me, and you will think of others.

I assume, for example, that all of us agree that labor unions are here to stay. Certainly, we of the Ford Motor Co. have no desire to break the unions, to turn back the clock to days which sometimes look in retrospect much more attractive than they really were. The truth of the matter is that the unions we deal with rose out of the very problem we are discussing—the human problems inherent in mass-production. We do not want to destroy the unions. We want to strengthen their leadership by urging and helping them to assume the responsibilities they must assume if the public interest is to be served.

It is clear, then, that we must look to an improved and increasingly responsible union leadership for help in solving the human equation in mass-production. Union leaders today who have the authority to affect industrial production on a vast scale enjoy a social power of enormous proportions. If they are going to be real leaders they must accept the social obligations that go with leadership.

What is needed today is industrial statesmanship—from both labor and management. Instead, we have a tradition of industrial antagonism. Men who in their private lives would not think of entering into a brawl on the street have in the past found themselves blasting each other in the public press by colorful name-calling. This tradition has given rise in some circles to the theory that open conflict is inevitable. I have even heard it said that strikes are helpful in clearing the atmosphere.

With such unhappy theories I do not hold. Modern man, who has done so much to reduce the manpower loss caused by disease, can certainly hope to reduce the manpower loss from industrial conflict. The public interest requires that we find ways to eliminate industrial warfare without impairing or diminishing the rights which both management and labor must continue to enjoy.

We will always have some honest differences of opinion. But we can certainly deal with these controversies more wisely and efficiently. If we are to have industrial relations programs and labor relations staffs, and spend as much money on them as we do, we should do it expertly and efficiently, bringing to the task the same technical skill and determination that the engineer brings to mechanical problems. We must act on a more human and professional plane.

There is no reason, for example, why a grievance case should not be handled with the same dispatch as a claim for insurance benefits. There is no reason why a union contract could not be written and agreed upon with the same efficiency and good temper that marks the negotiation of a commercial contract between two companies.

In the meantime, there are day-to-day responsibilities of management toward employees which should fit into the whole pattern of the new relationships we seek. Consider, for example, possibilities for improve-

ment in personnel evaluation. Only recently have we begun to develop and use modern techniques which enable us to fit people to jobs, and fit jobs to people, with some degree of science. Too often we have assumed that if a man is a good sweeper he is a good sweeper only, if a man is a good assembler he is a good assembler only. But the results of industrial psychological tests show very clearly that sometimes a good sweeper may also be a good assembler, and an assembler may have qualities of personal leadership that will make him a good foreman. Every company follows a general policy of advancing men in accordance with their capacities. But we can do a more scientific job.

When we have learned to do a reasonably good job of evaluating an employee's capacities at the start of his career, we can do a better job of upgrading. I am not talking now about technical requirements having to do with such things as automatic pay raises and seniority. I mean the development of more opportunities for employees to improve themselves in accordance with their own initiative and desires.

We know that great masses of men work constantly at points below their top capacities, and it is one of our jobs to see that ways and means are provided to help them rise to these opportunities.

Communication between management and employees in large mass-production plants is another important field in which we can work.

In any large group of people working together it is a basic requirement that good lines of communication exist. There will always be plans and estimates, information about new styles and new engineering, and other data, which management must guard closely because they are the very elements on which tough competition is based. But information about company objectives and accomplishments should be made available to all. People want to know what the other people they work with are doing and thinking. They want to know the score.

It is fairly easy for everybody to know the score when there are only 50 employees in a plant. But when thousands of employees work at assembly lines in a single plant, they create a problem of communication which has not yet been solved.

In an age in which the world prides itself on speed and efficiency in human communication, it is absurd that we should not have been more successful in this field. We have the tools at our disposal—movies, radio, coordination conferences, newspapers, the graphic arts, posters, and all the rest. It is good business to see to it that the members of our industrial teams get information to make them conscious of the fact that they are on the team. This applies all along the line—shop employees, office workers, supervisory and executive personnel.

I think we can lick this job of better communication. Informed employees are more productive than uninformed employees.

I shall not attempt to point out other areas—and there must be many—in which we can work toward better human engineering in mass production. The important thing, it seems to me, is to recognize the problem for the vital one it is and to move forward in hope and confidence and intelligent experimentation toward workable solutions.

As a starting point for continuing efforts in that direction perhaps management and labor would today agree:

1. That the job of American industry—management and labor—is to make at lower and lower cost more and better products to sell for lower and lower prices.

2. That the only way that job can be done is through understanding and sensible cooperation between management and labor.

3. That the spirit of that cooperation must be a sense of joint responsibility. The public is the boss, not management or labor. Both labor and management must accept their share of responsibility to the public welfare and live up to their commitments.

4. That mass production has demonstrated its ability to bring high wages, and that higher wages can come only out of greater production and lower costs.

5. That, while no single human institution or industry can promise complete security because of the complexity of modern civilization, management and labor can work toward more certain, more stabilized employment.

6. That American industry should be a place of opportunity—a place in which men and women can grow and develop into better jobs.

If these are our articles of industrial faith, then we are squared away to attack the problem of making mass production more efficient by giving the same hard-headed attention to human factors that we have given so successfully in the past to mechanical factors. The only approach we can take is to live up to the best industrial statesmanship of which we are capable. If we give the best we have we can hope to get the best in return.

The Girls Come Home

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, the Washington Post carries a very fine editorial regarding the splendid service performed by our servicewomen. I remember Mr. Eugene Meyers' invaluable assistance in securing the passage of the WAC legislation and the helpful policy of the newspaper relative to all legislation for the women serving with our military forces. I hope everyone will remember the unselfish loyal service of servicewomen and show appreciation by helping them. The Army speaks in glowing terms of their servicewomen, as do the Navy and Marine Corps and Coast Guard. They know what their service has been. They speak with authority.

[From the Washington Post of Thursday, January 24, 1946]

THE GIRLS COME HOME

Women who have served in the armed forces are not being welcomed home as conquering heroines. "Many have been disillusioned and discouraged by a cold reception from various women's groups," says Mrs. Anna M. Rosenberg, head of the New York Veterans' Service Committee. Hence this organization, as well as some national women's groups, have formed special committees to help women veterans get jobs and to provide them with social activities.

Women, far more than men, veterans are likely to meet neglect as a result of civilian apathy and callousness. They are too new at the fighting business to be surrounded by any romantic martial tradition, so that there are no "When Mary Comes Marching Home" songs. The returned warrior in folk myth is always the gallant knight for whom the fair lady waits in the tower. Also, the heroic deeds of women in warfare are rarely spectacular. The slayings of the dragon (in modern equivalent) is man's task. Women in uniform, with the exception of battle-line nurses, work mostly at routine jobs behind the lines. Then, women veterans come home to swell the surplus of marriageable women, and other women see them as competitors. Finally, there is no vast eager body of men at home waiting with outstretched arms.

It is also possible that some civilian women feel a bit guilty at their own failure to help out in the armed services. The response of American women to the recruiting compaigns was not very flattering to the Nation. Young able-bodied women who clung to their well-paying civilian jobs, or who turned down recruiters' pleas with the excuses that their fiances or mothers didn't want them to enlist, may feel some twinges of conscience now that the girls who went to serve their country are coming home. They may regret, and even resent, that they have no service records to brandish through future years.

Nevertheless Americans generally must be proud of the quiet, faithful, and valuable service their women in uniform gave. They must appreciate the personal and professional sacrifices so many of these women made to do the drab routine deeds that always remain unsung. They will surely see that job opportunities and a warm social welcome overshadow any petty snobbishness that the women who doff the uniform may encounter.

State of the Union

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. WOODRUFF. Mr. Speaker, at Pittsburgh, Pa., on October 19, 1932, Franklin Delano Roosevelt said:

> The credit of the family depends chiefly on whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good. * * *
>
> But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay and continue to pile up deficits, then it is on the road to bankruptcy.
>
> * * * we find that the expenditure for the business of Government in 1927 was $2,187,000,000 and in 1931, $3,168,000,000.

On last Monday, President Truman sent a message to the Congress and to the people of America, in which he set the Budget for the fiscal year of 1947—the first peacetime year—at thirty-six billions of dollars and foretold a tax income of twenty-nine billions. He also told the American people that so far as he could see into the future, our governmental costs will be $25,000,000,000 a year, and that there cannot possibly be any reduction of taxes. His Budget message pointed the way down the road to bankruptcy as described by his predecessor in office, Mr. Roosevelt, when he said, and I quote:

> But if, like a spendthrift, it—
>
> The Government—
>
> throws discretion to the winds and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay and continue to pile up deficits, then it is on the road to bankruptcy.

Mr. Truman's message and the Budget which he certainly cannot expect the

American people to understand, numbered 975 pages, and according to one newspaper account, weighed exactly 3 pounds, 11 ounces on the meat scales in the nearest grocery store. The message contained a section entitled "Explanation of the Budget Contents." A Washington Daily News' reporter made a very pertinent and applicable remark that the message badly needs a new section entitled "Explanation of the Explanation of the Budget Content."

When we contemplate this Budget of $36,000,000,000 that is to cover this fiscal year, what our Government is going to cost us for its first annual postwar peace operation, and then realize that it is four times the highest prewar Budget we have ever had, which was $9,000,000,000 in 1941, we can begin to get some idea whether this country has drifted. When we ponder Mr. Truman's statement that far into the future our governmental operations are going to cost the taxpayers $25,000,000,000 a year, almost three times the highest prewar peacetime budget, we begin to see the dangerous condition into which this Nation has drifted.

Senator KENNETH S. WHERRY, of Nebraska, Republican whip of the Senate, and Senator ROBERT A. TAFT, of Ohio, both analyze the Budget as being ten or eleven billions short of the actual figures. In other words Mr. Truman has left out, they point out, the cost of subsidies which have been promised; our contributions to the Currency Stabilization Fund and World Bank; our full commitments to UNRRA; our commitments through the Export-Import Bank; all of this to say nothing of the contemplated loan of nearly $4,500,000,000 to Great Britain. Other loans will, of course, be demanded by Russia, China, and every other nation on earth whose rulers believe they can get in line and dip into the United States Treasury. Senator WHERRY cites figures which indicate that the Budget of $36,000,000,000 should really be set at $46,000,000,000. This means a deficit of at least $10,000,000,000. Other estimates put the deficit as high as $14,000,000,000. Senator WHERRY points out that under a $46,000,000,000 Budget we would be spending $130,000,000 a day for governmental operations in this first peacetime year. If those figures are correct, and I have no reason at this time to doubt them, the Government will spend approximately a dollar a person per day for every man, woman, and child in the United States. That in turn would mean for you, Mr. Wage Earner with a wife and two children, and for you, Mr. Farmer with a wife and two children, that the Government would be taking, either directly or indirectly, $4 a day of your money to be spent for its operations. Now there is neither point nor logic in trying to twist and distort the figures and the conditions. The first condition is that if our Government is going to spend $25,000,000,000 a year, or $36,000,000,000 a year, or $46,000,000,000 a year the Government is going to get the money out of the pockets of the people of this country. The money is going to come out of the national income, and the greater part of the national income comes from the wage earners and the farmers, or we will have to continue the New Deal policy of deficit spending.

If the Government is going to continue down the road of deficit spending, there is no doubt, as Mr. Roosevelt pointed out, that it will lead eventually to national bankruptcy and disaster. There are those who will seek to fool the wage earners, and the farmers, and the white-collar workers, and the fixed-income citizens. But the plain fact is that they are the taxpayers who are going to pay this enormous bill for governmental operations, or we are going to continue to indulge in deficit spending and continued borrowing until the public debt grows so vast that it has to be repudiated either by inflation or outright refusal to pay. The fact is that the President's course, as determined in his Budget message, is straight down the road to ruinous inflation. The fact is that if we go on spending money and issuing Government paper, we will so inflate the currency that we will reduce the purchasing power of the wage dollar, the farm dollar, the salary dollar, the fixed-income dollar, and the Government-bond dollar, that those dollars will lose 10 or 20 or even 50 or 75 percent of their purchasing power. It is not the number of dollars the wage earner gets in his pay envelope, or what the white-collar worker gets in his check, or what the farmer gets in income that measures the real value of his income. It is the amount of goods and services, the necessities of life, the things he can consume and use that he gets in exchange for those wage dollars, those salary dollars, and those farm dollars which spell his real income. I have seen it stated that an ordinary dinner in China costs $25,000 in Chinese currency if you want to have a bottle of wine with it. The normal value of that currency is one-half that of our American dollar. That is what inflation can mean.

Inflation will ruin every man, woman, and child in this Nation if we keep piling up a Federal debt and expect finally to dispose of it with inflated dollars. That has been the way of the despotisms of Europe. On the other hand, as it was brought out by a distinguished Member of Congress in the House of Representatives, the Honorable DANIEL A. REED, of New York, our national debt is more than Mr. Truman alleges in his message by $300,000,000,000. The fact is that our national commitments today, as placed in the appendix of the CONGRESSIONAL RECORD, on page A5504 by Mr. REED, are $636,898,220,145.98.

The President's Budget message, to every thinking man and woman, is as alarming as a cry of fire in a crowded tenement. We cannot go on taxing our people as we are taxing them now. We cannot possibly go on with the deficit spending year after year, because there is a limit to the credit of even a great and glorious Nation like the United States. The inflation which we are entering into is as dangerous to our people as the black plague. We can begin to see that Mr. Truman has adopted the New Deal theory, "We owe it to ourselves."

Mr. Truman tells us our reconversion is well stabilized. Now is it? Production is being paralyzed. The people are fearful. This Nation is riven by strikes and industrial disputes. Every dollar that is earned or spent in the production of goods and services constitutes legitimate purchasing power to buy the goods and services it creates. Prices at the retail counter are the sum total of all costs and profits. They were never anything else. They never will be anything else.

Either we are going to have an expanding economy in this country, which means the constant production of more and more goods and services, at constantly reduced prices, which means that people will have more for their money instead of less, or else we are going to continue to have strikes, slow-downs, shut-downs, cessation of the production and distribution of goods and services, continued borrowing, continued increases in wages and prices until inflation has carried us to a point where panic and ruin will face this Nation.

All Americans should demand of your Congress that if the executive department of the administration will not reduce its spending and strive to get our Budget back to a pre-war basis, then the Congress must do it.

If the taxpayers do not turn to this task of compelling their Government to stop this needless spending and this piling up of billions upon billions of dollars of deficits and debts. I can tell you that this overswollen political bureaucracy in Washington, which also infests every nook and corner of this Nation, is not going to do it for them. They and only they, apparently, can compel Congress to put the brakes on this reckless spending. You should look at the facts. Whatever your Government spends, must be taken from your pockets and the pockets of your children and your grandchildren far into the future. We do not need to face ruin in this Nation. We have a great Nation, the greatest in the world.

We made more progress in 150 years than other nations have in 5,000 years. We have the know-how in this country. We have the raw materials. We have the production technique. All we need to be prosperous is to see to it that the administration, which for nearly 14 years has never had a balanced Budget. Stop this reckless spending; cut out everything but the most absolute essentials in governmental activities; by all means put an end to giving and loaning billions to foreign nations, which never will be repaid; return government to home rule as soon as possible, and reduce these terrible taxes we now have to pay.

Only in that way, my fellow citizens, can we go forward. Only in that way can we have a safe, sound, free, prosperous America. If we do not do it, then we can look forward to despair and panic and ruin. I urge, I beg that the taxpayers everywhere act in this matter and demand of their Congress that we put the brakes on this careening journey down the road to bankruptcy.

Let us make America strong, happy, and prosperous. We still can accomplish this if we will.

What Is Your Answer to the Veteran?—He Asks No Special Favors Either

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. DOYLE. Mr. Speaker, I emphatically call attention of this House to an editorial from the pen of the Daily News, of Los Angeles, Calif., dated January 16, 1946. It is not only appropriate for me to ask your reading of it, because it speaks out so clearly and constructively in connection with the veterans, about whom every Member of this House is thinking a great deal; but it is appropriate because this editorial specifically refers to Congress. This newspaper is rated as one of the great dailies of America.

Here is the editorial:

AN ANSWER TO THE VETERAN

What are you going to say to all of these thousands of burned-up GI's and veterans blowing their tops at home and around the world?

Suppose you are—or are trying your best to be—a responsible trafficker in opinion, now and then laying an editorial egg but on the whole striving to help folks form reasonable judgments about what Walt Whitman called life's involved and varied pageants, what would you say to other citizens?

What would you say to the thousands of ex-GI's here in Los Angeles who can't even find a home? Who can't buy a suit of clothes? What would you say to the 200 riled flying veterans who marched the other day at Long Beach demanding a chance for jobs as aerial freight pilots?

Particularly what can be said to these guys when you know their feelings are right and their moral impulses are sound but that much they want and deserve just can't be made to jibe quickly with the imperfect patterns of peacetime living?

We've gone through this painful business of reabsorbing the veteran several times in our history and each time it's been tough—especially on the veteran.

But chances are this will be the most painful adjustment yet, because we went all out for the war this time—total war. And that sort of war is like a blind, staggering, blacking-out jag, inevitably followed by a lulu of a hang-over.

The settling down process is just going to hurt, that's all. But it can be made somewhat less hurtful if some among us can keep from acting like lunkheads—and by "some" the Daily News doesn't mean former service people alone.

The veteran, as Amvet head Charles G. Bolte has pointed out, has in many instances "matured without ripening."

The result is that he is inclined to make brusque demands for immediate results. Assessing these demands you're struck by the fact of their reasonableness, their almost naked simplicity, their embarrassing validity.

What are they? Well, the veteran wants a place to live at a price he can afford to pay. Either rental or purchase will do.

It needn't be a fancy dump, replete with all the wonders of the "miracle home" which yet exists only in the advertising copywriter's imagination. Just a clean, comfortable, pleasant, well-put-together abode where he can hang up his socks and begin to feel like he has a home, a home for himself, for his family, if he has one, or if he intends to have one, or a temporary home if he wants to go to school and take advantage of the GI bill of rights.

He'd like also two or three suits of clothes and some work togs. Not the $125 tailor-made creations, not the $5 rayon shorts with the two-way stretch, but some fairly good clothes like he used to buy around $40 or $50 for the suit and arcund 85 cents for the shorts.

He'd like a job—perhaps a new job—in congenial surroundings at a decent wage and with some sort of future. Every day the veteran sees things, jobs that need doing, and can't see why he shouldn't be working at those jobs.

The flyers who want to fly freight are a case in point. The freight is there—perishable freight, such as asparagus and citrus fruit and flowers—the planes are there, former service cargo ships standing around unused—and the pilots are there. It doesn't make sense, the veteran figures, that those three essentials can't be reconciled with one another.

And lastly, the veteran would like peace and freedom, the goals he was told he fought for and saw his buddies die for on the sweltering beachheads and jungles of the Pacific and the cold wet mud of north Africa, Italy, France, and the Rhineland.

Counseling GI Joe to be patient and to forbear doesn't come off, somehow, when he's tramping the streets looking for a place to live—when he's marching around idle planes he knows how to fly while needed merchandise waits overlong to be gotten from here to there.

For Joe's wants and the questions he is asking strike straight at the faltering heart of the existing, muddled order of things.

No, even though the veteran is impatient—justifiably so—even though the total mobilization of war perhaps has taught him to overvalue immediate results—the Daily News can't counsel him to forbear in the sense that he will be satisfied with today's imperfections and shortcomings. It can and does ask him to be tolerant and to remember he and his 15,000,000 buddies are going to share a major responsibility for shaping their country's future.

But mainly what the Daily News asks is that the whole country, for its own sake as well as Joe's, get on with reconversion, that Congress and the State legislature and the city council quit stalling, that management and labor settle their differences, that citizens everywhere recognize the simple fact that it is already later than we think.

The only veterans' problem is the problem of our resources and our machines and ourselves. But mostly ourselves, who haven't learned in sufficient numbers that winning a war doesn't mean you've won a peace.

R. E. G. H.

Oregon Tops All Nation in E Bonds

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. ANGELL. Mr. Speaker, I am pleased to note by a release recently given by Ted R. Gamble, national director in charge of war-bond sales, that the State of Oregon led all of the 48 States in the Union in the per capita purchase of series E bonds for the period May 1941 through December 1945.

As disclosed by this report there was purchased in the State of Oregon $446.02 in bonds per capita during this period. Connecticut took second place with $434.76 per capita; Washington was third with $433.86 per capita; and California fourth with $409.89 per capita.

Mr. Speaker, this is in line with the contribution made by the people of my State in war activities in the construction of ships, production of aluminum, furnishing of wood products and agricultural and fishery products. Our State held a commanding position. I am proud of my fellow Oregonians and believe I will be pardoned for calling this fine record to your attention.

On-the-Job Training for Veterans in the Schools of Oklahoma

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. STEWART. Mr. Speaker, during the latest recess of Congress I discovered that the State of Oklahoma was on the alert upon the question of on-the-job training for veterans. This idea is known as the Poteau plan and the principal details were worked out by Hon. Elbert L. Costner, superintendent of the public schools of Poteau, Okla. He is also a member of the State Board of Education of Oklahoma, an ex-serviceman of World War I and one of our best educators. He was chosen as Oklahoma's representative in working out a national plan for training of veterans and plan hereinafter outlined was practically, if not completely, worked out beforehand by Mr. Costner in his own city. Since this plan is so simple and sound, it should certainly be made a public document by Congress for distribution throughout the Nation. The entire plan is as follows:

ON-THE-JOB TRAINING FOR VETERANS IN THE SCHOOLS OF OKLAHOMA

(Approved by all State and Federal educational and veterans officials—Courses in wholesale and retail, trades industrial, vocational agriculture—Robert S. Kerr, Governor of Oklahoma)

(Form for copying)

CERTIFICATES (B) AND (C)

On-the-job training

This is to certify that:

1. _____,
(Name of veteran)

C. No. _____, entered training on the job under the provisions of the Servicemen's Readjustment Act of June 22, 1944, Public, No. 346, with—

Name of establishment_____

Located at _____
(Address)

on _____ for
(Date)

training as_____
(Job objective)

and that this course ordinarily requires_____ months for completion.

2. The beginning monthly wage, exclusive of overtime will be $_____.

3. The establishment agrees to report at the end of each month the number of days

the veteran was absent during the month and the amount of money paid to the veteran for his services, exclusive of overtime.

4. The standard salary or journeymen's wage for this position is $---------- per month.

5. This veteran is in training---------- clock hours each week and the training will be continuous.

6. The estimated cost of supplies and equipment that are customarily required of a trainee for the successful completion of the course is:

Supplies $---------- Equipment----------
Name of school----------
Name of establishment----------
By----------
Title----------
Date----------

(Form for copying)

VETERAN'S TRAINING PROGRAM, OKLAHOMA SCHOOLS—MEMORANDUM OF TRAINING PLAN

1. The----------
(School)
and----------
(Establishment)
will permit----------
(Veteran)
to enter their establishment for the purpose of gaining knowledge and experience as (a) (an)----------
(Occupation)

(Department)

2. The course of training is designed to run for a ---------- year ---------- month ---------- day.

The training will be in accordance with an outline made and agreed upon by the employer, the coordinator, and the veteran.

3. The school will make provision for the veteran to receive related and technical instruction.

4. The status of the veteran while in training shall be that of a student-learner.

5. The veteran while in training shall progress from job to job in order to gain experience in various operations.

6. The schedule of compensation shall be agreed on by the training agency, the coordinator, and the veteran in accordance with existing local standards, labor laws, and policies.

7. All complaints shall be made to and adjusted by the coordinator.

8. The coordinator shall have authority to transfer or withdraw the veteran if he is found to be not feasible for the type of training begun, or if for any reason, the training station proves unsatisfactory, or for any other reason which the coordinator deems to be the best interest to those concerned. In any case, the veteran, the coordinator, and the practical teacher or trainer shall agree to any change that is made.

9. The veteran promises to abide by all implied and stated terms included in this agreement.

By----------
(Employer)

(Coordinator)

(Veteran)

(Superintendent or director of veteran's training program)

VETERANS' TRAINING PROGRAM

The public schools of Oklahoma will offer to veterans: Special courses of on-the-job training in wholesale and retail establishments, trades, industry, and agriculture. A large number of short courses will be given by technically skilled, practical teachers under the direction of the school's vocational coordinators, or other instructors. All such courses are available to out-of-school youth.

The above training is offered in an attempt to reach the veteran or youth that is not interested in returning to full-time high school or college work. Plans have been made that permit training on-the-job, and in short courses arranged at times that are convenient to the student. The Veterans' Administration has approved the plan and, subsistence allowance will be granted under the GI bill to eligible veterans.

Veterans wishing to enroll at the beginning of the month should contact the high-school office. New registrations or enrollments will be accepted any day of any month during the year.

State board of education: President, A. L. Crable; secretary, W. T. Doyel; director of vocational education, J. B. Perky. Members: Hugh A. Carroll, Fairview; Charles P. Howell, Ponca City; Elbert L. Costner, Poteau; R. L. McLean, Anadarko.

OAKLAHOMA PUBLIC SCHOOLS OUTLINE OF PLAN OF OPERATION FOR TRAINING RETURNING WAR VETERANS—WHOLESALE AND RETAIL OCCUPATIONS TO MEET PROVISIONS OF PUBLIC LAW 16 AND PUBLIC LAW 346

Purpose of plan

Numerous surveys have indicated that many men now in the armed services expect to own and operate their own retail stores. Others will enter the employ of already established wholesale and retail organizations. It is the purpose of this plan to help guide the veteran and to give him sufficient training so that he will be successful in his chosen occupation. The veterans trained under Public Law 16 will be assigned to the school by the Veterans' Administration after council and guidance given at Muskogee.

How the plan operates

The training plan operates as follows:

1. All training is conducted under public school supervision and control.

2. The training program will consist of three phases: First, a general basic training; second, specialized training; third, a cooperative on-the-job training.

3. Both the basic and specialized training should be offered as intensive training with a minimum of 40 hours basic, and 80 hours specialized training. These courses may be given concurrently and should be completed soon after the trainee begins training. Six hours per day or 30 hours a week should be spent in basic and specialized training, unless the trainee is receiving on-the-job training or is operating his own business while taking training.

4. The cooperative on-the-job training will be given in centers close to the place where the veteran is employed in a wholesale or retail, firm, near the center where he may be operating his own business. In the cooperative on-the-job training phase of this program the veteran will receive specific instruction from the coordinator instructor in the school and all specific on-the-job training from the coordinator and the operator of the business in which he is employed. Where the trainee is operating his own business cooperative on-the-job training may be given in the veteran's shop. It is anticipated that the trainee will devote a minimum of 4 hours a week to the group instruction and at least 32 hours a week to cooperative on-the-job training. If the veteran is operating his own business the 4 hours, group instruction may be given individually in the veteran's place of business at the option of the coordinator and the veteran.

5. The coordinator instructor will visit each trainee on the job at least once each month in addition to the meetings planned for systematic instruction.

6. The cooperative on-the-job instruction will be both remedial and supplementary.

Topical outline of basic training

I. Brief discussion of marketing process.

II. General facts that a prospective should consider.

III. Financial requirements.

IV. Personal qualifications of prospective merchant.

V. Opportunities in different fields of retailing.

VI. Why training is necessary for store owner or manager.

VII. Alternative to going into business for yourself.

In offering the work experience-related training program, a public school must provide the training related to the job needs.

Content of instruction

The content of the instructional program will be determined by the following factors:

1. A job analysis of the occupation.

2. Problems encountered by the trainee on the job.

3. Organized training materials made available by manufacturers, wholesalers, trade associations, trade journals, and others.

4. The veteran wishes should be given priority as far as possible under the law.

Approval of schools

Any high school in the State of Oklahoma that is accredited has been approved and may offer cooperative training for veterans.

Qualifications of coordinators or teachers

A coordinator or teacher having responsibility for a cooperative veteran's training program shall meet the qualifications required by the State Board of Vocational Education. This regulation shall not preclude the hiring of special instructors who may be necessary to the success of the program.

Administration and supervision

The local board of education and its administrative officers shall have administrative charge of the training program.

The Veterans' Administration, together with local school authorities, shall have supervision of the program under Public Law 16.

FARMER-TRAINING PROGRAM TO MEET PROVISIONS OF PUBLIC LAW 16 AND PUBLIC LAW 346

This program of farmer-training for veterans will be offered in high school under the supervision of the vocational agriculture teacher and the Veterans' Administration. The veterans trained under Public Law 16 will be assigned to the school by the Veterans' Administration after council and guidance given at Muskogee.

Educational basis for the program

This program is based on two integrated procedures which vocational education in agriculture holds to be fundamental to a sound farmer-trained program. They are:

1. Systematic class instructions, plus

2. Supervised farming (on-the-job training).

Systematic class instruction is necessary for the study and discussion of problems and practices significant to successful farming in the community. Through class instruction, the trainees can discover difficulties and problems confronting them on their individual farms, work out the best solutions to their problems, and acquire an understanding of the facts and principles and underlie the use of recommended or improved practices in farming. As a part of this class-work, the trainee plans rather definitely how he is going to carry on his own farming program. Each veteran's plan must be worked out and approved as an individual personal training unit.

Following the class-work on good farming practices and how they may be carried out, the trainee must have opportunity to use these practices in actual farming if he is to learn the use of the practices. The carrying out of improved practices in arming under the supervision of the teacher of agriculture is comparable to on-the-job training in industrial occupations.

Class instruction in agriculture and practice in farming are essential in the instructional program. Training the returning

veterans in the communities in which they are to farm not only makes this kind of instruction possible but promotes the establishment of farming.

Persons the program will serve

This program is designed to meet the farmer-training needs of disabled veterans under provisions of Public Law 16 and all other veterans under provisions of Public Law 346. In order to qualify for training in this program a person must have facilities and opportunity to carry on a satisfactory supervised farming program in one of the following situations:

1. Be a farm owner-operator or a farm manager.

2. Be a renter of, or a partner in, operating a farm.

3. Be working on a suitable farm with his parents or others.

Only veterans who have entered upon or who are preparing to enter upon a farming vocation and who have at their disposal farming facilities that will permit satisfactory practice in farming may receive training.

Plans of instruction

In offering this program, a school must provide a course or courses of instruction to meet the minimum requirements of one or more of the following plans:

Amount of Instruction: There is to be at least 150 hours of classroom instruction, plus at least two supervisory visits per month (24 per year), plus a supervised farming program of at least 1,536 hours for the year.

Course of Study: The contents of each course of instruction shall meet the approval of the vocational education director of Oklahoma. The courses shall provide as much as a 4 full years of training. The guiding aim of each course shall be to develop the individual's ability to successfully establish himself in farming and operate a farm.

The State Board of Vocational Education has developed course outlines with recommended content to be used in this program. These course outlines may be examined by the interested persons.

The course of study is to be designed to meet the needs of the veterans in the section of the State where they are to farm. Since different sections of Oklahoma have different types of farming, a course to meet the needs of the veterans in one part of the State will not meet the needs in another part.

A 4-year course of study, to meet the needs of trainees in a particular section of the State might be as follows, for example:

First year	*Hours*
Farming occupations (opportunities in farming and establishment in farming)	50
Home living (producing and conserving food and the like)	25
Farm shop	20
Livestock (general)	15
Corn and cotton, general row crops	15
Hogs and poultry	15
Total	150

Second year	
Home living	20
Farm shop	30
Soils (basic course)	40
Hay and pasture	30
Dairy	30
Total	150

Third year	
Home living	30
Farm shop	50
Feeding (producing and using feed)	50
Poultry	20
Total	150

Fourth year	
Home living	20
Farm shop	40
Farm management	40
Soil and water conservation and use 1	50
Total	150

The classroom instruction

Organized instruction may be more intensive during the fall, winter, and early spring and less intensive during the summer months. Transportation to all classes of systematic class instruction courses should be provided by the school at no cost to the veteran.

Class instructions shall be designed to develop in the trainees the ability and attitude necessary to:

1. Make a beginning and advance in farming.
2. Produce farm commodities efficiently.
3. Market farm products advantageously.
4. Manage a farm business.
5. Conserve soil and other resources.
6. Maintain a favorable environment.

Approved methods of instruction, including solving of farming problems, group discussion, demonstrations, and individual practice, visual aids, field trips, and planning and evaluating individual farming program and practices, shall be used.

The supervised farming

Each trainee shall have a farming program which is suited to his needs for training in farming. The amount of supervised farming may be greater in the spring, summer, and fall months, and less in the winter months.

The supervised farming program of trainees shall consist of the following

1. Making arangements for the program; buying a farm, renting a farm, or cropland, securing livestock or renting livestock, and the like.

2. Making plans for the program; deciding on the crops and animals to produce and deciding on production and marketing practices to use.

3. Providing facilities for carrying out the program; securing animals, feed, seed, fertilizer, finance, equipment, hired labor, storage, and so on.

4. Carrying out the program: caring for animals, cultivating the crops, using improved practices, managing the programs, marketing the products, etc.

5. Keeping, summarizing, and interpreting records of the program.

6. Planning future operations.

The teacher will give the trainee the supervision needed in his farming program, on the trainee's home farm. This supervision will consist of periodic and special visits to the trainee's farm to assist, encourage, and instruct him in such things as evaluating work already done, planning future work, using improved practices, and performing skilled jobs. The teacher will endeavor to see that improved practices are used.

School facilities to be provided

In order for a public high school to qualify to offer courses under this program, the following conditions must be met:

1. Classroom: The school will make available a classroom properly lighted and equipped. The school will also make available the vocational agriculture library and agricultural teaching equipment.

2. Farm shop: The school will make available an adequately equipped farm shop for instruction. The shop will be available to the trainees a minimum of one-fourth of the total time prescribed for class instruction.

3. Other training facilities. The school will make available to trainees such other farmer-training facilities that it has, such as school-community cannery, visual aids, and community farm equipment, for use in this program.

Qualifications of teachers

Teachers responsible for instructing veterans in this program must meet minimum qualifications for teachers of vocational agriculture in Oklahoma. However, the teacher of vocational agriculture may secure the assistance of special instructors to assist with certain phases of the instruction such as a teacher of home economics in teaching food preservation, a farm machinery repair specialist in teaching farm-machinery repair, or others who are recognized as competent in the field in which the course is being offered.

The use of special instructors shall be for the purpose of assisting the regular teacher in making the instruction more effective, and all work by special instructors shall be under the direct supervision of the regular teacher. All such special teachers as needed shall be provided by the local board of education.

The board of education and its administrative officers of the school district where a local program is operated shall have administrative charge of the program of training.

The State Board of Vocational Education in Oklahoma, together with local school authorities, and the Veterans' Administration at Muskogee, shall have supervision of the program under Public Law 16.

INDUSTRIAL OCCUPATIONS TO MEET PROVISIONS OF PUBLIC LAW 16 AND PUBLIC LAW 346

Purpose of the program

This program is planned to meet the needs of veterans who may find it impracticable to enroll in a regular vocational school for trade training.

Explanation of the program

A course under this program is given cooperatively by a public school and a local business or industrial establishment. The industrial establishment will employ the veteran or veterans and cooperate with the school in providing on-the-job work experience. The school, through a teacher coordinator, will offer the necessary technical and related instruction. In a typical course under this program the student will spend 35 hours a week on the job and 5 hours a week in school. The ratio of time in school and on the job may be varied or adjusted to meet specific individual needs. Provided, however, in case of Public Law No. 16, such adjustment meets the approval of the Veterans' Administration in Muskogee who will in all cases first interview, advise and at their discretion request the school to prepare for their approval a definite program of work in class and out that they and the veteran agree upon. The local school will accept the responsibility for seeing that the instructional pattern is carried out.

Plan of instruction

The public school will prepare, in cooperation with the industrial establishment, a specific plan for training the veteran. This plan will specify the work experience the veteran is to receive on the job, the technical information required in the trade which he is to receive at school, the length of the course, a work-study schedule, and other necessary details. Complete courses vary in length from 1 to 4 years.

A person with proper qualifications will be designated by the school to supervise the training in order that there may be proper correlation between the work experience and study activities of the veteran.

Satisfactory correlation will be accomplished by making a careful analysis of the trade to determine just what technical knowledge and job skills are required of a competent workman.

Facilities of the industrial establishment

Only industrial establishments will be selected for cooperative training that have facilities which will enable the veteran to acquire adequate experience with modern equipment and tools. A competent and sympathetic foreman will supervise the work of the veteran.

Facilities of the school

The school will provide a classroom properly equipped for giving the technical instruction required. This room will contain a selected list of books, charts, and other reference material for the trade.

The school will also furnish a trained instructor, who has had industrial experience, to teach technical and other subjects. This is the person who will be responsible for working with the veteran's employer in developing the analysis of the trade referred to in a previous section of this monograph. He will be responsible, also, for visiting the veterans on the job at regular intervals for the purpose of seeing that the planned correlation between work and study is being accomplished.

Approval of schools

All accredited schools offering cooperative training for veterans under this program are approved by the division of vocational education of the State board of education.

Qualifications of coordinators or teachers

A coordinator or teacher having responsibility for a cooperative veterans' training program shall have the qualifications required by the State board of vocational teachers in trades and industry classes. This regulation shall not preclude the hiring of special instructors who may be necessary to the success of the program.

Administration and supervision

The local board of education and its administrative officers shall have administrative charge of the training program.

The Veterans' Administration, together with local school authorities, shall have supervision of the program, and final jurisdiction will rest with the Veterans' Administration in all cases under Public Law 16.

SHORT COURSES

Short courses to be offered during the school year 1945–46 where fees are required of all who take the course:

Farm Training Program

Twenty hours, care and repair of farm machinery and equipment, No. 1, $8.
Twenty hours, care and repair of farm machinery and equipment, No. 2, $8.
Twenty hours, care and repair of farm machinery and equipment, No. 3, $8.
Twenty hours, care and repair of farm machinery and equipment, No. 4, $8.
Twenty hours, care and repair of farm machinery and equipment, No. 5, $8.
Twenty hours, farm auto mechanics, No. 1, $8.
Twenty hours, farm auto mechanics, No. 2, $8.
Twenty hours, farm auto mechanics, No. 3, $8.
Twenty hours, farm auto mechanics, No. 5, $8.
Thirty hours, conservation of soil and moisture, $12.
Twenty hours, pasture improvement and year-round pastures, No. 1, $8.
Twenty hours, dairy production, breeding, and milk markets, No. 1, $8.
Twenty hours, dairy production, breeding and milk markets, No. 2, $8.
Twenty hours, dairy production, breeding, and milk markets, No. 3, $8.
Twenty hours, poultry production for meat and eggs, No. 1, $8.
Twenty hours, poultry production for meat and eggs, No. 2, $8.
Twenty hours, food processing, No. 1, $8.
Twenty hours, food processing, No. 2, $8.
Twenty hours, food processing, No. 3, $8.
Twenty hours, establishment in farming, No. 1, $8.
Twenty hours, establishment in farming, No. 2, $8.
Twenty hours, farm management, No. 1, $8.
Twenty hours, farm management, No. 2, $8.
Twenty hours, farm management, No. 3, $8.
Twenty hours, farm management, No. 4, $8.
Twenty hours, farm management, No. 5, $8.

Wholesale and retail occupations

Twenty hours, salesmanship, No. 1, $8.
Twenty hours, salesmanship, No. 2, $8.
Twenty hours, salesmanship, No. 3, $8.
Twenty hours, salesmanship, No. 4, $8.
Twenty hours, window and interior display, No. 1, $8.
Twenty hours, retail store advertising, No. 1, $8.
Twenty hours, letter and show-card writing, No. 1, $8.
Twenty hours, records and reports, No. 1, $8.
Twenty hours, effective speech for salespersons, No. 1, $8.
Twenty hours, effective speech for salespersons, No. 2, $8.
Twenty hours, effective speech for salespersons, No. 3, $8.
Twenty hours, credits and collections, No. 1, $8.
Twenty hours, credits and collections, No. 2, $8.
Twenty hours, credits and collections, No. 3, $8.
Twenty hours, legal phases of retailing, No. 1, $8.
Twenty hours, legal phases of retailing, No. 2, $8.
Twenty hours, legal phases of retailing, No. 3, $8.
Twenty hours, house painting, No. 1, $8.
Twenty hours, store management, No. 1, $8.
Twenty hours, store management, No. 2, $8.
Twenty hours, store management, No. 3, $8.

Industrial occupations

Twenty hours, general carpentry, No. 1, $8.
Twenty hours, general carpentry, No. 2, $8.
Twenty hours, general carpentry, No. 3, $8.
Twenty hours, general carpentry, No. 4, $8.
Twenty hours, furniture repair, No. 1, $8.
Twenty hours, furniture repair, No. 2, $8.
Twenty hours, furniture refinishing, No. 1, $8.
Twenty hours, furniture refinishing, No. 2, $8.
Twenty hours, upholstery, No. 1, $8.
Twenty hours, upholstery, No. 2, $8.
Twenty hours, upholstery, No. 3, $8.
Thirty hours, care of hand tools, No. 1, $12.
Twenty hours, repair of electrical appliances, No. 1, $8.
Twenty hours, repair of electrical appliances, No. 2, $8.
Twenty hours, welding, No. 1, $8.
Twenty hours, welding, No. 2, $8.
Twenty hours, welding, No. 3, $8.
Twenty hours, electricity, No. 1, $8.
Twenty hours, auto mechanics, No. 1, $8.
Twenty hours, auto mechanics, No. 2, $8.
Twenty hours, auto mechanics, No. 3, $8.
Twenty hours, auto mechanics, No. 4, $8.
Twenty hours, radio, No. 1, $8.
Twenty hours, radio, No. 2, $8.
Twenty hours, radio, No. 3, $8.

Conspiracy Signs

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 25, 1946

Mr. SABATH. Mr. Speaker, for days, yes, even for weeks, several of the gentlemen of the House, notably the gentleman from Michigan [Mr. HOFFMAN], the gentleman from Mississippi [Mr. RANKIN], the gentleman from Virginia [Mr. SMITH], the gentleman from Georgia [Mr. COX], and a few others, have criticized labor and have tried to place the blame for the present strikes on organized labor alone.

Yes it is true. In several instances labor has declared a strike; but not until they have made every effort to bring about adjustments in their reduced earnings.

I have heard it charged that industry is responsible. I do not wish to make this as my own charge. My opinion might be questioned because of my known friendship for labor and fair play. However, I do not make the charge alone. Many fair-minded men have said, in recent days that Wall Street leaders who control General Motors, United States Steel, General Electric and Westinghouse, and the Big Five packers have recklessly decided to risk the welfare of all for the sake of their own greed, and have ordered that the appeal of organized labor for adjustment of pay rates should be given no favorable consideration. Many writers have charged that big industry has entered into an agreement not to come to a peaceful and common-sense settlement of labor's grievances, that the workers have been deliberately forced to strike, in the ghoulish hope that out of the misery of the heralded eight to ten million unemployed, swollen by returning discharged veterans, industry could obtain all the nonunion help they need, and thereby destroy the great labor unions, or so weaken them they would be relatively powerless to protect their members and defenseless unorganized workers.

I have read many articles by outstanding, impartial, and fair-minded observers, and I have heard many on the radio, as all of us here have. I feel, as do most of my colleagues, that these writers have brought home to us and have expressed most clearly the charges I have previously referred to, and they seem to have substantiated what I have stated as to reports being circulated that big industry is in an open conspiracy to break the benevolent power of the unions and defy the national interest. To demonstrate the generality of opinion of these unbiased observers I desire, under leave given me to revise and extend my remarks, to insert several articles, chosen to be representative of th opinions. The first insertion is of a column written by Thomas L. Stokes, a star columnist for United Features, which appeared in the Washington Daily News and most Scripps-Howard newspapers, as well as many papers outside that chain, on Monday, January 21, 1946. Mr. Stokes is widely known as an objective, hard-hitting reporter who has severely criticized the present administration when he has deemed it to be wrong. I have taken his title for this column for my own in this extension. Mr. Stokes bears out my own suspicions that the generally recalcitrant attitude of big business, and the united front which has appeared, is no accident; that there actually exists a conspiracy or agreement on the part of the industries now involved in labor trouble to break up and defeat organized labor's

justifiable efforts to adjust income to mounting costs of living.

CONSPIRACY SIGNS

(By Thomas L. Stokes)

It seems more than a coincidence that only a few days apart General Motors rejects a wage-finding by a Presidential fact-finding board and United States Steel refuses a compromise wage figure offered by the President of the United States intervening on behalf of the public.

In each case the unions accepted the findings which were much below their demands.

Big motors and big steel.

Some time back, even before VJ-day, there were charges by labor leaders that big industry was going to start a union-busting campaign after the war. A combination of big motors and big steel was cited specifically as the offensive weapon. These charges at the time made the usual impression that such charges do from union leaders who themselves intend to take the offensive for wage increases. In short, they were somewhat discounted, even though there were significant signs about.

Now, with the latest action of General Motors and United States Steel, it all seems to add up to just about what the union leaders were charging. That is, a conspiracy by the big interests to move in and take over, now that the people have lost the champion in the White House who was so quick to detect and expose the machinations of the big fellows, and to rally the people against them. They are capitalizing, too, upon the confusion that naturally follows a war, with the public weary and punch drunk.

The big boys first thought they could take Harry Truman, Mr. Roosevelt's successor, into camp. They thought he was their man. They have found out different. Now they seem determined to break him, if possible. He does not, it is true, have the maneuvering abilities of his predecessor.

Breaking the power of the unions and breaking the power of the administration are all part and parcel of the some plot as it begins to unfold, in the view of those here who have watched and analyzed the various moves.

The top-off came when big motors and big steel thumbed their noses at the President, the representative of the people, in what looks like a carefully premeditated gesture.

There are a few simple facts to remember in this situation. In each case, the awards proposed respectively by a fact-finding board and by the President were about halfway between those asked by the union and offered by the company. Without going into all the figures, each proposed award seemed reasonable.

The point is made that President Truman stepped into the steel case before the fact-finding board had investigated fully and reported. But he stepped in, as any President is expected to do, in the public interest. It was an emergency case.

There is another thing to remember. Both General Motors and United States Steel netted handsome profits in the war, both have a nice backlog, and both were treated most considerately by Congress, along with all industry, in repeal of the excess-profits tax and making available various tax refunds. Congress, in fact, hastened to do that while it held up action on such measures for the benefit of workers as increased unemployment compensation and the full employment bill, neither yet enacted.

Big industry, it would seem, can ill afford to fail the country at this time.

There seems little doubt that a public sympathy will be out with the folks on the picket line.

I am also inserting in the RECORD an editorial from the Washington Post for the same day, January 21. No one, surely, will suggest in this Chamber that this newspaper is unfriendly to industry. In this crisis, however, the Post sees clearly that the country is entitled to the facts and is bringing them home. In the same connection may I include also a column by Kenesaw M. Landis II in the Chicago Sun pointing out that Theodore Roosevelt, a great Republican President, faced with a similar situation in 1902, used the Big Stick which some Members of this House are so fond of recalling to force the coal operators to come to terms with what he called the "entirely fair proposal" of the miners by threatening to seize the mines, dispossess the operators, and operate the mines as a receivership with the help of the United States Army. Note that the operators capitulated, and accepted a fact-finding board 40 years ago.

THE PRESIDENT AND THE CRISIS

Twenty-four hours have gone by since the steel plants of this country closed down. Steel is the heart of our industrial system. The heart has now stopped beating, and the entire economy is fast running down. The people seem condemned to watch a knock-down and drag-out fight between labor and management. They must stand by and see the Nation lapse into state of paralysis.

For weeks they have heard the spokesmen of both sides say their say interminably. It is now time for the public to take the platform. The Post thinks it would be shirking its public responsibilities if it failed to proffer its own ideas about the grave crisis confronting our country.

The effect on reconversion is immediate. Reconversion is stalled. After 8 months of hard work and skillful deployment by labor and management, the goal was actually in sight. We were 90 percent reconverted. Then silence fell on the automotive, meat, and electrical industries. Steel joins them to make the standstill of our industry complete.

It is a criminal setback and seems like a conspiracy. But no good will come out of name-calling. Men on both sides are acting according to their convictions. There may be exceptions, but we prefer to think of the combatants as good Americans, all animated in the final analysis by a desire to serve the public. The fact remains that, because of inability to agree, they have thrown their hands in. When labor and management in our major industries quit, a crisis is created. We are in a crisis, not a conspiracy.

From this crisis we shall all suffer. The veteran coming back into our civilian life will be hurt. The prostrate world, looking to the United States for a lead in the work as well as the ways of peace, will lose heart.

The drift back of spreading inactivity must be arrested. This the people demand in self-preservation. But they have no preventive power. Only the President of the United States can act in their united name.

The Post assumes that President Truman is not quitting.

The President has been damned for stepping into the picture at all. It is said that he ought to let the combatants slug it out. This was sound advice when industrial struggles were minor ripples on our community and our international life. But no such advice is tenable when this fight could conceivably hold up the activity of the entire industrial world.

Those who criticize the President for his intervention would have been the first to criticize him for nonintervention. For he had to intervene. The maintenance of the war powers of his office testifies to the fact that we are still in an emergency. This peace emergency calls just as much for Presidential responsibility as did the war emergency.

We do not suggest that the President should be panicked into hasty steps. But the Nation cannot stew in the present mess much longer without inviting an irremediable disaster. He must bring before him the men who in fact guide our industrial destinies. It is now seen to have been foolish to allow negotiations to go on between representative labor and management which was not equally representative. Labor as a whole was talking to men who had no mandate from the whole industry.

In the steel fight the President seems to have thought Mr. Benjamin Fairless was the decisive voice in the steel industry. It turns out he was mistaken. Let him ask the actual leaders of the steel industry to come to the White House.

Let him go further and ask the real leaders in the other major industries to talk things over.

A national crisis requires a national solution. The heart of our current troubles lies in the absence of a wage-price policy for reconversion. Steel could set the pattern. It has set the pattern before in every great change in our economic history. But in this instance the others may want to have their say along with steel. What makes steel and the others backward is the effort to keep wages and prices in separate compartments. It has never been done before. It does not make sense. Both have got to be squared.

What has happened is simply a breakdown in common sense.

Common sense requires that we speed up reconversion. Reconversion means civilian goods. It follows that reconversion is the only way to beat inflation—to stop prices from spiralling, to prevent value from being drained out of our dollars. When this country is reconverted, other countries will have a chance to follow.

The setback can be retrieved by some such action as we have suggested. But every day's delay makes a meeting of minds more difficult. It thrusts the country and the world deeper into economic and social tribulation. In the President's hands is the last peaceful remedy, and no American, anxious for his own and the country's welfare, will deny him the right to invoke it. Mr. Truman would be in default to his own Presidential obligations in this national and international emergency if he balked at it.

WHAT CAN TRUMAN DO ABOUT GENERAL MOTORS

(By Kenesaw M. Landis II)

General Motors has rejected the wage increase recommended by President Truman's fact-finding board as "unacceptable * * * in whole or in part."

This means that one of the most vital segments of American industry will remain closed down while the company tries to starve out its employees.

It is obvious that only hunger and want can force the workers to settle for less than the Government proposal, which itself meant a reduction in their wartime living standards.

Before that happens there is likely to be strife and bloodshed in Detroit, and our whole economy may be threatened.

If the worst comes to the worst, what should the President do? As a practical matter, what can he do?

I'll tell you what a Republican President by the name of Theodore Roosevelt did back in 1902, when the strike of 150,000 anthracite miners threatened the country with a coal famine.

First, he invited both sides to the White House in the hope of reaching a settlement.

For this he was denounced in the newspapers, which said such interference in the affairs of private corporations was so unconstitutional as to render him liable to impeachment.

Remember that this was over 40 years ago, and that there was no War Powers Act.

"I disclaim any right or duty to intervene in this way on legal grounds," said Roosevelt, "but my duty requires me to use whatever

influence I personally can to bring to an end a situation which has become literally intolerable."

The operators came to the conference in a belligerent mood, and left after an acrimonious session, giving the newspapers an account of how they had "turned down" both the miners and the President.

They refused point-blank to consider what Roosevelt said he regarded as the "entirely fair proposition" of John Mitchell, the head of the miners' union.

"Well, I have tried and failed," the President wrote to Mark Hanna. "What my next move will be I cannot yet say. I feel most strongly that the attitude of the operators is one which accentuates the need of the Government having some power of supervision and regulation over such corporations."

What was his next move? Quietly the President sent for General Schofield and made arrangements to seize the mines, dispossess the operators, and operate them as a receivership.

"If the operators should go to court and have a writ served on the general, would he do as was done under Lincoln, and send the writ on to the President?"

"Yes," promised General Schofield. "All right, I will send you," said Roosevelt.

Strangely enough, the coal operators suddently agreed for the President to appoint a fact-finding commission, and accepted without debate the decision in favor of a substantial wage increase.

"I was all ready to act," said Teddy, "and would have done so without the slightest hesitation or a moment's delay if the negotiations had fallen through."

I am inserting also an editorial from the Chicago Sun which demonstrates that employees in the meat-packing industries are receiving much smaller pay than is being paid by many other industries:

FACTS BEHIND THE PACKING-HOUSE STRIKE

In its efforts to avert a Nation-wide strike in the packing industry, the Government openly offered price concessions to the operators to induce wage increases. Certain facts are needed to complete the picture.

The packing industry pays low wages. A spokesman for Swift, largest of the Big Four, announced Tuesday that its hourly wage employees had averaged $48.95 a week in October, but this figure needs qualification. In September, when the weekly average was $48.22, the workweek was 49 hours—which meant that 9 hours were paid at overtime.

The Bureau of Labor Statistics reports that the industry as a whole paid $45.68 in June 1945, on an average week of 48 hours. In August, when the week was reduced to 44.4 hours, the pay slipped to $41.57. Thus when the normal 40-hour week returns weekly earnings will be considerably below $40.

Packing-house workers have had no general wage increase since before Pearl Harbor. In a War Labor Board brief, the union stated that the basic wage was 82½ cents an hour. This contrasts with $1.12 to $1.20 an hour in the automobile and oil industries. Packing-house workers, therefore, have a claim to increases on grounds of equity as well as heavily increased living costs.

The Government's offer of price relief recognized that the packing industry operates on low-unit profit margins. Subsidies have been paid the companies during the war to let them function profitably without cutting the prices paid for livestock or raising meat prices to consumers. The packers argue, however, that the price increase suggested on Government purchases alone was insufficient to permit the 15-cent-an-hour wage rise considered the union minimum.

The Government then bargained a bit, offering a small general price increase as well as an increase on Government purchases for the armed forces and foreign relief. Again, the Big Four packers and the larger independents said "No."

A number of independents avoided the losses and discomforts of a strike by reaching voluntary agreements with the unions. The Hormel Co. gave a 17½-cent increase; others gave 15 cents, while still others agreed to match whatever rise the Big Four eventually grant.

These companies thus placed their action in line with the policy laid down by President Truman last October, when he pledged that any business which could show that wage increases made price increases necessary—within a 6-month period—could get relief. None of the Big Four has been willing to go along.

The striking CIO union is supported by A. F. of L. members and in Chicago is aided by the public opinion mobilized through the Back of the Yards Council. Secretary of Labor Schwellenbach, in his meeting today with company and union officials, may be able to suggest a solution to end the strike. Swift action is desirable because a long shutdown would mean substantial losses for the companies and genuine suffering among the payless workers, as well as almost immediate inconvenience to the public.

Long Beach Wins Sweepstakes in the Tournament of Roses, Pasadena, Calif., New Year's Day

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 24, 1946

Mr. DOYLE. Mr. Speaker, my home city of Long Beach, Calif., took her superlative float Shangri-La, blossoming with 750,000 fresh flowers—yellow roses, gardenias, chrysanthemums, white roses, candytufts, and blue delphiniums—to the world-famous Pasadena Rose Parade on January 1, 1946. Unanimously the judges awarded the most cherished award of the day to my own beloved city which means so much to me.

The float portrayed the great world-famous port of Long Beach. The deck of this significant creation was a series of floral waves which started with a floral ripple and then extended into a floral wave 14 feet high. All exclaimed that it was so realistic and so beautiful, too, that it made them homesick for those world-famous beaches and breaking waves at Long Beach. You see, we have about 7 miles of the finest beach in the world and Long Beach as a city owns most of it and has established a policy of acquiring it all, forever, to be kept open for the public recreation and happiness. Long Beach has learned that a city which recreates lives happier and healthier, and encourages its people to participate in recreation programs and activities.

But atop of these gorgeous floral waves and ripples rested at ease, the most gorgeous floral replica of the famous aircraft carrier *Shangri-La*. On this breath-catching depiction were also resting at ease floral replicas of airplanes of modern design, while three small white sails of beautiful flowers, at the rear, lifted their greetings to the million spectators along the line of the parade.

Long Beach has won much fame and merit in this world-famous Rose Tournament in years gone by, but never more justly so than in this good natured, artistic rivalry with the other cities of California on this day.

It is true that most people who have never been there think of Pasadena as the place where the annual football Rose Bowl game is played. I have seen many of these games. They come in the early afternoon and while the tickets are always a sell-out and 93,000 spectators witness the game, it is estimated that about a million people witnessed the rose parade or tournament in which my beloved city of Long Beach carried off top honors.

Not only is Long Beach a great commercial harbor and port; not only is Long Beach anchorage for the United States Navy; not only does Long Beach have the great Roosevelt drydocks and other extensive naval installations and the commodious naval hospital; not only does Long Beach have the Douglas aircraft factory and extensive shipbuilding yards and plants—but Long Beach again has proved her versatility and her resourcefulness and has demonstrated her strength as a city, too, of cultural mindedness and residential and recreational resources.

The more than 300,000 people of Long Beach are to be congratulated upon this creation out of God's own garden of flowers, Shangri-La.

The Word That Blocks Lasting Peace

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, January 25 (legislative day of Friday, January 18), 1946

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most timely and challenging article entitled "The Word That Blocks Lasting Peace," written by the distinguished junior Senator from Arkansas [Mr. FULBRIGHT] and published in the New York Times of January 6, 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WORD THAT BLOCKS LASTING PEACE

(By J. WILLIAM FULBRIGHT, Senator from Arkansas)

WASHINGTON.—In this fearful and troubled world there are few subjects upon which men can agree. During the long years of war we did agree among ourselves, and with our allies, to devote our energies and our resources, without reserve, to the defeat of our enemies. We agreed that we did not like the return to barbarism and slavery proposed by the Nazi supermen. I think we realize that we escaped defeat, in the early days of the war, by the narrowest of margins.

With this experience so fresh in our minds, surely we can now agree that we do not like

war, that it is altogether wasteful, demoralizing and horrible. We can agree, I believe, that it is not to our own best interests to have another war and that therefore we should now devote our energies and our intelligence, without reserve, to the prevention of such a war. If this is our objective, can we agree now on how to proceed?

From the beginning of man's history, the only principle that has ever brought peace with freedom to men has been the supremacy of universal rules of conduct we call law. In the beginning these rules were centered around the family group, but gradually, as man struggled up from his primitive status, the application of the rules was extended to larger and larger groups; to the tribe, to the city-state, to the principality, and finally to the nation-state. In this evolutionary process those laws which were based upon justice tended to prevail, and those units with the best laws were torn less by inner strife and proved strongest in the fierce competition for survival.

Without rules of conduct accepted by the people, peace with freedom has never prevailed among any substantial group of men. If we can agree that rules of conduct, binding on all, and enforceable against all, by the full power of the community, are the indispensable requirement for peace among men, then we should be able to agree that we must have such rules if we are serious about wanting peace.

The use of force and arms to settle the differences among primitive men was the natural method prior to the development of law. An eye for an eye and a tooth for a tooth indicates the character of that method. Among the rules of conduct which first concerned our primitive forefathers were those dealing with the individual's use of force and arms. And so, today, our first concern should be to establish rules of conduct among the primitive and lawless nation-states, regulating, if not suppressing altogether, the production and ownership of those deadly armaments essential to the prosecution of modern warfare. These rules, to be effective, must be applicable to every state and to every individual within every state.

It is at this point in the discussion that someone always asks: "But what about our sovereignty? You surely don't propose to sacrifice our sovereignty?" From this point on, confusion and frustration are ordinarily the only result.

It is not surprising that discussions involving sovereignty are difficult and confusing. The term itself is an abstraction, a political concept, concerning human relations and is not easy to reduce to definite formulae such as may apply to concrete, physical things. It is so much easier to understand battleships, guns, armies, land, and oil. Sovereignty, like justice, equity, and goodness, is not definite, clear and absolute. Like nuclear fission, it is difficult to grasp. It savors of mysticism and the occult. Sovereignty is one of those esoteric, untouchable principles, we are led to believe, which common mortals do not question or discuss without a suspicion of sacrilege or treason. The question, however, is always asked and we must seek an answer.

In days gone by, when men were slaves, their masters imposed their will by the doctrine of the divine right of kings. "Your sovereign by appointment from the All Highest" was the dogma. It was a useful concept to those in power to legitimize their rule over the people. Reflecting this origin, Funk & Wagnall's dictionary says this about sovereign:

"Exercising or possessing supreme jurisdiction or powers; royal. One who possesses supreme authority, especially a person or a determinate body of persons in whom the supreme power of the state is vested; a monarch."

Roget's Thesaurus uses these words: "ruler, potentate, monarch, suzerain, king."

It seems strange, indeed, to find our superpatriotic nationalists going back to the Middle Ages and borrowing the dogma of the tyrants and despots of those days, as the basis for their objection to the creation of law among the war-torn people of this bewildered age. Can it be that the tyranny of total war is to be perpetuated by the same principle that supported the tyranny of medieval kings?

More than 700 years ago our forefathers at Runnymede challenged the sovereignty of the kings who oppressed the people, and sought to establish the rule of law above the king. If the rule of law was necessary to the barons of King John, I am certain it is equally necessary to all of us who must live under the menace of the atomic bomb.

If sovereignty means anything and resides anywhere, it means control over our own destiny and it resides in the people. According to our republican principles, sovereignty resides in the people or community, not in the governments which they create. Only a totalitarian or Fascist state is sovereign, but such a state is not democratic, it is founded upon fear and force and its subjects have no freedom. The people may delegate, according to our republican principles, any power they wish to their representatives, but they do not delegate their sovereignty to their government.

So far in this country, we, the people, have delegated certain powers to the county governments, other powers to the States, and still different powers to the Federal Government. But these delegations do not exhaust the power of the people. Our Constitution expressly recognizes in the tenth amendment that all powers not specifically delegated are reserved to the people.

We may recall that under the Articles of Confederation, in 1781, our forefathers delegated certain limited powers to the central Government. When these powers proved inadequate for the preservation of order and tranquillity, further powers were delegated under the Constitution in 1787. Does it make sense to say that in creating the Constitution, establishing order, and preserving tranquility these men sacrificed their sovereignty?

The question involved in creating a system of rules to control the making of armaments throughout the world is not one of sacrifice or surrender of anything. It is not a negative action, a giving up of something we already have. The objective is positive; it is the creating of something we do not have. It is the acquisition of a power for the lack of which we and the world narrowly missed defeat and domination by the most ruthless force the world has ever seen.

When our forefathers exercised their powers to control their own destiny, their sovereignty if like, by creating the Constitution, they were indeed very wise. They recognized that even their handiwork was not the final word by the provisions for amendment. Further, as I have mentioned above, they reserved to the people all powers not specifically delegated. For 130 years the system they created was effective to protect us from foreign wars. Now, within a quarter century, much against our will and in spite of all we could do, we have been involved in two wars. It seems to me clear that we cannot survive another world war, certainly not as a society of free men. The destructive power of science is simply too great.

The conclusion is inescapable that the Government created by our Constitution can no longer fulfill completely the purpose for which it was created. It can no longer, in this scientific, atomic world, protect us from the disastrous effects of war, even though we may be victorious in the war itself.

In a real sense this so-called sovereignty, the power to determine our destiny, is imperfect and defective. Therefore, it is appropriate, in fact it is essential, that we consider the delegation of power to some other and higher organization which is reasonably designed to perform the function which this Government cannot perform. The United Nations Organization is the logical instrumentality to which such powers should be given. At present it is a machinery, but it does not have the authority to formulate rules of conduct applicable to the people of all its members, and the veto power of the Big Five nullifies to a great extent the powers of enforcement.

It may well be that the people of this country have not suffered sufficiently from this war to convince them of the necessity for peace. Reason has seldom been a substitute for bitter experience. However that may be, there is absolutely no merit in the view that we should not delegate adequate power to the UNO because it would be a sacrifice of sovereignty.

The whole argument about the sacrifice or preservation of sovereignty is about on a level with the medieval treatises of the monks on how many angels can sit upon the point of a needle. If the people of these United States recognize that it is impossible, as I believe it is, to avoid being drawn into future wars and therefore the only practical defense is to prevent wars, the proper course is clear.

The only principle that has ever controlled the violent tendencies of mankind has been law. The only way to establish law is to delegate the power to create law to an institution which is also provided with the power of enforcement. The people of the United States have this power; it is merely a question whether or not they choose to exercise it.

The Critical Butter Situation

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE CRITICAL BUTTER SITUATION

(Facts compiled by the Over-All Butter Industry Committee, representing Dairy Products Marketing Association, National Creameries Association, and American Butter Institute, whose membership produce more than 85 percent of butter in the United States.)

PRODUCTION AND SUPPLY DATA

Butter production and holdings have decreased to the lowest point on record. Unless immediate action is taken by the proper Government agencies to correct present inequalities depressing butter production, consumers face exceedingly low supplies for several months, and more creameries will be compelled to cease operation. This would eliminate a market for many hundred thousand dairy farmers, and discriminate against those who are directly connected with the butter industry and where other milk outlets are not available.

In 1941, 115,500,000,000 pounds of milk were produced, while in 1945 preliminary figures indicate the total production was 123,000,000,000 pounds. In spite of the increased milk production 471,500,000 pounds less butter was manufactured in 1945 as compared to 1941. This amounts to a reduction in the creamery production of butter at 25 percent from 1941 to 1945. After needs of the

armed forces were met, civilians had 43 percent less butter last year as compared to 1941.

The following statistics will indicate the diversion of butterfat from butter production, principally caused by terminating War Food Orders 8, 13, 79, and 92 on September 1:

MONTHLY BUTTER PRODUCTION

Comparison with same month, 1944

August 1945, 3,000,000 pounds more, 2 percent increase.

September 1945, 13,000,000 pounds less, 11 percent decrease.

October 1945, 12,000,000 pounds less, 12 percent decrease.

November 1945, 17,000,000 pounds less, 20 percent decrease.

December 1945, 25,000,000 pounds less, 23 percent decrease.

The production of butter during December 1945 was 50 percent less than the corresponding month of 1941. This critically low production is quite serious when consideration is given to the total trade storage holdings of only 30,000,000 pounds on January 1 as compared to 60,000,000 a year ago and 107,000,000 for the 5-year average, 1940–44.

EFFECT ON CREAM INDUSTRY

Although the ceiling price of butter has been frozen at the October 1942 level, the labor cost in butter manufacturing has gone up from 30 to 40 percent. Labor comprises about 37 percent of the cost of manufacturing butter. In addition to the increased labor cost it can be appreciated that when the volume going to a creamery is cut in half the fixed charges such as rent, taxes, depreciation, and other overhead items are doubled. A consistent drop in volume during and after the war has caused a serious financial burden to all butter-manufacturing plants.

During the war emergency, specific price formulas were issued by Government agencies that were intended to divert production from butter to cheese, whole milk powder, evaporated milk, etc. Restriction orders were placed on the sale of whipping cream, fluid milk, and coffee cream, ice cream, and the manufacture of certain cheeses other than Cheddar, to insure the production of sufficient butter and other dairy products for the armed forces, lend-lease, and civilians. These limitation orders were terminated September 1, 1945, and a tremendous demand has developed for fluid milk and sweet cream. With prices of sweet cream at 80 cents to $1 per pound of butterfat, the butter manufacturer cannot compete with those prices when his product is fixed by the 1942 ceiling of 46 cents per pound of butter wholesale, Chicago.

Approximately 850 creameries have ceased operation since 1941, according to the best information available. This represents almost one-fifth of the creameries operating in the prewar period, and denotes a serious casualty in an important segment of the Nation's small businesses. Why did those creameries close? Volume of butterfat handled by the various creameries—especially those in direct competition with companies receiving whole milk for the manufacture of cheese, evaporated milk and whole milk powder or the sale of bulk cream—dropped to such an extent that they were compelled to cease operation or face financial disaster. Overhead costs advanced in proportion to the decrease in volume of butter manufactured. Whenever the danger point of operating efficiency was reached, the creamery closed its doors and the balance of cream producers were compelled to seek a new market or quit dairy farming. The creamery industry is the only dairy products industry which was forced by Government controls to go through all the war with less than normal total volume.

The following table indicates the diversion from specific creameries, all located within one county in Minnesota:

	Pounds of butter made
Creamery No. 1:	
May 1945	202,000
June 1945	195,000
July 1945	211,000
August 1945	189,000
September 1945	43,000
Creamery No. 2:	
May 1945	125,000
June 1945	140,000
July 1945	131,000
October 1945	6,093
Creamery No. 3:	
January 1945	26,000
October 1945	7,000
Creamery No. 4:	
January 1945	20,000
October 1945	2,000
Creamery No. 5:	
January 1945	25,000
October 1945	9,691

In Minnesota during the year 1945, 257 of the 745 creameries have shifted from butter to the sale of butterfat in the form of bulk cream—some of them making only enough butter to supply their patrons. It is estimated that by December 31 approximately one-half of the creameries would be selling their volume in the form of bulk cream. In Wisconsin it is reported that from 85 to 90 percent of the available sweet cream is being sold as bulk cream instead of being processed into butter. It was estimated that all Wisconsin creameries have discontinued the manufacture of butter in favor of cream shipments as a major portion of their operation. In Iowa it is estimated that 25 butter plants in December discontinued churning butter in favor of the sale of sweet cream, and that 150 other creameries are selling a large portion of their receipts as sweet cream. In Michigan one modern creamery recently built at a cost of one-third million dollars, churned only 6,000 pounds of butter during a recent week. The same creamery in 1942 churned 50,765 pounds of butter during a corresponding week.

FARMERS' MARKET

Butter has supplied a market for 36 to 45 percent of the total milk production of this country. Butter has furnished a ready cash market for the producers, large and small, situated in remote areas, who do not have access to markets for whole milk, as well as producers located more favorably for other markets. In normal times about 85 percent of the creamery butter production comes from farm-skimmed cream. It is estimated that 65 percent of the butterfat for creamery butter production comes from farms having six cows or less. Before the war it was estimated that approximately one-half of all dairy farmers sold milk or cream for processing into butter, and will need such market for their products in the future.

On these comparatively small farms, more profitable uses have been made of their limited supply of labor, and the cows have been sold. Information from the National Stock Yards in East St. Louis reveals that during 1945 the percentage of milk cows being sold as beef ranged from 38 to 44 percent of the total number sold. This is the highest ratio of dairy cattle to beef as reported marketed through the East St. Louis yards. The farmer is discouraged in low prices of cream, and is thus turning to other endeavors.

RECOMMENDATIONS

1. Immediate restoration of War Food Orders 8 (ice cream), 13 (whipping cream), 79 (fluid milk and cream), and 92 (foreign cheeses other than Cheddar). This was deemed to be the most important step. The above table indicated the rapid decrease in the production of butter when the orders were terminated. Restoration for a brief period would correct that inequality.

2. New price ceiling on butter that will restore its prewar relationship to prices of other manufactured dairy products.

3. Suspension of ceiling prices and limitation orders on dairy products when we approach the period of surplus and normal relationships, which usually occurs about May 15. (During this flush period prices would seek their proper levels and would establish normal relationship as dictated by consumer demand.)

4. In addition, we request immediate consideration of price ceilings on cream historically comparable with the ceiling price of butter. (It is certain that price ceilings on cream without accepting the other three recommendations would make the situation worse, because certain users of cream are now out of the market because of the high price. Higher prices for butter or restrictions on the use of cream are necessary if a lower ceiling is established on bulk cream.)

Although this is the time of year when all dairy production is low, there is a potential increase in the supply of butter even now. It would materialize if the above recommendations are followed.

An Engineer Appraises the War

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Vice Adm. Ben Moreell with introduction by President Harry L. Stone, of the Executives' Club of Chicago, made on January 11, 1946:

INTRODUCTION OF VICE ADM. BEN MOREELL BY PRESIDENT HARRY L. STONE AT MEETING OF EXECUTIVES' CLUB OF CHICAGO, JANUARY 11, 1946

President STONE. The world-wide exploits of the Seabees, the construction battalions of the United States Navy, are familiar to all Americans, but too little is known of Vice Adm. Ben Moreell, the organizer of the Seabees and Chief of the Bureau of Yards and Docks. He has been the directing genius of a force approximating 10,000 officers and a quarter of a million men, whose assignment has principally consisted of building airfields, naval bases, barracks, hospitals, and warehouses, and they performed this almost miraculous work for more than 4 years in Africa, Asia, Europe, and the Pacific Islands.

Speaking of the Pacific Islands, one time while the Seabees were building an airfield in the corner of New Guinea, a most interested spectator was a native chief. Day after day the old man, a spear in one hand and bottle of pop in the other, silently watched the bulldozers at work. Finally, to stir up conversation, a soldier asked him what he thought of the Americans as jungle fighters. The response was immediate. The chief said: "Jap him good jungle fighter. Australian him good too. But Yanks, they come and jungle go." [Laughter.]

In addition to their actual construction work, the Seabees have loaded ships, demolished and removed obstacles to landing operations, built pontoons, rigged up camouflage, and dispersed fogs, which represented only a part of their many duties in helping spearhead an attack.

At the risk of possibly encroaching upon one of Admiral Moreell's remarks, here is a

story emphasizing the brotherly love existing between the Seabees and the marines. As you probably know, the Seabees are a group of older men, and in making living conditions more comfortable for the marines it was natural that a close friendship would develop. As a result the marines had a slogan: "Never strike a Seabee, he may be your grandfather." [Laughter]

Admiral Moreell is not given to theatrics nor is his talk salty. His office in Washington is not shipshape in a nautical sense and except for a large Seabee seal and some maps and blueprints, it might well be the office of a business executive. Yet Admiral Moreell is no desk-chained sailor, for the world is his construction realm and his trips of inspection have repeatedly taken him over the seven seas. Navy men in general give him a large share of the credit for our recovery in the Pacific after the Japanese attack on Pearl Harbor.

His college career at Washington University, St. Louis, early gave evidence of the combination of a brilliant student and outstanding athlete. He possessed the rare ability of giving equal attention to both interests while also working his way through school to supplement the scholarship he had won. He was captain of the university track team and starred as fullback on the varsity football team.

Admiral Moreell has served as president of the Army and Navy Club of Washington for three terms, as president of the Society of American Military Engineers, and as president of the American Concrete Institute, in addition to making a valuable contribution to many other important organizations.

It is my privilege to present to you the organizer and director of the Seabees, Vice Adm. Ben Moreell, whose subject will be An Engineer Appraises the War. Admiral Moreell. [Applause]

AN ENGINEER APPRAISES THE WAR

Vice Admiral MOREELL:

"The tumult and the shouting dies;
The captains and the kings depart."

Our combat forces and their leaders have been justly acclaimed for their accomplishments in contact with the enemy. But in the calmer atmosphere which we are now privileged to enjoy, it seems appropriate to appraise the lessons of the war in order that we may establish proper relative values and guides for future operations. I do not mean to detract from the brilliance of our military leadership in the fields of strategy and tactics. But in our desire to pay well-deserved tribute to our fighting men we should not make the error of slighting the importance of the great material superiority which was brought to bear upon the enemy. We have learned that battles may be won by the genius of military leadership, but wars are won by the strength of the Nation, acting as one integrated unit.

A study of the changing methods of warfare leads to the conclusion that the most significant development in this science has been the tremendous increase in the power of the individual obtained by equipping him with the machinery of war. As the power of the individual in industry has been multiplied again and again by means of the machinery and tools of production so in warfare has the power of the individual been multiplied by means of the machinery and tools of destruction. It is my thesis that the contribution of American industry to this multiplication of the individual's destructive power has been the vital factor in our recent victory.

In the calendar year 1941, the war products of American industry, that is, planes, ships, guns, munitions, fuels, and other implements and materials of war, amounted to approximately $8,500,000,000. In 1942, the amount increased nearly fourfold to $31,250,000,000. In 1943, it again almost doubled from the previous year to reach a total of $56,250,000,000. In 1944, the amount was approximately $65,000,000,000; and in 1945, up to VJ-day, it is estimated that we produced war products in the amount of $45,000,000,000; a grand total of $206,000,000,000.

OUR PRODUCTION RECORD

What is the significance of this great production record? The answer is given in the reports from the battle areas and in the recapitulation of our progress from the early critical days to the successful conclusion of the wars in the European and Asiatic theaters. Not only were we able, first, to hold the enemy, then to push him back from the lines where he was firmly entrenched, but ultimately we smothered him in an avalanche of material power. More important, we were able to do this with a minimum expenditure of personnel.

Those are the significant values of our massive production. First, to insure victory, and, second, to insure that victory with a minimum expenditure of our most valuable asset, the lives and limbs of our fighting men.

Statistics are usually boring and frequently misleading, but it is pertinent to cite some instances of the overwhelming superiority of our material power. In the invasion of Kwajalein Atoll, in which I had the good fortune to participate, we assembled 354 vessels with a total military personnel of 175,000. The aggregate of the Japanese garrisons at both ends of the atoll was estimated at 12,000. The fire power represented by our ships and aircraft and by our landing forces was so overwhelming as to make the result of this operation a foregone conclusion. The fate of the Japanese garrison was sealed when contact was made. We must avoid depreciating the performance of our gallant men who stormed the beaches in the face of murderous Japanese fire. But without the irresistible pressure of our great material power, the issue would have been far from conclusive. The products of American factories brought our men to their goal, and then provided the support without which the utmost in personal bravery would have been of little avail.

And so it was throughout the campaign in the Pacific. In Admiral King's final report to the Secretary of the Navy, he stated that for the invasion of southern Japan the United States Navy planned to employ 3,033 vessels. He states, also, "Although the application of our sea power in its various forms proved sufficient to bring Japan to terms without the necessity of invading her home islands, the possibility of invasion on the scale contemplated indicates the amazing progress in matters of supply and support that has been made in less than 4 years of war."

EQUIPPING NAVAL BASES

Admiral King goes on to state, "In this evolution advance bases have played a vital role. The 1940 Navy had no properly equipped advance bases other than Pearl Harbor. More than 400 have since been established in the Atlantic and Pacific areas in order to maintain the fleet and air forces in the forward areas where there was fighting to be done. But for this chain of advance bases the fleet could not have operated in the western reaches of the Pacific without the necessity for many more ships and planes than it actually had. A base to supply or repair a fleet 5,000 miles closer to the enemy multiplies the power which can be maintained constantly against him and greatly lessens the problems of supply and repair."

To indicate the enormity of the supply problem, he states, "The stocks currently on hand at Guam would have filled a train 120 miles long. The magnitude of the fuel supply alone is indicated by the total of 25,000,000 barrels of bulk fuel which was shipped to the Pacific in June 1945 for military purposes. At Guam alone 1,000,000 gallons of aviation gas were used daily."

A single major amphibious operation required hundreds of naval vessels, battleships, cruisers, aircraft carriers, destroyers, and many types of auxiliary and landing craft. There had also to be provided hundreds of planes for air cover, and to fight these ships and planes there were thousands of highly trained men whose training required the provision of great camps and highly specialized structures and equipment.

The magnitude of the production problem involved in making these implements of warfare available at the scene of the battle can be roughly judged from the estimates of their costs. In the invasion of the island of Okinawa, for example, the cost of building the ships engaged in the initial assault is estimated at $7,800,000,000. To this should be added approximately $1,000,000,000 to cover the cost of aircraft, consumable supplies, and equipment for both the vessels and the marine landing forces. The total investment in naval equipment alone for the initial Okinawa operation was, therefore, in the neighborhood of $8,800,000,000.

Similarly, for the attack on Iwo Jima the estimated costs of the naval equipment utilized was $6,300,000,000, an amount more than double the total expenditures of the Navy in World War I.

I have quoted Admiral King's statement concerning the vital part played by naval bases in enabling us to project our offensive power into the far reaches of the Pacific where we engaged the enemy on his home grounds. Perhaps in no other field were we better able to demonstrate the superiority of American industry than in the field of construction. Every strike by our forces whether by sea, by land, or by air, was preceded by the construction of bases from which the attacks were launched. More important, the speed and rapidity with which we were able to lay blows on the enemy depended upon the speed, certainty, and economy (in manpower and matériel) with which we were able to accomplish such construction.

ADVANTAGE OF SUPERIOR CONSTRUCTION ABILITY

The great advantage which we were able to achieve over the enemy by the superiority of our construction abilities was well illustrated by an incident that was reported by the Associated Press from Iwo Jima. The report told how the marines captured a Japanese major who had been holed up in a cave for 2 weeks. He blinked his eyes in the unaccustomed daylight and then surveyed the scene before him, the transformed surface of his once familiar island. His arrogance disappeared and he mumbled weakly the one word, "Impossible."

It was just such impossible industrial achievements that have been the rule rather than the exception. Not only did the construction industry, through the medium of our civilian contractors, build a large part of the shore support for the fleets, the marines and our aircraft at home and abroad, but it provided us with the officers and men who were formed into construction battalions, regiments, and bridgades, to carry this work forward into the active combat areas. We in the Navy gave these men their military training, but you in private industry gave them their know-how by years of education in the hard school of competitive American enterprise. You are justified, therefore, in counting their achievements as your own.

The dramatization of the combat phases of the war by the press, the radio, and in the movies meets a popular demand. The construction of a pier at which bombs are loaded for transportation to the forward areas is poor drama compared to the explosion of one of those bombs on an enemy vessel. And still, both the construction of the pier and the dropping of the bomb are essential parts of the great jigsaw puzzle which must be fitted together to spell out victory.

CONSTRUCTION COSTS

To attempt to tell the complete story of construction in World War II is beyond the limitations of time. But some of the highlights of the Navy's program will serve to illustrate my thesis.

The national war production program is generally considered as having commenced on July 1, 1940. From that date to VJ-day, the Navy spent and obligated, in round figures, some $10,000,000,000 for construction. If, to this, we add the cost of the pay, subsistence, and transportation of the Seabees, which are carried by other appropriations, the program would total, in round figures, some $12,000,000,000. It is of interest to note that the entire expenditure for naval public works construction during the First World War was only $189,000,000. The increase in the tempo of construction is indicated by the fact that from 1916 to 1937, a period of 21 years including World War I, Bureau of Yards and Docks construction work totaled $360,000,000, as compared with the $12,000,000,000 expended during the past 5 years.

Those 21 years from 1916 to 1937 were years of expensive economy. Instead of having a naval shore establishment adequate for the support of our fighting forces, we had to start our war program almost from scratch. The construction industry was faced with a major test. The construction of plant, beginning with training facilities for the personnel and manufacturing facilities for the equipment, is an essential condition precedent to the expansion of a military force.

TRICKS OF THE TRADE

I need not remind you of the frenzied pace which the industry was called upon to set during those early days. Operating under the much-maligned cost-plus-fee contracts, our contractors were able to cut through red tape and a thousand and one bottlenecks of procurement and administration to meet our schedules. The accomplishment of the task called into play all of the tricks of the trade and all of the ingenuity and initiative which are characteristic of American industry.

A brief recital of some of the achievements on naval works is, I believe, appropriate. We built 70 new major naval air stations and more than 100 important auxiliary stations, including the world's largest aviation training center covering an area of 45 square miles near Corpus Christi, Tex., a total aviation program costing $1,661,000,000.

We built over a half billion dollars worth of structures for naval personnel, including the great training camp at Great Lakes, on which we spent $68,500,000, and the $55,000,000 installations at Farragut, Idaho, and Sampson, N. Y.

We built more than $1,000,000,000 worth of shipbuilding and ship-repair facilities.

During the same period our contractors completed the construction of more than $750,000,000 worth of ordnance facilities and approximately $500,000,000 worth of supply depots. In addition new hospitals and expansions of existing hospitals increased the total bed capacity from 6,000 to approximately 75,000, at a cost of $200,000,000.

OUR FLOATING DRYDOCKS ACHIEVEMENT

These achievements constitute only a part of the program which was carried out in this country, but I will not burden you with more statistics. I believe it appropriate, however, to mention one of our most interesting and important developments. I refer to the design and construction of floating drydocks.

At the beginning of the national emergency the Navy had in service just three floating drydocks, with a total capacity of 40,000 tons. For maximum support of the fleet it was essential that we project our service facilities as far into enemy territory as possible. It was quite evident that if the fleet fulfilled its mission many ships were going to suffer serious damage, and those which escaped battle damage would be subjected to the hardest kind of usage. Experience had taught us that the quickest and cheapest way to add a ship to the fleet was to repair an existing one rather than to build a new one; but we could not afford to have cripples limping half way around the world to our navy yards.

So we enlisted the support of private industry and went to work. By VJ-day, our three floating drydocks, with total capacity of 40,000 tons, had grown to 155 docks with a capacity of 1,200,000 tons. The most unique and the most important of these are the so-called advance base sectional docks. As the name implies, they are built in sections, each capable of lifting eight or ten thousand tons. The sections are designed to be towed to bases in the forward areas and there assembled and welded together into working units, one type having a capacity of 56,000 tons and the other 100,000 tons, the smaller being designed to accommodate the largest battleships then in existence and the larger being built to accommodate the superbattleships which were not completed during the war.

Reports from the forward areas indicate that our predictions as to the importance of these docks were correct. As an example, three battleships which played a vital part in the critical battle for Leyte Gulf would not have been available had it not been for the service provided by our sectional dock at Manus. The effects of the nonavailability of these three battleships can only be guessed, but it is certain that even under the best of conditions the battle would have been much more costly to our forces had they not been there.

In all, we spent approximately $400,000,000 for floating drydocks and, while this sum is large, I am sure that no money was ever more wisely invested. The Japanese Kamikaze attacks were directed at a fleet that had brought its own repair facilities with it. Stricken ships were either repaired sufficiently to reenter the battle or they were enabled to return to our major bases where more complete facilities were available. In any event, many of our ships which would otherwise have been permanently lost to the fleet, lived to fight another day.

I have not intended, by dwelling at such length upon the floating drydock program, to minimize the importance of our conventional large gravity drydocks, which are built into the shore line. During the war period we built 32 graving docks and 11 marine railways at a total cost of $250,000,000. Unquestionably, the most important of these was the great battleship drydock at Pearl Harbor, which was commenced in 1940 and completed by our contractor 10 months ahead of schedule and just 10 days before the fateful December 7, 1941, ready to receive ships and to restore the fleet to action. Competent authority cites the availability of this great dock as the major factor which permitted our speedy recovery from the disaster which overcame our fleet on that day.

These are some of the accomplishments of the construction industry, the unspectacular achievements that rarely make the headlines but are essential for winning wars.

THE SEABEES' PART IN THE WAR

Industry's contribution to victory has been demonstrated far more dramatically through the medium of the personnel which they trained for our naval construction battalions, popularly known as the Seabees. It is entirely appropriate that today our battalions are at work on their last assignment before demobilization. They are building shore facilities at the Yokosuka naval base at Nagasaki, and elsewhere in Japan. They are making good the prediction recounted in a jingle composed by the marines at Bougainville, which the friendly leathernecks painted on a signboard. It read as follows:

"So when we reach the isle of Japan
With our caps at a jaunty tilt,
We'll enter the city of Tokyo
On roads the Seabees built."

The arrival of the Seabees on the isle of Japan was the end of a long road which they, in cooperation with their friends and coworkers in the Army engineers, had constructed across the Pacific. Along this road they built the airfields, the supply depots, the fueling facilities, ship-repair bases, the hospitals, communication centers, ammunition dumps, rehabilitation camps, and many other installations necessary for the immediate support of our combat forces. They were called upon to work under all conditions of climate and difficulties of terrain and supply, and very often were called upon to combat the enemy as well as the handicaps of disease, loneliness, and isolation.

When Japan capitulated more than 60 percent of our 250,000 Seabees were at work on advance bases in the Pacific, and their work was directed by some 7,000 officers of the naval civil engineer corps. They and the Army engineers had achieved a fine start on the base at Okinawa, where 65,000 of them were at work on a program calling for 28 airfields and more than a thousand miles of heavy-duty roads, to be accompanied by such collateral facilities as fuel storage, supply depots, utilities, and harbor installations.

The Okinawa project was designed to be the greatest military construction operation in history, and was to constitute the major base from which the actual invasion of Japan was to start. To give you an idea of the size of the program, it has been estimated that if the facilities planned for Okinawa were constructed in the vicinity of Chicago, under current conditions, they would cost approximately $200,000,000, of which we had completed approximately $60,000,000 worth during the 5 months before VJ-day.

In all, we were called upon to complete 400 naval bases, varying in size from the huge bases at Guam, Manus, and Leyte, to small PT boat bases and radar stations. Typical of the major bases was the one constructed at Tinian, a brief description of which will serve to further emphasize the import of industry's contribution to victory in World War II.

When the marines stormed ashore on July 24, 1944, the Seabees were with them, unloading supplies over Navy pontoon causeways and establishing storage depots on the beach as fast as the supplies arrived. They worked around the clock. At 7 o'clock on the morning of the third day, they received an order to repair the Ushi Airfield, which the marines had just captured. It was so filled with bomb craters that not even a Piper Cub could land. The Seabees went to work with trucks, bulldozers, rollers, and miscellaneous hastily repaired Jap equipment. On the very next day, C-47 transport planes were able to land and remove approximately 300 casualties.

About 5 months later, on December 21, 1944, three B-29's landed on a newly completed 8,500-foot runway. Today there are two giant airports on Tinian, each one of which has more than 20 percent greater mileage in runways and taxiways than New York's prospective Idlewild Airport, which, I am told, is designed to be the greatest commercial airport in the world. I believe it is contemplated for Idlewild that planes will be able to take off at the rate of six per minute. A year after the Seabees landed on Tinian its airports could and did accommodate eight B-29's per minute for the bombing of Japan.

ENGINEERS' CONTRIBUTION TO VICTORY

Speed of construction was an effective instrument of propaganda. There were many evidences that we were able to convince the Japanese of our ultimate victory by the tremendous accomplishments of our men and machines and the furious pace which they set by round-the-clock work. To illustrate this pace, the story is told of two Negro Army men who inadvertently drove their dump truck onto the access road to the Seabees' coral pits on Tinian and were kept in the

stream of traffic, hauling coral, for one entire morning. It was only when "chow call" sounded that they were able to stop long enough to convince the powers that be that they were not really Seabees. [Laughter.]

Simultaneously, similar developments were under way on Guam and, on a somewhat smaller scale, at Saipan and Iwo Jima. From all of these bases the Army was sending out great fleets of B-29's to cover the Japanese homeland with destruction. The base at Iwo Jima had an additional function to provide refuge for battle damaged B-29's returning from Japan. When I was there last August, I was told by General Chaney, island commander, that of the 2,400 B-29's that had landed on Iwo, approximately 25 percent were in distress. The saving in lives, property, and war potential from this construction operation was almost incalculable.

SUPERIORITY OF AMERICAN ECONOMIC SYSTEM

What is the significance of these great works of American industry? Anyone who has had the opportunity to observe our operations in the field during the critical periods of this war will testify that there is something about our American economic system which makes it outstandingly superior. We have demonstrated conclusively that our system of American individual competitive enterprise has established a record of outstanding accomplishment not even distantly approached by any other nation.

This is the result of the coordinated efforts of American finance, management and labor working together as one team for the accomplishment of a great mission.

In the light of our great achievements, it is with some apprehension that I see evidences on the part of some of our economic theorists to destroy the advantages which we now enjoy.

After having accomplished these great production miracles, we have been told by a foreign economist who recently visited our shores that we are all wrong and that "free enterprise economies must be scrapped."

"There is no middle way," he said. "Free enterprise and the market economy mean war. Socialism and planned economy mean peace." I must differ with this gentleman. [Applause.] The proof of the pudding is in the eating thereof. We have accomplished what we have because of our way of living, which stems from our economic system. No one will dispute the fact that there is room for improvement. The current industrial strife is a case in point. A practical and durable solution to this problem must be found. The intermittent, I might say the almost continuous, "bloodletting" of the American economy which results from industrial strife and the resultant interruptions of production must be stopped if we are to maintain our world competitive position in trade and our national security.

It has been my duty in recent months to direct the operation of a certain portion of the oil industry, the products of which are essential for the support of our forces of occupation and for our demobilization activities. The economic waste and the interference with vital war activities would have been enormous had the cessation of petroleum production been permitted to continue and perhaps spread to other plants. However, although such economic waste is great and important, the most harmful effect of such strife is the bitterness engendered between the parties and the danger that the controversy will develop into one having the character of class warfare from which our country has heretofore been happily free.

TRUSTEES OF HUMAN WELFARE

It is my firm conviction that we can achieve understanding between management and labor in industry, and that once this understanding is achieved we will go on to greater heights in the development of our economic well being. But this achievement will require the realization by management and labor that they are not in competition—they are playing on the same team.

Above all, both parties should bear in mind their grave responsibility to the public interest. The thought is well expressed in the following quotation:

"Business enterprises which touch the everyday lives of millions of people are in large measure trustees of human welfare. The right of profit is measured, and the very existence of profit depends, on the way in which industry meets its responsibilities to the public as consumers and as workers.

"Competitive enterprise under democratic government must have the greatest degree of liberty of action commensurate with the general interest. When it has less or more its existence is threatened. Therefore, in asserting its privileges, industry must be equally ready to accept its obligations.

"Belief in democracy means belief in the right and power of the people to rule. It recognizes that the people will run this country in their own interest—not to please theorists, not to serve the selfish purposes of any bloc, including business."

These quotations are from an address recently delivered by the Honorable Edward F. Johnson, general counsel of the Standard Oil Co. of New Jersey. I subscribe to his thesis wholeheartedly. I would call particular attention to the fact that the obligation to recognize what he calls the "new legal dimension—the dominant public interest" weighs equally upon all elements in our body politic.

I believe that only by following along the lines of our traditional concept of individual competitive enterprise can we be assured that in future crises there will be available to us the men and the products of industry which were so vital to victory. In my trips to the battle fronts, I have been impressed by the loyalty and devotion of these men, many of whom were under no compulsion to enter military service and who might well have remained behind in security at high pay.

Let us not lightly discard the system that produces men of that caliber—men who, when the pinch comes, are in there pitching not because the law says they have to, but because they want to. We have achieved in this country the highest standard of spiritual and material well-being in the history of the world. Let us wait until others can show us that they have something better before we consider changing to their way of life. [Applause.]

Address by Chester Bowles to the New Council for American Business

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 28 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, on behalf of my colleague the senior Senator from New York [Mr. WAGNER], who is necessarily absent because of illness, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Chester Bowles before the New Council for American Business on December 5, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to take part in this opening banquet of the New Council of American Business. You are a young organization with a fresh point of view, and I notice that most of your members are young men—men with enthusiasm and ideals, men who are not ashamed to be called crusaders.

The country needs your crusading point of view. American business needs it. You have undertaken to reverse the pressure group slogan of a certain section of business—the slogan which says that whatever is good for business simply must be good for the country. As businessmen you believe that only what is obviously good for the country as a whole can bring lasting benefit to business.

The old hackneyed pressure group slogan, that what is good for business must be good for the country, flatters some businessmen into believing that he is the center around which the economic universe turns. You are out to urge the more sobering truth that business moves with the rest of the economy, and that there cannot be any abiding business prosperity except when the entire Nation is economically prosperous and sound.

Back in the late twenties this country ran its economy into the ditch when it accepted the false notion that the pulse of the stock market ticker is a measure of the country's economic health. In the ensuing crash, not only did the country take a terrific beating, but Wall Street took a beating and business, great and small, took a beating. The business leaders who had championed the false notion of "new era" prosperity took a moral beating from which it required 10 years to recover.

I was also a businessman before I took my wartime assignment in Washington. It is as a former businessman and as a friend of business that I feel an obligation to sound a note of warning. If we as a nation decide to follow the lead of the small minority of business pressure groups seeking purely selfish advantages, we shall sooner or later have a repetition of the 1929 disaster—and a repetition this time on a far larger and even more dangerous scale.

The possibility of such a crash, as I say, is not immediately around the corner and for that reason we still have time to stop, look, and listen and to take action to straighten things out. But if our action is to be really effective we have to think and talk frankly and we have to be ready to face some unpleasant facts.

During the war we had to deal with the danger of inflation as an impersonal economic phenomenon. The Government was taking half of our production for war, and the resulting scarcity of goods in relation to available purchasing power was creating a terrific pressure on prices.

There was a grave question in many minds whether the inflationary situation—created not by anybody's will but as a result of the war emergency—could be controlled. Never before in our history had we successfully prevented wartime inflation. But this time we pitched in together and did it. Notwithstanding that the war expenditures in this conflict were 10 times the scale of World War I, we demonstrated that as a nation we possessed the means and the know-how to keep under lock and key the greatest inflationary pressures that this country has ever seen.

What is the situation today? The inflationary forces have not subsided, and they are unlikely to subside for many months to come. We know we can continue to control those forces. The only question is, Have we the courage and, above all, the will to do so?

But here is our greatest danger—the will to control inflation seems to have disappeared from some business groups. During the war, when the physical survival of the Nation was at stake, all business groups, and in fact all economic groups in the Nation, loyally supported price control. Today, however, we find some business leaders who are demanding the crippling or elimination of price or

rent control. They seem to feel that since the active fighting has ceased there is no more need of restraint and self-discipline. Although most businessmen are sincerely convinced of the need for continued controls until danger to the whole economy is over, there is a powerful minority that seems determined to make a killing on uncontrolled rising prices and rents. And they have rationalized their position by telling everybody that what seems good for them simply must be good for the country.

I am confident that is not what most businessmen think. Hundreds of businessmen have urged us privately to stand firm. They have told us that they are with us, and that we must not be misled by the voice of the minority. But the American people can only believe what they hear. And they hear only from the vocal minority.

It is this vocal minority which has spread the propaganda that the way to solve the reconversion problem is to increase prices and increase profits. Profits, they tell us, are the mainspring of our economy; therefore, profits can never be too high for the economy's good—even in the face of inflationary pressures which threaten to overwhelm us.

Again and again they have told us, "Take the lid off prices, or we can't produce." In the housing field where prices are already dangerously high, they have called for the elimination of price controls on building materials and they oppose any proposal to hold the price of finished houses within the reach of the 2,000,000 married veterans who are coming back from the war with no place to lay their heads.

Others are letting it be whispered that they are holding their goods for a while—that price controls will go soon and that prices will be higher. A crop of identical rumors recently broke out in a few department stores that went like this, "Better buy now, lady," the clerk said, "prices are going up."

These people are betting on inflation. Their dangerous activities have given rise to a flood of contracts with escalator clauses and with prices and deliveries stipulated on a when-as-and-if basis. Their activities have also given rise to a crop of predictions in the tipsheets and even in the business press that inflation will be here soon. Their activities also unquestionably play a part in explaining the spurting stock market in Wall Street where some stocks have even reached 1929 highs.

Some of these people are counting on the prospect that OPA will yield under this kind of pressure. I can clear up that point right now. OPA has no intention of yielding.

Since the hold-the-line order was issued in April 1943, the level of prices has been held under control except in two major areas—finished houses and the stock market. Only in these two cases may it be said that inflation is underway. In every other field the American people, working with their Government, have done a job which the skeptics said couldn't be done.

I am confident that as a result of the courageous legislation recently introduced by Representative WRIGHT PATMAN, ceilings may soon be established in the price of completed houses so that in this field also the American people can prevent the blind forces of inflation from turning the American dream home into a nightmare.

But the danger is far from past. It is hard to believe that responsible leaders of business would knowingly light a fuse to the explosive economic mixture around us. Most of those who oppose continued price control undoubtedly are sincerely persuaded that the danger of inflation is now definitely past and that the time has come to return to the conditions of a free market.

It is all too clear, however, that this is not true. Commodities all across the board, with rare exceptions, are pressing hard against OPA price ceilings. In a few cases, where we have counted on supply and demand factors being more or less in balance, we experimented with the suspension of ceilings. The response of prices in most instances was terrific.

The plain fact of the matter is that the inflationary danger today cannot be appraised solely by rational calculations of supply and demand—great though the purely economic pressure may be. What we are up against is a far more dangerous menace—the apparent will for inflation on the part of some minor but powerful groups.

Most of them do not, of course, appreciate fully the explosive forces with which they are toying. They feel, very likely in full sincerity, that the inflation that would result from their action would be relatively minor—even healthy. But that's the same old "didn't know it was loaded" theory with which disasters have been explained in the past.

Let's make no mistake about it. Unless we can win the fight against what might properly be called this "pressure group urge to inflation"—and we have to win it in the next few weeks, in the next few months—we shall condemn America—all America, consumers, agriculture, labor, and business—to a brief period of false boom followed by a shattering smash-up that will shake our economy to its foundations.

Statisticians may dispute as to the exact length of the boom—whether it will last into 1947 or end in 1946. People argued that way in the twenties as to the length of the bull market. But everybody knows that if we go through an inflationary boom, we shall suffer a deflationary crash whose consequence nobody can foretell.

We still have time to think and contemplate the possibilities. Price levels under OPA controls are still holding steady. Wholesale prices are still less than 2 percent above the levels of 2½ years ago. Only in the uncontrolled real-estate and stock-market areas is inflation actually under way.

Let us stop then and consider what a broad inflationary advance would mean for the various economic groups in the economy. What would it mean to the veteran? To labor? To the farmer? To the small and independent businessmen? And even to big business?

Nobody escaped the consequences of the crash of 1920 or the crash of 1929. That is why today, while reckless groups are optimistically talking up inflation, our farmers, our workers, and the great majority of our businessmen are swept by a sense of foreboding.

You don't see the veterans welcoming the Wall Street talk of inflation. You don't see labor or the consumers asking for the lifting of price and rent controls. You don't see the farmers cheering the bull market, and you don't see the great majority of businessmen doing any cheering either.

I think the people of this country are entitled to have their present fears set at rest. I think they are entitled to have the specter of willful inflation banished from our midst once and for all. The way to do it, it seems to me, is for the country to agree firmly, courageously, and beyond question or doubt upon its determination to see the job through. Then and only then will the speculative, inflationeers, and those sincere but misguided advocates of a free market under present inflationary conditions be kept from selling price control short.

We need, I believe, to do three things: First, as I testified to the House Banking and Currency Committee this morning, we need to establish controls over the prices of completed houses to put an end to the all-too-obvious inflation already under way in this field.

Second, we need to maintain firm price controls on all commodities, and ceilings on all rentals until the danger of inflation in each commodity field and each rental area is over. In determining the time at which controls should be removed, there are no magic dates. It depends entirely upon the speed with which supply comes into balance with demand.

Third, we should remove controls as promptly as possible, in one commodity field and rental area after another, as soon as it is safe to do so.

A firm decision to control prices and rents is an indispensable preliminary to any satisfactory transition from war to peace. Without it we can kiss good by the brave new postwar world of security and prosperity, full employment, and opportunity which we promised to build once the Nazi threat to our civilization was removed.

I would be the last to claim that price control in and by itself would be sufficient to call that brave new world into existence. That world must be built by the hard work and cooperative thinking and planning of all groups in the community—business, labor, agriculture, and government.

There has been a lot of talk of cooperation. Some of it has sounded hollow because it has come from people intent on advancing their own private interests, regardless of the general welfare. Cooperation under such conditions becomes an empty farce. The only time cooperation between groups becomes fruitful is when each group makes an honest effort to put the national interest ahead of its particular private interests.

That is why I like your businessman's platform. It not only urges all business to take the stand that what is good for the country is good for business, but it is an invitation to labor and to other groups to approach their problems from the same point of view.

To be sure, each group is not expected to neglect its own special State in the total national picture. We don't expect business to put forward a program which leaves out business enterprise and business profits, and we don't expect labor to put forward a program which leaves out the protection of good wages and steady jobs. But the particular planks which the various groups put forward for themselves, must fit into an honest program calculated to advance the welfare of all groups.

That is exactly the kind of program you have put forward. You are back of the full-employment bill. You are back of the bill to set a 65-cents-an-hour floor under wages. You are for liberalized unemployment compensation. You oppose the weakening of collective bargaining. You are for a permanent FEPC, so that no man whatever his race, color, or creed is denied the benefits of American opportunity.

You are for a program to protect the farmer—to protect his prices and protect his income. You support the broadening and deepening of the social-security program to cover everyone in the entire working population, and to raise benefits to a level of decency. You are for a medical-care and health-insurance program to bring the blessings of medical science into every home.

You are for the development of our natural resources, the application of the TVA idea to the Missouri River, to the Columbia River, and to the other river valleys. You are for all these good things and many others—last but not least of which is world cooperation and world trade.

This is a program in the national interest. This is a program for all the people. This is a program behind which men of good will everywhere may rally.

Your program shows us the way at home. But more than that it shows us the way to international peace as well.

In recent months the eyes of the world have been focused with a new anxiety on international problems, seeking to find an escape from war in the atomic age. Thinking men recognize that if mankind is to escape destruction, the nations of the world

must build a new international society, a society built not upon greed and selfishness and irresponsible power, but one in which there is freedom and abundance and security for all. But thinking men recognize that we cannot have these things abroad if we do not have them at home. We cannot have security, freedom, opportunity and abundance abroad while we have insecurity, fear, and economic disorder at home. We cannot have peace with other nations while we wage undisguised economic war at home.

The hopes of the world rest on us to provide leadership in the present crisis. Ours are unparalleled resources and productive power. Ours is the tradition of freedom—freedom not for the few but for all. If free men here in America should fail, where can free men anywhere succeed?

The world is looking to us to build a society in which there are jobs and opportunity for all who seek them, a society whose abundance is not denied to anyone whatever his race, color, creed or economic status. It is only a society dedicated internally to the principle of live and help live that can take the lead in establishing the same principle of live and help live in the international affairs.

Gentlemen, ours is a great and urgent responsibility. Time is running short. At home and abroad the forces of misunderstanding, of ignorant greed, of fear and conflict are mounting swiftly. These forces must be checked and reversed before it is too late.

The Nation needs men of unselfishness, and of vision. The Nation needs crusaders.

That is why I salute your organization. More power to all of you.

The Russo-Iranian Crisis

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, January 28 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by Joseph and Stuart Alsop under the title "We Are on the Brink," and published in their column in the Washington Post on January 25, 1946. The article relates to the Russo-Iranian crisis.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MATTER OF FACT

(By Joseph and Stewart Alsop)

WE ARE ON THE BRINK

At the risk of seeming alarmist, it is necessary to report that the inner gravity of the Russo-Iranian crisis cannot be exaggerated. It does not basically matter whether Iran's appeal to United Nations against Russia is withdrawn or maintained, since this will merely determine th locale of negotiations. What matters .s Russian policy. If it is Russan policy to carr, the Soviet adventure in Iran to its logical conclusion United Nations will be done to death at the moment of its birth.

This is no mere expression of opinion. It is a report o' the official American position, as it has been determined on the highest level. President Tru an and the American policy-makers are understood, on undoubted authority, to regard the Iranian question and allied Turkish questi.n as final tests of the workability of United Nations. The reasen is simple. United Nations cannot work without reasonably sincere Russo-Anglo-American cooperation. Such cooperation is impossible if the Soviet Union is committed to an imperialistic or ex,ansionist program. If that is the case, the American policy makers will conclude that the United Nations machinery cannot be made to work, and will seek other solutions to the problems of American security and world peace.

This does not mean, of course, that hope for United Nations has already been abandoned. On the contrary, the indications are that this Government and the British will join in a strenuous effort to demonstrate their good faith to the Kremlin and to secure a reasonable settlement. For example, it is probable that American and British influence will be used in favor of northern Iranian oil concessions for the Soviet Union—always provided that the Russians will be content with simple oil concessions, and will not insist on the equivalent o territorial cession, as they have done to date.

What if Soviet diplomacy in the Middle East should prove to have larger objectives than a little old-fashioned oil grabbing? The answer to this question is to be found in the issue concerning American overseas bases. The American policy on bases will be to offer compromises wherever possible, provided the Kremlin does not take action which is regarded as rendering United Nations unworkable. United Nations will, in fact, be relied on to assure our all-but-minimum American security. If United Nations is regarded as being unworkable, however, American policy will be to insist at all costs on the complete program for American overseas bases which the Joint Chiefs of Staffs have outlined as the optimum program for American defense. This program includes bases in Greenland, Iceland, the northern part of this hemisphere, and perhaps the Azores, as well as bases throughout the Pacific.

The implications of such insistence from the Russian standpoint can hardly be ignored. The complete program for American overseas bases would not merely provide the most effective defense of this country. With the production in quantity of the new B-36 aircraft, the program would also bring within range of effective attack all vital areas of the Soviet Union. All American policy makers, military as well as civil, are tragically aware of the meaning to this country and the world of an open return to the system of international relations founded not on trust but on suspicion. Yet it is hard to find a flaw in a statement of the logic of the American policy which was recently made by a responsible official.

"No man on earth," he said with some bitterness, "could accept the responsibility of insisting on less than the maximum defensive precautions in a world where there is no trust."

A further question may be asked: Why does the Iranian crisis raise such grave issues? The answer was presented at greater length some days ago in this space. Briefly, the evidence to date suggests that the Soviet objective, in both Iran and Turkey, is to overthrow the existing governments and establish new regimes dominated by the Kremlin. Accomplishment of that objective would give the Russians predominance in the Near and Middle East. Thus the Russians would be placed across the British, French, and Dutch lines of communication with the far eastern colonial areas. Those colonial areas are already in ferment. It is further feared that promotion of such ferment, and extension of the Soviet sphere of influence through all of Asia is the end purpose of the Kremlin policy.

In that event, it will no longer be possible to argue that the Kremlin has abandoned its original international program or has adopted a policy of simple development of Russia's own vast resources. The assurances given by Stalin to Harry Hopkins and Winston Churchill will have proved incorrect. The basis for our relations with Russia since the German attack on the Soviet Union will have been swept away. Before long, this enormous issue will be settled. The Russians can hardly complete arrangements for subversion of the Iranian Government by March 2, when they are committed to withdraw their troops from Iran. If they then withdraw, hope for UNO need not be abandoned.

The Strike Situation

REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. JONKMAN. Mr. Speaker, President Truman is in the meat business, the transportation business, and will probably go into the steel business and others. In the meantime Government business is going to pot. That is usually what happens to a business whose operators attend to every business but their own.

Last Tuesday the Washington Post diagnosed the strike situation as being a crime and a seeming conspiracy, although it expressed itself as loath to name the crime or the probable conspirators. On Thursday in the well of the House I agreed with the Post and said the evidence showed the conspiracy in the administration, named some of the conspirators, and in my opinion, the crime.

I pointed to Davis in OES, Snyder of OWMR, and Wallace of Commerce, who long before the General Motors strike agitated and advocated wage increases of 50, 24, and 25 percent, respectively, wage increases they knew industry could not stand, their motive being to start a conflagration of strikes which would sabotage our reconversion program and bring about Government operation of industry. This was aid and comfort to the Moscow Internationale, whose operations in this country were denounced by Secretary of State Hull in 1935.

Three weeks before the General Motors strike, President Truman, in his wage and price policy speech, backed up the conspirators, perhaps reluctantly, with the statement: "There are several reasons why I believe that industry as a whole can afford substantial wage increases without increasing prices." I say "reluctantly" because immediately the President tried to straddle by saying, "We must not kill the goose that lays the golden egg."

It was reassuring, therefore, when last Saturday, 2 days after I made the above speech, the Post came out with another editorial and agreed that what 4 days before it had called a crime and a seeming conspiracy, must be laid in the lap of the administration with the following statement:

However, the next move, morally, is up to the President. He, and he alone, can untie this Gordian knot, which, as a result of a combination of Government price power and

Government sloppiness in dealing with reconversion labor disputes, is of the Government's own making. The President should climb down from his take-it-or-else attitude in the interest of working out a just settlement that will start the wheels of industry again. That is what will save us from inflation. We do not know what the "or else" of the President's implication means, but to us it means tragedy.

How true, Mr. Editor. But do you realize that this treacherous gang, which has President Truman in the middle of a swift stream, where the current is so swift that he can neither turn back nor get out, welcomes this tragedy? They are already well on their way in Government operation of industry, and if they can bring about destructive inflation, they welcome that. Anything, anything that will destroy our constitutional liberties, our free economy, and our American way of life fits into their plan.

The conspirators do not want any part of industry's profits to be used for expansion of plants, research, improved machinery, slack periods, and so forth, which offer security for future jobs for workingmen. Like the prodigal son, they want them to be disgorged immediately to the bureaucrats and the racketeer labor leaders. They still believe in the New Deal ideology that we have reached the limit of our frontiers, that it is no use to build more factories, that we must divide what we have because it belongs to all of us, and whatever debts we have we owe to ourselves. So I repeat, we cannot look to the administration for relief.

People are beginning to look to Congress. It is up to Congress, not only in labor matters, but taxes and financial problems, to get the Nation back to a Government by law in which laws are fairly and justly administered for all.

United Nations Educational, Scientific, and Cultural Organization

REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. MERROW. Mr. Speaker, I had the opportunity of serving as one of the delegates of the United States to the United Nations Educational and Cultural Conference held in London, November 1 to 16. During this time the constitution for the United Nations Educational, Scientific, and Cultural Organization was written. This proposed organization, which is to be a specialized agency under the United Nations Organization, is now popularly known by its short title UNESCO.

The constitution of UNESCO is now before the governments of the nations who participated in the recent educational conference. The constitution will be effective when it has been adopted by 20 states. I hope that the United States will become one of the first members of UNESCO.

Mr. Speaker, today I have introduced a House joint resolution providing for membership and participation by the United States in the United Nations Educational, Scientific, and Cultural Organization. I go so far as to predict that UNESCO will become one of the great foundation stones in the United Nations structure. If the United Nations charter is to work effectively the peoples of the world must give it their wholehearted support. The most effective way of ensuring this support is to create the greatest possible understanding among the nations.

Mr. Speaker, I hope that the Congress will act at once in placing its approval on this constitution. Such action would guarantee to the world that we intend to participate actively in UNESCO. Such action would hasten the approval of this constitution by the requisite number of nations.

Mr. Speaker, I wish to list fairly specifically what this new Organization may well accomplish. I cite the following as examples of activities in which the new Organization will be engaged. They are for the purpose of illustration only and in no sense do they indicate the full scope of UNESCO:

First. Promote a free flow of ideas and information on the popular as well as the scholarly level—through the radio, motion picture, and printed page, and directly between scholars, teachers, librarians, and artists.

Second. Encourage the exchange of students and the reciprocal visits of scientists, and other scholars, teachers, and artists.

Third. Stimulate the circulation of scientific and technological information, now so vital to the well-being of all peoples.

Fourth. Forward the contribution to world understanding by creative writers, artists, and musicians through encouraging their association across national boundaries.

Fifth. Provide liaison arrangements to facilitate the giving of aid to peoples whom the war has stripped of educational and scientific resources, for the reestablishment and restaffing of schools, laboratories, and libraries.

Sixth. Provide for studies and reports concerning situations where educational and cultural opportunities are deficient.

Seventh. Cooperate with the Trusteeship Council in assisting non-self-governing peoples in the improvement of their educational opportunities.

Eighth. Assist in cooperative efforts to define the educational goals necessary to the development of free peoples.

Ninth. Foster approved programs of adult education in accordance with the needs and desires of the several nations.

Tenth. Publish factual studies of progress achieved in educational and cultural development.

Eleventh. In general, give all practical assistance to education, research, and scientific advance, as well as the free functioning of the press, radio, and motion picture, while scrupulously refraining from repression, surveillance, or dictation in the educational and cultural affairs of any country.

Twelfth. Encourage the development of education which gives support to world peace and international cooperation through the United Nations and its associated agencies.

Union Responsibility

REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 25, 1946

Mr. HOFFMAN. Mr. Speaker, the gentleman from California [Mr. VOORHIS] blames Mr. Fairless because he did not accept and go along with the President in his statement as to the amount of the wage which should be paid to those on strike. He forgot to add, however, that steel has to pay the wages. Neither the President nor the members of the fact-finding board pays the added sum that the President said should be paid as wages. That is a matter of importance. Can the corporation pay it, make needed improvements, replacements, carry on research, pay dividends? If not, there will be no jobs in that particular industry. The goose which lays the egg—a job—may just die for want of nourishment—profit.

Another thing the President also overlooks is the fact that in the steel strike the workers are striking in violation of the express terms of a contract they signed and for which they asked. What is the use of entering into a new contract if the union does not regard the terms of its present contract which they have put in writing? Is it fair for them to promise to do one thing today only to have them refuse tomorrow? Why not be fair about the situation? Of course, there are more workers—voters—than there are employers, and just a vote seeker should cultivate the field which promises the greater yield.

Summary of Social-Security Conference Held in Washington, D. C.

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 28 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, on behalf of my collegue, the senior Senator from New York [Mr. WAGNER] who is necessarily absent because of illness, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of the proceedings of the Social Security Conference held in Washington, D. C. by the International Workers Order on November 25 and 26, 1945. Represented at this conference were the general lodges of the International Workers Order and 15 nationality group societies,

comprising a total membership of 180,000.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF SOCIAL-SECURITY CONFERENCE HELD IN WASHINGTON, D. C., BY THE INTERNATIONAL WORKERS ORDER, NOVEMBER 25–26, 1945

PURPOSES

The IWO Social-Security Conference was held to organize and stimulate activities for the speedy passage by Congress of the two Wagner-Murray-Dingell bills, S. 1606 (H. R. 4730) the National Health Act, and S. 1050 (H. R. 3293), the social-security amendments, and related health and security measures necessary for establishing a rounded-out national health and social-security system in the United States.

A fundamental purpose of the conference was to emphasize the struggle for health and social-security legislation as an integral part of the efforts of the whole labor movement in America to attain postwar security for the working masses. It set about to link the IWO social-security campaign with the fight for full employment, wage increases, and the safeguarding of democracy by defeat of the reactionary forces which are promoting discrimination, anti-Semitism, and war policies.

The conference was to serve, also, as the "opening gun" of the International Workers Order national social-security campaign through the mobilization, in Washington, D. C., of its leadership from its general lodges and 15 nationality group societies assembling from New York, Chicago, Detroit, Pittsburgh, Philadelphia, Cleveland, Boston, Newark, N. J., and the District of Columbia. The IWO societies included: American Russian Fraternal Society, Carpatho-Russian American Mutual Aid Society, Cervantes Society, Croatian Benefit Fraternity, Finnish American Mutual Aid Society, Garibaldi American Fraternal Society, Hellenic American Fraternal Society, Hungarian Brotherhood, Jewish Peoples Fraternal Order, Polonia Society, Rumanian American Fraternal Society, Serbian American Federation, Slovak Workers Society, and the Ukrainian American Fraternal Union. The total membership represented in these groups is 180,000. Among the hundred delegates were a dozen Negro leaders from the principal cities.

GREETINGS

The conference received greetings from the following officials of the Government and labor and other organizations: Senator ROBERT F. WAGNER, Senator JAMES E. MURRAY, Representative JOHN D. DINGELL, Representative ADAM CLAYTON POWELL, Jr., A. J. Altmeyer, Chairman Social Security Board of the United States; Harry Bridges, president, International Longshoremen's and Warehousemen's Union; Reid Robinson, president, International Union of Mine, Mill, and Smelter Workers, CIO; Lewis Merrill, president, United Office and Professional Workers of America, CIO; Max Yergan, president, National Negro Congress and Council on African Affairs; Abner Green, executive secretary, American Committee for Protection of Foreign Born; George Marshall, chairman, National Federation for Constitutional Liberties.

In substance, the greetings from the coauthors of the Wagner-Murray-Dingell bills emphasized the benefits of the new health measures and urged immediate actions in the congressional committees toward realization of the Truman health program. Representative DINGELL called sharply for defeat of the medical reactionaries impeding the bills. Congressman POWELL and the labor and civic leaders stressed the all-inclusive needs of the people for legislation promoting health, full employment, fair employment practices, equality, abolition of poll taxes and Jim Crow, and the extension and enlargement of social security benefits.

SPEAKERS

A representative group of speakers addressed the Sunday afternoon session which was chaired by John E. Middleton, IWO general vice president. These included: Max Bedacht, general secretary, IWO; Dr. Milton I. Roemer, of the United States Public Health Service, representing the Physicians Forum, Washington, D. C., chapter; Dr. Paul B. Cornely, head of the department of bacteriology and public health of the School of Medicine of Howard University; Rev. Francis W. McPeek, chairman of the legislative committee of council for social action, Congregational Christian Church; Lincoln Fairly, director of Washington division of the research department, United Automobile Workers of America, CIO; and Sam Milgrom, director of organization, IWO.

DIGEST OF ADDRESSES

Mr. Bedacht pointed out generally the health needs of the Nation and the timeliness of President Truman's five-point health program presented to Congress on November 19, 1945. He outlined the special responsibility of the IWO—as a labor fraternal organization devoted to social security for its members and the Nation—in the broad campaign of labor and all progressive groups for the adoption of the Wagner-Murray-Dingell bills. Declaring that passage of this legislation would enrich the functions of fraternal societies, Mr. Bedacht emphasized that the winning of health and social security objectives would strengthen the fight against fascism. Dr. Roemer, representing the Physicians Forum of Washington, D. C., defined the health needs of the American people in relation to the proposed expansion of national health services. Dr. Cornely presented special aspects of the health problems of the Negro people which, he said, were a more acute aspect of America's health problems as a whole. He marshaled a convincing array of facts of health conditions and needs of Negro Americans in terms of benefits to be derived from S. 1606. Rev. McPeek discussed the churches' stake in the health program, declaring that Christian creed supported health advancement and that the church could be relied upon to aid to attain it. Lincoln Fairly, of the CIO, stressed the need of labor unity in overcoming resistance to health and social-security legislation, and warned against underestimating both the opposition and the people's strength. Mr. Milgrom reviewed the significant aspects of the struggle for social security legislation, emphasized the role of the communities in organization and mobilization for the two bills—especially the nationality group communities—and dealt with practical problems in developing an effective campaign nationally.

CONFERENCE ACTION

During the evening session, delegates reported plans and activities in their lodges and communities; discussed and adopted a main resolution outlining the policies and organization of the IWO national health and social security campaign; sent telegrams to President Truman, Senators WAGNER and MURRAY, and Representative DINGELL expressing support of their proposals for health legislation; and also sent a telegram to R. J. Thomas, president of the United Auto Workers of America, CIO, pledging full support of the striking UAW workers whose victory "will be a victory not only for the membership of your union, but also a big stride forward in winning economic security for all of the people."

Other decisions of the conference toward the projection of a mass campaign included the issuance of a petition for the collection of 2,000,000 names of American citizens supporting passage of the bills; the mass-scale distribution of a pamphlet on the health needs of the Nation; the issuance of other educational materials in English and various languages; the raising of a $25,000 social security campaign fund for literature, posters, use of radio, lecture tours, forums, films, and other educational and propaganda mediums; the organization of meetings, mass rallies, seminars, conferences on neighborhood, community, city, and State scale; the development, in cooperation with labor unions, fraternal groups, and other organizations, of a national center for the coordination of the growing mass campaign for social security and health legislation. The months of January and February 1946 were designated as a special period for the holding of educational meetings of the IWO membership and people in the communities. It was decided to place special emphasis upon action for the National Health Act, S. 1606, and to urge city councils in the principal cities to pass resolutions memorializing Congress to act favorably on the bill; and, finally, to circulate collection lists and use other effective means to establish the $25,000 fund.

Rapido River Investigation

EXTENSION OF REMARKS

OF

HON. JOHN E. LYLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. LYLE. Mr. Speaker, the Thirty-sixth Division, a Texas National Guard division, has a great record of service during World War II. Its men and officers conducted themselves in such a manner as to reflect credit upon the military services of this country. They have won the title "Brave Men," and America shall always be grateful for their service.

They have recently assembled in convention at Brownwood, Tex., and adopted a resolution, a copy of which I am inserting as part of this statement.

I shall not comment upon this matter at this time, Mr. Speaker, but I desire to include a copy of a letter I addressed to the chairman of the Committee on Military Affairs, and to say that in response to this the chairman has assured me that as quickly as the petition comes properly before him it will be referred to the whole committee for discussion.

Without regard to the merits of the matter, Mr. Speaker, I must say that I know the men and officers of the Thirty-sixth Division, and I am sure that only the deepest sense of responsibility prompted them to suggest this action, which is most unusual.

The resolution and letter follows:

This is the eve of the second anniversary of the crossing of the Rapido River, a military undertaking that will go down in history as one of the colossal blunders of the Second World War.

The One Hundred and Forty-first and One Hundred and Forty-third Infantry Regimental Combat Teams caught the brunt of this holocaust. Every man connected with this undertaking knew it was doomed to failure because it was an impossible situation. The Rapido River was the main line of resistance. The German elements opposing the division had every foot of ground covered with fire. The high ground was all held by Germans,

and observation was perfect for them in directing the artillery fire. Patrols had reported that those enemy positions were strongly held, that the area was heavily mined on both sides of the river, and the German positions were wired and strongly fortified, and that the crossing was not tenable.

Notwithstanding this information (which was in the possession of the Fifth Army commander), contrary to the repeated recommendations of the subordinate commanders, Gen. Mark W. Clark ordered the crossings of the Rapido at several points.

The results of this blunder are well known. The crossings were made under the most adverse conditions and required 2 nights to get elements of the two combat teams across. At daylight the Germans shot the bridges out behind the Thirty-Sixth Division troops and began a methodical destruction of our troops. The division suffered heavy casualties, amounting to 2,900 men.

It was such a colossal failure that one of the regimental commanders commented as follows: "The river was strongly defended by a German force superior in numbers to our attacking force. The first attack was made at night and was not successful. On the night before, the British attack of the south had failed. The last attack by my regiment was made in daylight and was more decisively unsuccessful than the first. Losses from attacks of this sort are tremendous in manpower and material, and have a devastating, demoralizing effect upon those few troops who survive them. Officers and men lost in the Rapido River crossing cannot be replaced and the combat efficiency of a regiment is destroyed": Now, therefore, be it

Resolved, That the men of the Thirty-sixth Division Association in convention assembled at Brownwood, Tex., petition the Congress of the United States to investigate the Rapido River fiasco and take the necessary steps to correct a military system that will permit an inefficient and inexperienced officer, such as Gen. Mark W. Clark, in a high command to destroy the young manhood of this country and to prevent future soldiers being sacrificed wastefully and uselessly.

JANUARY 21, 1946.

Hon. ANDREW J. MAY,
Chairman, Military Affairs Committee,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: You no doubt have observed in the press of yesterday that former members of the Thirty-sixth Division, a Texas National Guard unit, have, by resolution, requested a congressional investigation of the Rapido River operation during the Italian campaign of 1944.

Many American lives were lost in this operation and I know from personal contact with many men and officers of this organization that considerable bitterness was aroused over the resulting casualties.

I do not believe that the Congress is technically equipped to make an investigation of this nature. I do believe, however, that a board appointed by the War Department of trained officers, preferably retired, could well make an intelligent inquiry into the matter.

Great responsibility rests upon the shoulders of commanders as the lives of American youth are precious and should never be needlessly expended. If mistakes have been made, it is well for experts to study them and for the War Department to use every effort to see that they never occur again.

I believe it is the responsibility of your committee to request the War Department to appoint a board of impartial and qualified officers to make a full investigation of this matter.

Respectfully yours.

The Steel Industry and America's Economy

REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mrs. DOUGLAS of California. Mr. Speaker, use by the steel industry of its gigantic power to be the bottleneck of America's economy is a very dangerous threat both to our economic and to our political life.

The industry should understand that it is inviting widespread proposals not only for Government operation of Government-owned steel-making facilites, but for nationalization of the steel industry.

No industry so strategically placed can expect to use its enormous power carelessly or arbitrarily and not reap the consequences.

In the face of the concerted refusal of the steel industry to bargain in good faith, the President of the United States has in the Government-owned steel-making facilities one of the strongest instruments for securing from the steel industry agreement to his recommendations of an increase of 18½ cents an hour for the steelworkers. And he has in Henry J. Kaiser a man who can operate these facilities. Above all he has in Mr. Kaiser a man who has demonstrated his industrial statesmanship by his agreements to accept the President's recommendation in steel, and the findings of the President's fact-finding board for the General Motors Corp. and the auto workers. Last Tuesday, January 22, at the Department of Labor, Mr. A. W. Robertson, president of Westinghouse, admitted to reporters that United States Steel, General Motors, General Electric, and Westinghouse had met in New York the week before, as reported in the Washington Post January 23, as follows:

In a surprise move, the Labor Department took action yesterday in the strike of 200,000 workers who have walked out of the country's three biggest electrical manufacturing plants. The CIO United Electrical Workers and the General Electric and Westinghouse companies agreed to a proposal of Schwellenbach to sit in on mediation conferences.

The meeting began yesterday, with Arthur S. Meyer, New York State Mediation Board chairman, and William H. Davis, former Chairman of the National War Labor Board, as mediators. They adjourned with plans for reconvening tomorrow in Meyer's office in New York.

Neither the two mediators nor the disputants, including two top officers of the union, and C. E. Wilson, GE president, and A. W. Robertson, chairman of the Westinghouse directors' board, would comment on what transpired.

Robertson, however, held a press conference later in the day and was questioned by reporters whether there was an possibility of settling the electrical industry strike prior to a wage pattern being set in steel or in General Motors.

WOULD GET SERIOUS STUDY

Robertson said a settlement could be made provided a reasonable basis were found. He admitted, however, that if a wage pattern were set in the GM or steel cases "we would have to give it serious consideration and would be profoundly affected, and I believe we would be forced to be governed by it."

Pressed on how he could reconcile the two statements, Robertson laughingly conceded to a reporter that the "reasonable basis" would have to be a lower one than the 18½ cents proposed by President Truman for steel workers, or the 19½ cents recommended by the fact-finding board in the GM case.

Robertson was asked for information on an industrial conspiracy which Philip Murray, CIO head, has alleged to exist. He also was asked if there had been meetings last week among top executives of the steel, GM, GE, and Westinghouse companies.

NOT PRESENT AT MEETING

Robertson admitted there had been a meeting, but said he had not attended it, and insisted that there had been no joint discussion of the CIO wage drive. He said meetings of industrial concerns and their leaders were common affairs, but declared categorically that no meeting had discussed Westinghouse's wage rates. He also denied knowledge of any general strategy meeting by industry.

Mr. Robertson denied that wages had Ford, and Chrysler. And the four companies are still refusing to consider settlements at the level agreed to by Kaiser, Ford, and Chrysler. And the four companies named by Mr. Robertson, who have refused to bargain in good faith, are America's largest manufacturing corporations. The United States Steel Corp. holds the key to making effective this concerted refusal by these grea. companies or it can unlock the entire jam throughout American industry created by the present shut-down of the steel industry.

The refusal by the steel industry to accept the President's recommendations has started a creeping paralysis in our economy. The steel industry is the flywheel of our economy. If it can be kept rolling at its highest efficiency, every community throughout America reflects its prosperity.

Stop the steel mills and you soon stop the circulation of goods of almost every kind. Mr. J. P. Morgan understood this in 1900 when he put together the United States Steel Corp. And the American Iron and Steel Institute understands it today.

The settlements agreed upon last Saturday between Chrysler, Ford, and the automobile workers are very welcome news. They are especially welcome because Ford at least has said this settlement will not be based upon a demand for further price increases. They show that collective bargaining can work where there is genuine good faith on the part of management as well as the unions.

But these settlements will not enable Ford and Chrysler to continue operations. For that they need steel.

Letter in Opposition to Un-American Activities of the House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter in opposition to un-American activities of the House Committee on Un-American Activities:

JANUARY 26, 1946.

We, the undersigned, feel called upon to protest the arbitrary, un-American, and illegal methods by which the House Committee on Un-American Activities is attempting to destroy the work of the Joint Anti-Fascist Refugee Committee in bringing relief to Spanish Republican refugees. We speak as a group of citizens most of whom have no connection whatever with the committee under attack. The following events explain our alarm:

1. December 1: Ernie Adamson, counsel to the House Committee on Un-American Activities, asked the President's War Relief Control Board to revoke the Joint Anti-Fascist Refugee Committee's license.

2. December 8: The Joint Anti-Fascist Refugee Committee received a letter from Mr. Adamson saying in part, "In the interest of saving time, I suggest that you permit one of our investigators to make a preliminary investigation of your organization to determine whether or not this committee is interested in your organization."

3. December 10: The Joint Anti-Fascist Refugee Committee received a subpena to produce "all books and records."

As the Nation said in an editorial on this chronology on January 19: "Thus, after trying to execute a death sentence on an organization whose work for the relief of Franco's victims is a matter of public record, the Un-American Committee now wishes to launch a fishing expedition in the hope of finding something that looks like evidence to back the verdict it has already reached."

The House committee's contempt citation against Miss Bryan for failing to produce the thousands of documents requested was of a piece with the preceding pattern. Miss Bryan came before the committee prepared to answer all questions on the activities of her organization. She was given no opportunity to answer any questions. She was denied the right to consult with counsel during the hearing. She was given no chance to explain that to comply with the House Committee on Un-American Activities' request for "all books and records" would have been to stop the work of her organization.

The Joint Anti-Fascist Refugee Committee is licensed by the President's War Relief Control Board. Its license specifically limits it to relief activities and prohibits propaganda activities. It renders regular trimonthly reports to the Board. Had the committee been engaged in propaganda activities, its license would have been revoked.

We urge you as a guardian of American democracy to vote against any resolution citing Miss Bryan for contempt of Congress.

Very truly yours,

QUENTIN REYNOLDS.
FREDA KIRCHWEY.
ROBERT W. KENNY.
Bishop EDWARD L. PARSONS.
CARL SANDBURG.
Rev. Dr. DAVID DE SOLA POOL.

A Plan for America

EXTENSION OF REMARKS
OF
HON. GEORGE E. OUTLAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. OUTLAND. Mr. Speaker, under permission to extend my remarks in the Appendix of the Record, I would like to include a most admirable article by the Honorable JAMES E. MURRAY, Senator from Montana, in the January 21, 1946, issue of the New Republic:

A PLAN FOR AMERICA

(By Senator JAMES E. MURRAY)

Since January 1944, when the full employment bill was introduced into Congress, its sponsors have been asked repeatedly just what sort of program would be necessary to carry out the objectives of the measure and provide sustained full employment in a free America.

I have usually answered this question by pointing out that the bill commits the Federal Government to maintain full employment by every appropriate means and establishes executive and congressional machinery for developing the specific details of a full-employment program. I have always maintained that under the bill there could be many alternative types of full-employment programs, depending upon the economic situation at any given time and upon the varying judgment of Congress.

The full employment bill is now in the hands of the Senate-House conference committee. We shall soon know whether an adequate bill will be passed, or misconceived, ineffective and unworkable legislation which would serve only to confuse the issue. It would be most unfortunate for our country in the days ahead if this legislation were wrecked by the bias and ill will of men who are more interested in blocking sound, progressive government than they are in full employment. If, however, we can have enacted a carefully worked-out bill such as the Senate version, we shall lay the foundation for a program which will help cure the most serious defect in our economic system: Recurrent mass unemployment.

CHARACTERISTICS OF A FULL-EMPLOYMENT PROGRAM

Accordingly, I should like at this time to state my personal observations on the requirements of such a program, in the hope that they will help stimulate constructive thought and discussion on this all-important subject. These observations are based upon many conferences and discussions with economists, businessmen, Members of Congress, and public-spirited citizens who are seeking to avoid another major depression. They are also based upon a careful review of present Federal policies and pending legislative proposals.

Before discussing specific fields of action, I should like to suggest five bench marks by which, in my opinion, any full employment program must be judged.

First. The program must face up to the question of how far we are to push toward a better distribution of national income, as contrasted with the use of Federal deficits to compensate for maldistribution of national income. Neither approach is easy. Improved distribution of income means a clash with dominant vested interests. Federal deficits mean a collision with those who regard a balanced Federal budget as more important than a balanced national economy.

The only realistic policy is to place major emphasis upon obtaining a better distribution of income. This means central emphasis on all Government policies and functions that affect wages. It means vigorous and forthright attack on monopolistic prices. It means driving toward a tax system designed to increase consumption and thereby speed up production. It means that public works and public services should be approached primarily on the basis of meeting public needs rather than as compensatory devices for coping with economic fluctuations.

To the extent that this effort to improve the distribution of income may be unsuccessful, we must deal with the deficits in purchasing power through proper Government-spending programs—if full employment is to be maintained. But in so doing we must make it unmistakably clear that the responsibility for Federal deficits rests with those who oppose a fundamental attack on our basic economic ills. It is those who support monopoly and special privilege and stand in the way of improved policies on wages, prices, taxes, and public expenditures who are responsible for making it necessary to use deficit expenditures as a means of maintaining employment.

Second. The objective of full employment must be integrated with these other basic objectives of national policy: a rising standard of living, the preservation and strengthening of civil liberties and personal freedom, and the maintenance of friendly economic and political relations with the rest of the world.

Third. It must be a long-range program. A short-range approach can lead only to a series of improvisations based upon one emergency after another.

Fourth. The program must be truly comprehensive. No handful of measures by themselves, no matter how important, is sufficient to give us full employment. It is essential that all the innumerable fields of action affecting employment and production be encompassed within the program.

Fifth. The program must consist of much more than a number of disconnected policies. Too often one arm of the Federal Government knows not what the other arm doeth—as is particularly true with respect to expenditure programs, on the one hand, and regulatory activities on the other. All of the Government's innumerable activities should fit together within a general framework and add up to a total level of economic activity that assures remunerative employment opportunities for all who are willing and able to work.

SPECIFIC FIELDS OF ACTION

In listing some of the important fields in which decisive action is essential, I shall try to cover the Government's present activities, pending proposals that deserve support, and the need for new proposals to help meet our country's problems.

Business and finance: The Government's present activities with respect to business and finance are little more than vestigal remains of programs designed to cope with the economic problems of bygone days—the days of trust-busting, of depression and relief, of mobilization for war. They bear little resemblance to the kind of program needed to meet the problems of today or tomorrow.

On the vital question of monopolistic control we must develop a two-sided approach. On the one hand, our antitrust activities must be strengthened. In this connection the final report of the Temporary National Economic Committee is particularly pertinent. The TNEC unanimous recommended more adequate funds for the Antitrust Division and the Federal Trade Commission, legislation against patent monopolies, registration of trade associations, control of corporate mergers, more stringent civil penalties for the violation of the antitrust laws, and authority for the Federal Trade Commission

to serve as master in chancery in antitrust proceedings. Although these recommendations were made almost 5 years ago, none of them has been carried into effect. On the other hand, in all cases where it is impossible to prevent monopolistic practices and restraints of trade, we must develop methods of public control that will adequately protect the public interest.

We must promote the peacetime uses of atomic energy and, in general, stimulate research and technological development.

We must eliminate discriminatory freight rates, promote the industrial development of the under-developed areas of our country, and help spread our population over the thinly settled areas.

We must liberalize the lending operations of the Reconstruction Finance Corporation, and establish a banking and credit structure that will really help small business and all truly competitive enterprises.

We must provide more direct incentives for the utilization of Government plants by small independent business enterprises, and under no circumstances allow such plants to be disposed of to an unregulated private monopoly

During the war, all attempts to establish a coordinated Government procurement system under civilian control were frustrated by Army and Navy claims that any change in the procurement set-up would impede the war effort. Since peacetime procurement will still have an important effect on our postwar economy, we much achieve the complete coordination, under civilian control, of the activities of all Government purchasing agencies.

Labor and working conditions: In the field of labor and working conditions, the essential task is to defend labor's right to bargain collectively and to strike. Compulsory arbitration or Government wage-fixing should be avoided, since they do not comport with our democratic system.

At the same time, the Government must clearly recognize the need for increases in purchasing power if our capacity to consume is to catch up with—and keep in line with—our capacity to produce. All facts relevant to wage disputes should be collected and analyzed on a current basis—not merely when a strike situation develops.

In addition, it is essential to press forward to obtain approval of pending legislation to improve the minimum-wage and Government-salary structure, prevent discrimination in employment or in wages, and improve our facilities for conciliation and voluntary arbitration. We should obtain action on the long-postponed study of annual wage systems, and the long-delayed reorganization and strengthening of the Department of Labor. Finally, another attempt should be made to obtain enactment of legislation to outlaw oppressive labor practices, as proposed by the La Follette Civil Liberties Committee, and as passed by the Senate in 1940.

Agriculture: The Government, as yet, has no postwar program to offer the American farmer. Its present activities in agriculture are based upon a wartime expansion program now in the process of liquidation and a prewar program aimed at restricting farm production and adjusting American agriculture to the exigencies of world depression.

To have full employment we must develop an agricultural program aimed at the maintenance of farm income; support for farm prices should be subordinated to this objective. This calls for regional and commodity programs for the improvement of the present use of agricultural resources—along the lines of the cotton conversion program currently proposed by the Department of Agriculture. It also calls for crop insurance, assistance both for farm purchase and tenant farming, greatly expanded public works and public services in all agricultural areas, and a United Nations program to use unabsorbed farm production in raising nutritional standards throughout the world.

Construction and capital investment: At present, much worth-while activity is in process with respect to roads, airports, and flood control, and action can soon be expected on a program of hospital construction. But these activities, excellent as they are, need amplification.

The pending proposals on the Missouri Valley Authority, the St. Lawrence Waterway, and the Columbia River Authority open up many new frontiers for enterprise and expansion. They should be supplemented with similar proposals for other areas.

In the field of housing, the pending general housing legislation proposed by Senators WAGNER, ELLENDER, and TAFT represents a historic and statesmanlike approach to one of the most important problems of our time. With an expansion of the public-housing features and a further liberalization of the FHA provisions, this legislation would serve to meet America's total need for housing of all types.

Above all, we need a coordinated approach to the problem of stabilizing construction and capital investment. This would call for the formulation of long-range and short-range estimates of the need for capital investment of all types, advance planning of all Federal construction and cooperation with States, local governments and private enterprise in planning non-Federal capital investment. My construction-industry bill, developed as a result of hearings before the Senate Small Business Committee and currently being revised on the basis of discussion with experts in the field, is aimed at this objective.

Social services and welfare: The existing social-security program is out of date. Coverage should be extended to include the many groups that are now excluded. The old-age and survivors' insurance should guarantee an adequate income for the aged. We need substantial liberalization and broadening of unemployment compensation and public assistance. We need a real health program, as proposed in the new Wagner-Murray-Dingel bill.

In the field of education current proposals for Federal aid are too narrow in concept. We need a long-range program of Federal aid to equalize and expand educational opportunities at all levels and to include programs for handicapped children, youth work, vocational education, physical fitness, school lunches, libraries, community centers, summer camps, nonmilitary education in the armed services, and the expansion of educational buildings and equipment.

Finally the Federal Security Agency should be converted into a Department of Welfare and Security under the direction of a Cabinet officer.

Foreign economic relations: The American economy is merely one unit—though perhaps the most important one—in the world economy. During the past year we have made considerable progress with respect to international currency stabilization, loans and relief and rehabilitation. But we have not yet formulated a clear-cut policy of assisting in the economic development of underdeveloped areas of the world, which represent the great potential markets for our products. Our program on the reduction of tariffs and the negotiation of trade agreements must be supplemented by a realistic approach to the problem of those domestic industries that will necessarily be curtailed by the liberalization of trade among nations.

Above all, we must transcend the narrow approach to foreign trade in terms of mere trade barriers. The key factor in the exchange of goods and services among nations is the consuming power of each country—and this depends upon the levels of employment and income. The currently projected world trade conference must include not only the problem of trade barriers, but that of full-employment policy. Each of the United Nations should agree to maintain full employment within its own borders in a manner consistent with its own traditions, and without resort to the exportation of unemployment.

Taxation and fiscal policy: The present trend of tax policy is toward the stimulation of an uncontrolled and short-lived boom in business investment. As part of a full employment program, we need tax legislation that: (a) is directed at increasing consumption; (b) sets forth basic long-range policies, rather than being limited to the next fiscal year; and (c) is phrased in terms that any intelligent layman can understand. In drafting such legislation, careful consideration must be given to taxation of undistributed corporate profits, the elimination of tax-exempt securities, an all-out campaign against the large tax evaders, special concessions for independent small business enterprise and the financing of our social security system through the regular tax structure rather than the regressive pay-roll and wage tax.

In recent years there has been increasing acceptance of the idea that fiscal policy should be used to help iron out the fluctuations in the business cycle and that a balanced budget cannot be hoped for except over a reasonable period of years. However, we still have a long way to go in educating the people to the fact that a balance between our capacity to produce and our capacity to consume is far more important than any balance between Federal expenditures and Federal revenues. In fact, a long-range balance in the Federal budget can be obtained only if: (a) We have sustained full employment based upon a greatly improved distribution of the national income; (b) we set a period of years that is long enough to embrace both the up-swing and down-swing in business investment; and (c) we have a long-range economic program to cover this entire period.

With service on the national debt such an important part of the economic picture, the interest rate at which the Government borrows its money should be reduced. It will not be enough to maintain low interest rates in general. Methods can be developed of borrowing through the Federal Reserve System at little or no net cost to the Government.

Finally, a special commission should be established to try to obtain coordination between the Government's fiscal policy and that of our States and local governments.

Government organization: It has often been said that Congress is a body without a head. It might be added, I presume, that the executive branch is a head without an adequate brain. Both branches need fundamental reorganization.

In the near future the La Follette Committee on the Organization of Congress will submit its report. This should be the signal for aggressive action to rejuvenate the organs of party leadership in the Senate and House of Representatives, establish a coordinated pattern of committee action, and provide additional staff assistance both to the committees and Members of Congress.

Without waiting for any formal reorganization, however, it is essential that each House be asked to debate and vote upon a joint resolution expressing acceptance, modification, or rejection of the general program submitted to Congress by the President at the beginning of every session. Only in this way can Members of Congress be impelled to come to grips with the problems of our economy as a whole.

In the executive branch there has recently been a healthy trend toward increasing departmental responsibilities. This should be accelerated by reexamining the status of the so-called independent commissions. The executive branch can have no consistent and

carefully planned economic program if such commissions remain a law unto themselves and constitute a fourth branch of the Federal Government.

We must be particularly wary of any attempts to put Federal funds or Federal power into the hands of special interests—as proposed in the May-Johnson bill on atomic energy, one of the pending research bills, and the hospital-construction bill recently passed by the Senate.

Above all, we must establish within the executive branch a realistic approach to economic planning. Planning bodies, set off in an ivory tower, apart from the main stream of decision and action, should be avoided. The development of a full-employment program must be the direct responsibility of the President; the staff work must be done in the Executive Office of the President and be closely associated with the planning of agency budgets. In order to decentralize the operation, planning offices should be established in all the departments and agencies. A formal structure of interdepartmental committees should be used to help develop programs that cut across agency lines.

THE TASK AHEAD

Since our task today is to make a new and fresh approach to America's problems, it is only natural that major emphasis be given to legislation. Only when our new legislation is adopted can the emphasis shift more toward the development of sound administrative policies.

While there are many legislative proposals now pending before Congress which can serve as essential elements in a full-employment program, there is still a broad area of legislative action for full employment in which no adequate bills have been presented to the Seventy-ninth Congress. Here are but a few of the fields in which new legislation is needed: Monopoly and competition, freight rates, loans to business, Government procurement, elimination of oppressive labor practices, basic agricultural policy, river-valley development, aid to education, veterans' benefits, a department of welfare and security, economic statistics, tax policy, and congressional reorganization.

Of course, there are some who point to the black record of the first session of this Congress and throw up their hands in despair. "Look at what has happened to the President's recommendations in his September message to Congress," they say. "If we can't get congressional approval for improved unemployment compensation, a permanent FEPC, and a Missouri Valley Authority, why worry about thinking up additional proposals to be buried in committee or defeated on the floor?"

The answer to this question is manyfold. We need a truly comprehensive program if the support of independent businessmen, professional people, farmers, labor, and all thoughtful citizens is to be enlisted in the campaign for full employment. We need a truly complete program if we are really to plan ahead to meet the needs of our vast and complex economy—instead of having to ring an intellectual fire alarm whenever a new crisis develops. We need a program as broad as a party platform if the issues involved in the fight for full employment are to be brought to the people at every election. If we are to oppose effectively those reactionary forces in America which are opposed to full employment, we must learn the strategy of total warfare and campaign on many fronts at the same time. Above all, our full-employment program must not be limited to what political strategists predict will be acceptable to the Seventy-ninth Congress.

Never before in the history of our country has there been an articulate drive to maintain employment opportunities for all who are willing and able to work—as distinguished from merely trying to provide relief in time of depression. There is still a vast need for public education on all the issues that are involved. There is a great war to be won—the war against depression and poverty. If we are to win it, we must not be afraid of losing some of the battles. The fight for full employment has just begun.

Letter to Secretary of War Emphasizing Danger of American Soldiers Being Embroiled in British India Politics

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter to Secretary of War emphasizing danger of American soldiers being embroiled in British India politics:

JANUARY 28, 1946.

Hon. ROBERT P. PATTERSON,
Secretary of War,
Washington, D. C.

MY DEAR MR. SECRETARY: Maj. Gen. Edward P. Witsell has indicated that the number of American troops remaining in the India-Burma theater has been reduced to 55,000 as of January 1, 1946, and that this strength will be further reduced to 4,000 troops by July 1, 1946, and that all of these soldiers will be engaged in guarding surplus property or in providing services and supplies for those who are so doing.

All these soldiers have been given specific instructions not to become involved in internal controversies, but their very presence there during these parlous times is bound to involve them in great difficulties.

The independence movement in India is growing stronger and stronger. Each day the bitterness against the British Raj and its rulers is being emphasized and underscored by political disturbances, particularly where elections are being held or are about to be held. Elections for five provincial legislatures will take place during this month and the results will be known some time early in February, while the elections to the other six provinces will take place during the months of February and March and the results will be known in April.

It is the unanimous opinion of those in the position to know that if the British do not make a new settlement in India whereby their power is transferred to the chosen representatives of India, there will be widespread disorders all over India. If Britain continues her rule in India, on one pretext or another, the resentment against the British will result in intense civil strife and violence. When these widespread disorders break out, the American troops are bound to be involved as they were in Calcutta. The Calcutta demonstrations were against the British and not against the Americans, but mobs do not distinguish the British from the American soldiers.

Danger confronts our American boys. They may have to fight back in self-defense and use their arms against Indians who are fighting for their freedom. The repercussions will be tragic, more so, since they could have been prevented by the removal of these troops. Whether we wish it or not, the British will make effective use of our troops.

I have before me a letter which is a typical one from a GI stationed in India. He speaks of heavy concentration of troops in India where the British anticipate real trouble. He says our troops have been issued rifles and 50 rounds of live ammunition per man. They have drill and target practice every Sunday. Some of these soldiers say they will accept the rifles, but will refuse to shoot down innocent Indians. In all this we find the prevailing danger signals of real trouble for our troops if they are not removed from that theater.

These men likewise inform me that the British have not even started any full-stage redeployment. The British, they say, plan to crush any planned revolt and will not hesitate to use any American troops for this purpose, either directly or indirectly.

Our lads are worth more than any surplus property. In my humble estimation, the British should be held accountable for this surplus property and should be in duty bound to guard it.

Frankly, the excuse of the protection of surplus property is no longer valid for the keeping of a single American soldier in India. Those boys should be brought home forthwith, and special ships should be utilized for this purpose.

Very truly yours,

EMANUEL CELLER.

Behind the Strikes

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. HOFFMAN. Mr. Speaker, with millions of dollars being lost by striking employees; with industry unable to turn out the hundreds of items for which eager customers are waiting; with, in fact, the whole reconversion program which had started out so well and which had made such rapid progress stalled, many are searching for the real reason back of the present labor disputes and strikes.

Are these strikes due in part to the fact that during the war employees worked long hours, and, when the conflict was over, just wanted a vacation or a rest? Certainly, industry which can make neither improvements, extensions, carry on research nor make a profit during a strike, can gain no advantage through a closed plant.

Was the seed which was then being sown and the harvest which would follow accurately described and truthfully prophesied in Senate Document No. 14 of the Sixty-eighth Congress, first session, compiled under the direction of John L. Lewis, then president of the United Mine Workers of America?

In that document appear the following statements:

Imported revolution is knocking at the door of the United Mine Workers of America and of the American people. The seizure of this union is being attempted as the first step in the realization of a thoroughly organized program of the agencies and forces behind the Communist International at Moscow for the conquest of the American continent.

The overthrow and destruction of this Government, with the establishment of an absolute and arbitrary dictatorship, and the elimination of all forms of popular voice in governmental affairs, is being attempted on a more gigantic scale, with more resolute purpose, and with more crafty design than at any time in the history of this Nation.

The movement is aimed not only at the labor unions but at the entire industrial, social, and political structure of the country, and with the single aim of eventually establishing a Soviet dictatorship in the United States.

In 1930, a committee of the House of Representatives, Hamilton Fish, Congressman from New York, chairman, made an investigation into the activities of the Communists, and filed House Report No. 2290, which is well worth reading.

Congressman Fish, on many subsequent occasions, pointed to some of the activities of the Communists who were boring from within. Today, Congressman Fish issued a statement which calls attention to some of the facts which may aid in disclosing one of the reasons for the present widespread industrial disputes. His remarks are as follows:

A FIELD DAY FOR THE COMMUNISTS—A WARNING TO THE LOYAL 90 PERCENT CIO STRIKERS

(By Hamilton Fish, Member of Congress 1920–44)

The merits or demerits of the prevailing strikes will be presented fully by the management and by officials of the unions. That is their responsibility to the public, not mine. My remarks should not be construed as a criticism of the CIO strike situation. They are meant as a warning to loyal CIO members against the seditious and sinister purposes of the Communist agitators within their organization.

I propose to discuss merely one phase of the current strikes, the use that will be made of them by Communists within and without the CIO to incite class hatred, undermine private property and free enterprise, and create a revolutionary spirit among the workers. I predict that these strikes are forerunners of more violent ones to follow within the next 4 or 5 years. They are merely dress rehearsals for revolutionary strikes that will be set in motion as the Communists reach out and control more industrial unions, particularly transportation, communication, and heavy industries. In this article, I shall not name individuals with communistic records, but am prepared to do so if necessary.

Most of the strikers are loyal and patriotic Americans who have a natural and laudable desire to better their own economic conditions. As one who believes in collective bargaining and the inherent right of American wage earners to strike, I urge all employees who are now on strike or who may go on strike in the future to beware of Communist propaganda and Red labor leaders who will seize this opportunity to spread subversive and un-American doctrines among strike weary Americans.

It is well known that Communist agitators hold important positions in certain powerful unions now on strike. They are well organized, well led, articulate, and motivated by fanatical frenzy. They have been and still are infiltrating into all industrial unions that will have them.

The modern-day Communists are not to be envisioned as long-haired radicals or heavy-bearded revolutionists plotting behind bolted doors in some dark and secluded cellar. Nor are they to be regarded as radical and harmless crackpots without purpose or plan.

The Communist leaders in the CIO and PAC are largely the intellectual or the intelligencia type, serious, well educated, resourceful, and fanatical in their devotion to communism. They are often not even skilled laborers, but excel rather as paid union organizers and union secretaries, treasurers, and officials.

They are a force that has to be reckoned with in the CIO and particularly in the Sidney Hillman dominated PAC. Any American that shuts his eyes and ears to the communistic control of the PAC should have his brain examined.

It is well known in labor circles and by those families with Communist tactics that the Communist organizational network is strongly entrenched in the CIO and in its political affiliate, the PAC. These two organizations have increased communistic influence politically and financially beyond the fondest expectations of the Communist leaders in America. The CIO, which is directing the steel, General Motors, and electrical strikes, is honeycombed with paid Communist organizers and officials. Thousands of Communist Party members, taking orders direct from the party, are today in the CIO and its affiliate organizations. Some openly admit that they are Communists, others conceal their party membership, and still others parade around as non-Communists but all the time are serving the interests of the Communists Party in important labor quarters.

The dual hypocritical system of deceit and duplicity has been carefully built up to accomplish Communist objectives which the party could never accomplish by itself. This chameleonlike system is so stealthily operated that it deceives and hoodwinks many innocent people, both within and without the ranks of labor, who are inspired by idealistic sentiments. Ninety percent of the CIO members are not Communists. The 10 percent, however, form a solid, aggressive bloc, and have a powerful influence through skillful and determined leadership. The Communist element, on account of their unity in the CIO and PAC, wield a disproportionate influence in shaping their policies and promoting Communist ideology.

The growth of the communistic influence in the CIO is understandable because Communists have concentrated their energy and strength to achieve a large measure of control in both the CIO and PAC which accepts them as members and paid officials. The more important positions they hold, the easier to set up a patronage machine to take care of deserving Communists and provide them with paid jobs as organizers. Thus the Red network spreads.

There is no such person as an American Communist. All Communists in America are pledged to uphold and defend Soviet Russia. It is a misnomer to call them American Communists. They should be called Russian Communists, or International Communists. There is no possible compromise between Americanism and communism. The peace-loving, law-abiding, patriotic average American citizen knows almost nothing of this conspiracy in our midst. Yet night and day Communist conspirators are plotting in labor circles and urging the necessity of accomplishing the Communist revolution by militant and revolutionary methods.

The three largest CIO unions, steel, automobile, and electrical workers are on strike at the same time, totaling over 1,000,000 wage earners.

It is a tragedy for everyone except the Communists who are enjoying a field day. Mass strikes, mass demonstrations, mass suffering and mass paralysis in the critical reconversion period warm the hearts and delight the subversive minds of the Communists at home and in Russia. This is their opportunity to foment hatred and disorders and to denounce free enterprise and private ownership of property.

The steel strike is the most serious, as it will affect at least 10,000,000 workers in factories dependent on weekly steel shipments for production of numerous types of equipment. Most of these factories will have to shut down in 60 days if the strike is not settled by that time. It could paralyze one-third or more of American industry. If this situation should develop, the red hand of communism may come out into the open. There are numerous CIO Communist supporters who have been patiently waiting their day in the sunlight and whose main object is to destroy private enterprise, build a workers unity or a mass front and promote communism. The stark fact is that Communist strike tactics are not for immediate benefit of the strikers but to train leaders for the future revolutionary conflict. The Communist Party plan of campaign disavows democratic methods and seeks to sovietize America by direct action. It prepares its members to be ready for the revolutionary seizure of governmental power when a favorable opportunity occurs. Strikes controlled by Communists could become exceedingly dangerous and violent weapons and cause Nation-wide economic paralysis.

We must not forget that the Communists owe their first allegiance to the doctrines and ideas emanating from Moscow and will stop at nothing to carry them out. The Communists will seek to use the economic power of the CIO for communistic purposes and to turn strikes into revolutionary channels. The next radical step when the next economic depression sweeps America will be to urge the strikers to establish Soviets, take power in their own hands and if feasible to attempt to overthrow the Government.

I am not an alarmist but still believe in the old adage that the price of liberty is eternal vigilance. There is nothing I would not do to help preserve American freedom and our republican form of government and the civil rights guaranteed by the Constitution to all the American people. We are too complacent and too assured of our own security, on the basis it cannot happen here. I do not believe it will unless there is a complete economic break-down, which I do not anticipate for 5 years. All the Red termites are working furiously in their undercover assignments, fanning the flame of class warfare as a result of the strikes, yet I have faith in the strikers and the American people that they will not follow or be deceived by Communist treachery and treason. Former Attorney General Francis Biddle in his findings of fact in the Harry Bridges deportation on May 28, 1942, held that the Communist Party of the United States of America from the time of its inception in 1919 to the present time, is an organization that believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States.

The Communists want to organize one big industrial union of workers which could paralyze the Nation. Then with Communist cadres stationed in local unions they would be in a position to terrorize large cities.

The following orders or directions, are interesting and instructive as regards Communist revolutionary tactics and plans, and are only a small pattern of them. The wording of these directives is certainly consistent with Communist aims and objectives. Every city police force, and all National Guard and Regular Army officers should be obliged to study these revolutionary orders and be prepared with a definite plan of campaign to counteract them in any emergency, day or night. It is obvious that control of communications, radio, telegraph, telephone and the transportation of newspapers are vital to such subversive plans as well as control of airfields, armories, waterworks, electricity and transportation, including trucks, streetcars, subways, and shipping.

The following are a few extracts from Communist underground operational directives in the New York City area (30-mile radius) as published in the original source system of the Federated Libraries, Inc., of Salt Lake City, Utah:

First action: Cripple all communication systems. Execute this action in the following order unless it is possible to work all simultaneously: Telephone, radio, telegraph, cable.

Section action: Cripple all air forces, public and private.

Third action: Block off and prevent the use of all bridges and ferries.

Fourth action: Shut off all electric power for use of all transit lines, subways, surface and elevated. Cut off all electric power for buildings, shops, streets, private and public buildings. Cut off all steam for public and private heat and power.

Fifth action: At this time all DL's (district leaders) must have special units ready to take over all armories, ammunition and military stores upon signal (United States forts excepted at time).

Sixth action: Only if it becomes necessary to create further terror to render the people more helpless, shut off all water in following order: shops, public buildings, private supply. Smoke bombs properly located in subways, buildings, large stores will prove of great service in stepping up the terror of the people. Large fires in old buildings will advance the panic. Sharpshooters and snipers will be detailed in taxicabs and vehicles to wipe out police and opposition.

The Need for New Labor Law

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from the address of Donald R. Richberg entitled "The Need for New Labor Law," at the luncheon of Sales Executives Club, Hotel Roosevelt, New York City, January 15, 1946:

There is no effective program of industrial peace which will be supported today by the most conspicuous leaders of organized labor; and business managers are so divided and confused that they have no accepted program. But the American people in overwhelming numbers, including a large majority of labor unionists, want the Congress to pass a law that will end, or at least minimize, industrial warfare.

The active opposition comes mainly from leaders of labor and management who are hoping that they can win a few big battles and then dictate the terms of peace. Every proposal to lay down arms and give conciliatory methods a chance is met with abusive or plausible criticisms which spring from a basic desire to keep on fighting.

Business managers are confused and exasperated by a multitude of governmental regulations, partly required by wartime necessities, partly needed by the peacetime complexities of an industrial civilization, and partly imposed by the pressures of ardent reformers and special interest groups. They are resentful of the many abuses of organized labor power. They are distrustful of politicians who regard their favoritism for organized labor as proof of their liberalism—and as an insurance of votes in elections.

There is one saving grace among industrial leaders. In the mass, they do recognize their ultimate interest in the impartial writing and administration of law; and they do believe in a free, competitive economy, even though as individuals they frequently seek political favors and yield to the temptations of monopolistic power.

Labor leaders are generally suffering from the delusions of rapidly swollen authority gained by political influence, by a special immunity from legal restraints, and by the command of organized force and violence which a sympathetic public permitted them to acquire and exercise in the days when unorganized, helpless wage earners were the common victims of injustice.

The greatest weakness of these labor leaders is their hostility to impartial government. They feel that they are still entitled to an unfair deal; to be petted and favored as the representatives of a specially deserving and unfortunate class of people. With shortsighted selfishness they are trying to create an economic system in which all wage earners would be compelled to join unions and to accept the fixation of wages and distribution of jobs under the monopoly control of labor politicians. Their success would end a free, competitive economy and produce some form of state socialism as the inevitable outgrowth of the labor dictatorship which they are seeking to establish. Some of them know this. Most of the others don't know what they are doing, or don't care.

Our Government is still democratic in its representation of the unregimented masses of the people. But if the warfare between labor and management is permitted to spread, everyone will be compelled eventually to take sides under class conscious leaders of either labor or management who are strong enough to swing national power and wise enough to accept the responsibility for the general welfare that must go with the power to prosper or to ruin the Nation. But a government by any class would be destructive of political and economic freedom.

It is the balances of power between industry and agriculture, between manufacturer and merchant, between producer and consumer, between financier and borrower, between transporter and shipper—and everywhere between management and labor—that are necessary to preserve democracy and free enterprise. Any power that grows into an ability to dictate to the rest of the people must be cut down. It must be destroyed before it grows too great to be destroyed without a civil war.

As a free people we can no more permit organized labor to dictate terms to management and to regulate management, than we could permit management to dictate terms to labor and to regulate labor organizations. That is why the lawless and ever-growing power to strike must be cut down.

The spectacle of several hundred thousand men launching an industrial war today should warn us that tomorrow several million men may deliberately paralyze the Nation's energies. When an irresponsible labor boss today can stop the fuel, transportation, telephone, and telegraph service of great cities, we should realize that tomorrow the entire Nation may be denied the necessities of life. The sight of thousands of pickets marching today around a beleagured plant should warn us that tomorrow hundreds of thousands of such willful lawbreakers will also be trampling the Constitution and Bill of Rights under their feet.

The spectacle of a labor bloc in Congress today cringing under the whips of labor lobbyists should warn us that tomorrow a majority of the Congress may be whipped into line to pass laws to establish a labor domination—and that subservient administrators and courts may be forcing the free men of America again to revolt against such a tyrannical Government, and again to fight for their liberties. It would be wiser to fight labor sluggers in the streets today than to wait to have our offices and homes invaded by official thugs tomorrow.

What is the way to stop this rising flood of legalized force and violence that, if unchecked, will sweep away our liberties? The way is just as plain to see as the highway from the Department of Justice up Constitution Avenue to the Capitol. What is needed is not a law to forbid strikes, but a law to make strikes unnecessary, a law establishing processes of justice for the settlement of economic conflicts, and a law that sternly requires all those engaged in labor disputes to exhaust all peaceful ways and means to settle them before undertaking to make war on each other.

The overwhelming number of labor disputes can and should be settled by negotiation, or with the aid of mediation, or by voluntary arbitration. If these efforts fail and the public is not to be seriously injured, then the resort to a strike or lock-out may be justifiable or at least tolerable. Perhaps it is necessary, when the public injury may be slight, to permit irreconcilable opponents to resort to a test of strength in order to preserve that sense of democratic freedom which makes men tolerant of the difficulties and losses caused by democratic methods. But the freedom to strike should not be forged into as a license to break the laws. A lawless strike is an unlawful strike which should be broken by public authority. When the public police power yields to private force, the Government becomes unworthy of respect.

There are, however, two classes of labor disputes in which peaceful efforts should not end with the failure of negotiations. These are disputes where a stoppage of production will seriously affect the public interest.

In these cases the parties to an unsettled dispute should be required to refrain from any aggressive action until an impartial Government commission has had an opportunity to investigate the controversy, to hear the evidence and arguments of all parties, and to make public recommendations for a settlement. The experience of 20 years under the Railway Labor Act has proved that this procedure will bring about a peaceful end to most stubborn and difficult labor disputes.

This is not a compulsory arbitration, because the recommendations of such a commission would not ordinarily be made enforceable.

But there is a comparatively small class of disputes wherein it may be necessary to require the parties to accept the recommendations of a Presidential commission. These are disputes where a stoppage of work will inflict intolerable injury on an entire community or the Nation. Compulsory arbitrations and enforceable decisions have been made necessary in such cases because of two recent developments.

First, the expansion of labor organizations to the point where the number of employees who can strike in a body is so great that such labor organizations now have the power to paralyze vital public services and to bring grave suffering to a multitude of wholly innocent and helpless people.

Second, with the increased power of labor organizations and the absence of any legal responsibility for the misuse of such power, we have seen, with increasing frequency, reckless and devastating attacks upon the people and their Government through strikes which had to be stopped quickly by some public official to save the public from incalculable and unbearable distress and hardship.

We have seen repeatedly that a mayor or a governor, or the President was forced to use a doubtful executive power to compel the end of such a strike. It is an evil thing for the workers, for employers, and for the general public to have such economic conflicts settled by arbitrary executive action. Yet it would be worse for all concerned to have such strikes continue. Governor Dewey in New York had to stop a costly strike of building-service employees. Governor Kelly in Michigan had to stop a strike of public utility employees. President Truman had to stop dangerous strikes by seizing the properties of oil companies and of a local transportation company in the city of Washington.

In such an intolerable situation, some outside force must be employed to settle the terms under which labor and management,

which have undertaken to render a vital service, will continue to work together.

It is an underlying principle of our democratic, constitutional government that when private controversies must be settled by public authority they shall be submitted to a judicial tribunal which, after public hearings, will issue an enforceable decision. That is the principle which should be written into our Federal labor law.

It is not worth while to take your time today discussing the details of a Federal labor law that would preserve industrial peace. You might be convinced that my program is a good one. But tomorrow you might be persuaded that some other plan would be better and that mine had serious flaws. Eventually you will look to your representatives in Congress to solve the details of this problem for you.

But you can make up your minds today as to whether new labor law is needed and what kind of a law should be written. If you understand how destructive industrial warfare is to the interests of all the workers, all the businessmen, and all the consumers, and if you understand that it is the primary duty of government to preserve peace and good order, you know already that new labor law is urgently needed in the United States.

You should also know, or be able to learn very quickly, that the only way in which government can preserve domestic peace and good order is to establish peaceful methods for the just settlement of conflicts of interest between its citizens, and to require its citizens to use those methods instead of fighting one another. If you know these few things, then it should not take much time to explain what kind of new labor law should be written promptly into the statutes of the United States.

I am not trying today to persuade you that the HBB bill should be enacted by the Congress just as written, or that every provision in it should be supported. But I do think you should be easily persuaded that such a new labor law is sorely needed. Unrestrained labor warfare is bringing untold suffering and incalculable losses to the American people. It is destroying economic security, undermining Government authority, and sowing broadcast the seeds of civil war. It is a national disgrace. It shames us before the world in the very hour of a world-wide triumph of the strength and courage of the American people.

Yet, when public-spirited men, public officials, and private citizens strive to reestablish domestic peace with justice under the law, the leaders of this vicious labor warfare spit out their venom like angry snakes. They even have the arrogance to charge the President of the United States with "abject cowardice" because he has the courage to disregard their frowning displeasure.

Upon what meat have Murray, Green, and Lewis fed that they have grown so great? They are not even elected by the workers whom they claim to represent. They are chosen by delegates to conventions who are the product of boss-ridden political labor machines.

Public officers, however nominated, must be elected by the people. But these labor politicians have no such certificate of authority. They are only national bosses picked by the local bosses of half-free, half-enslaved organizations. These so-called leaders can't even maintain a volunteer army. They have to force employers to compel the workers to enlist and pay union dues—so they will be able to make war on the public with an imposing but largely conscript army.

That is why every secret poll taken of union workers shows that a large majority of them want strikes prevented. They don't want to fight and suffer in a conscript army to maintain the power and glory of the Murrays, the Greens, and the Lewises, who misrepresent them and lead them into wars in which everyone but the labor politicians and racketeers suffer irreparable losses.

For 60 years Presidents of the United States have been recommending Federal laws that would bring about the peaceful settlement of labor disputes by negotiation, mediation, voluntary arbitration, and through the recommendations of fact-finding commissions. From the days when President Cleveland proclaimed the leaders of riotous mobs of workers to be "public enemies" there has been a growing need and a growing demand to establish the supremacy of the public interest and the public law over the private interests and private laws of labor unions.

Without calling the roll and reading the long record, I will summarize it in the words of Franklin D. Roosevelt, who did more to strengthen labor organization than all the so-called labor leaders of today, and who said: "Every President of the United States in this generation has been faced by the fact that when labor relations are strained to a breaking point there remains but one high court of conciliation—the Government of the United States."

What kind of citizens are these who are unwilling to give to this high court, unwilling to give to their Government, the power to preserve domestic peace and security, the power to defend civil rights against organized mobs, the power to destroy conspiracies that deprive masses of people of the necessities of life, the power to break up the triple alliance of labor dictators, criminal gangsters, and alien revolutionaries?

It matters not whether those who are unwilling to give their Government the power to preserve industrial peace are labor leaders who regard themselves as defenders of the common people or industrial leaders who think they are the ordained defenders of free enterprise. It matters little whether these obstructionists are well-intentioned and ignorant or evil-minded and cunning. They cry out against Government compulsions but they are themselves advocates of a rule of private force instead of a rule of reason. All those who insist on using organized force to advance their selfish interests should be recognized as public enemies in an interdependent society which cannot prosper or even survive except through the ever-closer and more willing cooperation of all its members.

Nothing proves more clearly the need for new labor law than the opposition of these public enemies. They show themselves to be the enemies of labor and the enemies of business when they try to mislead workers and businessmen against a well-tried program of industrial peace which true friends of labor and of business management are advancing in order that labor and management together may seek and gain economic justice without suffering the losses and hardships of industrial warfare which a civilized society should have outlawed long ago.

Hope for Our Disabled Millions

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. COCHRAN. Mr. Speaker, there appeared in the New York Times magazine yesterday a very interesting article by Dr. Howard A. Rusk, of St. Louis, former Chief of the Convalescent Services Division, Office of the Air Surgeon of the Army.

While in the service Dr. Rusk initiated and built up the most outstanding rehabilitation program of any Government agency. As a result of his experience, Dr. Rusk, who was one of the leaders of the medical profession prior to the war, did not return to his private practice but joined the Baruch Committee on Physical Medicine. Statistics show, according to the article, for every disabled soldier there are five disabled civilians—250,000 veterans, 1,250,000 civilians. Dr. Rusk maintains these civilians can be rehabilitated if we apply the same methods we use in restoring handicapped veterans. Knowing Dr. Rusk as I do, as well as his accomplishments, I am sure he is right.

Mr. Speaker, under the permission granted me, I include the article as part of my remarks.

It follows:

It is paradoxical that out of the destruction and suffering of war may come opportunity and hope for millions. Today public attention is focused on the young men of America who are returning from the war disabled and handicapped. They number in the thousands. Yet few Americans realize that in this country prior to the onset of World War II there were in our Nation some 23,000,000 persons handicapped to some extent by disease, accident, maladjustment, or former wars. Few know that each year there are some 350,000 individuals permanently disabled by accident alone.

We had in 1940 some six and one-half million disabled males between the ages of 15 and 64 years, men who normally would be income-producing. These six and a half million plus the number of disabled or handicapped veterans being discharged from our military hospitals will give us, when demobilization is completed, approximately 8,000,000 working-age males who are disabled to the extent of requiring physical or vocational rehabilitation or special placement aids if they are to be successfully employed. This represents 1 person in 16 in our general population and 1 in 7 in our male working population.

Much has been written about the splendid work being done in our military and veterans' hospitals. We see and hear of the spectacular advances which have been made in the fields of physical, emotional, and vocational rehabilitation. Even a cursory study, however, will show that only a small segment of our civilian handicapped are receiving these advantages.

During the first 4 years of war there were approximately 17,000 amputations in the Army, but during this same period there were 120,000 major amputations from disease and accidents in our civilian population. Eleven thousand soldiers were wounded on the beaches of Normandy during the first 10 days after D-day, yet even with curtailed traffic, automobile accidents alone accounted for more than twice that many civilian casualties in the same 10 days.

The problem of the disabled and handicapped is not a new one. War has only focused our attention on it and quickened the necessity for its solution.

The alert citizen cannot fail to recognize the economic and social implications of the failure of our country to rehabilitate this substantial portion of our population to such a point that they can be self-sustaining, contributing members of their communities. The armed forces and some outstanding community and civilian agencies, such as New York's Institute for the Crippled and Disabled, have demonstrated that the physical and emotional rehabilitation of our handicapped and disabled is possible. The institute's staff with their 25 years of outstanding experience estimate that up to 97

percent of all our handicapped can be rehabilitated to such an extent that they can be gainfully employed.

The work of the National Office of Vocational Rehabilitation, operating under the Federal Security Agency, has shown how rehabilitation pays off economically. Of the 43,997 persons undergoing vocational rehabilitation under this agency in 1944, 22 percent, or more than 10,000, had never been gainfully employed and nearly 90 percent, or nearly 40,000, were not employed at the time they started their rehabilitation. The average annual wage of the entire group prior to rehabilitation was $148. After rehabilitation, the average annual wage of the group increased to $1,768. The total earnings of the entire group rose from $6,510,556 to $77,786,696.

Prior to rehabilitation the majority of these persons relied on general public assistance not only for the disabled individual but also for his family. The annual cost of this assistance to the taxpayer was from $300 to $500 per case, but the total cost of their rehabilitation averaged only $300 per case.

The short labor market during the war gave many disabled persons the first opportunity of their lives to take a place on the production line and prove that they could, with selective placement, produce on a par with the normal worker. An example is the Ford Motor Co. River Rouge plant, where more than 11,000 handicapped civilian workers were employed.

During the war 83 percent of our Nation's industries employed handicapped workers. Those industries report that among the handicapped there was a much smaller labor turn-over, less absenteeism, fewer accidents, and equal or higher production rates. Many employers, before this vast experience with handicapped employees, had a fear of increased accident rates. The industrial accident rate of 87 of the great industrial plants in America, each having from 50 to 12,000 handicapped employees, has disproved that fallacy. Their reports show that 56 percent found the accident rate of the handicapped lower than that of the able-bodied; 42 percent found the rate the same as for the able-bodied; and only 2 percent stated it was higher.

A statement of policy of the Association of Casualty and Surety Executives, composed of 65 major insurance and surety companies, states explicitly that no higher rate for workmen's compensation insurance is charged because of employment of disabled workers.

George Barr, Chicago pharmaceutical and cosmetic manufacturer, produced more than $6,000,000 worth of materials in 1944 and a scratched finger was the most serious casualty among 130 disabled of 150 employees. These handicapped workers produced from 17 to 22 percent more per man-hour than the nonhandicapped workers of his subcontractors.

There is no secret to George Barr's success in using handicapped workers. He knows you don't need a safety campaign to sell a handicapped worker on the wisdom of protecting those physical assets he has left. Men on crutches stop, look, and listen. An amputee himself, Barr knows and makes full use of the law of adjustments that takes place in the capabilities of handicapped workers. He knows the loss of one sense leads to the sharpening of the other senses; that men with no legs develop more capable hands; that men without vision develop sensitive, nimble fingers. This is a compensatory law of nature.

Most individuals use less than 10 percent of their potential efficiencies in normal pursuits. It is only in emergencies that we call upon our tremendous reserves of physical power and ability. In many cases a worker's physical defect acts as a tremendous stimulus to overcompensation resulting in extraordinary physical ability. Adler developed a complete system of psychology on the basis of inferiority. He believed that the successful, the efficient, and the aggressive individual was one who was compensating for some inferiority. The employer of handicapped workmen is putting that psychology into purposeful and gainful application.

Foremen report that handicapped workers are frequently a steadying influence in their departments. Their jobs mean more to them than to the normal workers. They have had more difficulty in getting employment and they value the right to work.

The answer to utilization of handicapped workers lies not so much in "fitting the job to the worker" as in "fitting the worker to the job." Through this procedure the worker in reality becomes nonhandicapped as far as his particular job is concerned. It is not a matter of coddling but one of proper placement. The worker is fitted to the task and knows that a full day's work is expected of him.

When attempts are made to adapt the job to the individual worker his flexibility as a worker is decreased. This is not necessary for if sudden engineering changes occur his value to the firm is decreased disproportionately.

A survey completed in a number of Westinghouse Electric Co. plants disclosed that approximately 19 percent of the occupations could be performed satisfactorily by persons having only one leg, 17 percent by operators who must use crutches, 83 percent by men with only one eye, and 82 percent by the deaf. Although much work still needs to be done in analyzing the physical requirements of jobs and physical capacities of the worker, the United States Employment Service has developed adequate tools and techniques to meet the needs of the bulk of our handicapped population.

No degree of economic gain, however, can measure the social and moral satisfactions obtained by the successfully rehabilitated and employed handicapped worker and his family. Nor can it measure the value to society in the transformation of these individuals from dependents to productive self-reliant persons. With adequate rehabilitation a disabled person retains his self-respect and becomes self-supporting; industry saves pensions, labor saves valuable workmen; government has more taxpayers; relief rolls are reduced, and our democracy retains its economic levels.

Although it is certainly not true of industry in general, there have been some isolated cases where handicapped workers after having served an industry faithfully and efficiently during the war are now the first to be discharged. This shameful practice becomes even more ironic when we learn that some of these firms used the employment of the disabled not only as a medium of production but also as a method of favorable public relations during the war.

Many of the handicapped were able during the war to become self-supporting without adequate rehabilitation because of the shortage of manpower. Many employees adopted the attitude that any employee was better than no employee. But now that the labor market is loosening, the handicapped are finding it increasingly difficult not only to find but to hold jobs. In order to meet the competition in the job market, the disabled must be brought to the maximum point of rehabilitation.

The work of the Office of Vocational Rehabilitation and its participating State rehabilitation programs has been growing steadily since it was established under the National Civilian Vocational Rehabilitation Act of 1920. Its services were greatly expanded by amendments to the original law by Congress in 1943. Today under Public Law 113 the disabled civilian can obtain practically the same rehabilitation services as offered to the disabled veteran by the Veterans' Administration under Public Law 16 with the exception of pensions and subsidization of living expenses.

But when we consider the magnitude of the task before the Nation, the total number of disabled they have been able to rehabilitate is woefully small. The 43,000 persons rehabilitated under the Office of Vocational Rehabilitation program is by their own figures but one-twentieth of the number who need such service. These figures alone show the crying necessity for increasing the services of this agency.

The Federal and State vocational rehabilitation programs alone, however, cannot meet our rehabilitation needs. Although they have both the funds and the authority, they are handicapped themselves by the lack of training facilities to which they can refer their cases. These State vocational programs do not do the actual rehabilitation and retraining themselves but use existing public and private facilities such as schools, vocational training courses, and on-the-job training on a fee basis.

Medical, surgical, and diagnostic services are obtained by contract with groups, clinics, and private physicians. Hospital care is purchased from existing hospitals. The same is true in physical restoration, which may include any type of medical or allied services which will aid in eliminating or substantially reducing an individual's disability as an employment handicap. These include medical, surgical, and psychiatric services, physical and occupational therapy, hospitalization, dentistry, care in a convalescent or nursing home, drugs and supplies, and such prosthetic appliances as artificial limbs, braces, hearing aids, eyeglasses, and dentures.

The funds and the authority are available, but the facilities equipped for doing the actual job of rehabilitation are inadequate. Several national organizations are making efforts to stimulate public interest in rehabilitation by demonstrating to both the medical profession and the public what actually can be done by an integrated program of physical, mental, social, and vocational adjustment.

One of such groups is the Baruch Committee on Physical Medicine, which is translating the experience of the armed forces in rehabilitation into its civilian applications in order that this experience may be made available to communities planning centers. The Baruch committee members have pointed out that rehabilitation cannot be done by segments. If a man has a hearing disability, has lost a leg, or has a cardiac condition, his disability affects all phases of his life. It has a bearing on his vocational opportunities, his family and social life, his recreation, and his mental and emotional outlook. Individual disabilities cannot be treated in rehabilitation; the whole man must be treated.

Today there are a few specialized services to the handicapped doing excellent work in their limited fields. The number is so few that they can reach only a small fraction of those who need aid. Too many existing agencies, however, can treat only one segment of a patient's problem. They lack the effectiveness of a planned, integrated community center. Rather than a dozen small agencies each giving individual psychological assistance, occupational therapy, vocational training, or social service, aid to the deaf, the blind, the orthopedically handicapped, the patient with a speech defect, arrested tuberculosis, or the cardiac, there should be one large community center where all the necessary services could be integrated, thereby improving the quality and scope of service to the patient.

In many ways the rehabilitation services we now have are in the same position as the high schools of our country over a century ago. There was no national planning but merely a number of small private schools with inadequate staffs, physical plants, laboratories, libraries, and workshops. Only a small percentage of the population could

receive a high-school education and only a very small percentage could receive a good high-school education. Today our high schools with their extensive curricula, specialized departments, complete laboratories and shops and highly trained faculties can give every child in this country the type of education he deserves. The same opportunity must be brought to our handicapped. The facilities we have must be integrated and the entire program expanded.

The Baruch committee is currently engaged in outlining a plan for community rehabilitation centers that will furnish a complete service. They are blueprinting a model civilization center, outlining its mission, organization, components, physical set-up, and its relationship to the medical and allied professions, industry, labor, social and governmental agencies, and to the community as a whole. To be published in the near future, it will give communities a pattern representing the ideas and experiences of both the armed services and leading civilian institutions and organizations. The plan will be available to any interested group whether it be community, civic organization, or medical school.

Preventive medicine and curative medicine and surgery have made great advances. The third phase of medical care—rehabilitation—has been neglected. Comprehensive rehabilitation programs have been established in the armed forces. The Veterans' Administration is organizing a similar service. The disabled civilian in a democracy deserves the same opportunities.

The medical profession, Government and social agencies, insurance companies, industry and individual citizens must be made cognizant of the opportunities available in a well-planned program of rehabilitation. They must learn that with such a program many handicapped individuals can be transformed from dependents into self-respecting, self-supporting, contributing citizens. The dividends of rehabilitation are great in dollars, in social gain, and in the saving of human beings. The investment is one for the whole Nation.

The Churchill Vacation

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks, I believe that the following editorial from the Fort Wayne (Ind.) News-Sentinel is particularly timely.

I am sure that my colleagues have noted the announcement that President Truman is planning a vacation to Florida. By a strange coincidence, the former Prime Minister of England, the illustrious Winston Churchill, who was able to accomplish so much for Great Britain through his friendship with our late President, Franklin D. Roosevelt, also is sojourning in Florida, coming to the United States for a vacation instead of visiting any of the various vacation spots in the British Empire on which "the sun never sets."

The newspaper editorial asks a very pertinent question. It could be put in this manner: Could there by any chance be any connection between the visit of Mr. Churchill to sunny Florida, the announced vacation of a week or 10 days for our President on the eve of congressional consideration of the proposed $4,500,000,000 loan that the British are trying to borrow from us?

The editorial follows:

THE CHURCHILL VACATION

British statesmen of the Churchill bracket don't come to the United States just to rest, and so we may check off the story that His Majesty's ex-Prime Minister had come to these shores for a vacation as the usual diplomatic folderol.

Every time Mr. Churchill has come to America in the last few years it has cost us plenty. The reason is twofold: Mr. Churchill is one of the world's most apt salesmen; and Mr. Roosevelt had such a little bit of sales resistance, where the British were concerned.

It is doubtful whether Mr. Truman will be of any tougher fiber, when crossing swords with the brilliant coiner of such phrases as "blood, sweat, and tears," so it almost goes without saying that, in one way or another, Mr. Churchill's trip will cost us something this time, too.

What he may have in mind this time it's hard to say. Since the matter of a $4,000,000,000 gift to England is about to be considered by Congress, it may just be that the Socialists thought this a good time to send England's most famous good-will ambassador over to the American colony, to turn on his personality and let it shine hither and yon in Washington.

Or it may be that he wants to find out whether Mr. Truman has yet fully realized what went on at the recent Moscow Conference, and just how long he expects to keep knuckling down to the Russian dictator. Or, fearing eventual trouble with Russia over their clashing interests of Europe, Mr. Churchill may want to feel out Mr. Truman now, and get a commitment, as he did in his conversations with Mr. Roosevelt back in 1940.

Churchill is nothing if not a realist, and he realizes the importance of having relations in a good state of repair. He also realizes that the Socialist worm may turn in England, and his people may again look to conservatism for salvation.

In any case, he is an Englishman first and a conservative second, and anything he can do to help England he will consider his duty.

Political parties come and go, but, as Mr. Churchill himself would say, "There'll always be an England."

Billions for Britain

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. STEVENSON. Mr. Speaker, now it is billions for Britain. What can we expect next? Is this to become a habit? Must the American taxpayer continue to loan money to Britain and to other foreign countries and potentates? Must we continue to support them and their foreign policies?

Before the Congress of the United States votes to make these gifts to Great Britain and to other foreign nations—before we give four billions to Britain—let us vote a few millions to construct and to equip a few more research laboratories where scientists will be enabled to work on the cause of cancer and infantile paralysis and other degenerative diseases, and thus make it possible to aid all mankind throughout the world by finding the cure for all these dread diseases.

It already appears that the British do not like the idea of a loan. While they have gone on record in favor of taking the money, they are not at all happy about the prospects of having to pay it back some day. They have expressed themselves in Parliament as not liking to pay for the use of the money. They think 2 percent is too much interest. They think the terms of the loan are too harsh. Their leaders in the British Parliament call us "Uncle Shylock, the money lender."

They borrowed a great deal of money from us during the First World War and after, but they have not paid back the loan. In those days they also called us Uncle Shylock. According to what they called us then and what they are saying about us now, what will they be calling us if we lend them four billions and then ask them to pay it back in 50 years?

If a man borrows money from his neighbor, he can be compelled to repay through the courts in case he neglects or refuses to pay his loan when it comes due. But if foreign nations refuse to repay a loan there is no way to compel payment. And in that case if we as a nation insist on repayment of a loan made in good faith, it means strained international relations, and possibly another war.

We insist on charging interest to every GI and to every farmer and every home owner who borrows from the Government. We insist that every American make full payment of every loan, together with interest. But we make deliberate gifts to foreign nations under the guise of a so-called loan. That is not fair to the American citizen nor to the American taxpayer.

If Congress votes to make a loan of billions for Great Britain, we must make similar loans of billions for Russia, billions for China, billions for France, and billions for Wilhelmina. While we are thinking of making all these billion dollar loans it is well that we recall the admonition of one of the founders of our country, Benjamin Franklin, who said "To loan money to a friend is to lose both our friend and our money."

Regulation, Yes; Regimentation, No

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. HOFFMAN. Mr. Speaker, the true objective of government—the only justification for its existence—is the protection of the liberty of the citizen, the creation of conditions which will promote his welfare and happiness. Be-

cause individual desires are divergent and often in conflict, to promote the welfare of all, the activities and liberties of the individual must be curtailed by the Government.

The true function of government is to protect the weak from the strong. Hence, laws punishing violence; prohibiting monopolies, the unfair use of corporate and group power. It is the Government's duty to protect the honest, the credulous, against the dishonest, the cheaters. Hence, pure-food laws; laws punishing fraud, deception.

It is the Government's obligation to protect the thrifty, the industrious, against the wasters, the lazy. Hence, laws protecting property, requiring the performance of contracts freely entered into; preventing the appropriation of the earnings and savings of one individual to be used for the benefit of or spent by another.

It is the Government's duty to protect the less able, the individual with limited resources, he who depends upon his toil for his livelihood, against exploitation by able, smart, greedy, unscrupulous individuals, and combinations. Hence, antitrust laws, the Norris-LaGuardia Act, the National Labor Relations Act.

The foregoing are illustrations of needed, justifiable regulations, though some laws, inadvertently or otherwise, are one-sided and unfair, granting special privileges to some pressure groups without imposing adequate responsibility upon them, and so fail to aid in achieving the desired result.

REGIMENTATION

Regimentation is regulation run wild. Its advocates assume that the Government knows all, is infallible, can and will give to the individual, through complete control of his activities, the greatest happiness and prosperity. Advocates of regimentation proceed upon the theory that the individual, whether he believes it or not, will be happier—and, if not happier, he should be—if his wishes and desires are molded into their pattern. That, happy or not, he will be better off if he is told what to eat, wear, where to live, when and where he should work, what he should receive for his toil, how he should invest and use what he may accumulate by his thrift and industry.

Regimentation is the attempt to fit square pegs into round holes, to make inoperative man's desires, the laws of nature, of supply and demand. The impossibility of successful regimentation has been demonstrated by the failure of OPA to prevent inflation by its creation of scarcities.

That regulation, not regimentation, is the better practice has been demonstrated in this country through the more than 150 years of its existence. Whether advocates of another form of government believe it or not, prior to the war the desire of the people of other nations to live under our form of government was proof positive that here, in the shadow of our flag, under the principles of our Constitution, even though sometimes ineffectively administered, the individual was more prosperous, happier, than anywhere else. The war added proof that, in a world emergency, under our system, our production, the courage and fighting ability of our youth, were superior to that of any other nation.

THE TRAGEDY

But the tragedy of it all is that, having the best, a powerful minority group, seemingly with unlimited resources, through the press and over the air now tell us to discard our tried and efficient form of government, forsake regulation, adopt regimentation. If men could be molded and used as wood or steel is used, regimentation might succeed.

The President seems to think that two and two plus one still make four, and is demanding that wages be increased, but that prices shall not. Because individuals cannot be forced to produce at a loss, if that theory prevails, it will lessen production, increase inflation.

Today, the administration is telling steel, the motor industry, and some other producers that they must produce at a wage and price determined by the administration's fact-finding agencies. If that policy is carried out and if those ordered to produce on the named terms are unable to do so, the business of the Nation will be slowed down and, in the end, when the situation grows bad enough, when enough individuals are injuriously affected, regimentation will be thrown out the window; government will then confine itself to regulation. We will for a time have inflation and perhaps a depression, but ultimately, when we give recognition to nature's laws, to the economic laws of supply and demand, we will once more return to those conditions which gave us our prosperity in days gone by; which gave us the foundation which enabled us to be the deciding factor in the World War.

Citation and Investiture of Leo T. Crowley as Knight Commander With Star of the Order of Pius IX

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 28 (legislative day of Friday, January 18), 1946

Mr. LA FOLLETTE. Mr. President, on January 10, 1946, there occurred at St. Mary's Hospital in Madison, Wis., a very impressive ceremony in connection with the investiture of Hon. Leo T. Crowley as knight commander with star of the Order of Pius IX. I ask unanimous consent to have inserted in the RECORD the citation of Pope Pius XII to Hon. Leo T. Crowley, the address of Cardinal Stritch, and my address, delivered at the testimonial dinner which followed the ceremony, together with a list of the names of some of those who participated in the investiture.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

CITATION OF POPE PIUS XII TO HON. LEO T. CROWLEY

PIUS XII, POPE

To our beloved son, health and apostolic blessing:

Our venerable brother, the archbishop of Milwaukee, and our venerable brother, the titular archbishop of Laodicea in Phrygia, apostolic delegate in the United States of North America, in a most laudatory manner, recommend you to us for the strenuous and skillful service that you have rendered as Foreign Economic Administrator. They petition us to acknowledge publicly your outstanding deeds and honor you with the distinguished dignity of knighthood. We, desiring then, that you receive an appropriate and ample token of our esteem and benevolence toward you, have decided that you, already a knight of St. Gregory, are now deserving of greater recognition, and should be elevated to even a higher rank of honor: Wherefore, by these our letters, we choose, create, and appoint you knight commander of the Order of Pius IX, and by virtue of these letters, we pronounce you properly named and appointed among the illustrious assemblage and number of the same knights. Therefore, beloved son, we accord you the right to wear freely the special uniform and regalia, which knights of this order lawfully wear, especially to wear the pendant, distinctive of this higher rank, which, in keeping with the custom of other knights, is worn suspended from the neck on a blue silk ribbon with double red stripes on the outer extremities. Moreover, that our benign good will toward you may better be known, we likewise grant you the privilege of wearing the great silver medal, which should be affixed on the left side of the breast.

Given at Rome, at St. Peter's, under the fisherman's ring, on this 14th day of December, A. D. 1945, in the seventh year of our pontificate.

By special mandate of his holiness.

DOMINIC SPADA,
Secretary of apostolic briefs,
For the cardinal secretary of state.

To our beloved son, Leo T. Crowley, knight.

ADDRESS OF CARDINAL STRITCH, AT THE TESTIMONIAL DINNER FOR HON. LEO T. CROWLEY, AT MADISON, WIS., ON JANUARY 10, 1946

My dear friends, it is a centuries-old custom of the church to stress the individual, personal, social, and religious responsibility of the layman by bestowing special honors on some few men, who have satisfied their responsibility in an outstanding way. In giving these honors, the thought of the church is not so much to reward merit as to hold up before others the example of genuine, full Christian life. It is but natural these days that in an effort to help build a better world we should search for the causes of the dire tragedies which have befallen us. Who will deny that among these causes there is the failure of Christian men to live in all fields of action abundantly Christian lives? How often in the past have we seen men, who in their private lives were Christian, in public, social, and economic life tolerate, and by inaction approve the spread of principles and theories and practices which contradict the truths which Christianity implanted in our culture? There has been a tragic dualism in the western world in which Christian truth has been crowded into private living, and materialism given the control in public and social life. This sort of thing had to have a climax, and instead of an advance in Christian culture in the new conditions, we have witnessed so great an assault on it that for a time men feared that it would be driven back into catacombs and there would be a return to sorry conditions which the Gospel once removed from the western world. If ever there was a time when it is necessary to stress the responsibility of

the layman to live a full Christian life, that time is at hand. In a troubled world we are trying to reconstruct human society on the ruins of an awful war. Genuine democracy is the answer to the world's needs, and genuine democracy postulates the cooperation of Christian men. How can there be genuine democracy unless men recognize in public and social life the dignity of the human person and its rights in the unity of the human family?

We see two trends in contemporary society—one is the struggling of genuine democracy to expand its reaches and become more real, and the other the totalitarian system, in which there is a return to the overlord and the serf, whom we had thought forever banished from society. Authentic liberalism is identical with the struggle for the progress of democracy. At times in this struggle some men think that government is ineffective and even impotent. It is hard for many to face the changed conditions, and the tactics of those who promote new genuinely democratic advances are not always well-chosen. But the struggle is the democratic way, and we are safe if in the midst of it we refuse to borrow from the program of the totalitarians and damage democracy by overreaches of the political power of the state. In genuine democracy there is indeed the postulate for strong, respected civil authority with might to enforce its just decrees. There is also the recognition of the dignity and rights of the individual and his participation in government through intelligent virtuous civic action. It may be that at times democracy seems inefficient in meeting the complicated difficult problems of our times, but the inefficiency is only apparent. Its struggles are the condition for genuine progress, and its final achievements are its justification.

When our country adopted our charters of democracy, the benefits were not immediately achieved. Social life is ever-changing, and in millenniums of history there were not the epochal changes which have come in the years of our national history. At times we made great advances in our democratic manner of living, and at times there were retrogressions. Who would be foolish enough to say that always in our history we were happy in adopting our democratic principles to changed conditions? We must keep in mind that before the things fixed in our charters are full realities, there is much to be done in making real the freedoms which they guarantee and promise. In this progress there must be struggles, differences of opinion, variety of attitudes, under the guidance of strong, respected civil authority. Never may we hope for fuller freedoms except under law. In this development of our genuine democracy, there is the chance for authentic liberalism. It were a tragedy to yield to the thought that authentic liberalism is in any way identified with totalitarian systems, which in principle and fact are a throwback to conditions and miseries from which genuine democracy freed peoples.

As we must be true to ourselves, we must be true to peoples who look to us with hope and confidence. We are a great Nation, the greatest in the world today. What is the thing which we have to give to the world in its misery? There is only a single answer possible. We must be the champions and the protagonists of genuine democracy. Whatever differences of conditions and background there may be in other lands, the essence of democracy, with perhaps varied trimmings, is the answer to the needs of all peoples. We do not aspire to the role of the dictator of the world. We respect the rights of other nations. But our influence and our prestige must always be for democratic institutions, and we may add, not for institutions which are camouflages of democracy. The simple cardinal principle in our foreign relations must be helpfulness in giving to peoples free, democratic institutions, in which citizens with freedoms under law satisfy their responsibility in government.

Today we are paying tribute to a Christian gentleman who in all fields of endeavor has sought manfully to satisfy his Christian responsibility. A delightful friend, gifted with abundant talent, he has honored us in being honored by the Holy See. Few men have been called to serve in the important public posts which he has occupied with distinction. His vision has been wide, his liberalism authentic, his wisdom always apparent. More than all this, Mr. Crowley has been a Christian gentleman whose Christianity has been evident in his service to his country in these years of great crisis. We congratulate him today and beg God to give him years and strength to be always in the future what he has been in the past.

The address of Hon. ROBERT M. LA FOLLETTE, Jr., at the testimonial dinner was inserted in the Appendix of the CONGRESSIONAL RECORD, by Hon. JAMES M. MEAD and appears on page A201.

The investiture of Leo T. Crowley, K. S. G., as knight commander with star of the Order of Pius IX, was made by His Excellency the Most Reverend Moses E. Kiley, D. C., archbishop of Milwaukee, at solemn pontifical high mass, Thursday, January 10, 1946, at St. Mary's Hospital Chapel, Madison, Wis.

Participants in the ceremonies were:

Master of ceremonies, the Right Reverend Monsignor Roman R. Atkielski, vicar general, Archdiocese of Milwaukee.

Assistant priest, the Very Reverend D. M. Burke, O. Praem., S. T. D., J. C. D.

Deacons of honor, Rev. Edmund Goebel, Ph. D.; Very Rev. Peter A. Brooks, S. J.

Deacon of the mass, Rev. John A. Koelzer.

Subdeacon of the mass, Rev. John B. Schneider, O. P.

Book bearer, Rev. Hubert Dougherty.

Crosier bearer, Rev. Charles Hayes, O. P.

Miter bearer, Rev. J. Haestrich.

Cross bearer, William Froelich, Jr.

Candle bearers, Leo N. Crowley, Robert E. Crowley.

His Eminence Samuel Cardinal Stritch, archbishop of Chicago.

Chaplains to Cardinal Stritch, Very Rev. Hugh O'Donnell, C. S. C., Ph. D.; Rev. Peter Leo Johnson, D. D.

His Excellency the Most Reverend Aloysius J. Muench, bishop of Fargo.

His Excellency the Most Reverend Francis J. Haas, bishop of Grand Rapids.

His Excellency the Most Reverend William P. O'Connor, bishop of Superior.

His Excellency the Most Reverend Stanislaus V. Bona, bishop of Green Bay.

His Excellency the Most Reverend John F. O'Hara, C. S. C., D. D., bishop of Buffalo, N. Y.

His Excellency the Most Reverend John P. Treacy, auxiliary bishop of LaCrosse.

Rt. Rev. Msgr. Patrick A. O'Boyle, representing His Eminence Francis Cardinal Spellman, archbishop of New York.

Rt. Rev. Msgr. Howard J. Carroll, representing the National Catholic Welfare Conference.

Rt. Rev. Msgr. William Mahoney.

Rt. Rev. Msgr. William Eggers.

Rt. Rev. Msgr. Edward C. O'Reilly.

Very Rev E. K. Cantwell, C. Ss. R.

Knights of St. Gregory: Sir Frank J. Lewis, K. C. S. S.; Sir William G. Bruce; Sir Charles Kerwin; Sir J. Francis McDermott.

Fourth degree, Knights of Columbus: Albert Decker, Charles Brown, George Stein, Karl Brennan.

Page boys: John E. Crowley, John F. Doyle.

Insignia bearer: Mary Doyle.

Music of the mass: From the Octave of the Epiphany (Roman Gradual); Missa Rosa Mystica (Vito Carnevali).

The sisters choir of St. Mary's Hospital, assisted by the Norbertine novices.

Guest soloist: Miss Lucille Meusel, San Carlo Opera Co.

Director: Horton Roe, United States Navy.

The program of the banquet follows:

Presiding: Very Rev. Leo L. Rummell, O. Praem., Ph. D.

Invocation: Archbishop Kiley.

The National Anthem: Miss Lucille Meusel.

Program following dinner:

Polonaise in A-Flat, Chopin. (Miss Catherine Crowley at the piano.)

Greeting: The Honorable ROBERT M. LA FOLLETTE, Jr., United States Senate, member of Foreign Relations Committee.

Vocal selections—Miss Lucille Meusel:

The Sleigh—Kountz.

Sunday—Carew.

Una Voce Poco Fa—Rossini (from the Barber of Seville).

The Universal Church: Cardinal Stritch.

A Business Program for Farmers

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address I delivered before the twenty-seventh annual convention of the American Farm Bureau Federation at Chicago on December 18, 1945:

Farming is a business and should not be used as guinea pig to test out the social fantasies and hallucinations of some of the consumer-minded economists and utopian dreamers who, here of late, it would seem, are staying awake at night figuring out ways of putting the farmers upon a dole or subsidy program in order to give the consumers cheaper food.

The trouble with these well-intentioned fellows is that they look upon farmers as managers of eleemosynary institutions, run for the benefit of the consumers, whose deficits will be supplied from the public Treasury. While I am deeply concerned over the problem of getting the consumers more, better, and cheaper food, the solution of the problem lies, not in subsidizing the farmers, but in placing farming upon a business basis so they will be able to produce more and better food at cheaper production and marketing costs.

It is high time that we all realized that farming is an American business enterprise—the largest business enterprise in America—and in order to be successfully and economically conducted business principles and practices will have to be employed.

SUBSIDIES

Before I discuss some of the things that I think it is imperative we should do in order to place farming upon a business basis, I want to impress upon you the necessity of first clearing the way by getting rid of farm subsidies and roll-backs on farm products. This thing of the Government stepping in and subsidizing one class in order for another class to get enough to eat, thus subsidizing both classes, is a fallacious policy that will, if not checked, undermine both classes and eventually our whole economic system.

What the farmers want, and justice and fair dealings demand they have, is a fair price in the market place. The farmers, like everyone else engaged in business, want to look to the market place and not the Government for their pay.

And what the lower economic class in America wants is not a subsidized food bill but a pay envelope with enough money in it to purchase, at least, the necessities of life. This lower economic class wants to look to its pay envelope and not the Government for the money to live on.

Such a policy, as I have said, will lead to disaster.

The farmers, as well as the lower economic class, want to retain their freedom and independence. All they ask is to lead their own lives, free from every possible governmental restraint, and the opportunity to make their own living in the traditional American way. They do not want the Government putting a subsidy-curb bit in their mouths.

They want to retain their American complex of freedom and independence. If you want to change this independent-freedom-American complex into a paternalistic complex, the way, in my opinion, is to follow the subsidy highway. As for me, I want none of it. There is already in America a small class that seemingly thinks the Lord was joking when He said, "In the sweat of thy face shalt thou eat bread." This class, as I said, is now small, but if you want to see it increase, I do not know of a better way of recruiting their ranks than by adopting a subsidy policy.

When we resort to subsidies we are not only dodging the issue, we are undermining the basic principle of free government, namely, free enterprise. If we maintain our free enterprise system, the respective enterprises in America—and remember farming is the biggest enterprise in America—should be permitted to operate, not under the subsidy system, but under the profit system. American enterprises, including farming, should be self-sustaining from profits and not from subsidies.

If subsidies is the answer to our economic ills, then why should subsidies only apply to farmers? Because a certain class in America is unable to purchase sufficient clothing and other necessary goods and wares, we have not adopted the policy of forcing manufacturers and merchants to sell below the production cost and then go to the Government for the deficit. Yet, if the subsidy policy is sound, and we are logical in our thinking and consistent in our practice, this is just what we should do. Why make Government wards of the farmers by forcing them to sell below the cost of production and then look to the Government for the deficit, and have the merchant and manufacturer to operate under our free competitive profit system?

Yes, when we resort to subsidies we destroy initiative, we destroy incentive, we destroy competition, the things upon which free competitive American enterprise is built, in that those engaged in farming, in manufacturing, in producing, will, sooner or later, begin to ask themselves this question: "Well, what's the use of putting forth my best efforts, in burning up my mental and physical energy, striving to produce better and cheaper food, or better and cheaper goods, wares, and merchandise, when I have a Government subsidy to fall back on to take care of any deficit my lack of effort brings about?" Take heed of my warning: If we do those things that will bring about such thinking, we are creating conditions that will, sooner or later, supplant our democratic system.

I cannot think that any red-blooded American who has given thought to the matter thinks that subsidies is the solution to our problem. If there is a class in America that, due to their economic status, is unable to purchase the necessities of life, the solution to the problem is to improve their economic status so they will have sufficient purchasing power to go into the open market and purchase the necessities of life. Subsidies is not the answer to our problem. The answer lies in creating a greater purchasing power. This, in my opinion, can only be accomplished by bringing about, as far as possible, full employment plus a decent wage scale.

And, let me add, that the time to get rid of subsidies is now while our purchasing power is high, because subsidies are reflected back in farm prices, and when removed there will have to be a corresponding increase in farm prices or else the farmers will be ruined. There is, I believe, sufficient purchasing power at this time for the consumers to absorb the subsidies without undue hardship. If, however, we wait until our purchasing power is lower and consumers are unable to absorb the advance in food prices, then the whole subsidy load will fall back on the farmers and will bring about such an agricultural paralysis as this country has never experienced; and remember when you paralyze agriculture, you paralize the Nation. Think, for instance, what would happen to the producers of beef cattle if we removed the subsidy of $39 per thousand pounds, without a corresponding increase in beef prices, and thus threw the whole subsidy loss on the producers. Why, such a thing would wipe out the beef producers overnight. The same thing would happen to the milk producers and the producers of certain other farm products.

I do not want anything I have said with respect to subsidies to be construed as meaning that I am unmindful of the fact that there are those in America who through misfortune, or through circumstances over which they had no control, are in need of governmental assistance, local, State, and national. We do have such people and it is the function of government to see that their needs are supplied. In looking after this unfortunate group we should face the problem honestly, and not use this unfortunate class as an excuse to subsidize those who, under improved conditions, would be able to provide for themselves.

Having gotten rid of subsidies and thus recognized that farming is a business to be run upon the profit and not the subsidy system, let us now consider some of the things that are necessary in order to place farming upon a sound, efficient business basis.

1. SOIL IMPROVEMENT AND CARE

First on the list I would place soil improvement and soil care. Why? Because farmers can no more produce food abundantly and cheaply on impoverished and wornout land than can the manufacturers produce goods, wares, and merchandise abundantly and cheaply in run-down plants equipped with wornout and outmoded machinery.

Now, soil improvement and conservation are far more than farm problems; they are national problems. They are impressed with more than a public interest. They are impressed with a public duty. The very strength of this Nation depends upon the strength of our soil. As we improve the soil we strengthen our Nation, and conversely, as we deplete the soil we weaken our Nation. I make this bold statement, the strength of every Nation in the world today can be measured by the strength of the top soil of that Nation.

While, due to the vastness of our farm lands, we, as a Nation, have not reached the danger point as yet, we are beginning to run into signs along the agricultural highway we are traveling that point to danger ahead.

What do we read on some of the signs?

1. Soil erosion has affected in some degree more than 1,000,000,000 acres of land in America. This is more than one-half of the Nation's land.

2. Approximately 50,000,000 acres of once productive cropland have been already ruined for any further immediate cultivation; another 50,000,000 acres are in a condition almost as bad; and half to all the fertile top soil has been removed from another 100,000,000 acres.

3. Of the present American cropland of 415,000,000 acres, only about 342,000,000 acres can be classed as really good land. Of the 342,000,000 acres of good land, only about 62,000,000 acres are nonerodible, and the other 280,000,000 acres of good land is losing soil with every hard rain.

4. Three billion tons of top soil go down the streams and rivers every year.

5. Annual loss of soil minerals by erosion is twenty times the amount of soil minerals annually used by plant life.

6. We are annually mining out five times the soil minerals that we annually put back into the soil.

7. Erosion alone is costing the Nation approximately $3,844,000,000 annually.

8. In the short span of our existence we have whittled down our top farm-land soil from an average thickness of about 9 inches to a present average thickness of about 6 inches. This is a statement of deep significance when we realize that American civilization is resting upon such a thin foundation. Yes, when we begin to visualize that our Republic and all it stands for rests upon such a thin foundation, which, to say the least, is becoming wobbly through neglect, we begin to realize the importance of keeping the foundation in good repair.

Having realized that soil improvement and care are national problems affecting the welfare of every man, woman, and child in America, we would be remiss in our duty if we did not tackle the problem from the national point of view. We are justified in such an approach not only from the standpoint that in so doing we are insuring to the generations yet unborn an ample food supply, and thus insuring the perpetuity of our national existence, but upon the ground that we are insuring consumers, present and future, cheaper food. It is axiomatic that when we increase production we decrease production costs and make it possible to give the consumers cheaper food.

It was from such considerations that I introduced H. R. 2922 in the House and Senators BANKHEAD and HILL introduced S. 882 in the Senate. These bills are identical and provide for a 5-year national fertilizer program that would reach into every agricultural county in America.

The experimental pilot plants provided for in the bill would be run by the Government for a period of 5 years which, it is thought, would be ample time within which to develop the right kinds of fertilizer needed for our different soils, and demonstrate to the farmers of America the imperative necessity for soil improvement and care, after which period they would be turned over to farmer-cooperatives, or, in the event the farmers do not desire to organize and run the plants through cooperative effort, to private industry.

The fertilizer industry, judging from the past, does not have the urge, nor does it have the vision, to inaugurate such a program. So far it has been satisfied with furnishing the farmers fertilizers low in mineral content but high in filler content which, of course, means more profits to the industry and poorer yields to the farmers.

Soil chemistry, I believe, is in its infancy, and I am afraid if we leave the problem to the fertilizer industry that its infancy will

be extended to manhood and from manhood on into old age.

Land gets sick, just as cattle and sheep and hogs and horses get sick, yet we know a great deal more about administering to the diseases of livestock than we do about administering to the diseases of the land. In order for the good earth to produce, as God intended for it to produce, we have got to preserve the topsoil and keep it in a healthy, productive condition. We cannot continue, from year to year, to mine from the soil more mineral content than we put back, and expect our soil to remain in a healthy productive condition.

And remember, the Lord put more than nitrogen, potash, and phosphate in the soil, though there seems to be a common belief that if we put these things back into the soil, even in diluted quantities, we have completed the job of restoring the mineral content of the soil. Let me impress this thought upon you by relating the experience of one of my farmer friends.

This friend of mine, while not a soil chemist, has been giving a lot of thought to soil improvement. He owns a splendid bluegrass farm, and like all cattle farmers, is deeply interested in increasing the capacity of his grasslands. He came to the conclusion, as he expressed it, that if "he could put back into the soil the minerals the Lord originally put there," he would go a long ways toward the solution of his problem. This, to my way of thinking, was a sound conclusion. He selected a field of 40 acres that contained a fairly good blue-grass sod, the carrying capacity of which was 15 head of beef cattle. He first treated the field with TVA superphosphate, which, of course, increased the field's carrying capacity. Three years ago my friend treated a part of the field with a mixture containing, per acre, 600 pounds of 20-percent phosphate, 200 pounds of salt, 2 tons of burnt lime, 6 tons of ground lime, 20 pounds of sulfur, 20 pounds of epsom salts, 20 pounds of borax, 20 pounds of bluestone, and 1 gallon of iodine. This year the field carried, not 15 head of cattle, but 40 head of cattle, and it is thought that had the whole field been treated with the mixture it would have grazed 50 head. The grazing season on the field commenced about 2 weeks earlier than the grazing season in that section and lasted, at least, 2 weeks later, thus lengthening the grazing season for something over 1 month. The cattle put on approximately 400 pounds in weight.

Moreover, we now discover that the nutritive value of farm products depends largely upon the condition of the soil. Because, for instance, a certain truck patch produces well-developed, lucious-looking carrots is no reason to assume that the carrots have the nutritive value they are supposed to have. As a matter of fact, so far as their food value is concerned, they may be utterly worthless. Why? Simply because the soil from which they came was lacking in certain soil minerals. Remember, the soil cannot put into the products thereof that which it lacketh. Hence, it is possible for us to undermine our health, even starve to death, eating good-looking food products that came from soil depleted of the necessary soil minerals.

As I said, I am afraid we know very little about the proper treatment of our soil. And I am afraid that too many farmers of today, like the doctors of yesterday who thought that calomel, quinine, and opiates would cure all the ills to which man is heir, think that nitrogen, potash, and phosphate will cure all the diseases to which the soil is heir. I am afraid that we do not appreciate that the soil on one farm may be suffering from an entirely different disease from the disease of the soil of a neighboring farm, which, of course, means that we have got to diagnose soil diseases just as we do human diseases, and treat them accordingly.

All Americans, regardless of their trade or calling, should be deeply interested in soil improvement and care. And, if the American people will only pause and think this thing through, I know that they will not only become interested, but that they will become interested to such an extent that they will become imbued with the spirit of the crusader and will line up in solid phalanx and fight until S. 882 and H. R. 2922 are written into the statutory law of this land. Do not think that the task ahead of us is an easy one. The Fertilizer Trust is on the war path. The trust has money, and money employs talent, and from present prospects it looks like we are going to be met on the threshold of this fight with an unlimited lobby fund plus the best, shrewdest, and most influential lobbyists money can hire.

Upon the introduction of these companion bills several significant things happened:

1. The Fertilizer Trust commenced to operate under a name that has more farm appeal, namely, the American Plant-Food Council, Inc.

2. Having obtained a name with more agricultural "it" in it, the next move was to invade Congress and select one of its most outstanding Members, occupying a strategic position on the Appropriations Committee, which committee, of course, will have to pass on all appropriations for the fertilizer pilot plants, as the leader to spearhead the drive to kill the bills. This Member is now listed as the president of this great pseudo-farm organization, the American Plant-Food Council, Inc.

3. The Fertilizer Trust has started the printing presses turning out propaganda against the bills, the like of which I have not seen since the days of the holding-company legislation. Oh, this American Plant-Food Council, Inc., is a high-powered outfit that started, from the very beginning, in high gear.

Now, this is a free country, and I do not criticize my colleague for resigning from Congress in order to improve his financial position—in order to become president of this newly created, all-important farm organization, the American Plant-Food Council, Inc., which was set up for the worthy purpose of protecting the American farmer from the rash, un-American act of providing means for improving his soil—but I do question the propriety, yes, the right of a Member of Congress taking on new duties vitally affecting pending legislation before divesting himself of all responsibility incident to his high office.

Yet, to my astonishment, I find my colleague, who has served his people in the House for some twenty-odd years, during which time he has evidenced no visible interest in agriculture, overnight, as it were, rushing in to defend the American farmers from the socialization, the regimentation, and the other baneful influences and effects the passage of S. 882 and H. R. 2922 would visit upon them. Oh, I wonder where this agricultural Roderick was during the early thirties when the farmers of America were fighting for their very existence! Oh, where was this fertilizer-scented Roderick when the agricultural situation was so serious that shotguns were being used by farmers to stay sheriff sales of farm lands? Oh, where, oh where, was Roderick during the so dark days when, if we measure his capacity for leadership by the valuation the fertilizer trust has placed upon it, one clear blast on his bugle horn would have rallied the farmers around a leadership that would have led them out of the low grounds of sorrow into "a land flowing with milk and honey." I will not be so uncharitable as to even suggest that it took a long-term contract, plus a princely salary, to get this psuedo farmer Roderick to toot his horn in defense of the farmers of America.

I am, however, persuaded that the farmers of America know their friends, and that they will not rally to the seductive bugle call that today is being sounded by this recent "plant food" convert. If they do, may the good Lord have mercy upon their souls, because I am afraid their fate will be that which befell the flute-enchanted rats that followed the leadership of that charming, seductive flute player, the Pied Piper of Hamelin.

On December 6, 1945, in the city of Roanoke, before the Virginia State Horticultural Society, my colleague, as reported in the Roanoke Times of December 6, 1945, sounded this blast upon his bugle horn against S. 882 and H. R. 2922:

"Senate bill 882 and House bill 2922, companion bills pending before the respective committees of Congress, are another misguided effort to turn the American farmer over to the Federal Government and to put him under bondage by unnecessary subsidies and Federal regulation and control," he said.

"However, I do not believe the time has come or should ever come when the Government goes into the farming business, or when it should undertake to regulate or regiment every action and procedure of the farmer, even down to the point of doing his plowing, seeding, fertilizing, and harvesting for him.

"I cannot go along with the unsound philosophy that would put the American farmer sitting on the curb with a tin can in his hand asking alms of every passerby. Those who advocate such unsound principles are doing a disservice to agriculture. I think that what the farmers want is a fair, square chance in a free and competitive economy to live his life, conduct his business under circumstances from which he may reasonably expect to have a profit for his labors.

"I maintain we can have no economic solidarity in this country—no domestic tranquillity—no personal security unless we maintain and foster individual initiative and a system of free enterprise," Woodrum continued. "That means that the Government, States and Nation, should not, except under circumstances of extreme national emergency, undertake to order our lives or enter into competition with free enterprise."

I am not surprised at the line of attack. It is the same line that has been followed by the Fertilizer Trust since the bills were introduced.

"Socialization!" "Regimentation!" "Free enterprise!" When unable to answer by logic and reason, these are the bugaboos with which to frighten the American people. I have heard these arguments used since the days the cities first commenced to put in their own waterworks and electric plants. Yes, and I have heard one or the other of them used against every forward movement we have taken in this country; against TVA, against social security, against unemployment insurance, against the Securities and Exchange Act, against the Holding Company Act, against the act giving labor the right to organize and bargain collectively, against the Fair Labor Practices Act. And now they bring these same old arguments out of the closet to frighten Congress into killing bills designed to improve our soil.

Now, let me briefly answer these arguments:

As to socialization: The public has a vital interest in the soil, and it is the duty of our Government to see that our soil is conserved and improved. Why? Because it is the source from which comes the food and fiber to sustain our people. While I believe in the ownership of land in fee simple, I also believe that every grantee in a land deed be-

comes, to a certain extent, a trustee. The trust imposed by the conveyance is not to wantonly abuse the land. And this trust is so broad that it also extends to the Government. It is the duty of Government to not only see that our land is conserved, but to render every reasonable assistance in soil conservation and improvement. Why? Because the strength and perpetuity of this Government depends upon the strength and perpetuity of the Nation's topsoil.

As to free enterprise: I suppose this argument is directed at the provisions in the bill giving the farmers, at the end of the 5-year period, the right to form cooperatives to purchase the fertilizer plants from the Government. Well, if individuals can organize, for instance, a fertilizer corporation to operate a fertilizer plant that no one individual is financially strong enough to build and operate why cannot farmers, no one of which is strong enough financially, get together and organize a farm cooperative for the same purpose? If corporations are permissible under our free-enterprise system, upon what theory are cooperatives excluded?

As to regimentation: There is nothing in the bill, not a single line, that would regiment anyone. The bill is free from compulsion and regimentation.

II. EQUIPMENT

Having provided the farmers with good plants, that is, good farms, we should see that the farms are well equipped. I use the word equipped to cover not only sufficient and up-to-date farming machinery, but necessary livestock and farm buildings, including the farm home and modern conveniences. As I intimated, a farmer can no more abundantly and economically produce on good land without the necessary equipment, than can the manufacturer produce in a fine up-to-date plant that lacks modern and up-to-date machinery.

These objectives can be accomplished by—

1. Carrying forward our rural-electrification program.

2. Adopting a rural-building program comparable to the urban-housing program. Such a program, of course, would have to be worked out in a sane, sensible manner in order to see that the earning capacity of the farm justifies the improvements because if a farmer is loaned money to erect buildings that the earning capacity of the farm is not sufficient to carry, the ultimate result would be not only the loss of the improvements, but the loss of the farm.

3. Bringing our farm-credit structure down to date so it will take care of the financial needs of the farmers in purchasing livestock and farm machinery, as well as modern conveniences that will add so much to farm life.

The farm home should be made an attractive place to live. The farmer is entitled to some of the modern conveniences in order to take out of farm life, as far as possible, the drudgeries that are, at present, incident thereto.

III. PRICE

Having provided the farmers with productive, well-equipped farms, in order for them to produce abundantly and cheaply, good business demands that we inaugurate a price system that will, at least, insure them a reasonable profit over and above the cost of production and upkeep.

No matter how modern an industrial plant may be, no matter how efficiently it operates, how abundantly and cheaply it may be able to produce, unless it operates at a profit it will, sooner or later be thrown into bankruptcy. The same is true of a farm.

The inability of the farmers to regulate prices, as does industry, has been the greatest problem that has confronted the farmers of America over the years. This problem has to be solved before we will ever be able to stabilize agriculture and place it upon a sound business basis.

Of all the suggested or tried farm-price formulas the parity concept is, I am persuaded, the soundest It is sound because it is fair to all. It protects producers and consumers alike.

Now, just what is this thing that we call, for lack of a better name, parity price? How does it operate with respect to the farmers, who are the producers, and how does it operate with respect to the consumers of farm products, which latter class, of course, includes all of us? If it works to the interest of the farmers and at the same time imposes no undue hardships upon the consumers, then it works to the interest of every man, woman, and child in America, and should demand universal approval. Well it does just that thing and, in my opinion, has the approval of everyone that has thought the matter through and understands parity price. Of course, those who are suffering from the subsidy hallucination and want to see Uncle Sam operate a free-lunch counter in every home will not agree with me. They want parity income, or some other subsidized program, which they masquerade under the name of a farm plan, but which in truth and in fact simply means a dole for the farmers and cheap food for the consumers, with generous old Uncle Sam paying the bill.

Now parity is a relative term. It is a price relationship, and seeks to maintain the proper price relationship between those things the farmers sell and those things the farmers buy. Under it farm prices would constantly change in order to maintain the proper relationship between what the farmers sell and what the farmers buy. Under it, for instance, if wages go down and consequently what the farmers buy cost less, farm prices would go down correspondingly. In other words, it would give the farmer's dollar the same purchasing power as the consumer's dollar, and conversely, it would give the consumer's dollar the same purchasing power as the farmer's dollar. It would keep the industrial dollar, the labor dollar and the farm dollar on a parity—on an equality.

Now, as I have said, there can be no question about the soundness of the parity concept. The trouble comes when we attempt to put the concept into practice by establishing parity prices. When the parity concept was first adopted back in 1933 we adopted the 5-year period of 1909–14 as the period when the price relationship between the things the farmers sold and the things the farmers bought were, more or less, at a proper balance, and called this period the base period, and attempted to figure our parity prices in such a way as to maintain this balance that existed during the base period. While this period was the best period we could find, we found that it did not work out justly and equitably in all cases, and at the time, for instance, adopted another base period for tobacco in order to bring about, as far as possible, a better tobacco price relationship. However, in spite of our efforts, we found that parity prices as figured during this base period, while manifestly fair—in some cases more than fair—to certain farm products, were manifestly unfair to other products. The truth is we created some price valleys and peaks, which, in my opinion, should be leveled off. And when this is done we should include farm wages in the calculations of parity. I am afraid, however, that if we only amend the parity law by including farm wages in calculations of parity that we will augment rather than ameliorate our parity trouble. What we should do is this: We should reexamine parity and work out a formula that will, as far as humanly possible, level down the present valleys and peaks, and bring about the proper price relationship with respect to all farm products. And, may I add, that in my opinion it is humanly impossible to write with one stroke of the pen a parity law that will hold good on down through the years. We will, if we maintain even approximately correct parity prices, have to modernize the law from time to time.

Having established parity prices, the job, however, is only one-half completed. It is an idle gesture to establish parity prices unless we take the next step and make parity prices effective. This is going to be a most difficult undertaking, but unless it is worked out, setting up parity prices for the farmers means absolutely nothing. And when it is worked out it should be worked out in such a way as to give the farmers the full parity price, and not 75 percent or 90 percent of parity. We can no more put farming on a business basis, for instance, giving the farmers 90 percent of parity than we can place industry upon a sound business basis by cutting industrial prices to 90 percent of a fair selling price.

IV. MARKETING

Having given the American farmers good production plants by soil improvement, equipped the plants, and provided them with a price system that will insure, at least, the cost of production plus upkeep, the next step is to set up a marketing system that will bring about the marketing of farm products orderly, efficiently, and economically.

One of the biggest farm problems yet unsolved is the marketing problem. Over the years we have spent millions of dollars teaching the farmers how to produce. Our production efforts have, by and large, been successful. Through conservation practices, improved strains, improved methods of cultivation, and mechanized farming, we have been able to increase our production tremendously. The sad part of the picture is this, that while the average farmer knows a great deal about production he knows very little, if anything, about marketing what he produces.

As you know, a special committee on farm marketing has been set up. I am chairman of the committee. While we have done a great deal of spadework looking into this, that, and the other phase of the problem, and are now holding open hearings, we are not in position, at this time, to make concrete recommendations. We are still seeking information and guidance. We do know that the spread between the farm and table impoverishes the farmer and consumer alike, in that, while reducing farm prices, it increases consumer prices. Our present farm-marketing system may be accurately described as the system of subtraction and addition. Yes; in 99 cases out of 100 the syster employs both subtraction and addition, shooting the farmers with the subtraction barrel of the marketing shotgun and the consumers with the addition barrel. Our problem, of course, is to work out a marketing system that will bring the farmer and consumer closer together. The whole secret of a successful farm-marketing system hovers around reducing the spread between the farm and table. If this can be done, and we believe it can, it will literally save the farmers and consumers millions of dollars per year. Most industries have worked out such a system, and the time is long overdue for such a system to be worked out for the farmers and consumers. I say it advisedly, no American industry could stay in business if it had to operate under the same double-barrel marketing system the farmers have been forced to operate under over the years. In order to impress upon you the seriousness of the situation let me make this statement: Roughly speaking, for every dollar the farmer receives for a farm product the consumer pays from 2 to 3 dollars for the same product. The table that follows will show you the spread from the farmer to the consumer for the years 1913 to 1943:

Year	Cash farm income (1)	Retail value (2)	Marketing margin (3)	Government marketing taxes (−) and payments (+) (4)	Marketing bill adjusted for Government taxes and payments (5)	Farmer's share of retail value, derived from columns (1) and (2) (6)
	Billion dollars	*Billion dollars*	*Billion dollars*	*Billion dollars*	*Billion dollars*	*Percent*
1913	3.8	8.2	4.4		4.4	46
1914	3.8	8.6	4.8		4.8	44
1915	3.8	8.8	5.0		5.0	43
1916	4.6	10.4	5.8		5.8	44
1917	6.5	13.8	7.3		7.3	47
1918	7.3	14.5	7.2		7.2	50
1919	8.0	16.4	8.4		8.4	49
1920	7.7	17.7	10.0		10.0	44
1921	5.2	13.2	8.0		8.0	39
1922	5.4	13.6	8.2		8.2	40
1923	6.8	14.5	8.7		8.7	40
1924	6.1	14.9	8.8		8.8	41
1925	7.0	16.1	9.1		9.1	43
1926	7.2	17.0	9.8		9.8	42
1927	7.0	16.9	9.9		9.9	41
1928	7.3	17.0	9.7		9.7	43
1929	7.5	17.8	10.3		10.3	42
1930	6.5	16.6	10.1		10.1	39
1931	4.8	13.3	8.5		8.5	36
1932	3.5	10.9	7.4		7.4	32
1933	3.7	11.4	7.7	−0.1	7.6	32
1934	4.4	12.8	8.4	−.4	8.0	34
1935	5.3	13.4	8.1	−.3	7.8	40
1936	6.0	14.7	8.7		8.7	41
1937	6.3	14.6	8.3		8.3	43
1938	5.5	14.2	8.7		8.7	39
1939	5.5	14.3	8.8		8.8	38
1935–39 average	5.7	14.2	8.5	−.1	8.4	40
1940	5.9	14.5	8.6		8.6	41
1941	7.4	16.6	9.2		9.2	45
1942	9.5	19.6	10.1		10.1	48
1943	11.2	21.5	10.3	+.4	10.7	52

While I know that a part of this spread, probably the larger part, represents transportation and legitimate handling charges, I am persuaded that if the right kind of farm-marketing system is worked out a considerable percent of the spread can be saved, and most of the saving, provided we have a fair fram-price system, will inure to the benefit of the consumers.

While, as I stated, we are still seeking information and guidance, and are not, at this time, ready to make concrete suggestions, I am going to briefly mention two or three things in particular that I think are worthy of careful consideration.

First, we should improve our present State marketing services and coordinate the marketing services of the respective States. If the respective States would put on an educational campaign to educate the farmers in up-to-date marketing the money would be well spent. And if the State activities were coordinated so information would be quickly transmitted through the States many supposed surpluses would disappear.

The marketing-news service should be improved, so the farmers can keep up with prices, trends, and gluts in particular markets and areas. The present news service, in many instances, comes too late to be of any real value to the farmers.

Probably the greatest field in which to make real farm marketing progress is in the cooperative field. That the farmers, when they cooperate and work together, have the capacity to market their products efficiently and economically is no longer open to question. T ey have in many instances demonstrated their capacity.

Let me briefly mention some of the accomplishments of the farmers in Rockingham County, Va. I am mighty proud of the record of this Virginia county. And let me call your attention to the fact that it is the home county of G. F. Holsinger, the wide-awake and efficient president of the Virginia Farm Bureau, which has played an important part in bringing about the accomplishments which I shall mention.

The farmers of Rockingham cooperatively own and operate:

1. Mutual insurance companies that carry $60,000,000 of insurance on farm buildings and property, at a rate greatly under the old-line companies, and which, of course, saves the farmers thousands of dollars in insurance premiums.

2. Mutual telephone companies which give the farmers one of the best rural telephone services in America.

3. A farm-bureau store with assets of over $1,500,000 and no liabilities, and which did a business of $3,617,633 during the fiscal year 1943–44. This cooperative store saves the farmers thousands of dollars annually.

4. A milk-producers' association containing 1,500 members, which handles 37,000,000 pounds of milk annually, and for which it received last year $2,225,000. This association is paying from 10 to 20 percent more for milk than other buyers of milk in that section, and owns one of the most modern dairy manufacturing plants in the South.

5. Perhaps the finest poultry-dressing plant in America, which is being expanded, but which is now dressing some 12,000,000 pounds of poultry per year. Its annual business amounts to more than $5,000,000 per year.

6. A rural-electric cooperative which was established in 1938. The cooperative now has a membership of 3,735, has 1,250 miles of lines, and a generating plant with a capacity of 3,600 horsepower valued at $250,000. The entire project, lines and plant, has a valuation of $1,500,000.

7. A mutual cold-storage plant, with a capacity of 375,000 boxes. In 1944 this plant stored for growers $200,000 worth of peaches and $675,000 worth of apples, and in addition stored for the Government, 72 carloads of eggs, 202 carloads of meat, and 42 carloads of potatoes.

8. A fruit- and meat-canning cooperative for food processing and packing. This cooperative only recently installed juice-manufacturing equipment with a daily capacity of 8,000 bushels.

9. Recently the farmers organized a livestock processing plant, the cost of which will be around $250,000. It is aimed to process and supply quality meats and meat products, and plans to package and quick-freeze meats for frozen-food distributors serving the eastern United States.

Now, what does this all add up to? Hold your breath if you do not know what cooperative effort will do, because the results are truly astonishing. The cooperative efforts brought to the 3,900 farms of Rockingham an income of $31,573,950, or an average income of $8,095 per farm. This income came from the following sources:

	Amount sold	Amount brought
Broilers	12,000,000	$12,000,000
Layers	2,000,000	3,000,000
Turkeys	650,000	3,900,000
Eggs, dozens	4,740,000	1,422,000
Milk, pounds	09,192,000	3,750,000
Cattle	36,100	1,805,000
Sheep and hogs	11,450	114,500
Apples, bushels	1,000,000	1,500,000
Peaches, do	300,000	450,000
Corn, acres	27,470	1,428,440
Wheat, do	37,741	1,135,000
Hay, do	40,800	816,000
Soybeans, do	1,640	33,000
Tomatoes, do	200,000	160,000
Vegetables, do	1,200	60,000
Total		31,573,940

Believing as I do that farming is a business, honesty demands that I state in this connection, though my utterances may be regarded by most members of the cooperatives as heresy, if farmers get together and form a cooperative to further their business interests, that the cooperative so formed should be taxed just like any other business enterprise is taxed. There is no economic justification for any business enterprise, including cooperatives, that has to depend upon tax exemption or tax evasion for its existence. I am afraid if we continue to follow the policy of granting cooperatives tax exemptions that we will, sooner or later, bring the cooperative movement into public disrepute. This would, indeed, be not only a high but a ruinous price to pay, because no enterprise can long exist without public approval.

V. AGRICULTURAL CREDIT SYSTEM

Lastly I mention a credit system designed to take care of the financial needs of the farmers.

There is great need to bring about a consolidation of all Federal agricultural lending agencies. Until this is done, the farmers of America will never have a Federal agricultural credit system that is administered in an efficient and businesslike manner and enjoys the confidence and respect that it should. The American farmers are entitled to a Federal credit system that is just as efficient as the Federal Reserve System, and the system should enjoy and command the same confidence and respect in the field of agriculture that the Federal Reserve System commands and enjoys in the field of business and finance.

Some time ago I introduced H. R. 3422 for the purpose of laying the proper foundation upon which to build the right kind of an agricultural credit structure; and, unless the right kind of foundation is laid, the structure, no matter how perfect it may be, will always be in jeopardy. For this reason it is imperative that we lay the proper foundation.

After we lay the proper foundation, I hope no one will think that we have completed our undertaking. If the laying of the foundation is all that we have in mind, then, as deeply concerned as I am in seeing set up an efficient credit agency for the farmers, I would not be interested in this piece of legislation. This piece of legislation is only the first step. While it is an important step—just as important as a foundation is under any structure—it would be a foolish step for us to take unless we intend to go ahead and erect thereon a farm-credit system that will serve the needs of the farmers in an efficient and businesslike manner.

Having taken the first step, that is, laid the proper foundation by bringing all the farm-loan activities under one agency, to be known as the Agricultural Credit Agency, we should then go ahead and take up the different activities transferred to this agency, one by one,

weeding out all duplications, bringing about consolidations where practicable, and setting up economical and efficient working machinery all the way down from the agency to the farm level. I do not mean by this that we should take hasty action. Other than the Farm Security Administration, for which we need immediate basic legislation, I would like to see the policy board set up in this legislation given a chance to make a thorough study of all our lending agencies and make recommendations to Congress before we bring in further legislation.

Our present understanding, however, is to lay the proper foundation. H. R. 3422, introduced after long study and careful and painstaking consideration, has the backing and approval of some of the best brains, not only in agriculture, but in banking and finance. The American Farm Bureau, the National Grange, and the National Council of Farmer Cooperatives have been pioneers in this legislation. It is believed that it lays the proper foundation for a permanent, efficient, and serviceable agricultural credit structure that will command the respect and confidence of all.

The main provisions of the bill, which has been favorably reported by the House Committee on Agriculture, and is now known as H. R. 4873, are as follows:

AGRICULTURAL CREDIT AGENCY

It creates an independent establishment of the Federal Government, to be known as the Agricultural Credit Agency. To this Agency there would be transferred:

All functions, powers, and duties of (a) the Farm Credit Administration, and (b) the Farm Security Administration.

AGRICULTURAL CREDIT BOARD

It establishes within the Agency an Agricultural Credit Board of seven members, one of whom shall be the Secretary of Agriculture, the other six members to be appointed by the President with the advice and consent of the Senate. The Board would be a bipartisan, full-time policy Board. The members of the Board would be appointed for 12-year terms and would draw a salary of $10,000 per year. The duties of the Board are fully set out in the bill, and it is expressly provided that "the Board shall not operate in an administrative capacity."

ADMINISTRATOR

The Board is directed to appoint an Agricultural Credit Administrator, who will be held responsible for the administration of the Agricultural Credit Agency.

DEPUTY ADMINISTRATORS

With the approval of the Board, the Administrator is directed to appoint a Deputy Administrator to be in charge of each of the principal divisions of the Agency. These divisions are six in number and are as follows:

1. A division for supervising loans to farmers' cooperative associations. Under this division there would be placed: (a) The Central Bank for Cooperatives, (b) the 12 banks for cooperatives, and (c) the revolving fund authorized by the Agricultural Marketing Act.

2. A division to supervise short-term loans made by cooperative lending institutions. Under this division there would be placed: (a) the 12 production-credit corporations, and (b) the production-credit associations.

3. A division to supervise long-term farm mortgage loans. Under this division there would be placed (a) the 12 Federal land banks, (b) the national farm loan associations, (c) the Commissioner loans, and (d) the joint stock land banks (in liquidation).

4. A division for supervising and administering direct loans to farmers. Under this division there would be placed (a) the Farm Security Administration program (including rural rehabilitation loans, Bankhead-Jones tenant purchase loans, and other activities); (b) the Emergency Crop and Feed Loan Acts; and (c) the Regional Agricultural Credit Corporation of Washington, D. C.

5. A division to supervise financing and discounting activities. Under this division there would be placed (a) the 12 Federal intermediate credit banks; (b) the security issuing and corporate financing phases of operations of Federal land banks, Federal Farm Mortgage Corporation, and banks for cooperatives; and (c) any other financing and discounting matters.

6. A division to carry out functions of appraisal and examination and other services. This service would be open to the public. Under this division there would be placed (a) appraisal functions, (b) examination functions, and (c) other service functions.

This legislation attempts to bring about not only a consolidation of the agricultural lending agencies under one head, but to set up, down to the Federal level, efficient and businesslike operating machinery.

Now a few observations as to the objections that have been advanced:

1. Some think the Agency should be left in the Department of Agriculture. It is thought that no financial agency should be under a department head. I think the Congress expressed itself definitely on this point in the Wallace-Jones controversy. In this controversy the membership of the House and Senate seemed to be pretty well agreed that the original mistake was in transferring a lending agency to a Cabinet member. To place a lending agency under a Cabinet member is not good business. It simply will not work. Lending agencies should be, as far as humanly possible, removed from political considerations. President Truman realized this when, along with others, he introduced S. 3480 in the Seventy-sixth Congress. This bill, S. 3480, was introduced to provide for the establishment of the Farm Credit Administration as an independent agency of the Government.

2. Some question the wisdom of appointing a full-time policy board. In answer let me say that a part-time board, in my opinion, would be a fatal mistake. The board members will, of course, be outstanding men of affairs. If they only serve part time, they will continue to be engaged in business, and in all probability would be up to their necks in their own affairs when called to Washington. When called to Washington to a board meeting their chief concern, I am afraid, would be in getting through with the meeting so they could return home. This would result, past experience shows, in the members leaving the thinking and planning to subordinates in the Washington office. It is, in my opinion, imperative that we have a full-time board; and if the board functions as it should—if it keeps in close touch with all the lending agencies in order to see that they are properly functioning and in order to see what improvements, if any, can be brought about, it will be one of the busiest boards in Washington.

3. Some object to bringing Farm Security into the Farm Credit Agency on the ground that the Agency will be administered by hard-headed businessmen. To my mind, this is the most compelling reason for bringing in Farm Security. The chief trouble with Farm Security in the past has been the fact that business principles and practices were never employed in administering the program. In my opinion, had the Farm Security Administration been under the general supervision of a policy-making board, such as is proposed in this legislation, the board would have seen that the Administration carried out the policies laid down by the Congress and would not have permitted the setting up of a single one of the communistic crackpot projects that cost the taxpayers untold millions and that brought the Administration into such ill repute. And had such a board been in existence, and had it killed only one of these crackpot projects, it would have saved enough to pay the salaries of the board members for many years.

Now, personally, I am a great believer in the farm-security program, if rightly set up and administered in the American way and along business lines. It has a place, an important place, in our agricultural picture, and I want to see the House Committee on Agriculture, just as soon as we get this legislation through, go to work on a farm-security program that will fit into the pattern of American life and will be administered along business lines. And why should it not be administered along business lines? Simply because you are dealing with loans in which there is an element of risk, simply because in certain cases you are administering relief is no reason why business principles and practices should not be followed. Remember the Congress will determine the policies of Farm Security and the board will only see that these policies are carried out. If the board fails to see that the policies of Congress are carried out, we have our remedy. Also remember that under this legislation Farm Security will be treated just like we treat every other agricultural lending agency; that is, it will be treated as a separate division and placed under a deputy administrator. What more could be asked?

I want to say that my criticism of Farm Security does not apply to the administration of the agency under the Honorable Frank Hancock, who, as we all know, has rendered an outstanding service since being placed in charge. And the reason he has rendered an outstanding service is because he has employed business principles and practices and conducted the program in the American way.

In conclusion, let me say this: The farmers of America are entitled to a Federal lending agency that is run along business and not political lines, and serves the needs of agriculture in the same efficient and businesslike manner that the Federal Reserve System serves industry and banking. And I hope the day may come when this independent agency is housed in a separate building here in Washington, just as is the Federal Reserve System, and will also have separate district buildings. Yes; I would go a step further and erect in every agricultural county in the United States a separate building in which I would also house all county farm activities.

This five-step program will not only place farming upon a business basis but will enable the farmers to produce more abundantly and cheaply. For these reasons it is not only a farm program but a consumer program as well. Let me briefly point out how the program will enure to the benefit of the consumers.

1. Soil improvement will increase production. As production goes up production costs go down. The decrease in production costs means cheaper food to the consumer.

2. A well-equipped farm will further reduce production costs which, in turn, will further reduce consumer costs

3. Under a price formula based upon the parity concept things will be kept upon an even keel. Stability will be brought not only to the farmers but to the consumers, because as the purchasing power of the consumers go up or down, so will the price of food correspondingly go up or down.

4. The right kind of farm marketing system will bring the farmers and consumers closer together. As we reduce the spread between the farm and the table, in the same proportion we should reduce the costs of the things that go upon the table.

5. By giving the farmers the right kind of agricultural credit system we not only eliminate unreasonable interest charges, but we make it possible for farmers to obtain credit without making unreasonable sacrifices. And, too, we give the farmers a dependable

credit source. These things will, of course, further reduce production costs which, in turn, will further reduce consumer costs.

I bespeak your earnest consideration of these proposals.

Red-CIO Concoction Based on an Old Moscow Recipe

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. CRAWFORD. Mr. Speaker, it is more than a coincidence that internal strife in the United States comes at a time when the prestige of this Nation should be unquestioned. The timing of these events simultaneously with the convening of the United Nations Organization has been perfect.

The long Red arm of radicalism can be seen stretching across the Nation, casting its shadow upon the innocent participants who love their country while the incendiaries who would apply the torch to our form of government wallow in the prospects of fulfillment of their long-range plans.

The Reds are head over heels in the labor strife along with the radicals of the CIO.

The Reds are head over heels in the recent soldier demonstrations along with the CIO inciters.

The Reds are head over heels in attempts to steer our international relations along with the CIO manipulators.

Plans for the present trends were drawn on paper years ago. They were not secret but in our patriotism we said it just could not happen here. As the result we find loyal American citizens at home and heroic defenders of the Stars and Stripes overseas who are trapped in the Red network.

It has been admitted that the recent soldier demonstrations in the Pacific as well as in Europe brought about as critical a condition in military affairs as this Nation has experienced.

It is to the credit of the American soldier that common sense prevailed in this crisis.

That Reds took advantage of the homesickness of our troops and the bungled statements of the military chiefs is beyond question. There is positive proof of the leadership of American Communists in many of these overseas demonstrations. There is positive proof of an intermingling of Red and CIO.

CIO'S GOLDEN AND RED

A few days ago Members of Congress received from the CIO headquarters a copy of a cablegram addressed to Clinton S. Golden, of the National CIO Veterans' Committee, and signed by a group of soldiers headed by Sgt. Emil Mazey, as chairman. The cablegram came from Manila, scene of one of the wildest of the Communist-inspired demonstrations. Who are Clinton Golden and Emil Mazey?

Records show Golden's radical career goes back beyond his association with Brookwood Labor College at Katonah, N. Y., which has been identified in Government records as a communistic institution. He has been associated with William Z. Foster, head of the Communist Party in the United States; Sidney Hillman and others in the Garland fund which has been identified by a congressional committee as a "highly profitable source of revenue for Communist causes." Golden was active in the January 1944 CIO Political Action Committee conference in New York at which the predominance of Communists on the program has been referred to as providing a true index of the extent to which the Reds infiltrated and obtained places of leadership on Hillman's CIO committee.

MAZEY AND COMMUNISM

The name of Emil Mazey has already appeared in the records of Congress. In 1938 he was named by a witness before one of our committees as a Michigan member of the Communist Party and a member of the Proletarian Party, which was listed as an offshoot of the Communist Party. Mazey was a ringleader among the radicals in the United Auto Worker movement in Michigan in 1938, and his connection with Golden's Brookwood College dated back at least that far. Government records reveal that he attempted to secure a donation from the UAW union for Brookwood but was overruled by union members who declared dues should not be spent for such purposes. He was identified as an agitator and attempted to seize control of one of the auto workers' locals.

Mazey's cablegram, relayed to Congress by CIO's Golden, attacked what he called vested interests of the War Department and demanded that demobilization be taken away from the War Department.

The New York Mirror has identified T4g David Livingston, a leader in the demobilization demonstration in Honolulu, as the same Livingston who was a key figure in New York's Communist Party and chairman of the credentials committee of the convention of the Young Communist League in 1943. It will be recalled that for reasons of convenience the name of the Young Communist League was changed during the war to the American Youth for Democracy, whose ideals were assailed a few days ago by J. Edgar Hoover, Director of the Federal Bureau of Investigation.

GI JOE LABELS AGITATORS

The rank and file of the GI's, whose common sense has prevailed in this tense situation, are in a better position than anyone else to know what has been back of these demonstrations which have been stirred up. Their letters indicate that the radicals have used the desire in the heart of every soldier to get back here to his family as a vehicle to stir up trouble and discredit the Army.

I have received letters from Pacific soldiers as have other Members of Congress. Here is one which outlines the situation. This disabled soldier, a GI who is stationed in Hawaii, says:

I know the set-up here. The trouble is being instigated by a lot of CIO hoodlums who are low-point men. The main speaker at the Fort Shafter meet was a former CIO local president. No matter what was accomplished, the United States Army has been disgraced and dragged through the mire of hell by a bunch of young radicals who don't know the difference between a mortar and a trench knife. Some of these youngsters know of no other way to accomplish their desires, and it's no secret that the committees planning these local affairs did all of their brain-trusting at the Honolulu labor canteen.

This GI who thus wrote me is not a part of the "brass" but an ordinary soldier.

We do have the statements of the Army officers too. Lt. Gen. Charles P. Hall, in Japan, has warned that subversives will take the cue from these uprisings and their next steps will be sabotage, and his chief of staff has declared that subversive forces are deliberately at work attempting to undermine the morale of our Army. Col. Charles A. Mahoney in Yokohama declared the protest demonstration against Secretary of War Patterson was stirred up by Communists and Bolsheviks among the soldiers.

Now the Red press and the Communist elements of CIO will use what I am saying and brand it a smear against GI Joe. They are fact-twisting contortionists of the highest degree and I would not expect them to accurately present what I have to say.

As far as the natural participation in these demonstrations is concerned, General MacArthur summed it up pretty well when he said of the GI's:

> These men are good men who have performed magnificently under campaign conditions and inherently are not challenging discipline or authority.

He was not talking about the radicals identified by the soldier I quoted. He was talking about the loyal redblooded boys who went out and fought for this country and who did so because they know we have the best form of Government on the face of the earth.

The same agitators who stirred up the demonstrations operate on the same party line as the gang that is out to kick General MacArthur out of the Pacific and who misrepresent his every move just as they will misrepresent my remarks here today.

REDS IN ARMY PLANNED

The Red instigation of these uprisings should not come as a surprise to the Government. Congress was warned that the War Department was commissioning Communists and even placing them in strategic places. Earl Browder, until recently the head of the Communist movement in this country, boasted there were actually some 13,000 Communists in the armed forces of the United States last year. We had also been informed by our own Committee on Military Affairs that the Communist Daily Worker in this country had declared that—

> The party and the Young Communist League must energetically conduct work of propaganda and agitation in the Army, Navy, Marines and all our armed forces, formulating a program of economic demands and complaints * * * linking up the struggle for these immediate demands with the struggle against imperialism, and the struggle against imperialist war.

Thus things are moving along according to the blue print with the Reds in the Army and Communist leaders here at home branding the moves of both the War Department and the State Department as "imperialistic," while the CIO has become a vehicle for the accomplishment of Stalin's statement in one of his books that the unions "constitute a school of communism."

Echoes of the Sixth Communist International in 1928 are in evidence in some of the resolutions shoved through by the leaders in the demonstrations in the European theater where the document called for opening of all officer messes, clubs, and so forth, to soldiers and for a general program for placing officers and soldiers on the same basis. The International called for the Red agitators to organize the soldiers and officers and abolition of compulsory saluting.

Here in the United States only a few weeks before these demonstrations a member of the executive board of the Council of United States Veterans, Inc., which is listed by a congressional committee as "the latest form of Communist controlled veterans' organization" whose executive board and advisory board have "numerous connections with Communist front organizations" carried in his publication for November 1945 the statement that—

> Our boys have been brought up to believe they are just as good as any other Americans; that we are born equal. By joining the Army they place themselves in a position of artificial inferiority. * * * Congress should consider whether it is necessary to have that sharp dividing line between officers and enlisted men.

CIO-RED PATTERN SIMILAR

The Pacific coast Communist Daily World for January 12 and the CIO News for January 14 spread the Golden-Mazey communications across several columns of type. The Red Daily World in a typical misrepresentation referred to the "virtual abandonment of demobilization." This cannot be substantiated by any War Department directive. The CIO News referred to the "discharge Snafu."

Other Communist groups in this country were quick to ride the tide of feeling among soldier and sailor loved ones here for their quick return. In Long Island City, Dave Rosenberg, acting Queens County organizer for the Communist Party, headed up a mass meeting designed to "fight to bring our GI's home to their families and to fight the imperialist policy of the Army." The Communist Daily Worker reported that Ray A. Birch, acting chairman of the Connecticut Communist Party, addressed a demonstration at Hartford, Conn., and in Chicago demonstrators identified by the Daily Worker as trade-unionists listened to an address by George Danfield, who is listed in one of the congressional hearings as a member of a Red front organization.

Using the Red's own yardstick this all pretty well measures up to the outline contained in their Program of the Communist International, which says:

> The Communist Parties in imperialist countries, while supporting the struggle proceeding in the colonies, must carry on a campaign in their own respective countries for withdrawal of imperialist troops, conduct propaganda in the army and navy in defense of the oppressed countries fighting for their liberation, mobilize the masses to refuse to transport troops and munitions, and, in connection with this, organize strikes and other forms of mass protests, etc.

In this connection it must be recalled that while Stalin and Hitler were stalking around Europe arm-in-arm the Reds were picketing the White House with manners declaring the "Yanks are not coming" and their allies in the CIO were manipulating sit-down strikes which seriously handicapped the administration's program to aid Britain in her fight against the Nazis.

Then Hitler booted Stalin out of his bed and the Red contortionists here in this country vanished from the White House and began yelling for lend-lease aid for Russia, a second front, and more production for Britain.

Now that the war is won they revert to their old philosophy that we should withdraw to our own Atlantic and Pacific seaboards. The Reds have had their way in Germany and are anxious that we move out of there. They have not been so successful in the Pacific in dealing with General MacArthur and that is why they are repeatedly garbling what he says and what he does in a scheme to have him recalled. The Daily Worker, Red mouthpiece, recently said:

> MacArthur must go if the United States intends to have this Allied Council accomplish anything.

One of the topics of the Communist mass meeting in Long Island was the "Political implications of the United States Government intervention in China." Further evidence that this is all a part of long-range planning is revealed in the program of the American Youth for Democracy, a Red outfit against which G-man Hoover recently warned American parents. Heads of this organization revealed that it had been engaged in a Nation-wide campaign to obtain signatures to petitions and post cards sent to the White House calling for withdrawal of our troops from friendly countries.

The AYD calls for an American occupation force in Germany and Japan to be scaled down to the bare number actually needed and contends that occupation forces in the Jap-infested Philippines and in China and in other friendly countries means interference in their internal affairs. As to the problems involved, I would refer these young radicals to the full text of General Eisenhower's statement before Members of Congress a few days ago.

Russia is jockeying for the No. 1 seat in world affairs. Is she withdrawing her troops from Germany and other friendly nations reclaimed at the price of American blood?

Mutiny in the Army and a collapsed economy through industrial strife in America is her dish. The fellow travelers are back on their line—all the way from telling Congress and the State Department to get back in the shell, except for the financial hand-outs, to keeping American school children out of their schoolhouses as the Communist-directed CIO strikers have done in Flint, Mich.

A. F. OF L. WARNS OF COMMUNISTS

Mr. George Meany, of the American Federation of Labor, did a good job recently in warning the American people against Communist front organizations in this country which use devious tricks to drum up support for Soviet policies and undermine America's foreign policy, and he concluded that warning by saying:

> It must be clear to all that there can be no compromise between real trade unionism and a political party which receives its orders from Moscow.

Availability of Rice for Domestic Consumption

EXTENSION OF REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks, I wish to include herein a letter I have received from Mr. Ray A. Tate, secretary, Louisiana Wholesale Grocers' Association, Inc., Baton Rouge, La., as follows:

LOUISIANA WHOLESALE
GROCERS' ASSOCIATION, INC.,
Baton Rouge, La., January 16, 1946.

Hon. HENRY D. LARCADE, JR.,
House Office Building,
Washington, D. C.

DEAR MR. LARCADE: On November 20, 1945, we called to your attention the critical situation that was rapidly developing regarding the availability of rice for domestic consumption and requested that you take the matter up with proper authorities in Washington. You presented this problem to the Department of Agriculture which we definitely appreciate. However, Mr. C. C. Farrington, Director of the Production and Marketing Administration Grain Branch of United States Department of Agriculture in his reply on December 12, would lead you to believe that we were in error concerning the availability of rice for domestic civilian consumption.

The rice situation to date is worse than November 20, 1945, and becoming more critical daily. We had hoped this condition could have been avoided, and that was our purpose in requesting that you bring the situation to the attention of the United States Department of Agriculture at that time.

Regardless of the thinking of Mr. Farrington or any other representative of the bureaus in Washington, the rice situation in Louisiana is most critical and less than 50 percent of the normal minimum essential needs are available. If some relief, adjustment, or modification to the existing orders is not immediately given, there will be no rice available for domestic consumption in the very, very near future.

A comprehensive survey of inventories in the hands of the wholesale distributors in Louisiana of this date show that the stocks range from the majority of instances to be none to approximately 30 days' supply, with the distributor making every effort to stretch the distribution to as long a period as possible. The situation indicates that the

over-all supply available would last approximately 20 days. Bear this in mind; the suppliers and millers do not have rice available for domestic consumption to replace the wholesalers' depleted stocks.

The condition is so critical that wholesale distributors of rice whose business establishments are in the very shadows of some of the largest rice millers in the world do not have a pound of rice and cannot get any; the reason being that what rice the millers now have belongs to the Government as a part of the set-aside and cannot be touched for civilian consumption.

The stocks in the retail stores are in the same condition as those in the wholesale establishments, for at no time has the wholesale distributors had sufficient rice on hand to enable retailers to buy sufficient quantities to build up stock of any consequence. These facts are irrefutable and we challenge the Department of Agriculture or any of its representatives to disprove them. Theoretically, they may tell you the rice is here but from a practical and concrete point of view it is not. Something has got to be done, and the people of Louisiana are depending upon you to do it.

If in your own mind there is the slightest doubt or apprehension we suggest that you pick up the telephone and call any wholesale grocery jobber or rice miller and ask him directly what the conditions are.

May we repeat that there is rice in the hands of millers but this rice belongs to the Government and is not available for domestic trade

Amendment 13 to War Food Order No. 10, issued December 29, 1945, and effective January 1, 1946, which reduced the Government set-aside in three Southern States from 40 to 35 percent makes the conditions worse rather than relieving it because the amendment further provides that sales to territories can no longer be applied to the Government set-aside. Consequently, instead of improving the situation, this amendment with all of its provisions has made it more critical.

We have been advised further that while certain agencies committed to UNRRA, 3,200,000 pockets of top-grade rice for relief, the Siamese Government made available to the British Government approximately 33,000,000 pockets which is almost twice the United States total production.

Why cannot these 33,000,000 pockets be made available to the combined Food Board instead of to one particular government and release the 3,200,000 pockets allocated to UNRRA for domestic use?

We recognize the fact that our Government and its agencies have commitments and responsibilities to other countries, but we are also remindful of the fact that they should have first responsibilities and first considerations for our own domestic economy and welfare.

Therefore, to bring some modicum of relief to the critical rice situation domestically we are urgently requesting that amendment 13 to War Food Order No. 10 be modified immediately whereby the reduction of the Government set-asides of rice remain at 35 percent, or even further reduced, and then permit sales to our Territories to be applied against the set-asides, and further, let the Government set-asides of rice include other grades than the top grades of rice. Those countries needing relief can well use and should be appreciative of other grades than those of the very best.

This same letter is going to each member of the Louisiana congressional delegation and 135 wholesale grocers in Louisiana who service more than 13,000 retail and institutional outlets, who in turn, distribute food daily to Louisiana's approximately 3,000,000 consumers, respectfully ask that each of you individually and collectively give this matter your prompt attention and secure immediate relief to our critical rice situation.

With warm, personal regards, we remain,

Sincerely,

LOUISIANA WHOLESALE GROCERS' ASSOCIATION,
RAY A. TATE, *Secretary.*

Issues and Significance of the 1946 Campaign

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Hon. JOHN J. SPARKMAN, Democratic whip of the House of Representatives, presented at the annual convention of the Young Democratic Clubs of Ohio, Columbus, Ohio, January, 26, 1946:

By this time it has been made abundantly clear to the American people that President Truman and the Democratic administration have a definite program for the Nation in this "year of crucial decision."

The President first gave clear and vigorous expression to his 21-point legislative program in his message to Congress on September 6.

In his radio address to the American people on January 4 he again outlined his plan for speedy and successful reconversion, and called for action to put it into operation.

Finally, only a few days ago, he again laid the whole plan before Congress, and gave an estimate of its cost.

The President's program is one designed to realize to the fullest extent the great potentialities that this country possesses.

It is a program that envisages a strong and prosperous America on the only terms that America can be strong and prosperous—full employment and increased production, higher wage levels and increased purchasing power, broader social-security safeguards, improved public services in the fields of health and education, and greater protection for the small businessman and farmer against the ruthless assault of monopoly.

It is a program that takes full cognizance of the many stumbling blocks that lie ahead, and that charts a safe course around them.

It is a forward-looking program—one that rejects the stultifying theory that what was good enough for our fathers and grandfathers will have to be good enough for us and for our sons.

So far the criticism voiced by the Republican opposition has been threefold.

First, they say that the program is nothing but a continuation of President Roosevelt's New Deal.

To this charge we Democrats gladly plead guilty. Our program is a continuation of the Roosevelt policies—the same humanitarian and farsighted policies that lifted this country out of the depths of the great depression—the same courageous policies that enabled us to triumph over our enemies in the terrible war that has just ended.

The second charge that they level against us is that our program is communistic. The idea of full employment, says Senator Taft, that doleful Jeremiah from your own State, is taken directly out of the Soviet constitution.

By this time that argument is so threadbare it does not deserve a serious answer. When Senator Taft uses it, it is only because he hasn't any legitimate grounds on which to argue. Instead, he indulges in the childish practice of name calling.

The same charge was made 10 years ago against the Social Security Act. It was employed without variation against one after another of the New Deal measures. It was dusted off and used as a weapon of desperation in the Presidential campaign of 1936—and again in 1940—and again in 1944.

But the elephant doesn't forget—nor does he learn. Obviously the Republicans are going to inflict the same old tommyrot on the electorate in 1946 and 1948, and the American people, with their inherent good sense, will fail to be impressed.

The third argument advanced by the Republican leadership is that the Democratic Party is split.

Now, I would be the last to claim that there is unanimous agreement among the members of our party on all of President Truman's proposals. And in all frankness, I think that is just a little too much of the Republicans to ask.

Of course, if we Democrats could see our way clear to draw up a program the way the Republicans do our inner-party life might easily be one continuous love feast.

If we carefully avoided coming to grips with the major issues—as the Republicans do—all might well be peace and harmony within the fold.

If, as the Republicans do, we came out boldy and and unequivocally for the flag, the Constitution, the way of our forefathers, mother love, and the law of gravity and nothing else, then we might all find ourselves in perfect agreement.

Then, if we cautiously approached the minor issues and phrased our pronouncements on them in such careful language that even a Philadelphia lawyer could find no fault—we might indeed have a program that would arouse no dissension.

But that is not the way we Democrats do things. We realize that there are important problems facing the country, and we know that weasel words will not solve them. Instead, we face the issues squarely and offer what we believe to be an honest and workable solution.

That is what President Truman has done in laying his program before the people. I do not believe it strange that a program of such scope and vigor should arouse some opposition—even within our own ranks.

The truth of the matter is that most Democrats are in agreement about the program as a whole. Some object to this or that specific part of it. Some believe that the particular method suggested is not the best way to bring about the desired result. Again I say, this is not strange in a country as vast as this, where there are so many differences of tradition, of opinion, and even of immediate interest.

But this I also say—only the Democratic Party could set forth such a vigorous and comprehensive program. And only the Democratic Party can bring about the fulfillment of such a program—for it is only within the Democratic Party that there is substantial agreement concerning the broad aims and purposes on which that program is based.

Moreover, when the Republicans assert that we are a house divided they lose sight of the fact that they themselves are split.

There is, however, one important difference between the situations within the two parties. We should not lose sight of this difference, nor should we ever fail to point it out to the people we meet and talk to. The difference is this—in the Democratic Party the progressive, forward-looking group is in the saddle. In the Republican Party the reactionary Old Guard has complete control.

In the Republican Party there is a small minority—a very small minority—who complain of the reactionary ways of their leadership. But these malcontents wield no influence. Their complaints and their suggestions go unheeded in the party councils. Each time one of them speaks up he is rebuffed. If he persists, everything possible is done to crucify him politically.

It is the height of futility to hope that this small group will be able to invigorate the arteriosclerotic old elephant. They are nothing more than the tail of the creature. And who ever heard of a tail wagging an elephant?

What has the Republican opposition been able to offer as an alternative to the Truman program?

The answer is—nothing. Nothing but the usual set of sonorous platitudes, and a reiteration of the Harding plea for a "return to normalcy."

This political and social bankruptcy of the Republican Party has been a source of worry to the Republican leaders. Or, to put it more correctly, they are worried by the public apathy toward their party induced by this chronic state of bankruptcy.

Every once in a while, therefore, the Republican leadership comes forth with a statement to the effect that they are going to develop a program.

The last time this threat was made was early in September, when Republican leader of the House, JOE MARTIN, announced that his party would soon declare what it stood for.

Mr. MARTIN gave the impression that this time it would be the real thing. No more beating around the bush. No more double-talk. With an air of complete confidence he stated, "People won't fall asleep when they read it—everyone will be able to understand it."

Well, I won't go into the details of what happened. After 3 months of cautious word polishing, during which the advice of the few liberal Republicans was unceremoniously tossed out the window, a statement was finally presented to the Republican National Committee which met in Chicago.

I am not going to tell you what I and other Democrats thought of that statement when we saw it. Instead, let us see how it was received by the press and by many of the Republicans themselves.

The New York Herald Tribune, a Republican newspaper, said: "It is vague where it ought to be specific. It avoids vital national issues."

The New York Sun, a Republican newspaper, called it, "A statement of limited usefulness," and said that its authors were "speaking in generalities and avoiding specific issues."

The Buffalo News, a rabidly Republican newspaper, could only characterize it as "a disappointing statement."

The Washington Star, a paper which consistently takes a Republican viewpoint, called it "a masterpiece of evasion."

The Washington News, a Scripps-Howard journal that cannot by any stretch of the imagination be called a supporter of the present Administration—characterized it as "a sorry apology for a program," and said that it was nothing but "a jumble of vague promises, shabby phrases, glittering generalities, and vacant viewings with alarm."

The columnists were no kinder than the newspapers. Tom Stokes, the veteran political reporter, said, "It is a mass of generalities lacking even glitter. * * * It has no emotional lift whatever, recalling in its barebones aspects some of the cooler of Calvin Coolidge's pronouncements."

This from Lowell Mellett: "It is a truly tasteless bit of spinach * * *. It is not surprising that a number of the national committeemen in Chicago threw down their spoons when it was placed before them. They had expected something they could get their teeth into."

And this from Pete Edison: "One of the emptiest and most meaningless documents of all time."

Among the Republican politicians themselves there was scarcely more enthusiasm than in the press. Senator WAYNE C. MORSE, voicing the sentiment of the small and ineffective group of Republican congressional liberals, called the statement "a program of blind reaction and double talk."

On the other hand, Clarence Budington Kelland, Republican national committeeman from Arizona, was peeved because the statement did not come right out and swat labor. "It is a meaningless conglomeration of ambiguous words," he said.

And National Committeeman Frank O. Horton, of Wyoming, must have caused Minority Leader JOE MARTIN a twinge or two when he said, "At last we should have a statement that people will read and understand."

After that barrage of verbal tomatoes, the Republican National Committee did what a committee usually does when it finds itself in a box. It appointed a subcommittee.

This new group bears the impressive-sounding title, "Subcommittee on Development of National Policy." Their duty presumably is to develop a program that people will read and understand.

Chairman Brownell appointed seven members to this subcommittee. Since they are the ones who will be responsible for the framing of party policy during the coming pre-election period, it behooves us, as well as all Americans, to inquire into their identity and backgrounds.

One of them is Werner W. Schroeder, a Chicago lawyer and a recognized spokesman for Col. Robert R. McCormick, publisher of the isolationist and reactionary Chicago Tribune.

In 1942 Mr. Schroeder put up a strong bid for election as chairman of the Republican National Committee. He was vigorously supported by the ultra-conservative Hoover-Taft wing of the party. He was finally defeated through the determined opposition of the Willkie group. As Willkie said at the time, he did not want "to see the masthead of the Chicago Tribune imprinted on the Republican Party."

Another member of the subcommittee is G. Mason Owlett, corporation lawyer and president of the Pennsylvania Manufacturers Association.

When Mr. Owlett was elected to the Pennsylvania State Senate in 1932 he was counsel for 29 large corporations, including many powerful railroads, utility companies, banks, and insurance companies.

His record in the Pennsylvania Senate shows the most tender solicitude for the welfare of the giant corporations and bitter opposition to every measure designed to improve the lot of the common man. He fought against liberalization of workman's compensation, old age pensions, minimum wages for women, regulation of holding companies, repeal of manufacturer's tax exemptions, child labor laws, and abolition of the company sheriff system. About the only thing he seems to have been for is the sales tax.

Perhaps the best characterization of Mr. Owlett comes from Mr. Morton Witkin, Republican president of the Philadelphia Board of County Commissioners, who said, "He is a Tory, an ultraconservative, a reactionary, an opponent of labor, and solely a representative of big interests."

A third member of the subcommittee is CLARENCE J. BROWN, Congressman from Ohio.

Now, Mr. BROWN is my friend, and I have a warm regard for him personally. But if he is going to be making Republican policy during the coming year, I know what kind of policy it will be. All we need to do is look at Mr. BROWN's voting record.

Before Pearl Harbor he was an isolationist. He voted against neutrality revision, lend-lease, selective service, and practically every other measure designed to aid our future allies and prepare this Nation for the coming struggle.

On domestic issues Mr. BROWN has been consistently reactionary. He opposed and voted against work relief, postwar planning of public works, farm parity payments, rural electrification, price and manpower controls, the Federal ballot for service men and women, and the full-employment bill.

Fourth member of the subcommittee is Barak T. Mattingly, who is boss of the Republican political machine in the State of Missouri. Just what his qualifications are as a developer of national policy is a complete mystery.

The remaining three members are women whose qualifications are equally obscure. It is evident that they were installed as window dressing to catch the women's vote. They, like Mr. Mattingly, will undoubtedly go along with whatever policy is decided upon by Schroeder and Owlett and Brown.

I don't believe anything more need be said. What sort of a policy can we expect to emerge from a group such as this? Obviously, the Republican Party is still headed for nowhere. It is still the party whose eyes—and hearts—are fixed on the dead past. It is still the party that refuses to face the future or adopt the policies that the future demands.

In the coming election the issues will be the same as in 1932, 1936, 1940, and 1944.

In November 1946 the American people will have another opportunity to choose between—

Frank and wholehearted collaboration with the other nations of the world in guaranteeing permanent peace, or a policy of undercover isolationism that can only lead to another war.

Jobs for all who want them, or a return to mass unemployment.

Full production at wages that will insure a high level of purchasing power, or a crippled economy in which industry and agriculture will not find an outlet for their products.

A broader Social Security System, or continued exclusion of millions of our citizens from adequate protection against joblessness, old age, ill health, and dependency.

In addition, the people in the next election will have to choose between continued vigilance against inflation and a return to Republican "normalcy" which will mean another ruinous era of boom and bust.

The American people have chosen wisely before. I am confident that they will do so again.

Care of Disabled Veterans

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Disabled American Veterans' Department of Ohio:

Whereas under the current policy of the Veterans' Administration many wartime disabled veterans are neglected and fail to receive the service and care that should reasonably be expected under the laws enacted by Congress; and

Whereas continued publicity through the press, magazines, and by radio of the wonderful care of this particular group of veterans is not substantiated by the facts; and

Whereas the Veterans' Administration hospitals in Ohio are inadequate and overcrowded conditions exist, with upwards of 1,500 wartime disabled veterans on the hospital waiting list and only strict medical emergency cases are accepted, and out-patient treatment for service-connected veterans is administered on a basis of considering the cost over and above sound medical judgment; and

Whereas at the offices of the Veterans' Administration in Ohio alone there are upward of 40,000 claims for benefits on war-incurred disabilities, not adjudicated and that thousands in this group are seeking medical treatment for combat wounds, tropical and other conditions incurred in many parts of the world, three-fourths of these claims not having even been acknowledged, and in the meantime these veterans are not eligible to out-patient care, monetary allowances or vocational training to overcome physical handicaps; and

Whereas the impression that all wartime disabled men and women file claims at time of separation from service is entirely erroneous, there being a backlog of thousands of authorizations for physical examinations pending for many months and the load is increasing every day and the adjudication of these claims must wait; and

Whereas a directive issued by the Washington office of the Veterans' Administration directs that applications of the able-bodied veterans seeking education and other benefits have precedence and priority over the claims for disability and medical benefits of those disabled as a direct result of war service; and

Whereas the disabled American veterans, Department of Ohio, believes such directive is unfair and unwarranted, and that first things be done first for America's service disabled, that they should at least have an equal standing with the able-bodied veteran in connection with the application for benefits. Therefore be it

Resolved by the Ohio Department of the DAV that we recommend the following corrective measures:

1. That the press, magazines, all other publications and radio stations give to the people the actual facts pertaining to the treatment and service extended to veterans who have been physically handicapped as a direct result of war service.

2. Extend or enlarge existing hospital facilities or immediately engage in the building of new institutions without further delay and without continued interference from political and pressure groups; that the Veterans' Administration arrange to accept the Army hospitals known as Fletcher General at Cambridge and Crile at Cleveland immediately upon their release by the Service Department.

3. That out-patient or home medical treatment be made available for wartime disabled veterans at established Veterans' Administration clinics and by fee-basis physicians on a more practical and humane basis.

4. That administrative action be instituted to handle out-patient physical examinations more promptly, which can be accomplished by requiring salaried and full-time physicians of the Veterans' Administration to put forth a full day's work, and to supplement this service by utilizing fee-basis physicians.

5. That the worn-out excuse of insufficient personnel and insufficient office space or the defeatist attitude with regard to the administration of the laws affecting benefits for the wars' disabled be abandoned. At this time actual unemployment is prevalent throughout the country and sufficient office employees are available. This condition can and should be relieved by the slashing of civil service red tape. Adequate office space can be procured by restoring to condemnation proceedings when necessary; authority for such action already being provided for in existing laws.

6. It is the opinion of the Ohio department of the DAV that the able-bodied veterans themselves do not desire this preferential or special treatment in the processing of their applications for benefits—over the claims of those veterans who have been disabled as a direct result of war service. It is also the opinion of this department that the able-bodied veterans desire that this directive of the Washington office of the Veterans' Administration be canceled at once to that all claims may be considered at least on an equal basis.

Adopted by the executive committee of the Disabled American Veterans, Department of Ohio, 111 Wyandotte Building, Columbus, Ohio, January 24, 1946.

D. M. BROWN.
Commander, Department of Ohio, DAV.

Patriotic Groups Demand Congress Outlaw Communist Party and Retain A-Bomb Secrets

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Don Markel from the New York Journal-American of January 26, 1946:

ONE HUNDRED PATRIOTIC GROUPS DEMAND CONGRESS OUTLAW COMMUNIST PARTY AND RETAIN A-BOMB SECRETS

(By Dan Markel)

WASHINGTON, January 26.—The American coalition of 100 patriotic societies today called on Congress to deprive the Communist Party of all legal status in the United States and to rescind the civil rights of any citizen acting as agent of a foreign political party or power.

In other resolutions adopted at its annual convention here the patriotic coalition:

Endorsed Senator HARRY BYRD'S bill to hold labor unions responsible for performance of contracts, accountable for union funds, and liable for civil damages.

Opposed the extension of American gifts, loans, or credits to any foreign government, or the sharing of American's atom-bomb secrets with any alien power.

Demanded retention of strategic-island bases, maintenance of a strong Navy and large merchant marine, and acquisition of adequate stock piles of strategic metals.

BACKS LEGION PROGRAM

Pledged full backing to the American Legion program for universal military training.

Praised J. Edgar Hoover's achievements as Director of Federal Bureau of Investigation, urged full appropriations for the House Committee on Un-American Activities, and denounced administration efforts to centralize and control dissemination of information.

Warmly commended Gen. Douglas MacArthur "for the fair, careful, judicial, but firm manner in which he is performing his present difficult mission as a culmination of well-planned and executed military successes."

Called for repeal of the Reciprocal Trade Agreements Act, protection of America's economic system from foreign investment practices, and withdrawal from the International Bank and International Monetary Fund set up under the Bretton Woods Agreement.

Urged suspension of all immigration to the United States except that of wives and minor children of American citizens.

Denounced the expansion of parasitical and paternalistic bureaucracy, including attempts to establish socialized medicine and to intervene in State educational programs.

"COMMUNISM ENTHRONED"

"We have destroyed nazism and fascism and enthroned communism in Europe," John B. Trevor, of New York City, president of the American Coalition, declared in his report to the convention today.

"The Russian Soviet regime now exercises a stranglehold on eastern Europe, Czechoslovakia, Hungary, Yugoslavia, Rumania, and Bulgaria, not to mention the absorption of vast areas of Poland. As for Lithuania, Latvia and Estonia, their obliteration as independent states may be viewed as an accomplished fact.

"Looking at the situation objectively, it seems to me that since Admiral Standley was removed from office as our Ambassador to Moscow, our abasement before the Soviet Government has been complete."

ENGLAND GOES MARXIST

"In western Europe the highly organized Communist minority in France has brought about the downfall of General de Gaulle," he continued. "England, which we fought to save from domination by a totalitarian Nazi regime in Germany, has succumbed to totalitarian Marxism by the action of a majority of her own people."

Characterizing the United Nations Charter as a grotesque parody of the Holy Alliance and the United Nations Organization a farce, Trevor cited that Russia through her veto powers can block any attempt to check Soviet aggression.

"Our position in central Europe is thoroughly unsound," Trevor warned in urging that American troops be withdrawn from the chaotic continent.

"Our lines of communication through France, by reason of the character of its government, are not safe," he amplified.

"Our lines of communication to the port of Antwerp is dependent upon the grace of France, Belgium, and Great Britain. We are cordially disliked in France, barely tolerated in Belgium, and hated in Britain."

Housing Shortage—A Proposed Solution of the Problem

EXTENSION OF REMARKS
OF
HON. BENJAMIN J. RABIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. RABIN. Mr. Speaker, the housing shortage is most serious and is one of the postwar problems to which we should give our first attention. Under leave given me to extend my remarks, I include two radio addresses on that subject made over the Columbia network on January 19, 1946—one by Franklin D. Roosevelt, Jr., chairman on housing of the American Veterans Committee, and the second by myself:

Mr. ROOSEVELT. Good evening, ladies and gentlemen, this evening I would like briefly

to review the most serious problem now facing the veteran—in fact, a problem so serious that all Americans must take an active interest and a part in its immediate solution. This problem is the housing shortage which has developed in the last 15 years all over America.

The National Housing Agency recently reported that at the present rate of construction of new homes, there will be 3,000,000 homeless American families at the end of 1946. And in 10 years, at the present rate of building, 8,000,000 American families will be homeless.

The reasons for this colossal shortage are simple. During the depression years almost no low-cost homes were built and the small amount of construction that did go on was to meet the demand of the higher income groups only. And then came the war and all building material was allocated for the construction of our great war plants and emergency housing needed to shelter the workers in these new plants.

For the last several years, the experts in the housing field have recognized that this crisis was bound to come but, except for a few public-spirited citizens and the poor people who could not find a place in which to live, the average citizen considered adequate housing a boring subject. Even before the end of the war, almost every community was beginning to feel the shortage of housing. The return of the veteran of this war to civilian life has, therefore, only exaggerated an already existing crisis. But the veterans' crying need for a decent home has at last dramatized this great national problem and made Americans from top to bottom housing conscious.

The American Veterans Committee has led the fight for a quick and effective solution to this problem and, as the chairman of its housing committee, I have left no stone unturned in our efforts to force our public officials to act and act fast. First, we have urged our cities to purchase from the Federal Government all available temporary demountable housing to tide us over until a long-range permanent-housing program for the Nation could go into effect.

Here, in New York, Mayor William O'Dwyer has earned the thanks and the cheers of every veteran by his rapid and effective efforts temporarily to solve the problem. Mayor O'Dwyer took office on the 1st of January and in the first 2 weeks had ordered from the Federal Government 7,000 temporary housing units and more than 1,300 quonset huts. This is the kind of swift red-tape-cutting action all Americans applaud in their elected officials.

However, this is only a step in the right direction and a temporary one at that. We must start today to solve the problem of tomorrow so that 10 years from now 8,000,000 Americans will not be homeless.

The American Veterans Committee has favored and worked for the passage of any and all legislation which would get a long-range, low-cost national housing program under way. And we feel that, until Congressman RABIN came forward with his plan, all the other proposed legislation were only half-way measures, a drop in the bucket, a step in the right direction.

When I first read Mr. RABIN's bill a few days after he submitted it to the Congress, I said, 'Why hasn't somebody else thought of this sooner?" It is the first plan which just doesn't nibble at the edges but goes after the entire problem, eliminates all the present obstacles which are holding up construction by private enterprise, and handles a national problem on a national basis. We have had letters from labor groups, from business groups, and civic organizations—all not only endorsing the plan but also pointing out that it is the first simple solution which tackles the entire problem. During the war our Government built war plants to save our Nation. Congressman RABIN proposes that the same methods be used now to house our people and our veterans in peace.

President Truman, in his address to the Nation on January 3, called the housing crisis an emergency situation which requires an emergency solution. I believe that the Rabin plan, which is based on the President's emergency powers, is the solution.

I know many veterans and civilians who will not agree that the war is over until they have found a decent place in which to live—a decent place in which to raise their families—the Americans of tomorrow.

Congressman RABIN has been good enough to come up from Washington tonight in order specifically to tell you about his plan—about the legislation which he has proposed—the legislation which I know will quickly and efficiently solve the housing crisis facing our country, and solve it now.

Ladies and gentlemen, United States Representative BENJAMIN J. RABIN, of New York.

Mr. RABIN. Thank you, Mr. Roosevelt. At the outset let me take this opportunity to congratulate you and the American Veterans Committee for the splendid work which you are doing to awaken the American people to the seriousness of the present housing situation. You are rendering a service not only to the veterans whom you represent and whose welfare should be the cause of concern to all of us, but also to the thousands and tens of thousands of our citizens, including returning war workers, who are seeking a place in which to live.

I welcome this opportunity to discuss the bill which I presented to the Congress. I feel that it deals with the housing shortage in a most expeditious and effective manner.

It would serve no useful purpose for me to discuss here the causes for the delays in building. They may or may not be justified—that is beside the point. The fact is, there is no real construction in progress now. And we dare not delay any longer. It is amazing how helpless we seem to be in our approach to this problem.

When the emergency of war came upon us the Nation responded with a determination and with a virility that astounded the world. We met that emergency. We needed ships, planes, tanks, and guns. We needed factories in which to build them. We built those factories. We produced the necessary war materials, and without delay. Why cannot we meet this housing situation with the same determination, with the same spirit, and with the same energy with which we met the great emergency of war?

If we were at war today, and if a war could be won merely by building houses, how long do you think it would take us to build houses from coast to coast? We would not be talking about a housing shortage—we would be building our way out of it.

My approach to the problem is just as simple as that. This great emergency arises out of the war and my bill provides for the use of the great war powers of Government to meet that emergency. It gives the President full power to act without any if's, and's, but's, or restraining conditions attached.

Let me summarize briefly the main features of the bill.

It directs and authorizes the President of the United States, through such agencies as he may designate:

First, to commence the construction of housing facilities in any part of this country where necessary and essential for the public welfare;

Second, to requisition any material for the purpose of such construction;

Third, to condemn such sites and acquire such land as may be necessary for that program;

Fourth, to let out contracts to private industry on any basis the President may deem most expeditious; and

Lastly, upon the completion of any structure, to sell it to private ownership for the best price obtainable, reserving the right to manage until a sale is effectuated.

In short, this measure provides for immediate construction. It provides for all types of housing—low-cost housing, medium-cost housing, or even high-priced housing, depending upon the needs of any particular locality. It provides for either temporary or permanent housing. It bypasses all of the controversies indulged in by the conflicting schools of thought on housing. It cuts red tape. It makes time of the essence and it seeks to avoid the loss of this spring's building season which we certainly will lose unless we begin building at once.

I know there are many who object to Government intervention in a field that they deem reserved for private enterprise. The program I propose, however, will not interfere with private enterprise. The buildings will be built by private industry and the Government will sell those buildings to private management after they have been constructed. Rather than interfere with private enterprise, it will assist it. In effect, we are merely lending to private enterprise the great war powers of Government to enable it to thrust asid the obstacles that now stand in the way of immediate large-scale construction.

This is not a spending program. It is in the nature of an investment with every prospect that we will have our money repaid in full. Besides, we are investing in the security of our Nation. We are investing in the welfare of our returning veterans. We are investing in the safety, health, and comfort of the American people. We are investing to avert a catastrophe.

It is the solemn obligation of our Government to act vigorously to relieve this acute housing situation. I agree with you, Mr. Roosevelt; the war is not over until we meet that obligation.

The Jet Plane Arrives

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of January 28, 1946, entitled "The Jet Plane Arrives":

THE JET PLANE ARRIVES

An Army Lockheed P-80 jet-propelled plane has crossed the continent from California to New York in 4 hours and 13 minutes. If it had been flying in the opposite direction, it would have followed the sun to reach its destination within approximately an hour of its starting time.

We are moving with tremendous impetus into a world of almost incredible speeds. The average rate of this Army plane was 584 miles an hour and that of its two companion planes not much less. But at times it was racing through the atmosphere at 660 miles an hour. Even so, the plane was never extended to its full power. Not so long ago it was predicted that such speeds would prove impossible for human beings because of the crushing pressure of the air itself. Yet Col. W. H. Councill, the pilot, reports a comfortable flight too brief to tire him. "In a couple of years," he said, "flights like this will be an everyday affair."

Colonel Councill was not merely flying from coast to coast or from city to city. He was flying from the past into the future. The fuel that carried him was the same that the farmer uses in a kerosene lantern to light his barn. But in the jet plane it will light vistas scarcely dreamed of. These projectile-like fliers are aptly called shooting stars. They arch the heavens like meteors. But they are already obsolete on the drawing boards. There may be a limit to the speed of flight, but it has not yet been reached in the stratosphere, where the air is too thin to breathe and men must depend on oxygen. The jet plane may in time relegate the propeller plane to our museums. It may, in turn, be succeeded by the rocket for human travel, though in itself it is a kind of rocket. We don't know. But we suspect that it will profoundly influence life and thought on this planet.

Making Ourselves Poor

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal-American of January 26, 1946:

MAKING OURSELVES POOR

As a part of the New Deal's internationalism, the little that remains of our protective tariff system is to be bartered away this year. The action will be taken under the so-called Reciprocal Trade Agreements Act.

It was under this act that former Secretary of State Hull, a free trader, adopted a policy of opening the home market to foreign competition several years ago.

The law at that time permitted the Government to reduce tariffs 50 percent by a treaty with a foreign country.

The law also provided that our tariff reductions agreed upon with one country should then be generalized—that is, be extended to all other countries under the most-favored-nations doctrine without an equivalent return from each.

The resultant treaties were thus not reciprocal agreements at all but tariff reductions made by the State Department without reference to Congress.

The second phase came about when former President Roosevelt reported to Congress that the tariff-reduction powers had all been traded away, and obtained an amendment to the Trade Agreements Act by which rates once reduced 50 percent could be cut another 50 percent, or 75 percent altogether.

This is the form of the law under which the New Deal is now proceeding.

The old law was beginning to have adverse effects upon our industries long before the Second World War.

Favored by depreciated currencies and low wage scales, foreign countries could more than undersell our protected industries in the home market in the early years of the New Deal.

Raw cotton, electric lamps, footwear, packed foods, metal products—these were only a few of the items in which imports increased 100 to 500 percent; and, of course, every import of competitive merchandise meant less work available for unemployed American workers.

The reciprocal trade agreements entered into under these conditions threatened to have the effect of piling bankruptcy upon poverty.

The outbreak of the Second World War, abolishing all international trade, postponed the consequences of our purblind policy.

Now the need for postwar settlements gives our Government the opportunity to reverse an evil and ruinous course—and the Government is throwing the opportunity away.

The State Department has invited 15 nations to a preliminary conference on international trade which is to be held in Europe, far from our shores.

All of these countries, except Soviet Russia, have accepted.

According to the New York Times:

"The preliminary conference * * * will * * * provide the occasion for negotiation of the initial reciprocal trade agreements under enlarged authority to reduce tariffs."

Quite evidently, we are to play another game of American give-away.

And it is going to be a wholesale affair.

The New York Times explains:

"Ordinarily the Trade Act hearings * * * would involve commodities in the trade with 1 country, but this time the goods in trade between all 14 countries and the United States will be considered simultaneously."

Furthermore what the administration obviously intends is to flood the home market with foreign goods.

Again quoting the New York Times:

"The new formula for speeding tariff reductions was seen as part of the administration's program to promote the highest level of foreign trade and to permit imports in quantities commensurate with the country's role as a great creditor country."

This country has nothing to gain and everything to lose by such a policy.

Supposedly we are "lending" billions of dollars abroad so that the borrowers may buy billions of dollars of our exports with our own money.

If the foreign loans are not repaid, we will be merely giving our goods away.

The New Dealers hold that the loans can be repaid, but only with foreign goods.

This idea runs contrary to our whole economic experience.

This country does not live by foreign trade.

Our imports depend not on our exports but on our domestic prosperity and purchasing power at home.

And we have never exported more than 6 percent of our production.

The other 94 percent is consumed in our own market and makes jobs for our 40,000,000 workers.

If, however, we are to import billions of dollars worth of foreign goods, what will our producers do for an adequate market?

Do we want to pursue a policy of exporting prosperity and importing unemployment?

Let's Settle General Motors Strike, But Not by Hunger

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to include a letter by Senator WAYNE MORSE, of Oregon, appearing in the Washington Post, January 26.

I, too, subscribe to the slogan of the committee to aid the families of the General Motors strike: "Let us settle the General Motors strike, but not by hunger."

LETTER ON GM STRIKE

SHOULD HUNGER DICTATE OUTCOME?

In an industrial dispute as long lasting and as widespread as the current General Motors strike, unfortunately public attention becomes so focused upon the economic issues involved that frequently an even more important issue becomes overshadowed and its significance dwarfed.

I refer to the human side, to the plight of the families of 200,000 General Motors workers, a total of 1,000,000 men, women, and children, who have not received a GM pay check since November 21, 1945, when the strike began.

For the average American family 10 weeks without any income is a heavy strain. Food must still be purchased, rent must be paid, medical care is needed. These are daily necessities which cannot wait.

Those who believe, as I do, in the perpetuation of an economy based on private enterprise must not permit economic warfare in America to reach a state where the issues are finally determined by the hunger and deprivation of women and children. Such settlements are never lasting settlements and the use of such weapons will boomerang in the long run against our national security. The bitterness which a man feels, seeing his wife and children suffering, is hardly calculated to make him a good citizen in the years to come.

There are thousands of desperate cases among General Motors strikers' families which require immediate attention. In many areas, families are existing on diets of soup and little else. Influenza and pneumonia are increasing. Many homes are without fuel. Children are in need of milk, shoes, clothing.

How bad the situation is can be seen from the first three cases which were given assistance by the Michigan Citizens Committee to Aid Families of General Motors Strikers:

.. striker, his savings depleted by several lay-offs following VE-day and the illness of all his seven children, was granted funds to meet payment on his home from which he was facing eviction.

A widow's appeal for new shoes for her three children, who didn't have a wearable pair between them was granted.

Hospitalization and medical care were provided for a striking former serviceman's wife who was expecting a baby. The hospital had demanded that the bill be paid before admitting the patient.

Despite this, one hears many questions being raised. What about the heavy savings these workers must have piled up during the war? Why don't they apply for unemployment compensation? What about the unions involved—don't they have huge reserves to meet just such an emergency? And then, there is another question, usually asked in an indignant tone, how will our servicemen feel returning home to a land where reconversion is delayed while workers go out on strike?

In answer to these, the following facts may be enlightening.

At the time the GM strike began, it was estimated that the savings of the average striker amounted to a total of $200 in cash and war bonds. Families cannot spend average savings; many families had less than the average and some had almost none. These are the ones that need help. Out of

200,000 strikers, 40,000 families have already exhausted their cash funds and war bonds. Thousands more are exhausting their savings each week.

Unemployment compensation is denied to strikers in 43 of the 48 States. Of the 5 States which grant unemployment compensation to strikers, only 2 contain GM plants. In both these States, New York and Pennsylvania, strikers first qualify for compensation after 7 weeks of unemployment.

Public relief has proven starkly inadequate. In the entire country only 8,500 strikers have been certified for, and are receiving, public relief. In many cities—Baltimore is an example—relief rolls are closed to families of strikers. In others, residence requirements and like technicalities prevent families from receiving relief through local agencies.

On the question of the union's strike relief fund, the entire resources of the international and all the struck locals combined is hardly equal to the loss in wages which the strikers suffer every 2 days. Many locals, with little at the start, have nothing left today

As to how the GI returning home reacts, I do not pretend to speak for the serviceman. But I do know that approximately 28,000 of the GM strikers are World War II veterans. And I know, too, that many of these men, who, just a short time ago, were welcomed home as beribboned heroes for whom nobody could do too much, are now stoically accepting the laments and brickbats hurled their way as they march on GM picket lines.

How many more weeks the strike will last is unknown. Each day that it does thousands of families feel its effects. Even when the strike is settled it will be fully 3 weeks before the average worker receives his first pay check. This allows 1 week for preparing the plants for operation and 2 weeks before the first semimonthly pay check is issued.

I see no difference in helping the family of a striker and helping people who suffer privation as a result of flood, fire, or other catastrophe. I do not argue for one side or the other in this strike, but no one can challenge the sincerity of the strikers who accepted the recommendation of President Truman's fact-finding board and would be at work today if the company had done likewise. This fact-finding method of settling disputes can succeed only through public support of those who will accept the compromise solution which the fact finders propose.

I am sure that it is generally known that I believe that the General Motors strike and the other major strikes now spreading creeping paralysis over the economy of this country should be settled by voluntary arbitration. I understand the workers are ready to arbitrate. I am convinced that lasting justice in settling these disputes cannot be reached by use of the economic weapon of hunger and deprivation.

There is now in operation a national committee to aid the families of General Motors strikers with a Washington, D. C., branch in room 718, Evans Building, 1420 New York Avenue NW. This organization is dedicated to the sole purpose of raising funds through public solicitation to provide relief to needy General Motors families through recognized relief organizations. It numbers among its sponsors American citizens from every walk of life, individuals such as Mrs. Eleanor Roosevelt, Archbishop Lucey, and Leon Henderson. I am proud to be among the sponsors of this committee, which has as its humanitarian slogan, "Let's settle the General Motors strike—but not by hunger."

WAYNE MORSE,
Senator from Oregon.

WASHINGTON, *January 24*

Bill Trinke, Outstanding Commander, the American Legion, Department of Wisconsin

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, the Department of Wisconsin, the American Legion, has as its commander William Trinke, of Lake Geneva. In the brief time that he has been commander the people in Wisconsin recognize his outstanding leadership. He is not sparing himself in his effort to tell the American Legion program to all of the people in that State and it is already evident that his year will top all records of the Legion to date in membership and program achievement.

Mr. Speaker, Bill Trinke is not only an outstanding Legion commander but he is the kind of man who has helped to make the small city in these United States the real backbone for our way of life. His gospel is always that of Americanism and that means a willingness to work for those principles in his contacts with people in his own community. His friends and neighbors respect him for what he is—an honest, hard-working business and professional man.

My attention, Mr. Speaker, has been attracted to a most valuable and interesting editorial that appeared in his home-town paper, the Lake Geneva Regional News, of Thursday, January 24, 1946, which tells a story about Bill Trinke better than I can relate it. Under permission granted, same is included as part of my remarks. I am glad that Bill Trinke is a constituent of mine.

BILL'S DOING A JOB—AND HOW!

The American Legion Department of Wisconsin's annual midwinter conference just closed testifies in double measure to the success of Bill Trinke's State commandership administration. Not only was it one of the most colorful presentations ever recorded, but likewise, the definite and clear cut position the Legion adopted demanding Congress to immediately enact legislation equitable to both labor and management and compel them to respond in the public interest strikes us as one of the most forceful steps the veterans' organization has ever taken. Both reflect upon the influence Bill has contributed to the State Department.

Ever since the local Legionnaire stepped up from the ranks to take over the reins of the commander post and began his strenuous journeys to the farthermost points of the State to make personal appearances and speak to individual post memberships, reports have come back to Lake Geneva. Dozens of requests, from veterans groups and civic clubs alike, have asked for return appearances. All of them have given absolute proof of an appreciation of the efforts he is making to accomplish the things that he has set himself to do. His speaking engagements are setting up some kind of a record for the office he holds.

When Bill visits a Wisconsin community, the folks there learn something of Lake Geneva. And from the reports mentioned above that we've received—coming from Lions, Legionnaires, and all the way to press association managers, we conclude that Trinke is doing more to acquaint the folks throughout Wisconsin with Lake Geneva than the local chamber of commerce has accomplished in a dozen years past.

Knowing Bill as a fellow townsman, we are convinced that the American Legion of Wisconsin will continue to fearlessly lead public opinion to demand of the national administration the fulfillment of its obligations of providing jobs, homes, and opportunities to those 12,000,000 veterans of World War II. Under such leadership, the group deserves the avalanche of World War II memberships it is attracting today. We trust that such leadership will continue to direct the Wisconsin department in the years to come.

Railroad Reorganizations

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 28, 1946

Mr. REED of Illinois. Mr. Speaker, I desire to call to your attention a splendid review of pending legislation relating to railroad reorganizations.

This review was published in the Detroit Free Press and was prepared by Mr. Paul R. Leach, whose ability as a shrewd observer, careful analyst, and interesting writer is well known to every Member of this House.

You will find this review accurate and dependable, and it will, I am sure, assist you in replying to the numerous letters you are receiving from your constituents on this important subject.

[From the Detroit Free Press of January 15, 1946]

RAIL RECEIVERSHIP PROBE IMPENDING—SENSATIONAL DEVELOPMENTS EXPECTED IN INQUIRY INTO ALLEGED SCANDALS

(By Paul R. Leach)

WASHINGTON.—Scandalous holding of railroads in receivership, when many are said to be wholly solvent, promises to be a sensational congressional issue in the weeks to come.

Involved are 75 large and small railroads. Some have been in bankruptcy for 13 years or more.

Hundreds of millions of dollars in potential worth of common and preferred stocks being washed out in reorganizations come prominently into the controversy.

It is one of the most explosive financial situations in recent history.

With the resumption of work Monday following the holiday recess, the Senate Interstate Commerce Committee was preparing to recommend a resolution for a thorough investigation of all railroad receiverships and reorganizations.

Meanwhile pending in both Houses is legislation designed to protect some of the millions of dollars of stock equities endangered or already wiped out by permitting affected carriers to work out voluntary refinancing outside of bankruptcy courts.

If the Senate authorizes the inquiry, which it is expected to do, the Interstate Commerce Committee, after several weeks of preliminary accumulation of information, some of which is already at hand, will begin public

hearings. Observers expect among those called would be:

1. Trustees of roads in reorganization, who have been appointed by Federal courts, to explain their actions.

2. Attorneys and others who have been allowed large fees.

3. Representatives of bond and other security protective committees, including large insurance companies whose investments have been safeguarded, as well as of stockholders whose equities are dissolving or gone.

4. Members and experts of the Interstate Commerce Commission, which formulates reorganization plans and passes on fees.

5. Members of the Reconstruction Finance Corporation, involved back in the early thirties through immense loans for the saving of tottering roads, some of whom have been said to exercise considerable Government influence in trusteeships since.

It is unlikely that any Federal judges will be called before the committee, despite charges of irregularities by some courts in appointing trustees, continuing receiverships beyond necessary time, and going ahead with ICC plans for washing out common and preferred stocks when both Houses of Congress were concerning themselves with these very stockholders equities.

Should any serious irregularities by judges develop, the House and Senate Judiciary Committees could scarcely escape taking them up. Those committees have jurisdiction in matters affecting the judiciary.

But because of the serious implication of possible impeachment in a public investigation of a Federal judge, all congressional committees will move very cautiously in this respect.

It is not so much illegalities that the Senate Interstate Commerce and House Judiciary Committees are concerned about. Its interest is in correcting by new laws what are termed injustices or bad practices in the light of present-day financial conditions of the roads, as compared to the depression years.

Senator BURTON K. WHEELER, Montana Democrat, chairman of the Senate committee, and Senator CLYDE REED, Kansas Republican, jointly sponsored the investigation resolution.

Both of these Senators, who have informed themselves deeply on the whole problem, were responsible for use of the word "scandalous."

The investigation resolution grew out of committee's hearing before the holidays on a bill to provide voluntary modification of railroad-financial structure.

In the course of that hearing, with Commissioner Charles D. Mahaffie, of the ICC testifying, WHEELER brought out that many roads in receivership are actually sound today. The following remarks were made in the hearing:

Senator WHEELER. "Is there any reason for keeping such railroad companies in bankruptcy? I mean, when they are not bankrupt at all. What is the reason for such railroads remaining in bankruptcy when they are not bankrupt?"

Mr. MAHAFFIE. "I know of no reason in the world why a railroad should stay in any longer than the time it takes to get it out."

Senator WHEELER. "The only reason I can see is that some receivers and lawyers want them to stay in bankruptcy so they can continue to draw down fees. Frankly I think it is getting to be a scandal."

Senator REED. "Maybe some of the courts like to retain control."

Senator WHEELER. "I can't understand why these court trustees are holding millions of dollars in surplus cash and not paying off some of the indebtedness and getting them out of bankruptcy, and why they do not pay off the RFC or some of the other indebtedness.

"It seems to me that there is just no excuse at this particular time when many of them are not actually in bankruptcy."

Senator REED. "If there is not legislation enough to clear this up we ought to have additional legislation. I think it is a scandal."

Senator WHEELER. "I think it is a scandal, also."

ROCK ISLAND ROAD PAYS, YET INVESTORS MAY LOSE

(By Paul R. Leach)

WASHINGTON.—Although the Chicago, Rock Island & Pacific Railroad appears to be in good financial condition, its security holders have been asked to approve reorganization plans which would wipe out common and preferred stocks.

Ballots were sent by the Interstate Commerce Commission to owners of bonds as well as stock after Congress recessed for the holidays. The ICC draws up all reorganization plans under section 77 of the Bankruptcy Act. They are put into effect when the courts so order.

Upon completion of the poll of security owners, Federal District Judge Michael L. Igoe of Chicago, in whose court the tangled affairs of the Rock Island have been long undergoing litigation, will be confronted with this problem:

Although apparently able to pay dividends on its stock, shall the Rock Island be so reorganized that this class of security will have no value?

According to information from the ICC, put into the Senate Committee on Interstate Commerce record of hearings on legislation to prevent this sort of thing, the Chicago, Rock Island & Pacific has had earnings justifying purchase of its bonds by investment trusts.

From 1940 to June, 1945, according to these records, the Rock Island earned its interest charges 16.63 times.

In that same period, when the company was in bankruptcy and not qualified to pay stock dividends, its earnings before interest and Federal taxes were on the basis of $121 on preferred and $67.50 on common stock. That computation is for the 5½ years as a whole, not for any one year.

This does not mean that, if not in bankruptcy, the Rock Island would have paid out that much in dividends over the 5½ years. Some funds would have gone into other accounting channels, as well as taxes. But that it could have paid its interest and some dividends appears evident to the protesting Congressmen.

Thus to Senate committee members, it seems that Rock Island bonds are safe as investments for insurance companies, savings banks and trusts, compelled by law to buy only sound bonds.

Furthermore, to congressional irritation, it appears that equity exists to make the common and preferred stock worth too much to be wiped out, even if those stocks should in close accounting be able to pay only a few cents now.

Bond securities are judged by large investors, who must under their State laws play safe, by the number of times they earn their interest charges. Insurance companies cannot buy as a rule unless the company has earned one and one-half times its interest per year for a certain number of years.

The Rock Island appears to have earned three times the minimum interest requirements in the last 5½ years.

Some time ago, when Judge Igoe's final decision on the ICC-approved reorganization plan for the Chicago, Milwaukee, St. Paul & Pacific was pending, Representative CHAUNCEY W. REED, Illinois Republican, wrote to Igoe asking that the final order be held up.

Representative REED is a member of the House Judiciary Committee. He, like others in Congress, has been seeking to prevent wiping out of stocks in reorganizations where stock value might be apparent. He has introduced a resolution which would take solvent roads now in receivership out of bankruptcy if they can make a satisfactory financial showing over the last 7 years.

Judge Igoe waited a few days, then issued his final order in the Milwaukee case, approving the ICC plan.

At about the same time Federal Judge George H. Moore, in St. Louis, approved an ICC plan for reorganization of the Frisco lines. Then, shortly after the Congressional holiday recess, he approved an ICC plan for the Missouri Pacific.

Although Judges Igoe and Moore acted on plans set up by the ICC, Members of Congress have been concerned over the fact that the court orders were issued while legislation was pending in committees to save stock equities.

Judge Moore called the Missouri Pacific reorganization plan as perfect as human mind could make it. Yet Chairman WHEELER has shown that the Missouri Pacific paid out $47,000,000 in excess-profits taxes in 1943 and $46,380,000 in 1944. These excess-profits-tax payments were exceeded by only one railroad, the Santa Fe, which is not in receivership.

[From the Detroit Free Press of January 17, 1946]

LITTLE PROTECTION GIVEN BY LAW TO RAIL STOCKS

(By Paul R. Leach)

WASHINGTON.—Congressional efforts to protect bond and stock equities in reorganized bankrupt railroads date back to the depression years.

In the early thirties, with earnings falling off to the point where maturing bond debts could not be met, big and little roads, representing three-fourth of the country's mileage, went into bankruptcy or on the verge of it.

Through huge loans from the Reconstruction Finance Corporation efforts were made to save the tottering carriers. Eventually 77 of them went into some form of receivership.

Seeing many investors likely to lose large sums, especially trusts and insurance companies with widows and orphans to think about, Congress in a series of investigations asked why.

Skullduggery? Bad management? Government at fault?

It was found that the Government, through its regulating agency, the Interstate Commerce Commission, had no supervision over railroad failures. Although operating across State lines the roads had to go through bankruptcy the same as any big or little private business.

That was all right for a closely owned small business. But there were thousands of railroad bond and stock holders to be considered.

As a result the Transportation Act was revised, giving the ICC more authority. Also section 77 of the Bankruptcy Act was passed, setting up proceedings for the handling of railroad receiverships through reorganizations.

Later, some roads showed they would be able to straighten out their own affairs if given time. The McLaughlin amendment to the Bankruptcy Act was passed. It barred the ICC from washing out any classes of security holders. But it applied only to a few roads.

Those which were allowed to operate under this act came through in good shape. Their investors lost little or nothing. The McLaughlin Act has been extended and is up for consideration now in Senate committee after House extension.

Under section 77, applying to all but these few roads, the ICC works out reorganization plans, generally washing out common and preferred stocks to save the bonds. The Hobbs

bill was passed in the House last year, designed to modify ICC authority so that Federal courts could use more independent judgment for stockholders.

More legislation to affect all reorganizations, somewhat similar to the McLaughlin Act, is now under consideration by the Senate Interstate Commerce Committee.

This new Senate bill would permit what is called voluntary debt adjustments. But they would have to be carried on with ICC approval, with further agreement by 75 percent of each class of security holders, bonds as well as stocks.

Bondholders heretofore have objected in reorganization set-ups to the kind of capital structure which would permit retaining common and preferred stock equities because of a contention that this would weaken the bonds.

It is probable that the pending Senate bill will be revised before going to the floor for action to provide stockholder protection of some sort not now assured.

Up to 1943 the courts in railroad reorganization cases assumed they had a right to consider equities of all classes of security holders and were not necessarily bound by ICC findings.

In the Chicago, Milwaukee, St. Paul & Pacific Supreme Court test, ICC plans in general were upheld. Justice William O. Douglas' opinion added the warning that the railroads probably faced poor times, with taxes and costs going up.

Those bad times have not yet come. Many Congressmen believe the roads have years of profitable operations ahead. Yet, based somewhat upon this Supreme Court opinion, the lower courts generally feel that there is nothing they can do about a plan once submitted by the ICC, and they are going ahead weakening stocks.

Thus, say protesting Congressmen, the ICC has a vested right in continuing a position it took originally, although conditions have changed.

Three years ago the House Judiciary Committee talked of giving warrants safeguarding stockholders. The ICC protested, saying the stocks were valueless. Now the ICC is willing to accept the warrant idea, but neither the House nor Senate committees are willing to accept warrants on the contention that stock equity values are now worth more than a promise.

In the House Committee report on the Hobbs Act in 1945 it was contended that section 77 did not give the ICC authority to wipe out stockholders, but that the ICC had interpreted it that way and has been upheld by the courts.

Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. PATTERSON. Mr. Speaker, the House Committee on Un-American Activities has been engaging these past few days in a series of activities which I believe are a proper cause for alarm to every Member of the Congress. It has attempted to carry out a wholly unwarranted inquisitorial investigation of the National Council of American-Soviet Friendship, a group well known for its splendid activities on behalf of cementing American-Soviet relations in line with the policies of the United States Government.

Furthermore, the committee has launched an attack upon the Joint Anti-Fascist Refugee Committee, whose humanitarian efforts have saved the lives of countless men, women, and children, victims of Fascist terror. The Un-American Activities Committee has climaxed its actions by an attempt to cite for contempt the executive secretary of the Joint Anti-Fascist Refugee Committee. She properly resisted the request for the records and books of her organization on the grounds that, as a relief rather than a propaganda organization, its fund-collecting activities were answerable to the President's War Control Board but not to an unconstitutional "fishing expedition" by the Un-American Activities Committee. Miss Bryan, the executive secretary, was given no opportunity to report on the activities of her organization or to state her objections to the Un-American Activities Committee's action. She was also denied counsel.

The committee has challenged the right of many other organizations to carry on their programs in various fields of American endeavor, as guaranteed by the first amendment to the Constitution. The committee openly announced on January 23, through its spokesman, Mr. Ernie Adamson, that it proposed to "investigate all organizations aiming to influence public opinion." This is precisely the field in which Congress has no power to legislate and in which the American people should be free to act without interference. By this action, the committee sets itself up as a censor of American thought and I have repeatedly said that it is thus riding herd on the thought of the American people.

The committee's action fully justifies the scathing indictment brought against it by the Washington Post in its editorial of January 23 entitled "Controlling Thought" which says in part "this Un-American Activities Committee, acting as it does under the authority and sponsorship of the House of Representatives, casts an ugly stain upon the integrity and the good name of Congress." Congress can render no greater service to the cause of Americanism than to wipe out this "ugly stain" by abolishing the Committee on Un-American Activities. I wish to conclude these remarks by quoting the whole editorial from the Washington Post:

CONTROLLING THOUGHT

The Joint Anti-Fascist Refugee Committee is an organization of responsible American citizens licensed by the President's War Relief Control Board to collect funds in the United States for the relief of refugee victims of fascism abroad. Among its activities is the maintenance of a hospital at Toulouse for those most pitiful and abandoned of all refugees, the Spanish Republicans exiled from their own country because fascism is still triumphantly there. In helping these people, the committee is wholly consistent with the position of the United States Government, which has already agreed to discuss with France and Britain the severance of diplomatic relations with Franco Spain.

Obviously, then, according to the logic which has been consistently pursued by the House Committee on Un-American Activities, this organization for the relief of anti-Fascist refugees is un-American. It is as plain, is it not, as the un-Americanism of Shirley Temple's dimples? The organization has therefore been subpenaed to produce all its books and records before the Un-American Activities Committee this very morning at 10 o'clock. And prior to this investigation, the committee asked the War Control Board to cancel the organization's license to collect and distribute funds.

This is in no sense an isolated case. The other day another reputable organization, the National Committee to Combat Anti-Semitism, received a letter signed by one Ernie Adamson, the Un-American Activities Committee's chief counsel. "I have received a copy of a formal petition being distributed by you," the letter began, "together with solicitation of money for the purpose of controlling the thoughts of American citizens." It has become un-American, apparently, in the view of the Un-American Activities Committee, for men to enter into voluntary associations to advance their common purposes or even to petition Congress for redress of their grievances. If the Committee to Combat Anti-Semitism is attempting to control the thoughts of American citizens, then so is the Anti-Saloon League, the Republican Party, the Society for the Prevention of Cruelty to Animals, and every other group which, in the free tradition of America, is seeking to secure acceptance of its views by a free people. There is a danger of controlling the thoughts of American citizens only from those like the Un-American Activities Committee who would suppress the free expression of ideas.

We say again that this Un-American Activities Committee, acting as it does under the authority and sponsorship of the House of Representatives, casts an ugly stain upon the integrity and the good name of Congress. It undermines faith in the legislative process. It violates fundamental concepts of Americanism. We urge the Members of Congress soberly to examine what this committee has done and resolutely to put an end to its travesty on the American idea.

Occupation Troops in the Philippines

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include two letters; one from a sergeant stationed in Manila and one from a sergeant stationed in Saipan.

Mr. Speaker, the Filipinos are our friends. They are about to have an election. The soldiers in the Philippines, as well as other countries and islands in the Pacific, are wondering why they have such a large number of occupation troops in these countries. It does seem ridiculous that we should have so many troops watching our friends.

I am certain, Mr. Speaker, that having an armed force in our friend's house, watching every move they make, is not conducive to a lasting friendship. I am inclined to agree with the Secretary of State, Mr. Byrnes, when he suggests that troops in all countries and islands be brought home with the exception of those in Germany and Japan. I am also

convinced, Mr. Speaker, that the number of troops in these countries can be greatly reduced. Certainly the troops in these countries should not be those impressed and kept in the Army against their will. The following letters from a sergeant in the Philippines and a sergeant in Saipan, asks some questions which should be answered, either by the War or State Department:

MANILA, P. I.

DEAR SIR: There are one-quarter of a million American soldiers in the Philippines today. Why? We ask the War Department, we ask Congress, and we ask you.

The Philippines are a friendly, allied country that we helped liberate a few short months ago. In another few months the Philippines will be granted their independence. Yet the War Department keeps a quarter-million occupation troops here, under the cover of such vague phrases as "hostile countries" and "commitments."

We ask what is hostile about the Philippines, and we ask what are these commitments? Are they commitments to protect the vested interests which wish to continue their exploitation of the Filipino people?

We are not satisfied with the present twice-slowed rate of redeployment of troops from the Philippines. We think that the present stand of the War Department is a step toward the establishment of military fascism, both at home and abroad. We have accomplished little if we defeat fascism in enemy lands and cannot return home because our own military fascists decree that we must occupy a friendly country.

If there's an answer to the question of why we are being kept here, we have not heard it. If there is an explanation, it has not been given. It's up to Congress to do something, before we cease to have a government by people and wake up to find that we have a government by the military.

Congress must act, and act now.

Respectfully yours.

SAIPAN, M. I., *January 16, 1946.*

Hon. A. L. MILLER,
House of Representatives,
Washington, D. C.

DEAR SIR: Let the "brass" in the War Department sit around and play checkers—although it does seem a terrific waste of taxpayers' money. I have more important things to do; a business which I hope to salvage at least a part; a family to raise, if I am not too old by the time the checker game is over.

I am not a professional soldier; would be ashamed to be a part of this organization except by force.

We men who actually had a hand in winning the war, who have been overseas from 1½ to 2½ years, are most certainly being discriminated against by the War Department's new slow-down policy. The man who has long overseas service has far less chance of getting back to his responsibilities than the USO soldiers who fought the war within the continental limits of the United States. Our country should show enough gratitude for what we have done for it to get us home after long overseas service. There are thousands of us who have seen no civilization of any kind for more than 18 months, and who have nothing to do on these lonely islands now that the war is over.

Transportation is available. Can it be that the people are against bringing us back?

Please see that we get a bit of justice; there is so little we can do for ourselves in this organization controlled by methods and traditions centuries old. Frankly, I, for one, am getting desperate. Thanks for the assistance I know you will be able to give us.

Sincerely yours.

Standing at Kadesh-barnea

EXTENSION OF REMARKS
OF

HON. DANIEL K. HOCH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. HOCH. Mr. Speaker, under leave to extend my remarks, I include the following sermon by the Reverend R. Paul Schearrer, D. D., of the Takoma Park Presbyterian Church:

With the single exception of Sinai, no place has more significance in the wilderness wanderings of the Hebrew people than Kadesh-barnea. At Sinai, the laws had been given, the organization effected, the census taken, and the responsibilities apportioned. Moses was proving to be a wise and competent leader. At length, the people were on the march again and in 11 days had reached the southern frontier of the land of Canaan. Here is the record: "We came to Kadesh-barnea. And I [Moses] said unto you, Behold, the Lord thy God hath set the land before thee: go up and possess it, as the Lord God of thy fathers hath said unto thee; fear not, neither be discouraged" (Deuteronomy, 1:19–21). They were standing at the gate of the Promised Land. To enter or not to enter, that was the question.

The people were familiar with the ancient promise. They knew, too, how Moses, their leader, felt. Nevertheless, prudence dictated that a committee be named to investigate and report. Moses was amenable to the suggestion. A committee of 12 was appointed, 1 representative from each tribe. They were charged to do a thorough job—to learn all they could about the nature and number of the people, the size and strength of the cities, the topography of the land, and the fertility of the soil. In due time, the committee returned. A hazardous assignment was faithfully completed. The people were assembled to hear the findings of the committee. The interest of the people was universal and intense.

The striking feature of the reports submitted was their common agreement relative to the basic facts. The committee were of one mind regarding the fertility of the soil. It was poetically pictured as "a land flowing with milk and honey". Samples of grapes and pomegranates and figs were exhibited. These were enough to make any desert wanderer's mouth water. The committee were unanimous in their descriptions of the people of the land. They referred to them as "giants". In comparison with them, they added, "we, the spies, seemed as grasshoppers"—an excellent example of Oriental hyperbole. And lastly, all reported the cities were walled and well protected; and, in addition, that the mountainous topography of the land afforded natural defense. In short, here were the facts: the land was most desirable, though its occupation was beset with some difficulties. There was entire agreement so far as the facts were concerned. However, there was irreconcilable division of opinion in the matter of conclusions reached and recommendations offered.

* * * * *

The minority report made by Caleb, in which Joshua also joined, urged immediate action: "Let us go up and possess it." The recommendation was positive and progressive, definite, and decisive. It was in line with the ancient promise of God. It was in accord with the thought of Moses. Not ignoring any of the difficulties, it rested upon a vital faith that the God who had brought them thus far would keep His word; that the God who had delivered them at the sea could and would also open up the land for them. In short, Caleb's case can be stated thus: We are able, we have the men and the materials, we have experience that the Lord our God makes good His promises, we have dreamed of a land of our own—a land of freedom and security, of peace and plenty—we are standing at the very gate of such a land, therefore, "let us go up and possess it."

The majority report, supported by 10 against 2 (all forgotten men, I challenge any congregation to name just 1 of them), was summed up in 4 words, "We are not able." Their statement played upon the fears of the people—the natives are giants, we look like grasshoppers beside them. The cities are walled, the mountains are high, the climate is wretched, literally eating up the inhabitants. They exaggerated all the difficulties. They made no reference whatsoever to their resources. By emphasis and omission, they created a false impression and won the verdict of the people. Standing at Kadesh-barnea, the people lacked the courage and faith to go up and possess the Promised Land. The result of their refusal in history, 40 years of aimless desert wanderings. And most striking of all—everyone of that generation perished in the desert save 2, Caleb and Joshua. In God's sight, they were the only ones considered worthy of entering the Promised Land.

This bit of Hebrew history is a precious parable for us today. In fact, the Old Testament is an ancient light on many modern problems. Why are we so reluctant to be guided by its light? Hebrew history is a sample of the universal history of mankind from the religious point of view. As God dealt with them, so will He deal with all nations. Modern states reveal how little nations—like men—learn from the experience of others. There seems to be a strong natural penchant to learn life's lessons the hard way. O Lord, how long will Thy children stumble about in the darkness of fear rather than walk in the light of faith?

As I see the world today, and especially as I see America's role in the present world situation, we are standing at Kadesh-barnea. For centuries mankind has had the prophetic vision of nations "beating their swords into plowshares." For centuries mankind has been haunted with the mystic overture of the angels, first heard on the night when the Christ was born, "Peace on earth, good will to men." "Peace on earth"—that is our land of promise. Since the day when the Pilgrim Fathers dared to cross the sea and settle on the cold, inhospitable shores of New England, we, as a people, have been led of God in such a way that it is clear God is seeking to use us as a divine agency for the fulfillment of his age-long purpose for all mankind. And have we not come to think of ourselves as His chosen, His beloved? We acknowledge in gratitude His past providences. We declare our faith "In God we trust." By His grace, we are now standing at our Kadesh-barnea. At this very hour we are listening to reports dealing with the new world in a new day. God's eye is upon us. Will we have the courage and faith necessary to "go up and possess" the land?

As in the days of Moses, so now, men are agreed on the facts in the case. There is no disagreement as to the nature of war. It is all men say it is—brutal, beastly, inhuman. We wonder what Sherman would call it if he were living now! Language breaks down in attempting a description of its true nature. In the span of a single generation, we have seen the introduction of the submarine, the airplane, poison gas, robot planes, rocket bombs, and atomic bombs. We are now told that Danish, Swedish, and Russian scientists are working on a plutonic bomb that will be a thousand times more devastating than the atomic. Professional soldiers calmly state that our own defense in the future will be offense; which means we must

annihilate the enemy before the enemy annihilates us.

Also, there is universal agreement on the question of the total defeat of Germany and Japan. So far as Germany is concerned, the several armies of occupation are vying for honors in doing a thorough job. It has been months now since anyone has hinted that MacArthur's policy in Japan was soft. The enemies are crushed; and what is more, they are cold and hungry. For purely selfish reasons, we dare not let them freeze or starve to death.

Again, no exception is taken to the general proposition that there is no more natural time to be thinking in terms of rebuilding than when so much of the world is in ruins. On every hand, we are hearing of blueprints for a better world. The cynic may raise his eyebrows and say, "It sounds like 25 years ago." Which is true, but with a difference. Today, the devastation is more nearly total than it was then. Too soon, after Versailles, everyone was rebuilding along the old familiar lines. It's an unwelcome question to raise, but not without point: "Who helped 'to build up' Hitler?" The German "big shots" now on trial want to call in as defense witnesses the "Cliveden crowd" of Britain. We might well ask ourselves whether we shall again lend money and provide credits to enable other nations to rearm. Shall we aid in financing the armament program of other nations and then use their program as an argument for arming ourselves? What guaranty have we that the money we lend other nations will not be used for military preparations? The heart of America would allow billions for relief and rehabilitation; but not a dime for aiding in the rearmament of potential future enemies.

Lastly, no one would deny that a start has been made in world government with the launching of the United Nations Organization. True, it is only a start; but it is a step in the right direction, which, if followed by other steps in the same direction, will bring us at length to the desired goal.

There would seem to be, then, general agreement on the main facts in our present situation: on the nature of war, the defeat of Germany and Japan, the devastation wrought, and the setting up of new machinery for international cooperation. But, what shall we say of the conclusions drawn and the recommendations offered in the light of these admitted facts?

Here, again, as in the days of Moses, there is division of opinion. There are two schools of thought. One school counsels: We must watch our step. Prudence, they assert, dictates that when we are strong it is our duty to remain strong; aye, grow stronger; no, we must not stop even there, we must make and keep ourselves the strongest nation on earth. We must be stronger than any combination of nations which might unite against us. We must be so strong that when other nations look at us they will conclude, as the majority of the spies reported of the Canaanites, that we are "giants". To this end, the following recommendations are being made: (1) conscript every lad as he becomes 18 years of age and compel him to study the art and science of war; (2) maintain a navy stronger than all other navies combined; (3) keep all laboratory secrets, like the manufacture of the atomic bomb, as trump cards, to be used if and when needed. It is the counsel of suspicion and fear. In all of it, there is not a word of past providential deliverances. They are made of such flimsy stuff. What shall we say of Valley Forge or Trafalgar, of Gettysburg or Verdun?

The other school of thought recommends, as did Caleb and Joshua, "Let us go up and possess the land." They feel that because, with God's aid, we have gained the victory; because, before our eyes, we can behold the punishment which nations bring upon themselves by brandishing the sword; because there is no better time to make a fresh start according to new specifications than when the world is in ruins; because we have before us the age-old vision of the prophets of a promised land of peace; and because we have already taken the first step in the right direction; therefore, "let us go up and possess it." This view of the minority report of centuries ago has now become the considered judgment of our most advanced scientists. The modern Calebs and Joshuas are men like Einstein and Compton, who see clearly we are standing at the Kadesh-barnea of the promised land. Either we shall "go up and possess it" or we shall wander, yea, we shall perish, in the desert.

One angle to the land of promise was lost sight of in the days of Moses which is still being forgotten today. I refer to the original promise God made to Abraham: "I will give thee the land and will bless thee and through thee, all the world." The land of promise is no exclusive, selfish possession of any one nation. It shall be given to that people through whom God can work out His purpose for the whole world. Can we, as a nation, catch that vision? Science has reduced the world to a neighborhood; only religious faith can transform it into a brotherhood.

We are standing at Kadesh-barnea. Before us stretches a land of promise. May we hear God say to us, "Go up and possess it; fear not, neither be discouraged."

New Pacific Era Dawns as Hawaii Nears Statehood

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William H. Doherty, from the Washington Sunday Star of January 27, 1946:

NEW PACIFIC ERA DAWNS AS HAWAII NEARS STATEHOOD

(By William H. Doherty)

While residents of the District of Columbia rejoice over President Truman's support of their campaign for enfranchisement, the peoples of four other American areas lacking statehood status—Hawaii, Alaska, Puerto Rico, and the Virgin Islands—also are finding deep satisfaction in the Chief Executive's recommendation to Congress.

In the same brief but highly significant section of his State-of-the-Union message dealing with the District's voting aspirations, Mr. Truman made the following proposals which promise to be of historic import:

Hawaii: Prompt, favorable action on her statehood application.

Alaska: Statehood as soon as it is ascertained her people desire it.

Puerto Rico: Legislation by which her people might choose their form of government and ultimate status.

Virgin Islands: An increasing measure of self-government.

From a national and international standpoint, the Presidential endorsement of statehood for Hawaii and Alaska is filled with the greatest significance. No new State has been created since 1912, when New Mexico and Arizona were admitted, and never before in history has a noncontiguous area become a full and equal partner in the American Union.

HAWAII THE FORTY-NINTH STATE

Of these two Pacific Territories, Hawaii definitely seems to be in the lead for the honor of becoming the Forty-ninth State. Mr. Truman's recommendation regarding Hawaii was unqualified. He urged that "the Congress promptly accede to the wishes of the people of Hawaii that the Territory be admitted to statehood in our Union."

The President's statement was the second administration pronouncement in favor of Hawaiian statehood in the past few weeks. Just before the close of 1945, Secretary Ickes issued a public statement advocating statehood as part of the Interior Department's Territorial policy.

Largely as a result of his action, a six-man subcommittee of the House Territories Committee flew to Hawaii early this month to investigate the question. The group arrived back in San Francisco the day Mr. Truman delivered his message, and the chairman, Representative HENRY D. LARCADE, Jr., Democrat, Louisiana, stated he was "convinced the people of the Territory of Hawaii have demonstrated their capacity to assume the responsibility of statehood."

LARCADE'S view was indorsed in a report to the full committee Thursday by the other members who were: Hawaii's lone—and voteless—Representative in Congress, Delegate JOSEPH R. FARRINGTON; Representative HOMER D. ANGELL, Republican, Oregon; Representative JAMES J. DELANEY, Democrat, New York; Representative GEORGE P. MILLER, Democrat, California, and Representative DEAN P. TAYLOR, Republican, New York.

Press reports indicate the subcommittee's appearance set off the greatest statehood demonstration in the islands' long campaign for that object, which dates back to the day in 1898 when the Republic of Hawaii voluntarily became a Territory of the United States.

Representative of all segments of the insular population trooped to the throne room of Iolani Palace in Honolulu, where native kings and queens once held court, and to other meeting places on other semitropical islands of the Hawaiian group, to have their say. A few dissenting voices were heard, but the majority cry was for "statehood now."

No organized group appeared in opposition, whereas the proponents included the leaders of both political parties, which have invariably carried statehood planks in their platforms; organizations of both employers and employees, and representatives of many professions and trades. Governor Stainback, a Democrat, and Delegate FARRINGTON, a Republican, both gave strong support.

LABOR AND BUSINESS APPROVAL

The International Longshoremen's and Warehousemen's Union, affiliated with the CIO, strongly indorsed Hawaii's full participation in the Union. So did the Hawaiian Sugar Planters' Association, composed of sugar producers having labor contracts for both mill and field employees with the ILWU.

The bipartisan Honolulu County Board of Supervisors approved it unanimously, as also did the board of directors of the local chamber of commerce. This latter action was voted following "whispers" that big business might be "half hearted" in its stand. To scotch such rumors the chamber took a secret ballot of its membership, which resulted in 506 affirmative and 170 negative votes. The Honolulu Advertiser commented editorially that if a ballot were taken including all small business in Hawaii, "the proportion for statehood would be even higher."

The Honolulu County Medical Society recorded its membership for statehood after

presenting figures showing that in public health work Hawaii ranked with any State in the Union. Dr. Charles L. Wilbar, president of the Territorial Board of Health, offered statistics showing that only the District of Columbia exceeds Hawaii's per capita expenditure of $3.23 for public health work. Jack Hall, regional director of the ILWU, was among those who made a frontal attack on charges that if statehood were granted, those citizens of Japanese extraction, numbering approximately one-third of the population, would control the electorate.

He termed it "a gross untruth and a slander upon the integrity and Americanism of our citizens of Japanese derivation. The military record of the One Hundredth Infantry and the Four Hundred and Forty-second (military units composed of AJA's) dispels any question of loyalty. The complete absence of any sabotage by citizens or aliens of Japanese ancestry during the war has been vouched for by military commanders in this area."

He said the AJA's always have had less than their share of representation in the local legislature and that "race has never been a serious factor" in elections.

Among others who supported this view were the president of the University of Hawaii, Dr. Gregg M. Sinclair; the previous Delegate from Hawaii, Samuel W. King; leaders of both the Democratic and Republican parties in the islands, and many others.

Secretary Ickes, in his statement advocating statehood, also commented upon the lack of any evidence of bloc voting.

Many observers regard the race question as one of the most important obstacles to overcome in Congress. One of the subcommittee's west coast Members, Representative ANGELL, made this plain to the Hawaiians. He said the mainlanders were quite unfamiliar with racial conditions in Hawaii and it would be the subcommittee's task to explain the situation on Capitol Hill.

According to the latest statistics, published by the Board of Health, Hawaii's total civilian population as of July 1, 1945, was slightly over 500,000, of which about 91 percent were American citizens.

The latest available break-down by racial groups is for 1941, no figures having been published during the war. These figures showed that of the Japanese, 124,351 were citizens and 85,183, aliens. Of those listed as Caucasians, 139,299 were citizens and 2,328 were aliens. However, those not listed as Caucasians were not necessarily of Oriental extraction. There were over 14,246 pure Hawaiians, 52,445 part Hawaiians and 8,460 Puerto Ricans (all of them citizens). The remainder of the population consisted mainly of Chinese, Koreans, and Filipinos.

There has been an upward trend in the non-Oriental population and a progressive downward trend in noncitizens year by year. A joint congressional committee which visited the islands in 1937 to investigate statehood pointed out that immigration, except from the continental United States, had halted, and added:

"It is obvious that the time is not distant when there will be practically no aliens in Hawaii, nor indeed any even of foreign birth."

NOW CLOSER TO WASHINGTON

Many of the arguments which previously figured importantly in any discussion of statehood for Hawaii have, through time and circumstances, been reduced to minor points or have disappeared, proponents say.

Among these are Hawaii's remoteness from the rest of the Nation. In this day of rapid transportation and communication, Hawaii is in some respects just as close as other parts of the Nation, and closer to Washington than were any of the States when they entered the Union, excepting the original 13.

THE NEW AMERICAN FLAG

The argument is also heard in jest, but perhaps with some sentimental force behind it, that a new State would knock the flag out of kilter. The Hawaiians have a ready answer for that one: They've already designed a new flag with seven rows of seven stars.

The Constitution sets up no requirements for Territories seeking to become States, but the territorial status is generally considered an apprenticeship looking to that end. Governor Stainback told the Larcade committee that Hawaii's property value assessment of over half a billion dollars exceeded that of any Territory at the time of admission except Oklahoma. The island population is also greater than that of any State when admitted, again excepting Oklahoma.

Hawaii's internal revenue tax payments to the United States Treasury totaled $174,000,000 in 1945, or more than 14 of the States.

CHEERED BY TRUMAN BACKING

The former island kingdom has another proud boast—she leads the Nation in war-bond sales. From May 1941 to November 1945, latest figures available, her per capita purchases of E bonds were $542.93, compared with a national average of $291. The District of Columbia, with $527.43 per capita, had to take second place.

If it is true that "humanity sympathizes with a strenuous aspiration," Hawaiians figure they have a big part of their battle won. President Truman's statehood endorsement—the first given by any President—has cheered them greatly.

OPA

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit for the Members of the House an article on nylon hosiery under a date line from New York, January 24, which appeared in the Washington Times-Herald, on January 25, 1946, as follows:

BULK OF NYLONS GO OVERSEAS—SHIPPERS ESCAPING OPA PRICE LIMIT

NEW YORK, January 24.—Just in case you'd like to know, ladies, the nylons you couldn't buy the last few months are being put to good use. They're embellishing some of the prettiest legs in all Mexico—not to mention gams in Cuba, Venezuela and other Latin-American countries.

An investigation today established that the lure of higher prices in foreign places devoid of OPA ceilings plus a lamentable error by certain Washington officials—who haven't yet learned that women's stockings are scarce in the United States, has resulted in the siphoning out of the country of a heavily increasing percentage of nylon production.

Unofficial estimates from Government scurces point to the probability that nearly 3,000,000 pairs of nylons have been whisked out to foreign markets in the last 2 months.

But the hosiery trade, boiling mad over the continued domestic shortage, insists that as many as 4,500,000 pairs have been snatched abroad.

Don't think that just any senorita in Mexico City or Havana can walk into a store and plank down the equivalent of $1.40, our average OPA ceiling, for a pair of nylons.

They're a top luxury, bringing up to $6 in Havana. Wealthy women can buy a dozen pairs if they can pay that price.

Foreign demand is so strong that it's even robbing our black market, the trade says.

The British Loan

EXTENSION OF REMARKS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. BULWINKLE. Mr. Speaker, on Thursday, January 24, 1946, the Secretary of the Treasury, Hon. Fred M. Vinson, addressed the twenty-first annual meeting of the North Carolina Newspaper Institute at Music Hall, Chapel Hill, N. C.

The following is the address of the Secretary:

Coming from Kentucky I feel that I am visiting my friends and neighbors when I come to North Carolina. All of us in the South are proud of what you are doing. We are proud of the great forward strides you are making in industrial and agricultural development. We are proud of the great forward strides you are making in education and public welfare. We see in North Carolina a vigorous and progressive democracy built on the finest traditions and highest ideals of the South.

Tonight we shall discuss a measure, on which the representatives of two democratic nations reached agreement, that will better our chances of establishing a sound world economy. That measure, which is subject to the consideration and approval of the Congress, is the proposed financial agreement between the United Kingdom and the United States.

The American people should understand fully the nature and effects of the proposed agreement in order that Congress can have the benefit of their views in applying its best judgment to the proposal.

One part of this agreement provides that the United States will offer a credit of $3,750,000,000 to Britain. There are certain misconceptions about this line of credit to Britain which should be dispelled at the outset. In some quarters this credit is still said to be, through inadvertence, misunderstanding, or purpose, a gift.

The proposed line of credit is not a gift; it is a loan. It is not merely a loan of so many dollars to be repaid, but it is an interest-bearing loan. The interest is not a nominal fee, but it is reasonably comparable to what it costs the United States Government to borrow money.

The repayment of the loan and the interest, moreover, is not all of the consideration or benefit that the United States receives under this financial agreement. Britain promises, in addition to repaying the loan with interest, to remove currency restrictions. Moreover, Britain promises to avoid trade controls which would discriminate against American products. On top of this, Britain has agreed with the United States on the principles that should be followed by a proposed international trade organization to improve world-trade practices.

In addition to these benefits which the United States receives, a general purpose of the loan, as stated in the agreement, "is to facilitate purchases by the United Kingdom of goods and services in the United States." This will be a real contribution to our domestic program of high production, employment, and national income.

A strong case could be made that in view of these benefits to the United States which I have mentioned last—the expansion of our markets abroad, the principles for an international trade organization; the elimination of trade discriminations; the abolition of monetary controls which restrict trade—that in view of these substantial gains, we could have made the $3,750,000,000 a gift instead

of a loan. While $3,750,000,000 is a lot of money, it is a small investment if it contributes to an expansion of world trade and to peace and to general prosperity.

Some may ask that if it could be claimed that these considerations fully supported a gift, why did we bargain for a loan, and an interest-bearing one at that? The answer is simple. The administration wanted to make the best agreement possible from our viewpoint and to offer a plan which would be acceptable to our people and the Congress.

Now, in regard to this financial agreement, we have an anomalous situation. If the benefits are as great as I have indicated—and they are—why is there as much opposition as there is? The only explanation, I believe, is that there are so many benefits extending in so many directions in so many direct and indirect ways that the total picture appears to be complex, whereupon particular economic isolationist or defeatist groups muddy the water and parade their pet prejudices in picturesque and sometimes demagogic language.

It is my hope, therefore, to explain some of these benefits in such plain language that those who wish to understand will not be lured away by colorful statements without substance. As we proceed to this more detailed examination, keep this over-all summary of the proposed financial agreement in mind: the money extended Britain is not a gift but an interest-bearing loan wherein we receive not only a return of the dollars and interest but benefits that in truth many believe would have supported a gift.

The prosperity of this country is closely linked with our export trade. Even during the 1930's, when world trade was severely reduced, our exports accounted for some 7 or 8 percent of our agricultural and industrial production. For many of the products of our factories and farms, foreign trade meant the difference between prosperity and depression. And of all our foreign trade, no part was more important than that with the British Empire.

It is hardly necessary for a southerner addressing southerners to state that British trade is important to the South. But just look at cotton and tobacco, the two principal crops of the South. In the 4 years before the war, from 1935 to 1938, for every 2 pounds of tobacco we consumed in this country, we sold 1 pound abroad. In that same period England alone bought more than two-thirds of all our tobacco exports. Of our flue-cured tobacco a much larger proportion went abroad, principally to England. And the same thing is true with cotton. In the 4 years from 1935 to 1938, for every bale of cotton consumed in this country we sold a bale abroad. England alone bought nearly one-fourth of all our cotton exports. It is plain that without the British market it would not have been possible to maintain our cotton and tobacco production and price levels.

During the war Britain adopted certain monetary and trade controls which if continued would hurt seriously peacetime trade. I say, frankly, American business cannot afford to see Britain's wartime trade and currency restrictions continued.

In connection with these wartime controls you have heard of the sterling area, blocked sterling, and the dollar pool. What does this mean?

Most of us spend our entire lives in the United States. We are accustomed to money in the form of dollars and cents. When we work we are paid in dollars. When we buy we spend in dollars. When we travel up North we find that they take our dollars, too.

In the world, however, there are other currencies. There are a few of intercountry application, but the world-wide currencies are primarily the dollar and the pound-sterling. If you have a dollar and want to buy something in another country you may have to change your money into its kind. If someone abroad wants to buy your cotton or tobacco he has to change his money into dollars.

In this convertibility of money from one kind to another restrictions and impediments can grow up or be imposed. As you can readily see this puts a brake on trade between nations.

Now what do we mean by the sterling area? These are the countries of the British Empire and some European countries who keep their monetary reserves in the form of sterling in London. Australia, for example, keeps its reserves on deposit in English banks. Before the war, the sterling-area countries could draw on these reserves to buy goods all over the world. If Australia wanted to buy American cotton, it sold sterling for dollars. But during the war, Britain had to stop the convertibility of sterling.

That brings us to blocked sterling. Britain had to say to these countries of the sterling area—to India, Egypt, Australia, and all the rest—the reserve you now have in sterling cannot be converted into dollars. You can use these sterling reserves for making payments to each other but not to outsiders.

One reason for restricting the convertibility of sterling was that England did not have enough gold and dollars. During the war not only did Britain sell $4,500,000,000 worth of her foreign investments to finance her expenditures, but also she incurred an enormous debt of $13,000,000,000, measured in our money, held by foreign countries in the form of sterling balances in London banks and sterling securities of the British Treasury. Britain had to restrict the convertibility of sterling. She couldn't convert such large amounts into dollars or other currencies. She had to block their use.

But it wasn't enough to block the wartime sterling balances and end the convertibility of sterling. England had to mobilize all of its dollar resources to pay for war needs. The British Treasury took over private holdings of American securities in England, paying for them in sterling, and sold many of these investments in the United States for dollars. And it took steps to see that all of the dollar receipts of the sterling area countries were mobilized for war.

This was done through the so-called dollar pool. For example, when an Egyptian exporter sold goods in the United States, he turned over the dollars he received to the National Bank of Egypt and received Egyptian pounds. These dollars were then sold by the National Bank of Egypt to the British Treasury for sterling. In this way all of the dollar receipts of the sterling area are pooled in London. Then when a country in the sterling area needs dollars, say Egypt, it applies to London which allocates these dollars on the basis of the most essential needs. To conserve dollars, London does not allocate funds to buy goods in America if they can be secured from sterling-area countries.

Of course, along with these financial controls, there are direct controls of imports in all sterling-area countries. And these controls, like import licenses, are used to keep out goods that must be paid for in foreign exchange. In practice, this meant keeping to a minimum imports from countries that had to be paid for in foreign exchange.

These wartime restrictions are still in effect in Britain. Clearly, they were essential for the war. They helped Britain to mobilize her foreign-exchange resources and devote them to war purposes. They restricted the use of her foreign-exchange resources for nonessential purposes. But these wartime restrictions are dangerous in peace. During war, ordinary trade must give way to war; but trade is the very lifeblood of peace. To restrict trade in time of peace is to force poverty on the world. That is why we and all countries have an interest in seeing the prompt removal of Britain's wartime restrictions.

Neither England nor the countries of the sterling area have any wish to continue these wartime restrictions. But until Britain finds some other means to pay for its imports it cannot remove these restrictions. Until the blocked sterling balances are settled, sterling cannot be made convertible. Until Britain's dollar recipts are increased, she cannot permit the sterling she pays for her imports to be used freely in any country, and particularly the United States. Until Britain can earn enough to pay for her imports from the dollar area, she must continue the dollar pool. Until Britain exports enough to pay for its essential imports it must continue to limit imports from outside the sterling area, and particularly from the United States.

The elimination of all these wartime restrictions and discriminations is the major international economic problem for the entire world. Whether they are eliminated depends on what we do. We are the largest exporting country in the world. It depends on what England does. England is the largest importing country in the world.

As you know, England's attitude will influence other countries, just as ours will. A number of countries in the British Empire and in Europe are so completely dependent on British currency and trade, that they are invariably guided by British policy. That is why Britain's decision to 'erminate her wartime restrictions and discriminations is an essental prerequisite to establishing fair trade and currency practices.

This country has a particular interest in the removal of England's currency and trade restrictions. England is our best customer. One-sixth of all our exports before the war went to England. Nearly 40 percent of all our exports were sold to the British Empire and the sterling area. Every section of this country, every American industry has a vital interest in the opening of British markets to our products on fair and nondiscriminatory terms. The people of this country, the people of the South, cannot afford to see England continue and extend her wartime restrictions on currency and trade.

Let's see, for example, what that means to the South. It means that England would concentrate its trade within the sterling area where countries would take payment in sterling for the cotton and tobacco and other things England would buy. It means that England would buy cotton primarily from India and Egypt; she would buy tobacco primarily from Rhodesia and the Near East. England would stimulate production in her trading area, and once such production was built up, the British market might be lost to us forever.

You know the consequences to the South if Britain should adopt such a policy. In plain language, we would have no other alternative than to cut the production of cotton and tobacco by 20 or 30 percent. More than that! With the decline in tobacco and cotton exports the downward pressure on prices would be heavily increased. We might once again see 8-cent tobacco and 5-cent cotton.

I speak of cotton and tobacco, only, because they are southern crops that we know so well. But the situation would be much the same in other industries. Wherever American farms and factories depend on exports, the closing of the markets of the British Empire and the sterling area would mean economic disaster.

A good deal of progress has been made toward establishing a world in which countries can trade together. We have agreed on the fair currency and trade principles that are necessary to make it possible for world trade to expand and grow. But it will do no good to agree on these principles unless all of the trading countries are ready to put them into practice. We can move ahead on this program only after Britain removes the restrictions on the use of sterling outside

the sterling area; only after the wartime dollar pool is abandoned; only after the blocked sterling problem is settled. When these wartime restrictions have been removed it will be possible for world trade to expand and to make its full contribution to world prosperity.

Frankly we have told England that we should like to see her wartime currency and trade restrictions brought to an end. We want importers in England and the entire sterling area to have an opportunity to buy American products if they prefer our products. The British Government, in turn, has told us frankly that they have no wish to continue these wartime restrictions. If they could find some other means to secure the flow of essential imports of food, raw materials, and equipment into Britain, they would be prepared to abandon at once these wartime restrictions and discriminations.

We all know that Britain, as an island nation, relies heavily upon trade. During the war what she shipped in and bought and what she shipped out and sold was thrown out of kilter. In 1944 she shipped out only 30 percent of what she did in 1938. Her export industries were converted to war production. She has lost a large part of her merchant fleet. Her income from foreign banking and insurance services declined. She sold many of her most marketable foreign investments and lost the income from these. Britain must somehow make good the fall in her foreign exchange income because she needs to import large amounts of food and raw materials to feed her people and industries.

This is the basic reason that Britain needs the money in this loan. The loan will help balance the difference between what she must buy abroad and what she sells until she reestablishes a full flow of export trade. And may I add that though in the transition period her imports will far exceed her exports that the resulting standard of living for Britain will be little different from the austere wartime levels.

In return for the loan, in addition to repaying principal and interest, here is what Britain undertakes to do by way of removing within a year, unless we agree to a temporary extension, the wartime trade and currency controls:

First. All countries of the sterling area will be allowed to use the proceeds of their exports to England to buy goods in any other country, including the United States. That's because sterling arising from current trade will be made convertible.

Second. All countries of the sterling area will be able to use the dollars they acquire from their trade with the United States to make purchases in the United States. That's because the sterling area dollar pool will be dissolved.

Third. England's import controls will be administered in a manner which will not discriminate against American products. Any exports from the United States to England will be paid for in dollars or in sterling that can be converted into dollars by American exporters.

Fourth. England will settle the blocked sterling obligations out of her own resources. The funds that are released in settling these balances, whether as an immediate payment or as future payments, can be freely used for purchases in any country, including the United States.

Fifth. England will support the American proposal for the establishment of an international trade organization, for the reduction of trade barriers and for the elimination of trade discriminations.

This agreement, then, will be a big step in preventing economic warfare. It will also be a big step in creating a world in which countries live and work together in peace and prosperity. For England it will mean a chance to feed her people and reconvert her industries in a world of expanding trade. For the United States it will mean the opening of the markets of our best customers, England and all the countries in the British Empire and the sterling area, to the products of our factories and farms. It will mean a larger American share in a larger world trade. For the South it will mean the stimulation of the great industrial development which now beckons. Just as there cannot be national prosperity in the United States without international prosperity, there cannot be that great economic development of the South without general prosperity in the United States and the world. For all countries it will mean a chance to reconstruct a war-shattered world with expanding trade, great employment, and higher standards of living.

The alternative is as unhappy as it is clear. If England cannot secure the financial assistance of this loan, she will have to take drastic steps to curtail her imports and force her sales on other countries. This means that England and the countries that depend on England's currency and trade—the sterling-area countries—would reduce their purchases in the United States and in the dollar area. Our exports would be excluded as far as possible from British markets. Britain would enter into bilateral agreements with countries in Europe and South America, offering to swap her manufactures for their food and raw materials. Such a policy would inevitably divide the world into conflicting economic blocs.

I have no doubt we could defend ourselves. We would have to fight fire with fire. We would be forced to retaliate. We would set up restrictions and discriminations of our own. In blunt language, the world would be at war—economic war. And if we won, at best we would win a sorry victory. World trade would be destroyed and all countries would suffer.

That is not the kind of a world our people want. Our basic goal is to establish a world in which countries can live and work together in peace and prosperity. Two world wars and a world-wide depression have taught this generation the bitter lesson that there is no other road to peace—there is no other road to prosperity except through international cooperation. The political and economic problems of the world cannot continue to be solved by force. That road leads to destruction.

This is nothing new to the people of the South. They have long known that expanded trade among nations will contribute to the prosperity of all. It was Woodrow Wilson, a Southerner brought up in Virginia, North Carolina, and Georgia, who warned an unheeding world that only through international cooperation will it be possible to maintain peace. Without regret for what might have been we must finish the job we have at last begun. That job is to build through international cooperation a peaceful and prosperous world.

The people of the United States and the United Nations have agreed on a program in which countries cooperate to maintain peace and prosperity. The United Nations Organization, with its Security Council, General Assembly, International Court of Justice, and Social and Economic Council, constitutes one side of this program. The Food and Agricultural Organization, the International Monetary Fund, and the International Bank for Reconstruction and Development, and the proposed International Trade Organization constitute another side of the same program. The financial agreement with the United Kingdom is a sound, big step to the realization of this entire program for peace and prosperity. This is what I hope the people and Congress will bear in mind in considering the financial agreement.

Permanent Location of United Nations Capital Merits Careful Study and Complete Consideration of All Pertinent Aspects Prior to Final Decision

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am herewith calling the attention of the Congress and the country to a pertinent and important editorial from the typewriter of Fred C. Christopherson, editor of the Daily Argus Leader, published in Sioux Falls, S. Dak. It merits the thoughtful reading of every citizen seriously interested in the preservation of world peace and the success of the United Nations Organization.

It should clearly be kept in mind that not "just any location" is equally desirable for the United Nations Capital. At best the problems with which the United Nations Organization must deal are prodigious. These problems should not be aggravated and accentuated by a careless choice of the site upon which the world capital is to be permanently housed.

Every historical, political, social, economic, and geographical aspect of the final decision should be carefully weighed before the final selection is made. Partisan politics, personal favoritism, passing sentimentalism, and pressure of time must not be permitted to dictate a decision which would decrease respect for the United Nations Organization or hamper its opportunities for success in the years to come. As nearly as possible, the final selection should name a site which will not antagonize the sentimentalities or the sensibilities of any considerable section of our public here at home and which will not indicate any favoritism among the many countries belonging to the UNO.

In the geographies of the future, the name of this site should be identified with the cause of peace and the work of the United Nations Organization. It should stand out in the field of international relationships as the reference to Rome stands out in the field of religious activities.

The UNO capital should not be located within the environs of a large city where it would be submerged and obliterated by the historical or commercial significance of that metropolis. It should not be compressed into a tightly crowded area where future expansion is impossible. It should have room enough for steady growth and space enough for the quiet and uninterrupted study of its mighty problems. It should be in a location, midway between Europe and Asia, where neither area need feel that its problems are being neglected or under-emphasized for the consideration of a more adjacent cause.

Mr. Speaker, the great central area of the United States lying between the Rocky Mountains and the Appalachians seems, by every criterion, to be the optimum region in which to locate the

United Nations capital. In this mighty region—comprising as it does the heart of America—the United Nations site location committee has had called to its attention attractive invitations from Michigan, Illinois, Indiana, Oklahoma, Missouri, and from the world famous Black Hills Mountain country of South Dakota. Perhaps other communities in this region have also extended invitations of which I am not aware. All of them merit careful and analytical consideration by the authorities finally making the decision for the permanent location of the United Nations capital.

BRITISH INFLUENCE STRAIT-JACKETED SITE COMMITTEE

Unfortunately, in a moment of hasty decision, the present UNO site capital committee now on tour in this country was restricted through the influence of Great Britain from even inspecting or considering any site outside of the limited east-coast area favored by the British Empire because of its relative proximity to the British Isles and its hoped-for adaptability to British influence. As a result, the UNO site inspecting committee has been prevented by this artificial and arbitrary device from even visiting many of the most attractive and meritorious locations which have invited the United Nations to inspect their offerings. Frankly, it is difficult to rationalize the strategy of the British Government which in one action seeks to float a gigantic loan in this country which all Americans would help to pay while in another action it endeavors to snub that great portion of America lying west of the Hudson River and south of Washington, D. C.

From reports emanating from the UNO site committee activities, it is apparent that in its highly circumscribed and circumvented inspection trip it has failed to find a site with which it is fully satisfied. But the dogmatic instructions under which it is traveling prevents it from looking "on the other side of the river" even though that area offers the United Nations Organization advantages and opportunities far beyond those which it has found in the limited region which it has been free to consider.

It would be extremely unfortunate, Mr. Speaker, if something is not done to free the UNO site committee from the strait-jacket in which it has been endeavoring to operate. I respectfully propose, therefore, that accredited spokesmen for the British Empire now publicly withdraw their objection to the consideration of any other American site for the UNO capital other than those in the eastern part of the United States for which they have expressed their support.

The gracious and the statesmanlike thing for British leaders to do would be for them to issue an open statement to the effect that they no longer insist that the UNO capital site committee restrict its inspections and considerations to the particular region of the United States favored by Great Britain.

The UNO must not be dominated by the attitudes and activities of a single nation or a single area. It is sincerely to be hoped that in its initial important decision—the choice of a permanent home—it will demonstrate the courage and capacity to approach the decision with an open mind and an uncontrolled opinion. The hour is late, but it is not too late to take the British strait-jacket off from the UNO site committee and to give it a free hand in reporting back to the parent organization on the benefits and disadvantages of all of the more desirable sites offered to it regardless of the section of the United States in which they are located.

[From the Sioux Falls (S. Dak.) Daily Argus Leader]

CAPITAL SITE TO BE A MAJOR WORLD CITY

Somewhat surprising to us is the seemingly casual indifference in the United States as to the site of the UNO world capital. Perhaps the people are so engrossed in their domestic difficulties that they are failing to appreciate the significance of the international organization's selection.

Yet the place which it selects as the site is likely to develop in the years to come as the world's most distinctive and most important city. It will be the place where the decisions affecting the world's welfare are made. It will be to the world what Washington is to the United States.

This statement, of course, is predicated on the assumption that UNO will become a workable institution. And certainly this is the current hope of every person who is genuinely interested in world welfare.

Other sections of the country may not appreciate as well as we in South Dakota do the potential development of the UNO world city. We have given closer study to it because of the Black Hills campaign to induce the organization to locate in that area and, in consequence, are familiar with the subject. Other sections seem to regard it as just another organization without comprehending its full import.

For our part, we are strongly of the opinion that it would be a mistake to place the capital in the already congested areas of the United States near a large city where difficulties in respect to racial backgrounds and so forth might develop. The UNO itself is worried about this and has sought to find a region where there is broad tolerance and understanding. Yet if the capital is placed adjacent to New York, Philadelphia, or Boston, future demonstrations of an unpleasant nature can be expected. Delegates with a swarthy complexion are likely to find some prejudices against them when they visit these cities and may be barred from some hotels and cafes.

There would be no such difficulties if the UNO capital were established in its own city well removed from other centers of population.

Our first choice, of course, is the Black Hills. But, if it is not to be there, we are still firmly of the opinion that it should be in some separate inland city of its own.

The great central part of America itself should be interested and concerned in this and we hope there can be developed a vigorous campaign to place the capital in the interior, well removed from both the eastern and the western seaboards.

Sermon of the Most Reverend Bryan J. McEntegart

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1946

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a constructive, powerful, and courageous sermon delivered by the Most Reverend Bryan J. McEntegart, D. D., bishop of Ogdensburg, N. Y., at the Red Mass in the National Shrine of the Immaculate Conception at the Catholic University of America, Washington, D. C., Sunday, January 27, 1946, which everyone should read. It is a sound contribution by a spiritual leader to the greatest question confronting mankind:

"Love thy neighbor and be joined to him with fidelity" (Ecclesiastes 27: 18).

In everyday life, my dear brethren, few traits of character are more esteemed than that of trustworthiness. We say of the trustworthy man that his word is as good as his bond. In business or social life, we feel secure when called upon to deal with him. For we know that his life is ruled by fidelity. He will be faithful to his obligations and promises without being watched. To live in a community where such men prevail is to know security and peace in community life. Fidelity is indeed the foundation of justice and the work of justice is peace.

On the other hand, which of us would choose to live in a community where each of our neighbors was a law unto himself? Where each was armed with deadly weapons? Where no one's word could be trusted, and the only recourse would be to police and courts dominated by the most powerful and the most ruthless. From such a community, all peace and security would be banished. Fear and suspicion would fill our day; and our nights would be troubled with worry and distrust.

What is true of a local community is likewise true in large measure of the world community.

I

Today distrust hangs like a cloud over the world community, darkening all prospects for international cooperation in the interests of peace. Its benumbing influence is to be felt everywhere in the public attitude toward the main problems in international relations.

Take for instance, the negotiations concerning atomic energy. President Hutchins of the University of Chicago speaks for many when he says that the world has only a slight chance of averting the horror of atomic war. That slight chance, he believes, lies in a rate of moral progress during the next 5 years far beyond anything that has ever been dreamed of. For that purpose, he would marshal the instruments of education throughout the world to develop in all men a common tradition, common ideals, and common ideas. "The task," he states "is overwhelming and the chance of success is slight. We must take the chance or die."

But even apart from the atomic bomb, public opinion is filled with distrust. We see it in the agitation for abolition of the veto power in the United Nations Organization; and just as clearly, we see it in the stubborn efforts to retain that power.

Distrust has stirred bitter controversies over the occupation policies in Germany and Japan, and it has influenced deeply the public reaction to the conflicts in Palestine, Iran, and Indonesia.

Nor does its work stop there. The failure to formulate any program for the gradual disarmament of all nations, and the clamor throughout our own land for universal military training, the little brother of national conscription, are but further evidence of this same pervading spirit of distrust.

II

Now, to the student of history, all these examples are but surface indications. They are only the outcroppings of a distrust which is rooted in more general causes. We must search deeper for those underlying causes.

In the first place, the roots of public distrust are grounded in the utter lack of public confidence in the promises of totalitarian states. The monstrous crimes of nazism and fascism are still vivid in the public

memory. Neither have people forgotten the other examples of totalitarian aggression to be found in recent history.

They know that in violation of solemn promises, the sovereignties of the Baltic nations were sunk without a trace, and even without public remonstrance from world leaders. They know that in violation of solemn promises Poland has been partitioner, its recognized government scrapped and a misrepresentative regime installed and maintained by force. And they know, too, that today the people of Balkan countries live in terror behind an iron wall of censorship.

With the logic of common sense, the public does not indulge in hopes that totalitarian governments will afford to other peoples the rights they refuse to their own subjects. And they are convinced that slave labor, concentration camps, and the mass banishment of innocent people are evil, regardless of what nation sanctions them.

Is it any wonder then, that the peoples of the world lack confidence in the promises of every totalitarian regime?

Furthermore, the roots of public distrust are also to be found in the disappointing history of other efforts at international cooperation. Still fresh in memory is the break-down of the League of Nations when it was faced with questions of vital import to the peace of the world. Men remember well the rapid succession of international treaties which were made between the two World wars and broken almost as soon as they were made. Nor does it serve any good purpose to ignore the shock experienced by our own people and those of other lands, when they heard the Atlantic Charter, that inspiring statement of moral objectives, minimized, disparaged and whittled down by its very authors.

Over and beyond these examples of history, the common people of the world sense that national spokesmen and political philosophers have done tremendous harm to the validity of international agreements. Stealthily, determined efforts have been carried on to divorce international relations from morality.

From many quarters comes the doctrine that the will of each state is supreme and subject to no higher law. International agreements, it is contended, are made to serve only the utility of a state; and such agreements are revocable whenever that state considers them no longer useful to it. Fine words and clever phrases may bolster the plausibility of such a doctrine. But the common sense of mankind brands it for what it is—international anarchy.

Another school views all law as only an expression of force. Men and nations, they tell us, are entitled only to the rights which they can hold by force or artifice. The common sense of mankind rightly names this doctrine, the "law of the jungle," and labels it unfit for human relations.

In fine, the people are distrustful because deep down in their souls they sense in recent efforts at international cooperation the lack of an essential element. They know that charters, covenants, and treaties are only so many worthless scrolls unless interwoven in the text and standing behind the signatures—there is legal recognition of an inviolable moral obligation. And common sense tells us that nothing is inviolable; if there be no God.

III

Three thousand years ago, Plato wrote: "If God presides not over the establishment of a state; if it has only a human foundation, it cannot escape calamity." Five hundred years later, King David, with divine inspiration, wrote: "The fool has said in his heart: There is no God."

And again: "Unless the Lord build the house, they labor in vain that build it." Today, 25 centuries after David, the truth and the wisdom of his words are evident in the tragic folly of men planning for the peace of all mankind without reference to God, the Maker of mankind.

The existence of God and His supreme dominion over the world is not a theory or hypothesis which men can accept or reject at will. It is a stark fact. To deal with human relations without taking that fact into consideration is folly. One might as well try to draw the map of the United States without reference to the Atlantic Ocean, or to write the history of the United States without reference to the Constitution.

If God is ignored, if we do not look for the true, the good, and the right in the nature of God, where shall we look for them? Politics will give us the answer: To the State. "The true," "the good," and "the right" will be what each State says they are. And when these little gods differ, the most powerful will make itself the almighty god of the human race. No. There is only one moral code of universal and everlasting application. The rule of right, the standard of truth, and the norm of good are determined by the nature of God. They cannot be found apart from the one true God.

How poignant, then, are the searching words of that valiant woman of China: "Religion, on which the doors of diplomacy seem to have been slammed, is the main pillar of civilization. Without it, there can be no international righteousness, no justice, no common decency, go guaranteeing of the honor of the pledged word."

Shortly after our entry into the war, our late lamented Commander in Chief made this prophecy: "We shall win the war, and in victory we shall seek not vengeance but the establishment of an international order in which the spirit of Christ shall rule the hearts of men and nations." One need not grope for the objectives of the spirit of Christ in human affairs. From a hillside in Galilee, the Son of God gave mankind the answer in words that come ringing down through the centuries: "Seek ye first the kingdom of God and His justice, and all these things shall be added to you."

The first step toward world order is to acknowledge in reverence and obedience the kinship, the dominion of God over human affairs, national and international.

The second step is to see that the instruments for the ordering of men's actions are in accord with His justice, that is, with the law written in man's nature and later given to us mainly in the Ten Commandments.

The chief instrument set up to secure the peace of the world is the United Nations Organization. At present, it is little more than an alliance of victorious powers. But it is all that we have and we must build on it. With good will it should be possible to transform it into a real organization under law of the international community. It should be possible, too, through its agency to develop and proclaim the provisions of international law in accordance with the true norms of justice.

In our own country the status and powers and prestige of the Supreme Court came to be clearly recognized only after years of conflicts and resistance. In time, too, may we not hope that the World Court will develop into a court to which all justiciable disputes among nations must be referred—a court to which the provisions of disputed treaties shall be submitted for just interpretation, or, where necessary, for equitable revision.

Ultimately, however, the success of the United Nations Organization will be measured by its progress toward two great goals. They are: First, the sincere adoption by all nations of an international bill of rights for individuals and for minority groups; and, second, the adoption by all nations of a program to reduce armaments gradually and to abolish military conscription.

When these objectives are achieved, and only then, may men feel with any assurance that the instruments of world order are in line with His justice.

IV

God has placed it within the power of the men of our day to introduce a new era—an era in which nations will live together in justice and charity. The deepest hope of mankind is for a world at peace, a world of sovereign states cooperating to insure to all men the full enjoyment of their rights, a world of freemen and free nations with their freedom secured under God and the law.

Along the hard road to that goal the nations may be called on to make many sacrifices which today seem great, but which, in the light of God's justice, are necessary for the welfare of the human family. Unjust trade barriers, the unfair advantages that go with might and wealth, the idea of unlimited sovereignty—all of these must be either rejected or readjusted in accordance with God's principles of justice. As we move along that road to understanding and unity, let us share the reverence and faith of Tennyson's prayerful words, timeless and for all humanity:

"Our little systems have their day;
They have their day and cease to be.
They are but broken lights of Thee;
And Thou, O Lord, art more than they."

Today, as we stand at the threshold of a new era, it is a heartening sign for the future that men, such as those who make up this congregation, should gather around the altar of God to offer their tribute of worship to Him, and to draw from the sublime sacrifice of the mass divine guidance and divine grace. You seek divine guidance that you may see more clearly God's purpose in a tangled world. You seek divine grace that you may, with courage and with loyalty, pursue that purpose in the cause of justice among men and nations.

May the Holy Spirit consecrate your labors in the sacred task of laying those foundations of fidelity and trust upon which rest the future peace and security of mankind, and now, in benediction, I leave with you the divine promise:

"My son, forget not my law; and let thy heart keep My commandments. Let not mercy and truth leave thee; put them around thy neck and write them in the tables of thy heart, and thou shalt find grace and good understanding before God and men."

Rural Electrification Benefits From St. Lawrence Development

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Development of the St. Lawrence: Benefits to Rural Electrification." The article was prepared by me for the January 1946 issue of the magazine "Rural Electrification."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEVELOPMENT OF THE ST. LAWRENCE: BENEFITS TO RURAL ELECTRIFICATION

(Editor's Note.—The co-ops of region 1 voted to request the National to have an article written showing the benefits to be derived from the proposed development of

the St. Lawrence seaway. We went to Senator AIKEN, long-time friend of the co-ops and advocate of the St. Lawrence project, with the request of region I, and he kindly agreed to prepare this article for Rural Electrification.)

(By Hon. GEORGE D. AIKEN, United States Senator, Vermont)

Each year that the development of the St. Lawrence seaway and power project is delayed, this Nation is being deprived of the use of a natural resource which rivals in economic value the TVA and the Panama Canal combined. For the 2,200,000 horsepower hydroelectric capacity of the proposed power station at the International Rapids of the St. Lawrence River will equal the generating capacity of all the hydroelectric of the Tennessee Valley area, and the 16,000,000 tons of ocean shipping which the Great Lakes-St. Lawrence seaway will provide greatly exceeds the original traffic in the Panama Canal.

The importance of opening the great and productive midwest to the deep-water trade routes of the world holds for this country even greater promise than the opening of the Dardanelles and the Suez Canal held for the nations of the old world. The completion of this long-planned project will add a fourth coastline to the United States, extending 2,350 miles into the heart of the North American Continent.

Only eight countries of the world produce as much electricity as will be generated at the single dam near Massena, N. Y. Also, the generating capacity at the proposed dam will be exceeded only by the production capacity of Grand Coulee.

The feasible transmission range of this electricity includes most of New England, New York, and a part of Pennsylvania. Interconnections will make this power available on an emergency basis as far as Chicago and Washington, D. C. The value of this cheaper power—which can be generated for about 1 mill per kilowatt-hour—to the rural and urban people of the area served, where electric rates are now among the highest in the country, will be tremendous. Its value to REA co-ops is particularly significant.

In this land of ours—known the world over for its high standards of living—little more than 40 percent of our farms are electrified. That means that more than 3,500,000 farms and about 2,800,000 other rural dwellings are still without central-station electric service. In the States of New York, Vermont, and New Hampshire alone, there are still almost 50,000 farms without central-station electricity, and more than 85,000 unelectrified nonfarm homes and establishments in rural areas of these States.

The question now is: How much longer will obstructionists and self-seeking interests be permitted to stand in the way of the development of the navigation and power phases of these waters which constitute one of the greatest natural resources in the world? The opposition has come mainly from power interests and eastern railroads, both groups being closely allied with New York financial powers. The eastern railroads fear competition in their rates, and the power companies fear cheap public power. This opposition has been both vocal and united since public development of this project was proposed a decade and a half ago. Prior to that time private-power interests had long been trying to obtain the right to tap, as a private development, the latent power in the rapids of the St. Lawrence.

CALAMITY HOWLERS BUSY

The calamity howlers have voiced all kinds of claims against the proposed public development of the project. They have fought the power phase of the project with the same kind of scare propaganda that was used against TVA, Boulder, Grand Coulee, Bonneville, and other similar projects, claiming that it isn't needed. Just as the need for the power of these other projects has been proved beyond all question, so has the need for power in the area to be served by the St. Lawrence project been proved. During the war, the shortage of electricity in the Northeast was one of the biggest power headaches the war mobilizers had. The peacetime need for cheaper power in that area is still acute.

The railroad opponents of the seaway—like the man who mounted his horse and rode in all directions—hold simultaneously that the seaway will be a waste of money because it will not be used, and that it will cause their economic ruin by taking business away from them. There is ample evidence to show that the long-time benefits to be gained from the seaway's cheaper transportation far outweigh any temporary, short-range disadvantages claimed by the opponents. There are always those who oppose any move in the direction of progress. Actually, the seaway will be an alternative means of meeting a part of our future transportation requirements under an expanding economy.

The legislation, introduced in both Houses of Congress on October 2 as a joint resolution, is the latest of several efforts on the part of congressional proponents of the project to gain legislative consent to it. Specifically, the proposed legislation provides for approval of the major portions of a 1941 agreement between the United States and Canada to develop the navigation and power phases of the Great Lakes-St. Lawrence waterway. The Senate bill was referred to the Committee on Foreign Relations and in the House, where several identical bills have been introduced, the matter has been referred to the Committee on Rivers and Harbors. While it had been expected that hearings on the Senate bill would be held first, no public announcement concerning the holding of hearings has been made as this is written.

FIRST REAL OPPORTUNITY

The legislation now before Congress represents the first real opportunity afforded both Houses to pass on the real merits of the project. Previously, technical, procedural questions—unrelated to the merits of the project—have served to obscure the fundamental issues. In the course of pursuing these delaying tactics, those opposed to the undertaking have achieved their purpose on at least one occasion by talking it to death.

In both the Senate and the House of Representatives the current bipartisan support of the bill is stronger than for any similar legislation in recent history. President Truman's endorsement of the legislation, in a special message to Congress on October 3, is in keeping with a precedent followed by every Chief Executive since Woodrow Wilson—Republican and Democrat alike. Also, the project has had strong support from many and varied groups outside of Government.

PROPOSAL NOT NEW

The proposal to develop this seaway is not a new idea. It has been envisioned by the United States and Canada for over a century. During the last 50 years the desirability of harnessing the power latent in the rapids of the St. Lawrence has been more and more appreciated.

The truth of the matter is that the 2,350-mile seaway already exists, except for a comparatively short span. Aside from some spot dredging in the channels connecting the Great Lakes—mainly in the St. Clair and Detroit Rivers—the main work to be undertaken by the United States will involve the construction of a control dam and the big power dam, locks, canals, and a power station in the International Rapids section of the St. Lawrence. Canada's major remaining work includes the construction of canals and locks at the Lachine and Soulanges Rapids, and the installation of machinery and equipment in the power station, at the International Rapids.

The total cost of developing the Great Lakes-St. Lawrence Basin and the benefits from the 27-foot seaway and the cheap power will be shared equally by the United States and Canada. Our neighbor to the north has already spent approximately half of its share of the over-all cost. The United States has yet to make its main contribution.

President Truman Requests Extension of Price Control

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Truman Asks Price Control for Next Year." The article not only relates to the statement made by President Truman but also to a statement made by Civilian Production Administrator John D. Small, who takes the same position as the one I have taken in the Senate during the past 2 years, namely, that the only way to whip inflation is by means of obtaining maximum production, and the only way to obtain maximum production is through a realistic pricing program. I think Mr. Small concurs in the view I have expressed in the Senate for the past 2 years.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUMAN ASKS PRICE CONTROL FOR NEXT YEAR—PRODUCTION CHIEF THINKS OPA POLICY BALKS CONVERSION

President Truman yesterday called on congressional leaders for an extension of price control legislation for another year after next June 30.

A short time later Civilian Production Administrator John D. Small expressed the view that OPA pricing policies must be changed before the Nation's industry can get back into high gear.

Chairman SPENCE (Democrat, Kentucky) immediately set House Banking Committee public hearings on the OPA extension bill to begin Tuesday of next week.

TRUMAN WANTS SPEED

House Democratic Leader MCCORMACK, of Massachusetts, said "the President feels that early action on extension of price-control legislation as soon as possible is a matter of paramount importance to the country."

Representative WOLCOTT, of Michigan, senior Republican on the Banking Committee, said large numbers of Republicans would support a continuation of price control "where needed," but they want amendments for more precise definitions of OPA's powers.

SPENCE voiced the belief the bill would go through "without much trouble," and commented: "You know everybody is for self-preservation. And that is just about what OPA amounts to in our economy today."

OPPOSITION AHEAD

However, the extension measure is bound to meet some vigorous opposition.

Charging OPA with lack of realism and flexibility, Small told a news conference that CPA is able to get only dribbling price increases with which to break production bottlenecks. These, he said, are granted only after much argument and a real "go-to-town" campaign on CPA's part.

Small's attack on OPA methods brings into the open a long-developing interadministration battle over whether Price Administrator Chester Bowles is to be permitted to make pricing policy or whether Reconversion Director John W. Snyder will be able to impose his philosophy of "flexibility."

Small and Snyder held the same views on pricing—and that is that a few cents given here and there hurts nobody. When in doubt, raise the ceiling. At his news conference Small went a step farther than Snyder has gone publicly to declare a new plateau of price ceilings might be in order.

"A price increase is not what will hurt the country most," he declared. "Lack of production is." Questioned on how much of a general price increase he thought the Nation should have, Small said: "It would not take much. These men who come in here are asking only for very little."

Pressed to state whether he visualized a new price level of "say 5 to 10 percent to consumers," Small said: "Not any more than that would be needed—if that much."

INSISTS ON PROOF

The Price Administration believes the cost-of-living line should be held as much as possible, but has given hundreds of price increases since VJ-day. It believes that nearly any increase is going to be felt by the consumer sooner or later, and insists that proof be presented to show whether an increase really will increase production before consenting to raises for that purpose alone. Lumber—one of the items Small declared "we've just got to have more of"—has had five major price increases since 1941 and production has continued to decline.

Small presented numerous charts and comprehensive report to show that production is in reality bogged down. December output was far below expectations on most consumer durable goods items. Building materials are lagging. Nineteen hundred and forty-six goals look next to impossible when viewed beside reconversion output to date.

Strikes are only one factor which has delayed output, Small pointed out. Many vital industries have manpower shortages, he said, and there has been a letdown in intensity of effort by both management and labor.

Part of this letdown, he said, is due to "dissatisfaction with OPA price ceilings on individual products by those who are squeezed between rising costs and rigid ceilings." Another part is due to "reluctance to make forward commitments because of uncertainties as to wages, prices, and labor relation."

"We are in a sellers' market of unprecedented magnitude. * * * If we are to avoid inflation we must have all-out sustained production. * * * Instead we have rapidly growing black markets, a trickle of consumer goods to dealers' shelves, and increasing shortages of materials and components," he declared.

The "trickle" of consumer goods Small is worried about is illustrated by these samples of production in December, compared to 1941 levels:

Electric irons: 350,000, or 92 percent of the 1941 rate.

Electric ranges: 30,000, or two-thirds of the 1941 rate.

Electric refrigerators: 150,000, or about half the 1941 rate.

Radios: 100,000 sets, or only 8 percent of the prewar figure.

Sewing machines: 5,000, or only about 11 percent of the prewar rate.

Domestic washing machines: 65,000 units, or about 40 percent of the 1941 rate.

Considered beside accumulated wartime demands, these trickles are alarming to Government officials who believe that only greatly increased 1946 production can stop the inflationary tide. Some of these officials besides Small and Snyder believe price incentives must be offered.

Address by Hon. Harold E. Stassen at Conference of the National Council for a Permanent Fair Employment Practice Committee

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by a great American statesman, Gov. Harold E. Stassen, of Minnesota, at the conference of the National Council for a permanent Fair Employment Practice Committee, at Washington, D. C., on January 23, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies and gentlemen, it is my deep conviction that we meet at one of those critical periods in which the world takes on a sense of direction and establishes a course. A world-wide war of terrific destructive impact has ended. It ended with victory for us and for our United Nations allies. And it ended as science revealed that the tiny atom had been successfully split in a manner to unleash amazing destructive power.

We are now in the period in which the minds and hearts and materials and machines of mankind are reconverting to a world at peace. It is a time of change, of readjustment, of unrest, of questioning, of searching. It is a time that pleads for moral leadership from the United States of America.

A review of history makes it quite clear that the pattern and the trends were established within the first few years after the last World War, which in a quarter of a century led to world-wide depressions and unemployment and suffering and to the tragic outbreak of the second world-wide war.

That must not happen again. It will not happen again if the United States of America contributes in full measure to the moral leadership of the world. At the very base of the moral foundation of our own country has been the principle so bravely and beautifully enunciated in the Declaration of Independence, "We hold these truths to be self-evident, that all men are endowed by their Creator with certain inalienable rights, that among these are, life, liberty, and the pursuit of happiness."

It was this recognition of the fundamental dignity of man which more than any other thing has made it possible for a small group of struggling colonies to become a powerful nation, peopled by sons and daughters of every nation in the world.

We are all keenly aware of the fact that this great principle has been violated in varying degrees in many portions of the world and has also been violated within the borders of the United States of America. This National Council for a Permanent Fair Employment Practice Committee has recognized clearly that unfair discrimination in employment because of race or color or creed has been one of the blots upon the record of our moral principles. You have recognized the imperative necessity, if we would continue to build America, if we would increase its units, its strength, and its stability to move forward in a practical, definite, gradual, and common-sense manner, to eliminate this unfair discrimination.

I commend you highly this evening for your clear recognition of the importance of this work. It is encouraging to find this unusual group of national organizations working actively together for this noble purpose. I would like to urge upon you tonight, the full recognition of the fact that not only are your efforts making a profound contribution to America within, but also that your efforts in the program for fair employment practices is an essential part of the moral leadership which America must contribute to the world.

If we would have peace for mankind, if we would have a slow, steady march of progress in the well-being of men and women and little children around the world, then it is imperative that America speak out against injustices around the globe. America must speak out against the violation of basic human rights wherever they may occur. America must speak out on behalf of the peoples of the world, their hopes, and their aspirations, and their yearnings. And, America's voice cannot be heard in the clear, convincing, sincere, tones that are needed, unless America also speaks out and acts upon economic injustices and violations of basic human rights at home.

I know you sense the bigness of this issue. I know you grasp its historic significance.

The current situation upon the measure in the Senate raises some additional grave questions. It seems quite clear that the overwhelming majority of the peoples of the United States are in favor of this legislation. It seems equally clear that a minority of the Democratic Senators in the United States Senate can effectively block this legislation by the filibuster method in which they are now engaged. The question then is not simply of the importance of legislation to safeguard the rights of minorities, but also of the importance of the establishment of a legislative procedure that will prevent minorities from willfully blocking the decisions of the majority.

Clearly the filibuster has a place in legislative procedure. It can well be used to insure an opportunity to the people of the country to thoroughly understand an issue before a decision. It can be used to give time for the marshalling of evidence, for the investigation of facts, and for sound democratic compromise. But it does not appear currently that it is being used for any of these purposes. The issue has been thoroughly debated for many months. A temporary wartime FEPC functioned ably and well throughout the war. The State of New York under Governor Dewey has placed a similar measure in operation with agreed success. The Republican platform of 2 years ago continued unequivocal support for the program. A definite notice was given by the senatorial sponsors of the legislation, to whom high praise should be given for their forthrightness, their fairness and their vision. The opinion of the people clearly supports the legislation. The filibuster then, if long continued, constitutes, purely and simply, obstruction by a minority which defeats the effective functioning of democratic government. It gives comfort to those of the extreme right and of the extreme left, who seek to undermine the effectiveness of and the confidence in our representative form of government. It contributes to the establishment of fertile ground for the flourishing of subversive activities It throws a spotlight upon a condition which is of even wider significance than the important issue of the FEPC. It is an issue which should be decided by the people of the country in the elections that are before us.

There are those who obstruct this legislation on the pleas that there are other injustices that need correction. This is a frequent tactic of entrenched reaction. It is not the method by which progress is made. Let measures be presented and debated be-

fore the country and considered by the people and the political party conventions to meet other injustices on their own merits. Used as a tactic of obstruction this device is simply a method which results in keeping the smudge on both the kettle and the pot.

As to the immediate measure of legislation itself, I know that the organizations represented on this Council are desirous that it be adopted and administered in a manner that will carry out its name; in other words, that it will promote fair employment practices. The amendments which are proposed by friends of the measure limiting its application to employers of over 25 and requiring substantial evidence of violation are sound amendments. Other reasonable and sincere amendments should be accepted. I know that is your attitude. I commend the reserved and balanced judgment of the predominant leadership of the minorities who are directly concerned. You have demonstrated that you know that progress must come gradually, that education and understanding must keep pace with legislation. You have demonstrated an awareness of the manner in which subversive elements might endeavor to take advantage, to the detriment of all the people of the country, of the situation created by unfair employment practices. You have emphasized properly that you seek only to have the men and women of this country judged in their important economic rights on the basis of their ability and their character and their industry. You have merely and ably insisted that the doors of economic opportunity should not be slammed shut because of race or color or creed. You have indicated that you have recognized that a program of nondiscrimination in economic matters must not be interpreted to mean the invasion of essential rights of privacy. You have indicated your recognition that the rights of men to associate together in groups of their own choosing so long as they do not close the doors of essential economic, political, and cultural rights should properly be preserved. I commend this broadness of your approach.

Let us not forget that everyone fits into a minority of one type or another in this great country. I urge upon all members of minority groups that they should so conduct themselves that they encourage respect from the majorities and stimulate a desire to extend fair treatment. The continuing success of America requires a continuing dual obligation of those who from day to day and issue to issue, find themselves in the majority to extend fair treatment to the minority, and of those who on the same basis find themselves in the minority to so conduct themselves that they do not obstruct the majority and that they make it a pleasure for the majority to extend fair treatment to them. It should be added, however, that the conduct of neither a majority nor a minority should ever be used as a reason for the failure to give the basic fair treatment and respect to fellow human beings which is at the very foundation of our form of government.

The issue is intense, it is emotional, it is deep. But let us recognize that the stakes are very high. It is a part of the very atmosphere which will determine the continuing peace and happiness of mankind. Then let the effort to attain success of your endeavor continue. Recognize that even while, as now, the issue is being debated this will in itself have a continuing wholesome effect upon the economic policies and practices within the country. Never become discouraged. Be ever resourceful, vigorous yet patient, determined yet understanding, with faith that the people of this country will so respond to the issue that it will win through.

Prices and the Cost of Living

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Housewives, Attention!" published in the January issue of the Journeymen Plumbers and Steam Fitters' Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOUSEWIVES, ATTENTION

It's just about time that the politicians of this country stop their orations long enough to listen to the housewives of America tell them a thing or two about prices and the cost of living. The housewives are authorities when it comes to making ends meet by stretching a dollar. Perhaps they cannot distinguish the truth from a falsehood when it is buried in the depths of a complicated display of statistical figures or explained by zig-zag lines of varying colors on a chart; but they certainly know what is happening to prices and qualities of goods. They do the buying for the Nation, and there is a great deal of truth in the homely saying that husbands may earn the money, but it's the wives who spend it.

Are the housewives of America being consulted as qualified experts by the Members of Congress? The answer to this question is so clear that it need not be made. Instead, too many of the Congressmen are busy appeasing every pressure group that has enough money to come to Washington. Indeed some Members of Congress are so busy listening to pressure groups that they rarely are present in the halls of Congress. The list of absentees in Congress resembles that of the "little red schoolhouse" when there is a circus in town.

Let's take a look at this question of prices.

Within a year after America got into World War II Congress decided—by a majority vote—that an attempt should be made to avoid inflation. Every time we went to war there was inflation. Every time the war came to an end, inflation did not. Every time inflation got started during the war, it did not end until we suffered through two postwar depressions. The American housewife doesn't need an economist to "prove" that inflation is not good for the Nation. As a matter of fact, even Congress was sufficently aware of the dangers of inflation to conduct an experiment designed to avoid inflation. For the first time in the history of America the Federal Government made a positive effort to fight inflation when Congress passed the antiinflation act of October 1942.

As a consequence of this act the OPA fixed prices and rationed the amount of certain goods that could be bought. To be sure this first experiment was not 100 percent successful. To be sure, housewives had to become magicians in order to match the appetite of the family with the "points" allowed her. To be sure, the chiselers refused to produce low-priced goods for the public markets while they did supply the black markets. To be sure, some landlords let their properties run down because they could not raise the rent.

FEPC Bill

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from A. Philip Randolph to the editor of the New York Times urging passage of the FEPC bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PASSAGE OF FEPC BILL URGED—EDITORIAL OPPOSITION TO PROPOSED ACT SUBJECTED TO CRITICISM

To the EDITOR OF THE NEW YORK TIMES:

Concerning your editorial, The FEPC Problem, in your issue of January 24, you state: "If the bill could actually accomplish what its proponents believe it will, we would have no hesitation in urging that it become law with the least possible delay."

Obviously neither the FEPC bill nor any bill which is now, or will come before the Congress, will accomplish 100-percent performance. But the word "what" suggests such a performance. The fact that the Federal Constitution has been amended some 19 or more times shows that it did not accomplish 100-percent performance. But if the founding fathers had refused to support the Constitution on the grounds that it was not infallible and complete we would today be unable to predict what the course of the Nation would be. What bill or law is without its Achilles' heel?

"If its swift passage could be made a rebuke to Senator BILBO and others who propose to filibuster against a vote, there would be another argument in its favor," you observe. But how can its swift passage be effected? Certainly not by tenuous reservations, but with the support of powerful voices, such as the New York Times, which cannot successfully be accused of wild-eyed demagoguery.

Supporting your reason for refusing to back Senator CHAVEZ's measure, you state: "The act would apply to every employer or labor union with more than a handful of employees or members in interstate or foreign commerce in any State, Territory, or possession of the United States." I don't see anything wrong with this. The National Labor Relations Act and the Railway Labor Act apply to businesses with a so-called handful of employees, and these acts have the same scope of territory as FEPC. However, in order to remove the grounds for this criticism, representatives of the National Council for a Permanent FEPC met in conference with the Senators leading the fight for the bill and agreed upon increasing the number of employees involved from 6 to 25.

SIMILAR PROCEDURE SEEN

You add that "an FEPC order, if sustained, could in theory be enforced by the Federal courts, with contempt penalties, and any willful interference with the Commission or its agents or agencies could be punished by imprisonment and fines." But this is not different from the procedure of other administrative agencies such as the Interstate Commerce Commission, Federal Trade Commission, the Fair Labor Standards Act, Securities Act, and the National Labor Relations and Railway Labor Acts. These Federal administrative agencies have been reasonably successful.

"We do not believe this act would be enforceable in any State or community where the dominant opinion runs strongly against it," your editorial points out. Undoubtedly the law would encounter difficult problems of enforcement in certain areas where dominant opinion runs strongly against it, but that is no valid reason for not passing the bills. Dominant opinion ran strongly against the National Labor Relations Act in the South. It still does. But I am sure you would not advocate repealing the act for this reason.

Who does not remember the terrorism against labor unions in Harlan County, Ky., and other boss-ridden, open-shop sections of the country?

If this logic were to prevail, it would justify abolishing the thirteenth, fourteenth, and fifteenth amendment to the Federal Constitution, for the dominant sentiment runs strongly against them throughout the South

QUESTION OF INTENT

You go on to say, "Discrimination is always hard to prove, because it involves the subjective question of intent." I doubt that modern psychology will sustain this position. While it is true discrimination is hard to prove, it does not follow that it involves the question of subjective intent. You are confusing prejudice with discrimination. Prejudice, racial, religious, or national, is subjective and involves intent. It is an emotion or feeling, a tate or attitude of mind. It is an inner condition.

Not so discrimination. Discrimination, racial, religious, or what not, is an objective practice, which can be seen, heard, and felt. For instance, discrimination against workers through the blacklists, yellow-dog contracts and company unions was stopped by the Wagner Act. But this does not mean that the prejudice against, and hatred of, the workers by the employing class are any less. FEPC is not designed to abolish prejudice but to eliminate discrimination. The law cannot compel Protestants to love Jews, but it can stop hoodlums from smearing synagogues with swastikas. Federal legislation may not be able to make Senator BILBO embrace Representative ADAM C. POWELL but it can stop mobs from lynching Negroes. Laws can prevent residential segregation through restricted covenants and Jim Crow in transportation.

"It will have to be created by education," you insist. Certainly education is a basic factor in preparing the way for the enactment of legislation of any kind. But this does not indicate that in order to make public opinion favorable to FEPC classes and tracts on anthropology should be held and distributed. While there is no objection to this form of education it doubtless would involve astronomical time to register any visible change on FEPC or any other issue in the interest of minorities.

It appears that there is an unwarranted distinction between the processes of education and legislation. The fact is legislation is a form of popular education. It tends to dramatize an issue which educates the people. The fight for FEPC legislation brings into public focus a concrete socio-economic question, which is debated and discussed pro and con in schools, churces, trade unions, business clubs, barber shops, and on street corners. But this exchange of ideas on FEPC in the arena of public discussion would not obtain and have the vital interest and enthusiasm were there no bills before Congress. This form of education is a living, dynamic force. It conforms to the principle of the progressive school of education of learning by doing.

A. PHILIP RANDOLPH,
Cochairman, National Council for a Permanent FEPC.
NEW YORK, *January 25, 1946.*

Alternatives to Brass-Hat Muddling

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. LA FOLLETTE. Mr. President, if the Senator from Arkansas will yield to me without prejudice to his right to the floor, I ask unanimous consent to have printed in the Appendix of the RECORD an article which I wrote for the Progressive, and which is to be found in the issue of Monday, January 28, 1946.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALTERNATIVES TO BRASS-HAT MUDDLING

(By Senator ROBERT M. LA FOLLETTE, Jr.)

Despite repeated assurances from the Army and Navy top commands, demobilization of the armed forces continues to be a red-hot issue for many millions of Americans.

The undercurrents of dissatisfaction are not merely homesickness nor the standard brand of griping which some troop commanders insist is a natural and desirable trait in an aggressive Army man. Nor is the dissatisfaction explained by other far-fetched theories that the American soldier is so superior intellectually that he has no respect for discipline, or that treatment of him has been too soft compared with the ironclad rule of other armies.

The smoldering resentment that pervaded the thoughts of many of the men overseas for many months was kindled into a roaring flame by two recent incidents: (1) The news story in Stars and Stripes of an interview in the Pacific area with the Secretary of War in which it was reported the Secretary expressed complete lack of knowledge that points did not continue to accumulate after VJ-day, and (2) the announcement by the Army that demobilization would be slowed down, despite previous promises and ample shipping space.

So great was the reaction in many parts of the world that, in the opinion of some observers, it approached the condition of mass hysteria and even mutiny. The Army Chief of Staff later admitted in a meeting before Members of Congress that the reaction of the men was unexpected by the Army and they were unprepared to meet it. Even now, the Army's primary method of meeting the situation seems to be in restricting the privileges of the men so that they cannot demonstrate their feelings openly.

When a GI digs in his pocket and spends his hard-earned cash to send expensive telegrams to his Senator or Congressman, or joins with his friends in buying expensive advertising in American newspapers, you can safely conclude that his are not ordinary rumblings without good cause.

The exceptionally heavy congressional mail on this subject comes not only from the servicemen, but also from the relatives and friends at home who share the impatience and dissatisfaction. There is nothing superficial about the letters and telegrams. They are not mass inspired. Each has an individualistic opinion or a pathetic personal story to relate. In each, one senses a deep feeling and a dead-earnest attitude. The irony of it all is that the individual Senator or Congressman is able to give direct assistance to but a small percentage of those who seek his aid.

Demobilization is such a tremendous job that it was inevitable that mistakes be made. Furthermore, regardless of the program adopted, certain borderline cases and certain inequities were bound to arise. In all fairness, credit must be given for some phases of demobilization that have proceeded entirely satisfactorily.

However, it is apparent from congressional correspondence that some of the past excuses about inadequate shipping space only served to raise to the boiling point the ire of those who saw partially loaded ships leave their harbors. It is also obvious that the very specific Army promise of only a few months ago that certain men would be released by March—and then reneging on the promise now, is a mortal blow at Army morale, no matter how justified the revision may be on any other grounds.

No one, not even the men directly affected, want to shirk any real responsibilities we have. When our men overseas had a job to do, they did it. Too often now they have no job and can see no reason for their enforced idleness, thousands of miles from home. You don't have to be a psychologist to know that enforced idleness breeds unhappiness and discontent. If we have a clean-up job to do, if we have Government property that must be cared for in remote parts of the world—that job must be done. But it can be done, in my opinion, with fewer men and in more orderly fashion.

Another excuse frequently given for demobilization delays is that replacements are not reaching the foreign theaters fast enough. This is also used as a convenient argument for the extension of conscription and compulsory military training. The simple mathematics of the situation is convincing proof that there is a fallacy in this argument. The plain fact is that the present numerical strength of our armed forces is still many millions above that called for by any permanent plans. Not until we demobilize the excess must we provide replacements man for man. Hence, it follows that if replacements are not sufficient in foreign areas, either the over-all planning is awry or replacements are being used to provide complements for establishments which are not intended to be permanent installations.

There may have been some justification from an administrative standpoint for each of the services to have its own plan of demobilization, but this has been offset by the confusion and unfortunate dissimilar action taken as between similar cases in different service branches. I am convinced Congress erred in permitting the services to work out their own demobilization plans rather than facing the problem squarely and legislating into law a clear-cut uniform procedure.

Of course, this experience is not unique in Government administration and legislation. We had some of the same confusion on a lesser scale when Selective Service was inducting men. We had some of the same uncertainties and frequent changes in our wartime tax laws. The factor of unnecessary uncertainty is a most disturbing influence, whether it concerns the taxpayer, prospective inductee, or serviceman seeking release to civilian life.

This type of uncertainty could be minimized with better administration. There are many other uncertainties that prey on the minds of the men overseas. Economic problems pertaining to themselves and their families loom very large. Future job opportunities—especially the better jobs—appear very uncertain unless early release is obtained; even the opportunity of attending school under the GI law appears to be jeopardized by inadequate housing and filled student quotas. And in the meantime his dependents may be struggling to survive on a niggardly allotment from the Government. Add to that occasional marital problems, sickness, and a score of other problems, plus, of course, an overwhelming desire to get back home with his friends, relatives, and neigh-

bors—and you have a composite of the uncertainties and desires in the mind of the serviceman.

In many cases there is still another important problem that must be faced before satisfactory morale can be had: all unwarranted discriminations between officers and enlisted men must be eliminated. In a peacetime military or naval establishment there is always a tendency to erect rigid social and administrative barriers which are a serious threat to the morale of the enlisted men.

The importance of an orderly solution to the demobilization problem should not be underestimated. Apart from the personal considerations of the service men and women (which is reason enough in itself) we are face to face with at least two repercussions from the problem that can entail widespread and disastrous consequences:

First, with respect to our part in international relations. With the display of internal difficulties in the armed forces, we may give an appearance which will weaken our hand in international dealings.

Second, with respect to a future volunteer army. Unless we quickly rectify the present situation and assuage the bitter feelings of those getting out of the Army we cannot hope successfully to encourage others voluntarily to accept a career in the armed forces.

The stakes are higher than many realize. The time has come to move boldly and decisively with constructive alternatives to the muddling of the demobilization problem.

A Humanity Loan

EXTENSION OF REMARKS
OF
HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Alvin Johnson entitled "A Humanity Loan."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A HUMANITY LOAN
(By Alvin Johnson)

"Some hae meat who canna eat,
Some can eat wha want it;
But we hae meat, and we can eat,
And sae the Lord be thankit."

We Americans can eat and the red points have gone back to the Devil, leaving it to the good old honest dollar to regulate our consuming fires. All through the war we were the best fed people under the sun. Now we will have to look to our buttons. And shall we not be universally admired for our sleek plumpness, like Little Jack Horner?

Alas, a hungry world has no admiration to spare for the sleek and fat. On the contrary, we are by way of becoming the most detested nation. That is wholly unfair. It is not our fault that French and Italians, Greeks, Yugoslavs, Poles, Russians, Austrians, Germans, Chinese, Japanese go hungry. We didn't start this war. We finished it, and we deserve the gratitude of all mankind, even the former enemy populations for that. But mass starvation is an icy soil for gratitude to grow in. There are 30,000,000 children in Europe who would hardly recognize the sensation of a full stomach. There are 20,000,000 mothers starving themselves, brave souls, to put a little more food into their children's mouths, or to supply a few extra calories to support a hopeless husband in his treks for fagots to make a little fire. As good Christians or good Jews, they ought to find pleasure in the fact that we at least are fed and clad and housed humanly. But they don't.

Well, you say, what can we do about it? Could we find food, even by stinting ourselves savagely, for all those hungry people? Could we find transportation? Could we find the finances?

We could.

Our farms produced this year a billion bushels of wheat, and we have a carry-over of 450,000,000 bushels. We cannot possibly eat more than 650,000,000 bushels; we do not need more than 200,000,000 bushels for seed and for the rats. There are at least 350,000,000 bushels we could not only spare but which we could gladly have taken off our hands to keep them from weighting down next year's market. And 350,000,000 bushels of wheat, in addition to home supplies, would provide bread for every man, woman, and child in Europe, and leave enough over to supplement the Indonesian rice needed for Japan and China.

But Europe also needs proteins of animal origin, mainly meat and milk. We shall produce enough meat this year to give us each, counting also the toothless babes and the octogenarians, with 160 pounds of meat. Do we need 160 pounds per capita? The healthiest adults in America do not eat above 120 pounds per capita; or, if they consume their quart of milk a day, not above 80 pounds. The strong-limbed Scots have never in history eaten more than 60 pounds of meat and fish. We are going to eat—or waste—40 pounds of meat per capita in excess of our full needs. That means 5,600,000,000 pounds—enough to cope with the greater part of the physiological protein deficiencies of most of western Europe.

We produce a hundred billion pounds of milk a year. Reduced to solids, that means 4,000,000,000 pounds of butterfat and 4,000,000,000 pounds of casein. If we consume as much milk as we should per capita, we would consume one-tenth of the whole milk. The butterfat we use for our consumption, but the casein mostly goes to American hogs. In the form of dried skim milk we could supply Europe with 3,000,000,000 pounds, quite enough to make up for any meat shortage. And we could spare a bit of butterfat, enough to abate the discouraging European fat shortage, taken together with lard we don't need and vegetable oils we could get from the copra of the South Seas and the palm nuts of Africa, if we went after them.

But can we find the shipping? The idle ships lying around the wharves of the world, the ships crossing the ocean in ballast, are a scandal. Could we distribute the food in Europe, with transportation in its present state? We handled bigger and more difficult problems of distribution for the Army.

But the reader will say with relief, we are getting ready to do these things. Is not Congress preparing to add another $1,350,000,000 to the exhausted UNRRA budget? Grant that Congress does act. Is $1,350,000,000 enough?

Consider: Out of 1,350,000,000 it is possible to send 300,000,000 bushels of wheat. That will take more than half of it. It will be possible to send a billion pounds of meat—just about equal to the billion pounds we will supply to our 300,000,000 population of legitimate cats.

No; our conscience cannot get off so easily. We shall need a lot more money, and where will Congress find it? The American public is no longer avid for Victory loans.

You subscribe and I subscribe to stale Victory loans, but with wry faces. How about a humanity loan, every dollar to go to feed the hungry, clothe the naked, bind up the wounds of war where possible, set at least the small industries that involve no war risks operating? Would you subscribe for such a humanity loan? Would I? Of course we would, even if we had to borrow money to do it. Millions of Americans would, if we built up an adequate propaganda for it. The average American may be cynical in speech, but his heart is human.

But you ask, would we relieve the suffering of former enemy populations on the same terms as populations that remained friendly? We would. We savage civilians would take a leaf from the policy of our gallant Army. They fed and clothed and housed prisoners taken in murderous battle on the same terms as themselves.

Honor to our gallant Army: it shot no hostages, it inflicted no reprisals; it sullied its name with no Lidices. We civilians, when we let a beaten population perish by the ten thousand weekly for want of the relief we are quite able to give: what are we doing but taking reprisals in their most abhorrent form? For by and large, it is the children and their devoted mothers we are dooming to death.

Readers will you join with me in a movement to awaken our people to our imperative moral responsibility to raise the hope of the hopeless, to pave the ways of peace, to build a future of the world upon a sounder basis than the threat of atomic bombs?

FEPC Termed Farce by Local Employers

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "FEPC Termed Farce by Local Employers," which appeared in the Anderson (S. C.) Daily Mail.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEPC TERMED FARCE BY LOCAL EMPLOYERS
(By Jack Stillman)

The Fair Employment Practices Commission legislation, if enacted into law, would be a farce, as far as small businessmen in Anderson, questioned by a Daily Mail reporter yesterday, are concerned. Included in the survey were Negro workers and white employers alike, who admitted that they did not know what the proponents of the FEPC were seeking.

They believe Anderson represents an average southern town, and those businessmen questioned yesterday represent average small businessmen throughout the South. They were of the opinion that the FEPC seemed to have a "hidden" meaning in "fair employment," and that it was a bad bill and could never be enforced if it were passed by Congress.

"I believe it would be a bad law, and could never be enforced," one employer said. His opinion was that such a law would only cause confusion and do nothing toward solving interracial relations in the South, "if that is a purpose of the bill," he said.

One Negro included in the survey was a veteran of 21 months in the South Pacific. He told the reporter that he had discussed racial relations with white soldiers in the Philippines many times. There was some argument about racial segregation, he said, but he pointed out that neither the Negro soldiers nor the white soldiers could determine just what was meant by discrimination, when applied to white and Negro races.

The Negro pointed out that neither he nor many of his race had been able to determine just what the proponents of FEPC were seeking. "If they want to improve racial relations between the white people and the colored people, then the FEPC will do nothing but cause confusion. The question of personal feeling is too big," he said.

Those Negroes questioned yesterday admitted that they had not heard of any clear definition of fair-employment practices, and told the reporter that they did not see how any such law would improve racial relations in the South. None would charge that they had been discriminated against, and again asked, "What does the Congress mean when they say 'discrimination'?"

Most of the employers pointed out that they had built their business up over a period of years, and held to the belief that they had the right to hire anyone whom they saw fit and would conduct their businesses accordingly. They said that any such legislation as the FEPC had too many loopholes to be successfully enforced upon the people.

Anderson has no large labor unions, and the closed shop is virtually unknown. Those included in the survey yesterday were convinced that the closed shop was discrimination, and they said that until such a measure was included in any law to enforce any form of compulsory employment, the fair employment enactment of Congress could not even hold any hope of enforcement.

The survey showed that the average southerner believes that proponents of FEPC are trying to reach too many intangible things that exist in the problem of racial relations in the South. They believe that those favoring fair-employment practices are attempting to use the power of numbers to pass the measure, instead of digging into the facts involved where the law would affect the majority of the people. They believe that the FEPC is aimed directly at the South, and that it would be no fair enforcement in any part of the Nation.

Negroes and white persons alike pointed to the racial troubles of northern cities, and refused to believe that legislation designed to curb these troubles would serve the same purpose in the South. They again pointed to the intangible problems facing the two races in the South, and said that the most prominent problem confronting the average southerner is a friction between personalities which no law on earth can prevent.

In answering questions put forth by the reporter, those included in the survey brought up the matter of States' rights, and held to a strong belief that the FEPC is trespassing these rights They could not understand how representatives of other parts of the Nation could successfully campaign for the welfare and well-being of the South.

It was conceded by all questioned that if any other State adopted a fair employment practices commission of its own, it possbily would solve some of the labor problems of that State, but never, they said, would such a law serve any purpose other than to confuse and bring about more problems than already exist for the people of South Carolina.

Miami Is a Substantial, Fairly Typical American City

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. PEPPER. Mr. President, the city of Miami, because of the charm and greatness of the city, is often regarded as not being a substantial city, that is, a city of business and industry as well as a city with recreational appeal. I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Miami Is a Substantial, Fairly Typical American City," written by Mr. John S. Knight, owner of the Knight newspapers, which emphasizes the substantial as well as the more recreational character of this great American city.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIAMI IS A SUBSTANTIAL, FAIRLY TYPICAL AMERICAN CITY

Several hundred Associated Press managing editors gathered here for their twelfth annual meeting and the first since 1943 are getting a perspective of Miami never related by the picture magazines and that acidulous debunker of the American scene, Westbrook Pegler.

When Miami Beach was very young, the late Carl Fisher employed Press Agent Steve Hannagan to glamorize that spit of pumped-up land and reclaimed mangrove swamps as the zenith of the American Riviera.

Very soon thereafter, Miami Beach bathing beauties and local lovelies in gay sports attire crowded many a newsworthy picture out of the roto sections and the newsreels.

So well did Steve do his job that in the era of gat and gal journalism, the Miami area was the beneficiary of so many millions of dollars of free publicity that newspaper business managers winced every time they say another piece of cheesecake art under a Miami date line.

Miami became known throughout the world as a gay winter resort flaunting its tinsel and spangles to lure the well to do who could afford winter vacations without unbalancing the family budget.

But there was and is another side to the Miami story. Brush aside the tinsel and fold back the spangles and you will find Miami to be a substantial and fairly typical American city.

Dade County, in which both the Miamis are located, has a permanent population of slightly over 300,000. It is a county of home owners who take their community responsibilities seriously and have unbounded faith in the future of this truly remarkable area.

While the resort business is Miami's primary industry, there is a great deal more to this little corner of the country than glitter, glamor, gambling, and gals. During the winter season, Miami fairly bulges at the seams in assimilating some 300,000 visitors but they all manage somehow to find living accommodations, food, and recreation. Sometimes we wonder how a community of this size can withstand the impact of such an avalanche of people. But Miami does the job and thrives on it.

The rest of the year, Miami is concerned with all of the community responsibilities that fall to the lot of any growing, progressive American city. During the war years, Dade County Red Cross and War Chest campaigns met with a tremendous response. Its citizens knew there was a war on because they could see with their own eyes the ships that were torpedoed just offshore by the Nazi submarines.

When this winter playground was converted virtually overnight into a gigantic parade ground, Miami and Miami Beach took it without faltering. As I said in a little talk to the A. P. Managing Editors, more American troops were trained here during the war than composed the entire American prewar Army. Hotels became barracks, and restaurants and night clubs were converted into mess halls.

The famous Hialeah race track was turned into an Army warehouse and Miami's commercial docks became the naval training center at which thousands of Allied as well as American sailors were instructed in the art of handling small boats.

Miami became the headquarters of the Gulf Sea Frontier and the Seventh Naval District. The Nazi submarine warfare was licked in the Gulf of Mexico and the South Atlantic by naval officers who directed the fight from Miami.

General of the Army H. H. Arnold is authority for the statement that the air forces training program was advanced 6 months by the availability of Miami's resources.

At one time the antisubmarine training base was giving instruction to more than 10,000 men. The naval air station at Opa Locka had a personnel varying between 10,000 and 15,000 throughout the war.

Miami was the nerve center for the Army Transport Command's service to north Africa and the CBI theater. Nearby Homestead provided one of the world's finest bomber fields and the Richmond Naval Air Station a few miles away housed the blimps that performed such yeoman service in Atlantic antisub patrol duty.

Additionally, at war's end, more than 500 Miami plants were producing gas masks, diving helmets, radios, airplane assemblies, oil tankers and hundreds of other military items.

Last year Look magazine pictured the seamy side of Miami as a hide-out for war-weary playboys and a few mental IV-F's from both Houses of Congress, but the real people of Miami need never apologize for what I consider their superb all-out war effort.

Although picture editors are notoriously susceptible to "leg art," it is to be hoped that Miami's press agents may some day learn how to glamorize a potato, tomato, or bean.

This area has a winter vegetable business that brings in better than $50,000,000 a year and is the only place we know where a farmer can stick a tomato plant or a potato cutting in the ground in October and ship his crop in December.

Another $50,000,000 industry is dairying, and the Miami Herald carried a story the other day about a farmer who averaged a thousand dollars a day net profit for 60 straight days growing and shipping "glads" by air to New York.

Miami's publicity experts should tell the world about our rapidly developing garment industry, specializing in sportswear, which is fast gaining recognition in the country's major markets.

Plastics are being made from pine trees and rough plumbing fixtures are fashioned from the palmetto scrub that covers many acres of undeveloped land. The area's fresh water provides an almost inexhaustible source of lime. Miami is also an important commercial fishing port and its small boatbuilding and repair is considered a major factor in the area's economy.

The first manufacturer who was successful in building, demonstrating, and selling radio communications to an American railroad is located in Coral Gables, a Miami suburb.

Miami leads the Nation in international air transportation. A recent report released by Pan American Airways revealed that more international passengers and air express traffic passed through Miami than New York, San Francisco, Los Angeles, Brownsville, and New Orleans combined.

Aerial routes extend outward from Miami to all of the principal ports of entry in Latin-American and Caribbean countries and possessions. As an illustration of how this traffic is growing, Pan American recently stepped up its flight schedules between Miami and Habana to 22 a day—almost one flight an hour around the clock.

Miami's commercial industry has a total pay roll of more than $25,000,000 a year. The permanent naval air installations and pri-

vate aviation increase that total by several millions annually.

The list of Miami's civic and business achievements is both lengthy and imposing. Better still, most of the adventuresome politicians with deep and cavernous pockets have been eliminated from public office.

Miami has a fine young mayor, a veteran of World War II, a capable city manager, and a city commission that is beginning to understand that the caliber of a city's government is the best index to the community's character.

Colonel McCormick of the Chicago Tribune once referred jestingly to my venture into the Miami newspaper field as "going slumming."

Today, I think a tour around this area would convince the colonel that the Miamis have come of age and attained a degree of community respectability and pride in excess of anything that might have been considered possible a decade ago.

Admittedly, Miami is not without its sins and shortcomings but what American city of comparable size can start throwing stones in all good conscience?

JOHN S. KNIGHT.

Give Industry Its Head Instead of Strait-Jacket

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky, from the St. Louis Globe-Democrat of January 24, 1946:

GIVE INDUSTRY ITS HEAD INSTEAD OF STRAIT-JACKET

(By George E. Sokolsky)

The only items left out of the President's message to Congress on the state of the Union were a recipe for potlikker and a cure for dandruff. To make sure that nothing like it had ever been tried before, I went through Presidential messages from George Washington to Franklin D. Roosevelt to see whether any other President had put so much into one single document. No one had ever tried it. No one had ever thought of putting a decade or two of legislation into a single state paper.

Mr. Truman wants price control to continue for a year and a half more. But at this moment the principal industries of the Nation are on strike because of price control. Every strike could be settled in the flash of an eye by genuine collective bargaining, without Government intervention, if price controls were lifted.

CONTROLS TO BLAME

And he wants to continue his war powers, including priority and inventory controls, in spite of the fact that these very controls have stymied and delayed reconversion by making it so difficult, and at times impossible for business, particularly small business, to get the materials to start again to produce civilian commodities.

And he wants to extend the draft, when everyone wants to find a way of bringing all the boys home. And there is no one to tell the American people why so many Americans need to be kept abroad, except to guard surplus war supplies and to police the prostrate Germans and Japanese.

And so Mr. Truman says: "Good wages mean good markets." Selah. And he adds: "Good business means more jobs and better wages." Selah. But how do you pay good wages for the good markets when prices squeeze out profits and for the small man produce a loss?

PRICES HELD DOWN

He does not explain that one. So prices are to be held down and wages are to be shoved up, and inventory and priority control are to be retained, and a new doctrine in economy is enunciated:

"Private capital and private management," Mr. Truman says, "are entitled to adequate rewards for efficiency, but business must recognize that its reward results from the employment of the resources of the Nation."

What were those resources producing when the Indians had them? What did similar resources produce in Russia for a thousand years, or in China, or Brazil?

It is not resources in or on the ground that produce goods but their exploitation by daring, ingenious, and wise men. Oil lay in the earth for hundreds of thousands of years before the ingenuity and labor of man brought it forth. Electricity has been in the cosmos longer probably than the earth has been inhabited, but it was not until Franklin, Faraday, Volta, and others captured it that it became the servant of man.

INITIATIVE KILLED

Steam is as old as heat, but it was not until James Watt saw a teakettle and had an inspiration that it became of use to man. And so with Bessemer's steel, and Westinghouse's air brake, and Edison's electric light, and everything else.

Yet Mr. Truman brushes all that aside and talks about resources. It was not resources but man that made this country what it had been before the wreckers and despoilers got to work on it. Of course, capital and management and labor should receive adequate compensation, but how can they in the economic straitjacket which the Government has devised for them?

Give the industry of this country its head and it will outproduce the rest of the world. But it will not do it on the formula proposed in Mr. Truman's address to Congress. That address kills initiative, but, what is worse, it kills hope for a return to common sense. And they say he comes from Missouri.

Collective Bargaining and the Strike Limitation Issue, 1933–46

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. BENNET of New York. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the contents of Bulletin No. 39 issued by the Library of Congress Legislative Reference Service, entitled "Collective Bargaining and the Strike Limitation Issue, 1933–46":

POLICY OF ENCOURAGING COLLECTIVE BARGAINING ADOPTED

While trade unions and collective bargaining have been more or less important factors in a number of industries in the United States from the 1890's to 1933, particularly in construction, mining, on the railroads, and in the printing and apparel trades, trade-union agreements and collective bargaining played a minor part in American industry until 1933, except for the short period during and immediately following World War I. Since 1933, when the policy of encouraging the growth of trade unionism in all industry was foreshadowed in the National Industrial Recovery Act and later written into the National Labor Relations Act (the Wagner Act), trade-union membership and strength has increased from approximately 2,500,000 members to a present claimed membership of affiliated, unaffiliated, and independent unions of some 15,000,000.[1] This has been accompanied by a very great increase in both the number and scope of labor agreements which outline the terms and conditions of employment and provide machinery (under some but not all agreements) for the handling of grievances and disputes in the establishments and plants of the country. These agreements are intended to preserve peace in industry on terms satisfactory to both sides during the period of their operation, which is commonly 1 or 2 years. Encouraged by the Government and enforced by the administrative agencies and the courts, collective bargaining and the making up of mutually satisfactory agreements have become accepted as the national industrial relations policy.

JUSTIFICATION OF COLLECTIVE BARGAINING

The basic purpose of the National Labor Relations Act of 1935 was to strengthen the organizations of workers by keeping them free from all possible interference by employers and by giving scope to their access to employers across the conference table. Administrative agencies were given wide powers to use public authority to prevent employers from engaging in specified unfair labor practices or interfering with efforts of workers to form their own organizations for mutual aid and protection, including effective bargaining with employers. If a question developed as to who or what organization was to represent the workers in such bargaining, this was to be determined in an election conducted by the National Labor Relations Board. It was a basic preconception of this policy that the bargaining of workers through their unions with employers or groups of employers would result in the establishment of mutually acceptable wages and other conditions of employment and the adoption of peaceful procedures for the handling of grievances and complaints. As economic conditions changed new terms in the agreement would be negotiated.

Collective bargaining has its justification in economic and social policy as a means of providing stabilization under the highest possible returns to labor while promoting self-government and responsibility in industry. Collective bargaining is intermediate between individual bargaining, which is regarded as unfair to workers under modern conditions, and the Government fixing of wages and other conditions by compulsory arbitration or direct regulation which, as a permanent policy, would be regarded by most Americans as alien to our system of free enterprise. The Government adopted the policy of encouraging collective bargaining and the writing of agreements convinced that collective bargaining was to be the instrument for promoting industrial justice and peace. The high hopes of the National Labor Relations Act with reference to the maintenance of industrial peace is seen in the opening words of the act, which describes its purpose: "To diminish the causes of labor disputes burdening or obstructing interstate and foreign commerce, to create a National Labor Relations Board, and for other purposes."

[1] See footnote at end of article.

STRIKES AN ACCOMPANIMENT OF COLLECTIVE BARGAINING

This new national industrial relations policy was a determined shift from the traditional Government policy of indifference, if not hostility to unionization and its works. Taking advantage of the new support of Government, unions put on great organizing drives and made demands on employers for recognition. Many employers resisted these demands because they did not want "outside" organizations to meddle in their affairs, or because they did not think that the protesting workers represented a majority of their employees, or because they did not approve of the new national policy embodied in law, or for other reasons. Workers then "went on strike" to enforce these now legal demands. Between 1933 and 1937 the number of strikes and lock-outs increased each year.[2] A large proportion of the strikes were caused by efforts at unionization rather than in pursuance of direct efforts to improve wage and working conditions.

Strikes for union recognition aroused a good deal of public sympathy because it was felt that the workers had the law on their side and that the law itself was in the public interest in its support of the weak against the strong, in its purpose to prevent the victimization of men engaged in union activity, and in its fundamental effort to increase the bargaining strength of workers. With this increased bargaining power unions expected their weight to be felt.

MACHINERY OF THE NLRB AND COLLECTIVE BARGAINING

The Wagner Act avowed that inequality of bargaining power between employers and employees depressed wages and prevented the stabilization of competitive wage rates in industry. It assumed that the protection of the employee's right to organize would equalize bargaining power and thus lift the pressure on wages and promote the stabilization of wages at a high level. The specific terms of the act, and therefore also the machinery which the NLRB developed in the course of its administration, dealt with the safeguarding of the rights of self-organization and collective bargaining. These were to be guaranteed by prohibiting the employer from engaging in five specified types of practice deemed to be unfair. The act also had specific provisions for the settling of questions as to who were to represent the workers in collective bargaining. These were implemented by the elections conducted by the Board, as a result of which representatives were legally selected.

Beyond the responsibility of the NLRB to enforce the safeguards of workers against interference from employers and the selection of appropriate bargaining agencies the Wagner Act provided no machinery. It was assumed that, if workers were free to organize and bargain collectively, and if employers bargained in good faith, agreements would be reached. There was no new machinery provided to facilitate the coming to agreement of the parties. And agreement, experience showed, was not always possible. While the act said in its preamble that the national policy of encouraging collective bargaining had as one of its main purposes to diminish the causes of labor disputes, it specifically provided that nothing in the act shall be construed so as to interfere with or impede or diminish in any way the right to strike. There was no implementation of an orderly and peaceful adjustment of disputes when collective bargaining ended in disagreement. This failure to provide adequate Government machinery for intervention and adjustment to facilitate coming to agreement made it appear that a strike or a lock-out must follow every disagreement.

[2] See footnote at end of article.

The right of workers to withhold their labor either individually or collectively has been recognized in law, in the courts, and in custom. The law has also sanctioned strikes and the threat of strikes in any stage of the collective-bargaining process. The "strike weapon" has become organized labor's treasured possession, by the use of which the bargaining strength of labor can be made as potent as that of the employer, who is made to realize that the demands of labor can be ignored only at great cost to the company. In this sense the increase in the number of strikes in the past 12 years is some measure of the growth of collective bargaining.

PREWAR SPREAD OF COLLECTIVE BARGAINING

In April 1937 the Wagner Act was held constitutional by the Supreme Court and this further facilitated the work of the NLRB and the organizing efforts of the unions. After the successful organizing drives of 1937 the total number of strikes in the country declined, but they remained at a relatively high level in the ensuing years. With the upswing of business in 1938, followed by the stimulus of European war orders and later by our own defense program, unemployment diminished, the labor market began to tighten and the bargaining power of labor continued to improve. Trade union strength, which had increased steadily during the period of relatively large unemployment ranging from about 15,000,000 down to about 9,000,000 between 1933 and 1937, continued to increase as unemployment began to vanish. A higher plateau in the number of strikes was an accomplishment of the entire period since the passage of the Wagner Act and strikes of greater or less duration become part of the normal industrial scene.

STRIKES IN DEFENSE INDUSTRIES

The settling down in the number of strikes in 1938 did not augur a permanent downward trend. While there were slight decreases in the number of strikes in 1939 and 1940, the number of workers involved and the man-days lost in 1939 were among the highest for the period under review. In 1941, when our military preparations were increasing sharply and we were producing war goods on a large scale for nations fighting an enemy with whom we were also on the verge of war, strikes increased sharply to the high level of 1937 and involved more workers than at any time since records have been kept, except for the year 1919.

To the degree that editorials and public-opinion polls reflect public reaction, strikes in defense industries aroused the strongest public revulsion. There were demands to prohibit strikes and to control the activities of trade unions. This public reaction was reflected in part in the passage in a number of States of laws which endeavored to control or regulate union activity. On March 19, 1941, the National Defense Mediation Board was established by Executive order to deal with the strike situation. The Board settled more than 100 cases involving more than 1,000,000 workers; but it was finally brought to an end by the resignation of the CIO members over the refusal of the Board to recommend the union shop to the United Mine Workers in the captive mine dispute. In this background the House of Representatives passed the Smith antistrike bill by a vote of 252 to 136. This bill contained many provisions to control the activities of unions, including regulation of membership, limitations on the conduct of strikes, cooling-off periods and the withholding of bargaining rights from unions under certain conditions. The bill was passed by the House 4 days before the attack on Pearl Harbor, an attack which stirred the country and brought about a sense of unity heretofore lacking in industrial relations.

WAR EXPERIENCE WITH COLLECTIVE BARGAINING AND STRIKES

After we entered the war the leaders of organized labor pledged their unions to the policy of no strikes in wartime and agreed to iron out all differences by means of collective bargaining, supplemented by the enlarged conciliation and wage stabilization services of the Government. Greatly increased selective service withdrawals and expanded war-production programs further tightened the labor market. Industry had sharply rising war schedules and expanding and certain markets for their goods ahead of them. The only thing lacking was labor and consequently great efforts were made to augment the labor supply from sources not customarily in the labor market. Millions of new workers entered the recently unionized war and war-supporting industries.

Government labor policy during the war period, especially the adoption of the maintenance of membership device by the National War Labor Board in partial compensation for the no-strike pledge by organized labor, added to the force of the total economic situation in strengthening the continued growth of trade-union membership. At the same time it was felt necessary to keep wages from rising further under the impact of the tightening labor supply situation in order to keep costs and prices from getting entirely out of hand. The substantial increases in wage rates and earnings which had taken place in the 2 or 3 years before we had to mobilize for all-out war continued into the summer of 1942, when the policy embodied in the Little Steel Formula was developed in order to place a ceiling on wages. As prices and the cost of living continued to increase and wages remained stabilized, except for overtime rates, upgrading, bonuses, shift differentials, and other indirect means of increasing earnings, union spokesmen became more and more critical of the wage formula. They felt they were being deprived of increases to which they were entitled and which they would have received had the wage formula not stood in their path, because it seemed that after 1943 the Little Steel Formula brought results which did not give full weight to the continually improved bargaining position of labor, upon which, in the whole previous decade, labor and industry both had been taught that just wages were supposed to be determined. The War Labor Board was making the important decisions. The right to strike, as well as wages, hours, shift differentials, vacation allowances, and internal and external inequalities, were all being prescribed by directive order.

Most employers were either working for the Government more or less on a cost-guarantee basis or were producing for a civilian market where higher prices were by no means barriers to sales. For these reasons and also to obtain additional manpower which in many instances meant inducing workers to give up one job for a higher paying job, many employers were ready to meet the demands of the unions in their industry. In many such cases strikes became a means of obtaining War Labor Board attention. The War Labor Board was not able to keep up with the numerous requests for wage increases, and the protests and irritations of the unions were therefore directed increasingly against the Board rather than against employers. Although statistics are not compiled in this way, those experienced in these controversies know that many strikes occurred to force prior action by the War Labor Board, or to get favorable action, or to reverse a decision of the regional board, while some of the most spectacular strikes followed decisions of the National War Labor Board which were not satisfactory to the unions involved.

The reaction of the public to strikes in wartime became increasingly hostile because

the public had been convinced of the relatively high earnings of union workers as hours in war industries increased and also because the strikes appeared to be directed against the actions of Government agents who were presumed to be fair. In many minds comparisons were made with the lower earnings and greater risks of men in combat. Everywhere there was an increasing impatience with any interruption of war production, whatever the cause. Some strikes or threats of strikes in important industries had to be stopped by the Government seizure of plants in order to avoid great loss or to prevent the cutting off of supplies to the battlefronts. It was seen more clearly during the period of maximum mobilization for the conduct of the war that a strike in one plant interfered with production in many other plants, and that the conception of an industrial dispute as of primary interest only to the employers of the particular plant and their employees was not adequate to describe the economic reality of modern industrialism. Most companies are suppliers of other companies as well as a market for still other companies. Industries such as coal mining, public utilities, and railroads are the very lifeblood of the economy as a whole, and few if any industries can carry on for long if these materials or services are not forthcoming. The secondary effects on other business and on consumers are also passed on to labor, where many more than the number directly engaged in a strike may be disemployed because the company with which they were employed and with whom cordial relations existed has been incapacitated by a strike in another plant, located perhaps in another city or another State. The official strike statistics do not record the losses arising out of these secondary effects.

THE WAR LABOR DISPUTES ACT

In June 1943, at the height of public irritation with strikes in wartime, the War Labor Disputes Act was passed over President Roosevelt's veto. The act was based on the hypothesis that strikes were to some large degree stimulated or encouraged by the leadership of the unions and that they were called without adequate reflection or consideration. The 30-day strike notice provided in the act was intended to offer an opportunity for reflection and to lessen the ardor for strikes because of the possible consequences to the war effort. After the 30-day waiting period the men would have an opportunity to vote by secret ballot against the intention to strike in wartime. Great hopes were held out that the passage of this bill would avoid work stoppages. However, strikes continued at practically the same level after the passage of the War Labor Disputes Act, with a sharp increase in the number of new strikes in the middle 6 months of 1944. Obviously this act was not preventing strikes; instead it provided a validated procedure for strikes in wartime by making them legal after notices had been properly filed and secret ballots taken. After the surrender of Germany and particularly after the surrender of Japan petitions for strike ballots increased until this activity became the major function of the National Labor Relations Board. Demands for the repeal of the vote-taking provision of the act increased as its failure to attain its original objective became apparent to all in the light of the mounting severity of strikes toward the end of 1945.

TYPES OF UNION REGULATION ENACTED OR PROPOSED

The increasing power of unions and the fuller realization of their widespread effects on the economy as a whole, as well as on the individuals who come into direct contact with them as members or employers, has given rise to a variety of legislative proposals to deal with the problems created. Since 1937 a number of States have passed statutes regulating the activities of unions beyond any regulation provided by Federal law, while many other proposals dealing with union affairs have been made in the State legislatures and in the Congress of the United States.

Present State and Federal laws and additional proposals to regulate unions may be classified into one of three types:

1. Some of these laws or proposals deal in one way or another with unions as business or social organizations. They include such matters as the regulation of unions, the filing of financial statements, regulation of initiation fees and dues, and the contributions of unions to political organizations and activities.

2. Another series of laws or proposals attempt to deal with unions as controllers of work opportunities. They deal with such matters as the closed shop, limitations of union membership, the qualifications of union officers, and the democratic organization and administration of unions.

3. A third type of legislation, the type to which this bulletin is addressed, deals with unions as bargaining agencies and has as its avowed purpose the development of additional machinery to help in the peaceful conduct of collective bargaining and in the reduction of work stoppages.

PRESIDENT TRUMAN'S DISAPPOINTMENT WITH LABOR-MANAGEMENT CONFERENCE

The growin realization that widespread collective bargaining was not promoting industrial peace but was in fact accompanied by increasing strikes and work stoppages has intensified the search for remedies. Editorial discussion became more widespread and intense. More bills were introduced in Congress. The President took action on this problem soon after the surrender of Japan by calling for an impressive labor-management conference, focusing responsibility upon it and giving it plenty of time and assistance to work out a solution satisfactory to all sides. The conference met and earnestly debated a number of issues for a period of about 4 weeks. The conferees agreed that collective bargaining was the correct policy in industrial relations, but they came forth with no solution of the problem of work stoppages. On the third day after the adjournment of the conference the President issued a message in which he said:

"The American people have been patient. They have waited long in the hope that those leaders in labor and management whose business it was to handle this problem would be able to do so in agreement. The Federal Government declined time and again to make any suggestion to the conference as to proper machinery. All that the Government did was to point out the objective which the American people expected it to attain.

"Now that the conference has adjourned without any recommendation on the subject, it becomes the duty of the Government to act on its own initiative. Therefore, I now suggest to the Congress that well-reasoned and workable legislation be passed at the earliest possible moment to provide adequate means for settling industrial disputes and avoiding industrial strife."

QUESTION OF LIMITATIONS ON THE RIGHT TO STRIKE

Assuming the functioning of collective bargaining strikes or lock-outs occur, whether immediately or after unsuccessful mediation, when one side or the other decides that it can find no further purpose in continued negotiation and concludes that it has more to lose than to gain by continuing to work on existing terms. Some strikes have not been called until after prolonged negotiations and until all existing mediation and arbitration machinery has been employed to avoid the necessity of a strike. A large percentage of strikes occur only after the union heads are convinced that the company is unyielding or altogether unreasonable on the important issues. There have, however, been cases where strikes were called almost immediately upon making demands, and there have even been times when one or the other side said it did not know what the strike or lock-out was about. The President's proposal and other proposals which will be discussed hereinafter involve in one way or another some limitation on the unfettered right to strike under every and all conditions. Before considering the specific legislative proposals, the fundamental differences raised in the strike limitation issue as such will be considered.

THE POSITION OF THE UNIONS

Practically all union leaders who have spoken on this issue have argued that any limitation on the right to strike is an interference with freedom to work or not to work and is, therefore, an intolerable throw-back to feudal or slave conditions. This line of argument rests on the conviction that under modern conditions workers do not have real industrial freedom except in association. In turn the association of workers in trade or industrial unions derives its strength from the power to strike, which gives them a weapon to be used in negotiations with employers to force the best terms and conditions which the economic situation can afford. This weapon can be used most effectively when the employer is vulnerable to attack, since the whole point of the strike is to make him yield or accede to their demands. Any limitation on the time, place, or manner of attack limits the union that much in its strategic campaign to bring the employer to accept the terms and demands of the union by giving him time to prepare to counteract the pressure of the union or to nullify its effects.

Limitations on the right to strike are therefore regarded by union spokesmen (and others) as limitations on the worker's freedom and his bargaining power. They hold that a democratic society should hold inviolate the right of men to be free to sell or to withhold their labor on the basis of mutual self-interest and benefit. Unions represent the workers' self-interest in selling or withholding their labor. If unions cannot act freely and without restraint, they will soon have no important functions and will eventually wither or be destroyed. Many, if not all, are convinced that the destruction of unions is the principal purpose of all efforts to limit the freedom to strike.

The position of the unions is that they do not want to strike but that they must retain the strike weapon inviolate. Workers risk much in going out on strike. They are not paid for time lost and they run the risk of losing the strike as well. In most industries the loss of only 2 weeks' pay due to a strike would have to be made up by an increase in wages of at least $1.50 per week for a whole year before there would be any net gain to the worker at the end of the year. There may be no net gain at all; and strikes are also ordered to prevent reductions in pay or standards. They assert that in a profit-seeking, competitive, industrial economy the strike and the threat to strike are the time-tested means by which free men attempt to improve their economic position. They argue that it is little enough to expect that the worker be not disarmed in this uneven struggle. Where the strike is over other questions than wages, such as work assignment, hiring or laying-off procedures, the discharge of a particular worker, etc., over which issues no wage increases would generally result, they assert that the momentum to strike must come from some pretty deep-seated convictions regarding the men's rights and sensibilities believed to be infringed by the employer. Men who withhold their work and pay for it in lost wages are in fact paying in part for their own freedom and the freedom of all workers.

As to the public interest, spokesmen for labor say that the workers are largely the public and anyway what is to the workers' interest is always in the public interest. Limiting the freedom of unions to strike when they judge it is to their long-time interest to do so, would weaken all unions by dulling the edge of their most effective weapon; it would lower efficiency and morale, lessen the pressure on management, reduce general purchasing power and expose all workers to the whims of irresponsible bosses.

For all these reasons union spokesmen have opposed all legislative measures which have as their objective the limitation in any way on their freedom to resort to a strike in furtherance of their aims at any stage in their dealings with employers. Unions have, however, limited their own freedom of action in agreements which many have voluntarily made with employers not to strike during the life of such agreements.

POSITION OF PROPONENTS OF LEGISLATION TO LESSEN STRIKES

Those who support any of the legislative proposals intended to lessen strikes differ greatly among themselves in their attitude toward unions and the effective participation of unions in the economy of the Nation. While some are hostile to the extension of union conditions and control in industry, others are unquestionably friendly to the aspirations of the unions in playing their part in developing joint and mutually satisfactory relations in industry. They all agree that good industrial relations flow from mutual trust and cooperation and they do not approve of coercion. However, they look upon the volume of strikes in recent years as evidence of the periodic break-down of collective bargaining, of perhaps the lack of sufficient confidence and cooperation in industry and as proof that the national labor policy of encouraging the growth of unions and the extension of collective bargaining is not in fact yielding the beneficent results anticipated by its sponsors and friends. The remedies they propose differ in method and content from the imposition of only a moral obligation not to strike in important industries while the facts and recommendations are published by a disinterested panel to closer implementation of collective bargaining with effective machinery for mediation and arbitration and, the most extreme position, the prohibition of strikes, at least during certain periods, with severe penalties for illegal strikes.

All the proponents of additional legislation to lessen strikes emphasize far more than those who accept the unions' position and conclusions that strikes are practically always an inconvenience to the public (interpreted as those not directly involved in the strike or lock-out) and that strikes in key industries involve great losses to innocent parties and jeopardize the health, safety and welfare of many individuals. They are impressed, that when collective bargaining results in work stoppages, it is frequently of much greater consequence to others in our tightly knit society than to the struck company or to the workers directly employed by that company. They plead principally for the rights of these innocent parties and for the public to be able to carry on its legitimate business. They are satisfied that when both sides directly involved in an industrial dispute are completely free to strike or lock-out at any time, the public interest may not be considered at all or given next to no weight in comparison with the grievances felt by either side to the controversy. Some are convinced that an important proportion of strikes is carried on for trivial reasons or to serve private, anti-social or jurisdictional ends and that most strikes could be avoided if a legal obligation to come to agreement were imposed and proper alternative facilities provided. They are all convinced that it has become necessary to bring the weight of public opinion to bear upon the strike problem as a whole in order to protect all the interests involved.

The proponents of additional legislation do not question the absolute freedom of the individual worker to quit any job which he finds unsatisfactory, and this is provided for in every bill which is reviewed in this bulletin. They do not seek to limit the freedom of any worker to quit his job, but they seek in one way or another to postpone the use of the strike weapon or to make its use rarely necessary in order to obtain justice in industry. Another way of putting it is to say that they seek to place some limitation on the right to quit work collectively and by picketing and other devices preventing all others from working until the employer comes to terms. The bills under consideration seek delay and friendly mediation; they seek to reduce the necessity for work stoppages, not to prohibit the right to strike. Most of them would concede that in a democracy the right to strike cannot finally be taken away; but they are even more certain that the multiplication of strikes is not in the public interest. They feel it is the duty of public authority to develop effective machinery for peaceful and fair settlements of labor disputes. The strike may be the final resort in an industrial dispute; but it does not have to be the only resort—just as war is not the only resort of peaceful nations in handling their differences.

Proponents of legislation also say that it is by no means proved that any postponement of the use of the strike weapon weakens the power of unions in collective bargaining. If, as some union officials allege, many corporations simply say "no" to their demands and do not in fact engage in collective bargaining, the requirement of a public report on the issues would smoke out such situations and obligate the company to bargain with the union in the light of the facts placed before the public. In arbitration awards it is felt that unions have generally gotten a square deal. The evidence that the old railroad unions and the new air transport unions have grown and prospered under one form of such strike and lock-out control and the allegation that a similar strike limitation law has effectively reduced strikes in the State of Minnesota are held to prove that a system of industrial relations can be established by law which will protect the interests of the public as well as of the workers and employers.

CURRENT LABOR RELATIONS BILLS—ELLENDER AND NORTON BILLS (THE PRESIDENT'S PROPOSAL)

The President proposed that Congress authorize the certification to ad hoc fact-finding panels of issues in important labor disputes which have not been settled by negotiation or mediation and which threaten to result in work stoppage. These boards would hold hearings and publish the facts and their recommendations on the issues within a period of 30 days, during which strikes or lock-outs would be unlawful. The board would have the power to subpoena such company records as it deemed necessary to arrive at the facts in the dispute and to make recommendations for settlement.

Hearings were held before the Christmas holidays on the Ellender bill in the Senate, and the Norton bill in the House, both of which embodied the President's specific proposal. Neither committee was satisfied that it could report its bill in the time requested by the President and they both decided to continue hearings on the reconvening of Congress on January 14, 1946.

The position of the representatives of organized labor at these hearings on the central issue of limiting the exercise of the right to strike was one of almost violent opposition. The reasoned argument was in line with the position of labor on the strike limitation issue outlined on pages 13-15 of this bulletin.

With reference to the specific limitation on strikes during a period of 30 days, spokesmen for labor have also said that it is impossible to frame any measure which would have the effect of limiting the right to strike to a period of no more than 30 days. They argue that the limitation is far more extensive. It will hover over the negotiations while the partier are engaged in collective bargaining, during all subsequent efforts of mediation or conciliation, during the period of discretionary uncertainty as to whether or not the President will certify the dispute, and the deliberations of the fact-finding board, which may have to be extended beyond 30 days. The 30 days start only from the time the dispute is certified. What may apepar in the law as a formal period of 30 days may thus be stretched out to a period of 5 to 6 months or more from the beginning of negotiations until it is legal to strike. For, to have struck at any time during this extensive period would have exposed the workers to the requirements of the law that they return to work. Preparation and organization for a strike cannot be developed and held static for weeks or months, built up to the point of action and let down again during discretionary delays. During this long period of negotiation, mediation, conciliation, certification and fact-finding, strikes would be impossible as a practical matter. The strike weapon would be blunted to complete uselessness.

The position of the top union spokesmen, therefore, remains that this proposal, if enacted into law, would condemn labor to involuntary servitude and that, to enforce the restrictions on labor, the courts will be restored to their pre-Norris-LaGuardia Act role of issuing injunctions in labor disputes.

The representatives of employers organizations at the pre-Christmas hearings also did not support the President's proposal. The spokesman for the National Association of Manufacturers endorsed the principle of fact finding but objected strongly to the subpena power of the panels. He spent the greater part of his time making entirely different proposals for legislation and, when asked finally whether he favored the bill before the committee, his answer was that he was not in favor of it in its present form. The spokesman for the United States Chamber of Commerce said that his organization had not been polled on the subject but that, speaking for himself, he opposed abridging the right to strike, was skeptical whether legislation of itself could create good labor relations, and felt that Congress should not pass the bill hastily.

The strongest support of the bill came from the Secretary of Labor. He found a need for the measure in the break-down of collective bargaining in some important industries and in the sharp increase in the number of strike notices filed with the NLRB under the War Labor Disputes Act. He had confidence that the informed findings of a panel of public-spirited men, backed by public opinion, would generally be accepted, and he based this confidence on the history of emergency boards under the Railway Labor Act. He did not think that labor had anything to fear from the 30-day period during which no stoppage would be lawful, which he said is also a provision included in the Railway Labor Act. Contrasting the waiting period in this bill with the 30-day waiting period provided in the War Labor Disputes Act, he pointed out that the latter was designed to be a cooling-off period and nothing more, while the 30-day period provided in the bill under consideration will be used to secure affirmative action in the nature of hearings, fact finding, and recommendations which will serve as a basis for the settlement of the dispute "rather than serving as a period of preparation for the beginning of a strike." He

pointed out that the fact-finding procedure would be used only where certification is made that Government conciliation and arbitration have failed, that the parties are unwilling to submit the controversy to arbitration, and that the stoppage of work would seriously affect the national public interest.

The simplicity and directness of the President's proposal was apparently a source of its strength in the public mind. Although there was much skepticism regarding the probable accomplishment of the fact-finding device on the part of those most experienced in labor relations, public support appeared to be overwhelmingly in favor of attempting this program at once. In a survey of the American Institute of Public Opinion issued on January 3, 1946, it was shown that about 78 percent of the sample canvassed approved, while only about 11 percent disapproved. Of union members voting on the question in the survey, 70 percent approved, 16 percent disapproved, and 14 percent were undecided. Union members appeared from this survey not at all eager to strike if other means of resolving current controversies could be found. Sixty-eight percent of union members thought that the President's proposal would reduce strikes and presumably they did not think they would be hurt by that contingency. In a similar survey conducted at the same time by the Des Moines Sunday Register, 72 percent of union members in Iowa voted approval of the President's plan. Sixty-seven percent of the union members voted favorably to make strikes and lockouts unlawful during the fact-finding period of 30 days, while only 11 percent of union members opposed this provision; 22 percent had no opinion.

BALL-HATCH AMENDMENT

The amendment to the Ellender bill proposed by Senators BALL and HATCH strikes out the whole bill after the enacting clause and substitutes a new bill. This is a somewhat reduced and toned-down version of the Ball-Burton-Hatch bill originally introduced in June 1945 and referred to the Committee on Education and Labor, but upon which no formal hearings have been held. It appears that when the committee reconvenes hearings on this substitute may be permitted as part of the over-all effort to find a satisfactory method of handling industrial disputes. It is pertinent to note, however, that the Ball-Hatch amendment makes no effort to amend the National Labor Relations Act or to make illegal labor practices by labor organizations, which were the most criticized provisions of the original Ball-Burton-Hatch bill. In place of these there is a provision that "the Board (created under this amendment) shall take no action which will interfere in any way with the consideration or determination of complaints of unfair practices by the National Labor Relations Board in accordance with the provisions of the National Labor Relations Act."

The central task which the Ball-Hatch amendment sets itself is how to make collective bargaining function to settle the issues between management and labor fairly but without work stoppages. It seeks to restore to the parties and to Government a sense of the public necessity to settle collective bargaining issues amicably and to make collective bargaining work as the national labor relations policy. It does so directly by imposing upon all parties the duty to make and maintain agreements, while it provides detailed orderly Government settlement procedures for controversies which threaten to result in a substantial interruption of commerce.

Under this bill a Federal Industrial Relations Board of five members is given comprehensive power to mediate and settle disputes. The United States Conciliation Service will be transferred to this Board and it will also have the power to utilize the services of other agencies deemed helpful in its settlement efforts. If the Board is not successful in its efforts at mediation and conciliation, it is obligated to use its offices to induce the parties to agree to submit their controversy to arbitration. Pending the exhaustion of settlement efforts, existing conditions must be maintained by the parties to the dispute.

If, finally, a fact-finding commission is appointed as a last step in the Government's settlement efforts, no strike or change in conditions by employers shall be made until 30 days after the report is made. It is a violation of the act to strike or lock-out until every reasonable effort has been made to settle controversies by the formal procedures established for collective bargaining, conciliation, mediation, fact finding, and voluntary arbitration.

The "right to strike" is specifically impeded under this bill by the imposition of the duty imposed on both parties to make and maintain agreements, to settle controversies by the procedures provided and to maintain conditions pending exhaustion of settlement efforts, including a 30-day period following the report of a fact-finding commission if such is appointed. This bill, like the Ellender and Norton bills, also provides that nothing in it shall be construed to require an individual employee to render labor or service without his consent or of quitting or withdrawing his labor. There is a further restriction on unions and employers that controversies arising out of any grievance against any employer concerning the application of any such agreement—that is, so-called grievance controversies—must be arbitrated and the award is binding on the parties and enforceable in the courts. The substitution of "effective grievance procedure, including final and binding arbitration for strikes, or lock-outs in grievances which arise under existing contracts" was, however, one of the agreements arrived at in the national management-labor conference called by the President last November and listed as an accomplishment of the conference in its release to the press on December 1, 1945.

Collective bargaining is not conducted according to the principles of a one-price store. It will generally lead to deadlocks when either side holds firmly to its original position. The more publicity given to the issues, the larger the interests represented, and the more the public is taken in on the discussions the more difficult it becomes to recede from original positions. A compromise proposal becomes a "break in the dam"; a fair concession is restrained by fears that it will be used for trading upward.

That is where mediation can play an important role to supplement the collective-bargaining process. The mediator, after he has come to grips with the final decisions of the parties in confidential talks with each side, is in a better position to quote rock-bottom prices. This role of firming up the bid-and-asked prices can be performed by the mediator before a strike as well, if not better, than after a strike, after which the mediator's job is also made more difficult by the public positions taken by the parties.

The Ball-Hatch bill makes the supplementary mediation and arbitration processes integral parts of the collective-bargaining process, and it endeavors to make collective bargaining itself less of a burden upon commerce. It looks to these publicly supported mediation efforts to lessen the inevitability of strikes or lock-outs when formal collective bargaining breaks down. Both sides will have to trade realistically or expose themselves to the persistent pressure to accept public decisions. The bill does not prohibit strikes or lock-outs after these efforts have failed; but it does not expect that strikes and lock-outs will be as inevitable or as numerous if both sides accept the duty to maintain agreements, make use of the settlement machinery provided and, as reasonable men, voluntarily leave a larger number of issues to arbitration.

SMITH BILL

H. R. 4875, introduced by Congressman SMITH of Virginia on December 3, 1945, contains practically all the provisions which had passed the House—but not the Senate—on two different occasions, on December 3, 1941, and on June 4, 1943. While the measures proposed in this bill are violently opposed by organized labor, they nonetheless commended themselves to a majority of the Members of the House of Representatives as necessary to meet the strike situation when it becomes very critical. The first passage of a similar bill 4 days before the attack on Pearl Harbor followed the great increase in strikes in 1941 in defense industries; the second time a similar bill was passed by the House was in 1943 after another increase in strikes, frequently against Government directives or Government policies. (The latter bill was compromised with a Senate bill and emerged as the Smith-Connally War Labor Disputes Act.)

The present Smith bill was introduced 2 days after the adjournment of the Management-Labor Conference and referred to the Committee on Labor. This committee held pre-Christmas hearings on the Norton bill (the President's proposal). It was announced by the acting chairman of the House Committee on Labor that when hearings are resumed on the return of Congress they will be broadened to include other measures to deal with the current situation.

The Smith bill has a number of provisions which do not deal directly with the strike limitation issue and will therefore not be discussed in this bulletin—such as the provision depriving any labor organization of its status under the National Labor Relations Act if it knowingly or negligently permits members of Communist or Nazi organizations or felons to hold office, and the provision for the compulsory registration of labor organizations, including the furnishing of detailed information on initiation fees, dues, limitations on membership, elections, and financial statements.

On the point at issue the bill provides for the maintenance of the status quo in collective bargaining by making it unlawful to conduct strikes or lock-outs until after 30 days' written notice filed with the employer and the Secretary of Labor of both the intention of striking and the reasons therefor.

There are a number of specific provisions regarding violence and intimidation in industrial disputes. These make it unlawful for any person to use or threaten force or violence in an attempt to prevent another person from working in a struck plant, to picket the homes of workers, to picket a place of business unless before the strike or lockout the picket was himself in the employ of the company. On the other hand, employers are enjoined from employing any person for the purpose of obstructing or interfering by threats or force with peaceful picketing or with the exercise by employees of their rights of self-organization or collective bargaining.

The bill would make it unlawful for workers concertedly to engage in sympathy strikes, jurisdictional strikes or to refuse to work on articles produced by any person in an attempt to induce such person to recognize, comply with the demands of, or to employ members of any labor organization.

Federal district courts shall have jurisdiction to enjoin any of the above acts and persons committing them shall also be liable to civil suits for damages. Individuals committing any of these acts shall lose their rights under the National Labor Relations Act, employment or other benefits under any act making appropriations for relief purposes or any unemployment compensation benefits under the Social Security Act. If a trade union or an officer of a union is guilty of any of the foregoing violations, the union shall cease to have the status of a labor organization under the National Labor Relations Act

and shall lose the protection of the Norris-LaGuardia Act, which prohibits the issuance of injunctions against certain acts of labor organizations.

It is declared to be the policy of the United States that labor disputes affecting the public interest should be settled fairly and without interruption or delay in the production necessary in the public interest. To this end additional facilities are created for the voluntary settlement of such disputes as cannot be settled expeditiously by collective bargaining and by existing conciliation and mediation procedures.

The bill creates in the Executive Office of the President a National Mediation Board, composed of an equal number of representatives of employers, workers, and the public to have jurisdiction of labor disputes which are not expeditiously adjusted by collective bargaining or other conciliation and mediation procedures. The Board may set up panels of employer-employee-public representatives or exclusively of public representatives who will make every reasonable effort to settle the dispute. The Chairman of the Board (a public representative) or the mediation panel may at any time request the parties to a dispute to negotiate by collective bargaining or to meet with any representative of the Board.

If a dispute is not settled by collective bargaining or mediation, the Chairman of the National Mediation Board or the mediation panel shall endeavor to induce the parties voluntarily to submit their differences to arbitration. Arbitration awards shall be filed with the Board.

If a dispute is not settled by collective bargaining, mediation, or voluntary arbitration the Chairman may authorize a panel to investigate the issues involved and to make findings of fact and recommendations. The Board shall submit such report to the parties and to the public.

After the Board has taken jurisdiction of a dispute the Chairman may issue an order requiring any person to refrain from calling or assisting in a strike arising out of the dispute or an order requiring an employer to refrain from any practices which change the situation existing at the time the dispute arose. Such order shall terminate within 5 days after the findings and recommendations of the Board or within 60 days after the date on which the order was issued, whichever is first.

Orders of the Board shall be enforced in the appropriate District Court of the United States at the suit of the Attorney General of the United States and its judgment and decrees shall be subject to review by the appropriate circuit court of appeals and by the Supreme Court upon writ of certiorari. The jurisdiction of the courts when granting temporary relief or restraining order or making or entering a decree enforcing an order of the Chairman of the National Mediation Board shall not be limited by the terms of the Norris-La Guardia Antiinjunction Act.

The Board shall have subpena power to examine relevant books and records necessary for the settlement of labor disputes before it.

Those who support the stringent provisions of the Smith bill have felt that it is no longer true that unions have weaker bargaining power than employers because they are organized nationally to deal with individual companies; they frequently strike at will without giving the employer an opportunity to bargain with them; they sometimes break or ignore their own contracts; they employ threats or violence in labor disputes; they picket the homes of workers or of managers; they employ pickets who never worked for a struck company to mislead the public; they engage in sympathy strikes, jurisdictional strikes, and strikes against employers who use materials made by another union or by nonunion labor—practices which are directed against employers who maintain friendly union conditions in their own plants.

By making all the foregoing acts illegal, proponents of the Smith bill believe they are striking at the roots of the abuses of labor organizations which have contributed to the multiplication of strikes. Other provisions of the bill, dealing with the purging of unions of such of their leaders as are Communists, Nazi sympathizers or racketeers or criminals and the elaborate provisions regarding the registration of unions and the publication of the basic facts regarding their organization, jurisdiction, fees, dues, assessments, limitations on membership, paid-up membership, election of officers, constitution and bylaws and financial statements, have as their purpose the cleansing of unions of internal abuses, the elimination of subversive or other deleterious and extraneous purposes in the conduct of unions and of strikes, and the protection of both the membership and the public from irresponsible control by unwanted, selfish or even vicious leaders. The proponents of this bill believe that peace and order and fair dealing in industrial relations are not possible while the conditions exist which have called forth these proposed remedies.

Over and above the provisions of the Smith bill which aim to eliminate what are regarded as serious abuses of unions and which seek to inquire into the practices of unions as membership organizations, the bill remains the most severe of the four bills considered in its restrictions on strike activity. There is, first, the 30-day notice which must be given before strike action is possible. There is the specific provision with respect to the use of force or violence in connection with picketing, which union spokesmen say means the destruction of strike discipline and the exposure of normal picketing to unfriendly local police and courts. There are the provisions against sympathy strikes, so-called jurisdictional strikes and strikes against employers using nonunion materials, which union spokesmen say will not only greatly reduce their effectiveness but, especially in so-called jurisdictional strikes, will create a happy hunting ground for company unions and make it impossible for workers to select the representatives who they think can serve them best. Union leaders point to the severe judicial penalties, including the practical repeal of the Norris-LaGuardia Act, which they say means the return to the destructive and immoral doctrine of conspiracy under which men are not permitted to do in association what is perfectly legal for them to do as individuals. They point to the withdrawal of all unemployment compensation and relief benefits as measures which are sure to destroy unions as well as to intimidate the rank and file of union members. Their reactions to all these proposals are bitter in the extreme; they charge that those who support these proposals are either naive individuals who do not know much about the struggles of labor in the past to obtain its present position of near-equality with management or that they are avowedly antiunion spokesmen who use fair words to destroy trade unionism in the United States and to return to a condition where it is illegal for workers to organize for mutual aid and protection and for effective bargaining with large aggregations of capital.

Union spokesmen say that they have no objection to the creation of adequate conciliation and mediation machinery and that they have urged the necessity of better settlement machinery for years. They say that it is also the policy of the trade-union movement to settle labor disputes fairly and without interruption or delay, but they do not see how fair settlements can be made by so greatly restraining the weaker party. Their objections to any limitation on the freedom to strike were outlined on page 13–15 of this Bulletin and their criticism of compulsory waiting periods in connection with fact-finding panels were given on pages 19–20. They naturally find a 60-day compulsory waiting period for the report of a fact-finding panel more objectionable than a 30-day waiting period.

M'MAHON BILL

S. 1419, which was introduced on September 20, 1945, by Senator McMAHON for himself and for Senators HAYDEN, THOMAS of Utah, and TUNNELL, provides for the creation of special boards of inquiry to hold hearings on the issues of a labor dispute and to make "the factual argument of each party to the controversy available to the public." Nothing is said about recommendations to be made by boards of inquiry which would bring objective thinking to bear upon the contesting arguments and help to crystallize public opinion on the issues involved. The appointment of such board of inquiry "shall not otherwise interfere with any action undertaken or to be undertaken by either party." In other words, in this bill, unlike the Ellender and Norton bills (the President's proposal), the Ball-Hatch amendment and the Smith bill, no recommendations are made by the fact-finding boards, and strikes or lockouts may take place before the appointment of such boards, while the board is conducting hearings, or any day after the board makes available to the public "the factual argument of each side of the controversy."

The other provisions of the McMahon bill deal with the centralization of labor functions in the Labor Department, the creation in the Department of a Conciliation and Mediation Division which takes over the functions of the Conciliation Service and any other conciliation and mediation functions in the Department, and the establishment of an independent United States Board of Arbitration to handle arbitration voluntarily requested by both sides.

The Administrator of the Conciliation and Mediation Division has the duty of encouraging representatives of employers and employees to make and maintain agreements and to settle all differences arising therefrom with expedition and, wherever possible, in conference. The services of the Division shall be employed in mediation and conciliation efforts to bring the parties to agreement in any labor controversy involving or threatening an immediate and substantial interruption to the free flow of commerce.

The independent arbitration agency created—not within the Department of Labor—to be known as the United States Board of Arbitration, is composed of three members appointed by the President with the advice and consent of the Senate for overlapping terms of 3 years. This Board will cooperate with the parties in forming a board of arbitration when requested to do so; but the failure or refusal of either party to agree to arbitration shall not be construed as a violation of any legal duty or other obligation imposed by this act. The Board will establish a roster of fair and competent arbitrators familiar with the industrial and employment problems in the region where the controversy exists. Arbitration awards shall be transmitted and filed with the District Court of the United States and with the United States Board of Arbitration. Boards of arbitration shall have the power to require the attendance of witnesses and the production of necessary books, records, etc., deemed material to a just determination of the matters submitted for arbitration; for this purpose the Board may request the District Court to issue the necessary subpenas.

The Bureau of Labor Statistics of the Department of Labor is authorized to maintain a file of copies of agreements reached as a result of mediation, conciliation, and arbitration pursuant to this act, of arbitration

agreements made and awards rendered pursuant to the act, of all statements and summaries of fact issued by the Board of Inquiry and of any other collective labor agreements submitted by the parties. Such file shall be open to inspection for the guidance and information of interested representatives of employers, employees, and the general public. The BLS shall be equipped (presumably more so than now) to furnish factual information which may aid in the settlement of any labor controversy.

To remove any possible doubt in the matter, it is provided finally that nothing in this bill shall be construed to interfere with or impede or diminish in any way the right to strike, or exert other lawful means or to amend or modify the provisions of the National Labor Relations Act.

What we have here, then, is some further centralization of the labor functions of the Government within the conciliation services in the Department of Labor, perhaps larger appropriations for the Bureau of Labor Statistics to gather, collate and publish relevant labor data, and the establishment of an independent board of arbitration and other arbitration facilities the use of which will depend upon the willingness to use such facilities on the part of both parties to a dispute. The parties need not agree to arbitration but, once they do, arbitration awards are enforceable in the courts. In connection with collective bargaining and conciliation and mediation, strikes and lockouts are permissible at any time from the beginning of a controversy. Arbitration boards have subpena power; but the decision to submit to arbitration is voluntary.

This bill, which was submitted after the original Ball-Burton-Hatch bill, and partly as a rival measure, contains substantially the same arbitration provisions and is animated by the same aim as the Ball-Hatch proposal to prolong the process of collective bargaining before such bargaining breaks down in a work stoppage; but it differs from the present Ball-Hatch amendment particularly in that it provides no such compelling duty on both parties to make and maintain agreements and to use the settlement facilities of government, no recommendations by the fact-finding board, no obligatory waiting period, and no sanction.

The general counsel of the American Federation of Labor was quoted in the press on January 5, 1946, to the effect that the McMahon bill does not contain the "objectionable features" of the President's proposal for a "fixed waiting period" and "for recommendations by the fact-finding board." He added that "we possibly should have indicated that fact finding in and of itself is not harmful to labor even though I am not convinced that it can do much good." Nevertheless, he added in a later interview, the general executive board of the A. F. of L. at its meeting in Miami later in January "would give serious consideration to the fact-finding bill proposed by Senator McMAHON."

---

[1] In 1944 about half the workers in private industry—some 14,300,000 men and women—were working under terms of union agreements. In manufacturing industries about 65 percent of the workers were covered by agreements, while in some industries, like coal mining, railroads, and longshore work, practically all the workers were covered by agreements. The national average for all industry was pulled down by the lower degree of unionization in the service trades, in clerical occupations, and in agriculture. (See Florence Peterson, American Labor Unions, pp. 188–191. Miss Peterson is the Director of the Industrial Relations Division of the Bureau of Labor Statistics of the U. S. Department of Labor.)

Total union membership is somewhat larger than the number of workers covered by union agreements because there are scattered union members in plants where the union does not yet represent the majority of the workers.

[2] While Government statistics make no distinction between strikes and lock-outs, practically all work stoppages are popularly regarded as strikes. In a period of generally rising production, prices, and wages, the initiative in asking for changes in the labor contract is, of course, taken by labor. If a work stoppage results it is called a strike. A lock-out in the traditional sense is very difficult to effectuate under the National Labor Relations Act because the employer is obliged to bargain with his present employees and cannot call in new workers to take their place. At the same time, when there is a stoppage because the employer will not accept a demand of a union, the union many interpret such stoppage as a lock-out.

Strikes and lock-outs in the United States, 1916–45

Year	Strikes and lock-outs		Workers involved		Man-days idle			Indexes (1935–39=100)		
	Number	Average duration (calendar days)	Number [1]	Percent of total employed [2]	Number	Percent of available working time [3]	Per worker involved	Strikes and lock-outs	Workers involved	Man-days idle
1916 [4]	3,789		1,599,917	8.4				132	142	
1917	4,450		1,227,254	6.3				155	109	
1918	3,353		1,239,989	6.2				117	110

[1] The number of workers involved in some strikes which occurred from 1916 to 1926 is not known. However, the missing information is for the smaller disputes and it is believed that the totals here given are fairly accurate.

[2] "Total employed workers" as used here refers to all workers except those in occupations and professions in which there is little if any union organization or where strikes rarely if ever occur. In most industries it includes all wage and salary workers except those in executive, managerial, or high supervisory positions or those performing professional work the nature of which makes union organization or group action impracticable. It excludes all self-employed, domestic workers, agricultural wage workers on farms employing less than 6, all Federal and State government employees, and the officials, both elected and appointed, in local governments.

[3] Available working time was computed for purposes of this table by multiplying the average number of employed workers each year by the number of days worked by most employees during the year.

[4] Tentative.

Blank spaces mean information not available.

The figures are those of the Bureau of Labor Statistics.

Official strike statistics do not add up the total amount of idleness and lost man-days due to work stoppages. They do not include time lost in plants because of a strike in the plant of its regular supplier, time lost in other plants which buy its commodities, or time lost by large segments of industry resulting from any strike of local transport workers, coal miners, delivery men, public utility workers, and elevator operators. The Bureau of Labor Statistics, which compiles the official statistics, asserts that, because it is impossible to obtain consistent and accurate information concerning the indirect and secondary effects of stoppages, only the workers in a plant who are made idle because of a dispute in the plant are counted. Such statistics are, of course, comparable from month to month and year to year, but they are by no means the true measure of all the losses created by work stoppages. In a number of strikes of recent memory the known secondary effects involved losses many times the man-days lost in the specific strikes themselves.

In Honor of Mrs. Woodhouse

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the St. Louis Post-Dispatch of January 25, 1946, containing a reference to the plan of the gentlewoman from Connecticut [Mrs. WOODHOUSE] for discussing public questions with her constituents, and a deserved tribute to the gentlewoman:

IN HONOR OF MRS. WOODHOUSE

To the special honor of CHASE GOING WOODHOUSE, Congresswoman from Connecticut, for the right answers at the right place to the right people:

At biweekly intervals, Mrs. WOODHOUSE reports in the Norwich town meeting to as many of her constituents as care to come. After that, she stands up to questions.

"Your letters," said she to the 350 present on January 7, "are not always helpful. I can't perpetually vote 'No' as most letters advise me to." As she conceives it, she must vote "Yes" on anything to promote peace and "grassroots" prosperity—and specifically for renewed price control, low-cost housing for veterans, and a strong full-employment act. Then the questions:

Why the British bitterness on the proposed loan?

"Don't take Beaverbrook's editorials for the British people."

Why the delay in bringing the troops home?

"My own son has been in the Pacific 44 months, yet I am willing that he stay as long as necessary rather than have his son sent there to fight 25 years from now."

Antilabor legislation?

"There may be a bill to curb Petrillo, but I call that procultural rather than antilabor."

A Legionnaire said his post is 100 percent for atomic secrecy.

"I wish you would remind your members that there is no secret of the atomic bomb."

To CHASE GOING WOODHOUSE, economics professor on leave and town-meeting Democrat, all good wishes, and would the Congress were graced with many more men and women like her.

The Filibuster

EXTENSION OF REMARKS
OF
HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 29 (legislative day of Friday, January 18), 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "The Filibuster," from the Oregonian of January 21, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FILIBUSTER

The southerners' filibuster to prevent Senate action on extension of the Fair Employment Practices Act was anticipated—in fact, openly promised. Yet the Senate majority made no move to tighten its rules to prevent the filibuster, which is the weapon recurrently used by southern Democrats to block legislation advancing the rights of Negroes.

The Senators have been reluctant to restrict harshly the immemorial freedom of debate which guarantees the rights of minorities to be heard and by fairness and logic, on occasion, to so influence their colleagues as to become the majority. The Senate did not find it necessary to adopt a rule to close debate ("closure" or "cloture") until 1917, when a filibuster by "the little group of willful men" stopped action on the armed ship bill.

To stop debate under a closure petition brought by 16 Senators, a two-thirds vote is required, and the southerners heretofore have held enough votes to defeat such motion. The British Parliament, which was confronted with filibusters by the Irish comparable to those in Congress from the southerners, long ago was forced to adopt restrictive measures more severe than the two-thirds closure vote.

It is incomprehensible to the man in the street that a majority of Senators is willing to sit idly through filibuster after filibuster in which the subject matter at issue is not even discussed. Creaking parliamentary machinery which prevents functioning of the will of the majority must be replaced.

Significant Pictures and Displays Portraying Irrigation Shown in House Committee on Irrigation and Reclamation

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. MURDOCK. Mr. Speaker, when the House Committee on Irrigation and Reclamation moved into new quarters at 328 House Office Building about a year ago, the walls of the committee room were bare and in need of appropriate decoration. The chairman felt that the decorations supplied should be appropriate to the work of the committee and instructive and therefore urged his staff to get such pictures, maps, charts, and displays as would convey to the eye of visitors, and to the minds of the committee members the nature of the great conservation and constructive work in which the committee is engaged. A glance around the walls of the committee room will indicate the completeness of that impression which the displays are intended to give. Naturally, there are maps showing the sections and regions where irrigation is carried on throughout the 17 Western States. Some of these maps are in colors outlining the major river basins of the West, which theoretically ought to be treated as a geographic unit for maximum development.

As is to be expected, the committee room has pictures of some of the larger dams, both of the earlier construction and of the very latest construction. The visual story would not be complete without some scenes from both above and below those great dams and reservoirs showing forested uplands above and desert stretches below converted into irrigated farms and now producing fruitfully. Therefore, in order that it may be shown that irrigation on any project is not at first concerned with the building of dams, there are pictures showing the watersheds and the character of the catchment basins that supply the water for storage. To get these pictures it was necessary to get views of national forests, which were furnished by the National Forest Service and of course pictures of dams furnished by the Bureau of Reclamation, and that we may not forget other agencies of Government interested in such development, a picture of one dam was obtained from the Indian Service to represent its part in the work of irrigation.

The committee is indebted to the Forest Service for two splendid pictures which are worthy of comment. One shows a view of the Tonto National Forest from the crest of the ridge on the Mogollon Rim which extends diagonally across Arizona from northwest to southeast. As a ranger stands at this point looking out over a vast area toward Pleasant Valley, the floor of which is carpeted with yellow pine forest, he gets some notion of nature's great contribution to the needs of civilized man. The view impresses the value of forests, but there are other values not apparent to the eye. This Tonto Forest is the principal part of the watershed for the great Roosevelt project in central Arizona, which surrounds the city of Phoenix. This is one of the oldest and best of our reclamation projects.

This picture in the committee room shows a ranger surveying the prospect. One wonders what he is thinking—possibly it is something like this—"Up here is the world as God made it; down yonder is the world as man made it, but for good or bad the valley has to depend upon these upland regions for nearly everything that is needed to carry on modern life. In the productive garden down in the Valley of the Sun their crops are dependent entirely upon the precipitation in rain and snow that fall on this forested area. These waters must be stored behind the curving walls of stone or concreate in our dams until conveniently turned loose for the growing crops, but as the waters are turned loose, they churn the wheels to spin the dynamos to produce the power which runs the industries and lights the city streets. The very building material of which those cities in the valley are built comes from these mountains. If it is timbered products, they are taken from these pine trees. If it is building stone, it is quarried from these mountains. If it is copper for the great bronze doors of the State Capitol, or for the electric-transmission lines, it is taken from the mineral wealth in these hills. A study of the history of the State shows that some of its leaders with the best brains and minds also came out of these mountains. Probably such thoughts are going through the ranger's mind.

Another beautiful colored picture, furnished by the Forest Service, hanging on the walls of the committee room, shows the beginning of Workman Creek in the

Tonto National Forest of Arizona. One can almost see the trout in the clear stream in the picture. This mountain stream is only one of innumerable twig-end beginnings of a river which nourishes a great reclamation project. Now, this particular small stream has its watershed which is but a small fraction of the total watershed of which it is a part. Possibly it constitutes only about 1 percent of the total, but it is centrally located in the heart of the watershed and thus presents the whole watershed in miniature. An experiment station has been located upon this small stream and careful measurements of its run-off are made, especially between November and February, and the knowledge of the miniature stream flow is used to predict the stream flow of the entire watershed for 3 months later or during the spring months of March, April, and May.

Now, stream flows on all western watersheds vary greatly from year to year. However, there is a very close correlation between the stream flow of this creek and of the entire river. Through a number of years the two stream flows have been correlated and the coefficient of correlation is found to be .99 plus. That is about as nearly perfect correlation as has ever been computed or discovered in nature. The difference in time is important for the high mark of run-off in the tiny tributary occurs before March the 1st, and the run-off which is to be predicted does not completely occur before June the 1st. Thus the farmer in the Valley can ask the ranger in the mountains any time prior to March the 1st, "How much water can we count on collecting in our reservoirs this season?" One does not want to detract from the beauty of this picture by injecting such mathematical and practical utilitarian ideas regarding the mountain stream other than to say that to some it is beautiful and to others it is equally beautiful and also significant.

In one corner of the committee room hangs a picture of the Coolidge Dam on the Gila River, which was furnished the Committee by the Office of Indian Affairs. This picture is unique for it is the only dam of its type in the world, as well as being the largest dam built by the Indian Reclamation Service in our country. It does not look like a dam but looks instead as if two giant eagle eggs had fallen off a wall like "Humpty-Dumpty." These are the two great domes which constitute the unique part of the structure. The view is from the upstream side of the dam and that is why these dome sections appear like egg shells viewed from the outside. If viewed from the lower side, they are seen to be concave sections of an oblong. They not only look like egg shells but are built on the principle of the egg shell. The great engineer who designed this dam convinced a committee of Congress that he could build as strong a dam as any other type of similar size with a saving of 50 percent of the material and thus he built the major part of it in a shell-like structure. This dam was dedicated by ex-President Calvin Colidge on March 4, 1930, and present on that occasion was the great humorist Will Rogers and other notables, all of whom made appropriate speeches. Probably the best speech which was delivered that day was by a full-blooded Pima Indian concerning the significance of this structure.

The committee does not have pictures of all the big dams but does have a group of four including Roosevelt Dam, the first big reclamation dam in the West. This is the "Father Abraham" of our modern dams, begun in 1906, finished in 1911, and dedicated by Thedore Roosevelt in that year. Roosevelt Dam in the first of 6 big storage dams on that one river. The group includes also a picture of Boulder Dam on the Colorado River between Arizona and Nevada, Shasta Dam in northern California on the Sacramento River, and the greatest dam in the world which is Grand Coulee Dam on the Columbia River in eastern Washington. These enlarged pictures of these dams do not and cannot do them justice and nothing that could be said in a brief description regarding their significance would begin to do them justice.

The walls of the committee room contain other pictures of downstream agricultural benefits showing irrigated fields, alfalfa in the midst of a desert, flocks of sheep and herds of cattle, and vast citrus groves of oranges, lemons and grapefruit, together with nearby vineyards. Other pictures show date palms which give some indication of more than one hundred semitropical productions of a land that is fertile as the Valley of the Nile and is coaxed into productiveness by unfailing sunshine and the water that fell miles away up in the mountains. This is a synopsis of the story of reclamation as pictured by one project.

The Housing Crisis

EXTENSION OF REMARKS

OF

HON. JOHN E. LYLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. LYLE. Mr. Speaker, the American Veterans of World War II have submitted to me the following statements, together with certain press reports, which they request to be placed in the RECORD for the consideration of the Congress:

AMVETS DEMAND CONGRESSIONAL INVESTIGATION OF THE HOUSING CRISIS

(By J. H. Leib, national legislative director)

American Veterans of World War II, respectfully demand a congressional investigation of the serious housing shortage for veterans, also an immediate clarification of the Surplus Property Act as it affects the sale of defense housing.

The veterans of this war are getting a pathetic run-around and it is about time that the Congress take constructive action to see to it that the returning soldiers are given the priorities to which they are entitled.

Amvets, tired and disgusted after being pushed around while attempting to find suitable homes for their fellow comrades, came forward with a plan to purchase a Government housing project which the Defense Homes Corporation has declared surplus.

This plan has attracted national attention and veterans throughout the land are eagerly waiting to see whether or not the men who fought in World War II will be given a stake in our democracy.

Because of the obstacles that have been thrown at the Amvets plan we requested Representative MANASCO, Senators FULBRIGHT and HILL to introduce House Joint Resolution 297 and Senate Joint Resolutions 131 and 132, respectively, which asks for a clarification of the Surplus Property Act in regard to the sale of defense housing for veterans.

These bills are now pending in Congress and we urge immediate consideration of this legislation so that the veterans of this war may know where they stand.

Following are three newspaper clippings which covers the subject somewhat in detail and I ask that every Member of Congress study these accounts for an idea of how the veterans look upon this housing crisis.

The press reports follow:

[From the Washington Post of January 27, 1946]

"VETERANS ASK HOUSING BID AID

"The board of directors of the Veterans Cooperative Housing Association yesterday agreed to ask Congress to take action that would help them purchase McLean and Naylor Gardens.

"The board directed William A. Roberts, counsel for the group, to send letters to the Senate Military Affairs Committee and the House Committee on Expenditures in the Executive Departments asking action on resolutions now in their hands.

"The Senate resolution was recently presented by Senator LISTER HILL, Democrat of Alabama, and the House resolution by Representative CARTER MANASCO, Democrat of Alabama. They both ask Congress to delay the sale of the housing properties to private investors until veterans' priority rights to the projects have been investigated.

"The Defense Homes Corporation Board is expected to meet some time this week to award six properties on sale to bidders.

"In announcing the action of the board of directors, Raymond Sawyer, commander of District Amvets, and a member of the Board said: 'It is discrimination against the veterans to require us to bid in an inflationary market when the Federal Public Housing Authority sold a housing project in Dayton, Ohio, to war workers at a price determined by appraisal and without soliciting public bids'."

[From the Army Times of January 19, 1946]

"VETS MAY STRAIGHTEN IT OUT

"Lip service. The old malarkey. That's what the veterans are apparently getting when they look for a place to live. In the past few months many Government agencies, presenting arguments for their continued existence, have issued pious declarations, pointing out that they can help the good old vets.

"So what happens if you deal with one of these agencies—if you go to one looking for assistance in obtaining said house? You get lip service. The old malarkey.

"For example, members of the Washington Amvet post, tiring of the run-around, decided to get homes of their own. They set up an organization with the intention of buying McLean Gardens, a Government project which had been declared surplus and put on the block.

"The organization submitted a bid. It didn't enclose a check for $9,000,000. Who ever heard of a veteran with that kind of money? Instead, a reasonable proposition was given the Defense Homes Corporation—a proposition which would inconvenience no one, and which would eventually reimburse the Government.

"But the DHC didn't like the bid. It asked for a new one and at the same time made it clear that some of the big-time real-estate operators were topping the Amvet bid—and that if by some fluke the Amvets got the project, they couldn't take it over for some time. New rules would be made to make sure that they didn't.

"It was the first time anyone had heard that the DHC was a profit-making firm. But it wasn't the first time that the surplus property priority of veterans has been ignored.

"If the DHC was the only agency that is giving the veterans the run-around a simple congressional investigation might clear up the matter—but, unfortunately, it apparently isn't.

"Many veterans have complained about the treatment accorded them in personnel offices of Government agencies. Those coming back to old jobs have all too often been discouraged by the personnel officers. Other veterans, seeking civil-service jobs for the first time, are given vague answers, as only experts in giving vague answers can give them.

"It's a sad situation—but it may be that 12,000,000 veteran voters can straighten it out a bit!"

[From the Washington Times-Herald of January 27, 1946]

"VETERANS' AFFAIRS

"(By Lt. Comdr. Tyrrell Krum, USNR, retired)

"It's high time that the Congress of the United States swung some of its unlimited investigational powers into a genuine and straightforward attempt to find out why, despite expenditure of billions of dollars of taxpayers' money, our Nation today faces the most acute housing shortage in history.

"Since away back in the early days of the New Deal, we have had a constant parade of so-called 'housing programs,' ranking from PWA's clumsy attempts at slum clearance down through our recent 'war housing' era, which actually was the construction of new slums for millions of war workers and service personnel.

"A few days ago another 'housing czar'—Wilson Wyatt, of Louisville, Ky., was appointed 'housing expediter' to succeed John B. Blandford, National Housing Administrator.

"And the first words Wyatt uttered upon assuming his new position were:

" 'The present housing shortage is one of our gravest national problems. A great emergency exists.'

"The reaction of most veterans was: 'Here we go again.'

"There is no doubt that a definite housing shortage exists and is nearing the point where it is about to become a national scandal. But why, veterans are asking, do we have such a shortage in view of all the billions that have been spent on all the programs that have been lobbied through Congress?

"And particularly when some 4,000,000 of our citizens are still out of the country.

"Veterans are fed up with bureaucratic double-talk and are slowly and cautiously mustering their strength to do something about taking the housing proposition into their own hands. And the first thing they intend to do is to kick out a lot of bureaucrats who used their jobs in war-housing agencies as a cause for deferment from the draft throughout the entire war.

"Veterans would like to know what was back of the effort on the part of the Federal Public Housing Authority to foist off on ex-service people a lot of second-hand knocked-down defense housing units which had been abandoned by war workers in various parts of the country as they returned to their homes.

"Despite one of the biggest publicity stunts in housing history, engineered by a nationally known advertising agency and designed to persuade municipalities throughout the Nation to take some of the warped, cracked, and practically worthless housing junk back home for the use of veterans and their families, the whole scheme blew up when ex-servicemen held their nose at the deal.

"And it is easy to see why, by the FPHA's own estimation of the type of housing they intended to hand returned fighting men as set out in the fancy pamphlet gotten out at Government expense:

" 'Sooner or later, temporary war housing units, after they have fulfilled their task of housing veterans, will be available for ultimate reuse as various types of utility buildings * * * barns, implement sheds, poultry houses, repair garages, resort cabins, tourist camps, etc.'

"In short, all the present housing authority has to offer the men who won World War II are abandoned war workers' dwellings potentially fit only for barns, sheds, and poultry houses.

"Also the returned veterans would like to know why the professional housing 'experts' who are running the show here in Washington take such terrific exception to any efforts which ex-service men and women are expending on trying to work out their own solutions to the housing shortage.

"One concrete example of this was the opposition thrown out by the Defense Homes Corporation to the proposal by the American Veterans of World II (Amvets) that they be permitted as a group, to purchase McLean Gardens, a huge Government housing project which has been declared surplus and put up for public sale.

"The Amvets, along with members of the older veterans' groups—American Legion, Veterans of Foreign Wars, and Disabled American Veterans—were sick and tired of the constant run-around they got when they tried to find places to live.

"And so, under the leadership of Raymond Sawyer, commander of the local Amvet post, the group submitted a bid on the project which would provide several hundred homes for former fighting men. Of course, they didn't enclose a check for $9,000,000, because they didn't have that kind of money.

"But they did—individually, at least—have the right under the GI bill to obtain a loan through the Veterans' Administration with which to buy a home. The Defense Homes Corporation didn't like the proposition and told Amvets so.

"It is easy to see that war veterans are in for the same run-around in the field of public housing they are getting in most other endeavors and it's time they did something about it. But more important is that Congress dig out all the ugly facts about the housing program of the past and then try and set up some new scheme that will really work—and good."

Television

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mrs. BOLTON. Mr. Speaker, it fell to my lot today to be the first woman Member of the Congress to broadcast over television station W3XWT. This is an experiment station conducted by the Allen B. Dumont Laboratories. Participating in the news broadcast with me were Jay Owen, a Washington radioman, and two men whom we of the Congress know well, Gordon Graham and Robert Coar, who are in the House Radio Room where we make our transcriptions.

It was a most interesting experience. The studio is in the Harrington Hotel building. The lights now being used give 1,000-foot candlepower. Two hundred and thirty 300-watt lights are focused on those participating. The heat is terrific, but in possibly 2 months cold light will be used.

Our audiences today were confined to a restricted area. Among the viewers were members of the Television Institute from New York, Baltimore, Washington, and Richmond, Va., attending a luncheon at the Statler. We had word from several of the viewers that the broadcast came through very clearly.

I was most interested to be told that it is anticipated that within a year or two the cameras will be so constructed that they will be brought right into offices and we will talk directly to our constituents from our own desks. In addition, the actual happenings on the floor will not be beyond the power of these amazing cameras.

I was particularly interested to know that both Cleveland and Cincinnati, in my home State, have applied for television stations.

Truly, this is a world of miracles in which we live.

What Our Nation Needs

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Jackson (Miss.) Daily News:

WHAT OUR NATION NEEDS

Over and above all things else the thing this Nation seriously needs is this:

A revival of the spirit of hard work, the will to do, the ambition to achieve, the laudable desire to get along in the world.

We need to realize that hard work carved out of the wilderness that was this continent 300 years ago, the greatest, the most prosperous, the freest nation on earth.

We need to learn again to be thrifty.

We need to learn again to be God-fearing.

We need to reassemble our scattered families and have again the daily family gatherings around the dining-room table.

We need to recapture the spirit of self-reliance which made all great Americans great—in statesmanship, in art, in education, in industry.

We need to work ever so much harder at keeping our families intact instead of running them as on a conveyor belt through the divorce courts.

We need to reestablish our old birth rate and raise millions of healthy and happy children who in this country can have such opportunities as no other land can offer.

We need to learn again the honest policy of doing an honest day's work for a day's pay; to learn again that to do less is to steal from another.

We need to learn again to have a wholesome respect for the rights of others, even though we dissent from their views.

We need to learn again—and practice—the Golden Rule.

We need to develop a wholesome respect for the law—all laws.

We need among the various political units of Government our one-time feeling of independence one of the other.

We need to resolve to vote regularly—and do it.

We need to resolve to study carefully the records of candidates for office and vote for the better man without regard to mere party labels.

We need to encourage the wise and courageous and incorruptible among us to seek public office, and to support them while they serve.

We need to scrap our 13-year-old flabby notion that we can lean on Washington for whatever we need, in States, counties, cities, towns, and villages.

We need to learn again the rugged practice of saving each for himself; we need to abandon the wastrel's practice of earn today—spend tomorrow—deluded by the extravagant idea, so long encouraged in Washington, that rich old Uncle Sam will be ready with a bag of cash whenever we are in want.

We need to learn again the sound and sensible program for the boys of our grandfather's days—that every boy should work and earn, and learn the value of a dollar.

We need to learn again that a dollar must work for a year at 5 percent to earn a nickel.

We need, in short, all of us, to be good Americans, and if each of us is a good and God-fearing American we shall have a good America.

Governor Tuck's Inaugural Address

EXTENSION OF REMARKS
OF
HON. THOMAS G. BURCH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. BURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable William M. Tuck, Governor of Virginia, at his inauguration in Richmond, Va., on January 16, 1946:

Mr. Speaker, members of the general assembly, and fellow citizens of Virginia, today brings to a close a memorable administration in the history of Virginia governors. I shall always remember the occasion 4 years ago, when Governor Darden and I were inducted into our respective offices. It was a little over a month after the treacherous blow at Pearl Harbor. We had just become actively involved in the greatest war in human history. The Japanese were running roughshod over the Pacific areas. The Germans and the Russians were locked in deadly combat. The picture was indeed a gloomy one when Governor Darden entered upon his new duties. It is not necessary for me to remind the people of this State how well and how earnestly, and with what statesmanlike ability, he has discharged those duties. His brilliant leadership during those trying times will be accorded a prominent place in Virginia history. It will, for many years, provide to his successors an inspiration to emulate his worthy achievements. As he lays down the burden of his official duties today the picture is much brighter than it was when he assumed them, but it is still clouded with sadness. We can now look back with pride upon a hard-won military victory, and with a feeling of immense relief from the sickening fear of possible subjugation and enslavement at the barbarous hands of the Axis dictators. But we would not, if we could, forget the sacrifices made by those heroic members of our Army and Navy who fought so gallantly in foreign lands in order that we at home might still have freedom. The thoughts of them will ever glow in the hearts of the people of a greateful State and Nation.

PROUD OF VETERANS

Virginia is proud of her sons and daughters who have returned and are returning from the war zones and the fields of battle. She mourns for those who perished in the conflict and does honor to their sacred memory. It is now for us, with the help of Almighty God, to see to it that they shall not have suffered or died in vain—that nevermore will mankind be subjected to a repetition of such hardships, slaughter, and suffering, as those to which our beloved sons have been subjected. And now today, with the picture thus changed, I have come again to be inaugurated; this time as Governor of the Commonwealth. Words cannot express my gratitude. There is no higher honor. I pray that I may prove worthy of it.

During the gubernatorial campaigns, I stated the principles by which I would be guided and some of the objects I would try to accomplish if elected. These objects I was careful to hold within bounds which I thought could be attained. To that end I now dedicate myself as I enter upon the duties of this high office.

There are many difficult problems which call for solution, but I shall deal with only a few of them today. My legislative recommendations will be the subject of a message which I will communicate to the general assembly next Monday. What I say today I consider addressed primarily to the people of Virginia.

I will now speak of a matter which is of vital concern to us all, and that is the necessity of improving and preserving State and local self-government. As we all know, under our constitutional system we have three levels of government: First, the local governments, that is, those of the counties, cities and towns; second, the State, which should be careful not to trespass upon the local functions; third, the Federal, which was intended to operate solely in the field of national affairs, and was so limited, it was thought, by the Constitution.

RIGHTS OF STATES

Even before the late war, there had developed a decided movement by the Government at Washington to break over the constitutional bounds prescribed for it and take on activities which were supposedly reserved to the States. This was being done in most instances by making grants of money to the States to aid in some State function. The States were required to match the grant. This presented, at first blush, a picture of generosity and benevolence, and it was no doubt so intended by the Congress. But upon analysis it developed that the proposal was not that of a gift but for Federal regulatory control over certain State governmental agencies. A Federal bureau was given the power to say whether, and, if so, under what conditions, the grant would be made to a particular State. This bureau invariably imposed a condition that the money must be spent under its control and supervision, and a Federal agent would be sent down either to take charge, or from time to time to supervise. In this manner began the recent movement for the centralization of power in Washington. The movement has grown by leaps and bounds. There are a multitude of bills calling for huge additional grants to States now pending in Congress. If this policy of expansion of Federal activities into State fields continues, it will result in the virtual abolition of the States. The preservation of State sovereignty was the chief aim of the founding fathers when they established the Constitution of the United States. In that instrument it is clear that they regarded State independence as a necessary bulwark against the growth toward and the ultimate founding of a Federal dictatorship. They knew that dictatorship meant the destruction of our personal liberties. These liberties were greatly treasured by the fathers because they had lived under conditions where they were denied to them, and they had fought for them and had bought them at great cost. We of this day, having enjoyed for more than a century and a half these liberties which they achieved and handed down to us, have fallen into a way of taking them for granted. It is so comforting to assure ourselves that nothing can happen to them, unless through conquest by a foreign foe.

The fact that in England, South America, and in nations all over the world, freedom has been otherwise greatly curtailed or completely destroyed has not aroused us from our slumber or disturbed our complacent dreams of security. Under the emergencies of war we have seen the Federal bureaus and agencies take complete control of our everyday affairs, and the affairs of industry, commerce and trade. This was undoubtedly a necessary step in the successful prosecution of the war, and has been cheerfully accepted by the people. But we must be ever conscious of the fact that many of them may not be discontinued when the proper time arrives. Also there have been other regulations of domestic affairs adopted under the guise of war measures which had no real purpose of aiding the war effort. I will mention but one of them, but it is illustrative of many others. I have in mind the creation of the Fair Employment Practice Committee. It has the power to send a Federal agent into the States and tell us who we may hire and fire in our businesses and industries. Outstanding political leaders, both Democratic and Republican are now advocating that the Congress continue this committee on a permanent peacetime basis. One does not have to be a constitutional lawyer to perceive that this invasion of a private individual's right to select his own employees on the basis of efficiency, or for any other reason, is but the first step in the complete destruction of all his personal liberties. We may be sure that other measures equally as objectionable will follow if Congress yields to the pressure groups which are advocating this one. These pressure groups, who reside in some of the big cities, are very influential for the reason that they are supposed to virtually control the election results in a half dozen pivotal States which have the largest electoral votes. Both political parties, therefore, cater to these groups of voters chiefly because of their ability to influence the election of a President. Thus it is every day becoming more clear that the people of Virginia and many other States are being constantly threatened with the very real danger of having their domestic affairs regulated in accordance with the ideas and wishes of these pressure groups. Furthermore, it is in these groups of voters that many of the Federal grants have their origin, the underlying purpose being to regulate through Federal agencies various activities of the governments of those States in which such groups have little local influence. The proponents of these regulatory measures are always careful to clothe them with the garments of pious and worthy-sounding purposes.

EMBARRASSING SITUATION

When it is proposed to make such a grant to the States, the Members of Congress are placed in a very embarrassing situation. It is very tempting to them to be able to go back to their constitutents and tell how they secured large sums of money for them out of the Federal Treasury. On the other hand,

if they vote against the grant with such apparently worthy objectives, the Congressmen may have a hard time satisfying their constituents that they were justified in doing so.

Let us view the matter, however, from the standpoint of the interest of the Virginia taxpayer. What money does the Federal Government possess which it can legitimately and properly grant to the States? It has none. The United States, by the time the war activities have been brought to a close, will have incurred an indebtedness of about $300,000,000,000. We may have a little better idea of this stupendous and inconceivable sum if we express it as three hundred thousand million dollars. It has been estimated that this is more than twice the value of all the land and tangible property owned by all the persons and corporations in the United States. The annual interest on it alone, at 2 percent is six billion, or six thousand million dollars, and, in addition, large sums must be paid in reduction of the principal. On top of this there is the annual cost of operating the Federal Government, which, on its present basis, is several times more than it was a few years ago. But that is not all. The program of benefits for the war veterans, which they so richly deserve, will cost many billions of dollars more in the years to come. So where is the money to come from for these grants? Federal revenues are not now meeting current expenses. Obviously, there is a limit to the amount of bonds which can be sold. If the Federal financial structure is to avoid collapse, any money granted to the States must be derived from one source and one source only—that is from the taxpayers who reside in the States. Is it to the interest of the Virginia taxpayer that the money he is required to pay to provide governmental services by the State shall be paid by him directly in the form of State or local taxation, or is it better for him to pay it in the form of Federal taxes and have the Federal Government turn it back to the States? The answer to this question is clear.

Money paid by the taxpayer to the Federal Government and then returned by it to the States is burdened with the collection and handling charges incurred by that Government. It is also burdened with the operating costs of the headquarters of the Bureau in Washington which passes upon the grant and regulates its expenditures. Finally, it is burdened with the salaries and expenses of the Federal agents who are sent into the States to personally regulate the State agencies in their spending of what is left of the money received from the taxpayer. The amount left is probably about half. Since the money must be spent according to a national pattern prescribed by the Washington bureau, it cannot be utilized for such purposes as will best satisfy Virginia's needs. These needs necessarily vary in the several States according to varying conditions prevailing in them. There can be no correct uniform pattern. A grant may be made for a purpose Virginians do not want at all, but if it is rejected her taxpayers must pay their part of the cost just the same. It may be said with truth, therefore, that when Congress makes a grant to the States it has the effect of almost forcing it on them. The States must either accept it and submit to the Federal regulation of local affairs which such acceptance entails, or else reject it and place their citizens in the position of paying Federal taxes for grants to other States without receiving any corresponding benefit. The result is that nearly all of them are accepted. I am convinced that the making of grants to the States by Congress should be vigorously opposed by all the States, so long as the operations of the Federal Government necessitate incurring an annual deficit. However, if the time comes when, consistent with sound financial policies, the making of such grants can be justified, then no purposes, conditions, or restrictions should be attached, but such State should be free to spend its share for such purposes as its best interests require. The grants for highways, except such of them as are necessary in our national defense or in the exercise of other strictly Federal function, should be discontinued and the Federal tax on gasoline, which is a road-use tax, abolished and reimposed by the States. The same policy should be adopted with respect to the cost of operating the unemployment compensation commission and the entire pay-roll tax retained by the States.

GRANT NOT A GIFT

I have discussed this question at length because I believe it essential to the independence and autonomy of the State that the people clearly understand that a grant of money from Washington is not something for nothing, that it is not a gift, but that it must be paid for twofold by the Virginia taxpayers, and at the same time we are surrendering control of our State governmental agencies to a Federal bureau.

Yet, despite this obvious truth, there are many who advocate the policy of these Federal grants to States. They assert that the States and their local governments do not and cannot provide the governmental services required by a progressive citizenry; that the people in the States will submit to being taxed by the Federal Government because the levying authority is so far removed and inaccessible. On the other hand, the people will not stand for a tax to raise less money to accomplish the same purpose when same is imposed by their board of supervisors, or their city council, or their State legislature. And I must admit that in the past there has been truth in this statement. But I believe the people of Virginia and other States now realize that it is much better to run their own governmental activities and services than to have them controlled from Washington. I think our citizens are becoming wise to the fact that every so-called grant to Virginia necessarily involves the payment by the Virginia taxpayer of more money in Federal taxes than the amount of the grant; that it is more economical to finance their public services through local and State taxes than through Federal.

There has been considerable agitation in some circles for a Federal grant to the States to aid in the conduct of their public schools. It is claimed that the present schools are inadequate and the States are not in a financial position to make them so. The thought is seductive; it carries with it the something-for-nothing idea. But let us not deceive ourselves. The plan will not only cost the taxpayers of the States more money, but will eventually result in the control of their schools by a Washington bureau. Under the influence of the pressure groups I have referred to, the use of the money will, in the course of a few years, undoubtedly be restricted to schools conducted according to their ideas and teaching their ideologies. The principles of government preached by these groups are not in conformity with the faiths and traditions of Virginia. The teaching of them here would be highly objectionable to our people.

SET-BACK TO EDUCATION

From the earliest days of the Commonwealth, when Thomas Jefferson was the champion of education, the business of educating its children was recognized as perhaps the chief function of the State. Unfortunately, this task was grievously interrupted by the War Between the States and the days of the reconstruction which followed. When we recall the great difficulties encountered during that period, the impoverishment of our people, misgovernment at the hands of the carpetbaggers, the huge public debt which they had fastened upon our parents, the scarcity of teachers, and the great number of illiterate parents and children following the abolition of slavery—when we consider all these nearly insuperable obstacles to education which confronted our forebears, we must bow our heads in tribute to the great work they did, and the remarkable success which they achieved. But in spite of their heroic efforts the progress of education did receive a severe set-back.

In recent years, however, Virginia has been blessed with prosperity. The incomes of her people, as well as her public revenues, have steadily increased, and her citizens have come to realize that there is no longer any reason why she should not go forward in expanding her educational facilities. We have witnessed among the Virginia people a rebirth of enthusiasm for an efficient public-school system. We sense a demand that our teachers be adequately compensated and that their importance as members of their school community be recognized. And the teachers have become conscious of the fact that they are not merely instructors, but that they are educating the future citizens of Virginia, molding their character and habits, are, in fact, dedicated to the greatest of all work—the building of the citizenship of the State. This reawakened interest of the teachers and the people generally in the improvement of our schools is most gratifying. It has been greatly stimulated in recent months by Governor Darden's vigorous activity and by the public discussions conducted throughout the State under the auspices of the Denny School Commission. In my campaign addresses I expressed my hearty approval of many of the recommendations contained in the fine report of this commission, and I entertain the hope that future conditions in the State will enable their fulfillment.

I have spoken to you at length upon the question of public support for the improvement of our schools, because such support is vitally important. If the people want better schools they will get them, but unless they do, they will not. Unless the people desire to have the conduct of their schools controlled from Washington, which I do not believe, they must be willing, through State and local taxation, to provide the necessary money. The general assembly will not and should not impose taxes upon them for a purpose they do not endorse, and if imposed they would be speedily repealed. In a democracy the government springs from the people, and no function can be performed successfully by that government unless it conforms to the wishes of the people and has their support.

INCREASED FUNDS

Fortunately, the greatly enhanced revenues of the State during the unprecedented industrial activities of the war years have enabled large increases to be made in State appropriations for school purposes without the imposition of additional taxes. The comptroller estimates that condition will continue through this biennium. We must bear in mind, however, that this raising of school standards requires expenditures of a recurring nature, and at least as large in each of the years to come. The maintenance of these higher standards will eventually call for increases in State, and perhaps local, taxation, if and when the revenues derived from the present tax structure prove inadequate for that purpose. We cannot expect abnormally prosperous conditions to remain with us always. I feel sure that the members of the General Assembly, as well as the public at large, clearly recognize the fact that by increasing these recurring expenditures we are committing the State to higher standards for our public schools, and to increases in taxation should same become necessary. I am confident that such commitment meets with the people's hearty approval, and that they will gladly finance their own schools. I also am confident that they prefer these schools to be financed through State and local revenues rather than through the medium of Federal taxation with its accompanying outside interference.

PUBLIC HEALTH

Closely associated with an efficient school system is public health. There should be competent and adequately staffed health organizations available to every county in the State, and charged with the duty of frequent periodic examinations of every school child. Effective means must be provided to remedy, if possible, all physical defects and illnesses revaled or discovered. These organizations should also be required to safeguard the health of all other persons in the community through the use of modern methods for the prevention of disease. For instance, tuberculosis is a contagious affliction, but our present facilities for the care of such sufferers in tuberculosis sanataria is conceded to be inadequate. There is an urgent need for an expansion of this service in order to arrest the progress of the disease in the patient and to prevent its spread through contagion.

Virginia is an agricultural State. We must keep it so. The successful cultivation of crops possibly means more to Virginia than any other activity of our people. About one-third of our population live and earn all or part of their livelihood on the farm. It is an occupation which is conducive to the finest type of citizenship.

We have during the last few years enjoyed increased production of agricultural products despite the handicaps of war. Our young Virginians must be encouraged to remain on the farm, as well as to develop new ones. This can be done through the services afforded by the Virginia Department of Agriculture, the Virginia Polytechnic Institute, the extension services, and other agencies, which have pointed the way to soil conservation and improvement, better living conditions, and increased earning power. The practical and scientific services offered by these agencies must be extended; their use must be encouraged.

Our farmers, and their wives and children, have struggled long hours in the war to produce the necessities of life. Our workers in industry have forged the sinews of war. All deserve and will have the consideration of Virginia to which their efforts entitle them.

CONCLUDING REMARKS

Let me say, in conclusion, that the message which I have sought to bring to the people of Virginia is one which I consider of paramount importance to their future welfare. I conceive it to be my duty, as Governor of this great Commonwealth, to do what I can to instill in her citizens a keen and enlightened interest in the affairs of their government. To this end the problems, dangers, and pitfalls which confront us should not be obscured but brought into the open for their wise and intelligent consideration. Virginia has a fine government, the peer of that of any of the States. This is generally conceded. But it is not perfect and we should not allow ourselves to become too well satisfied with it. All of us should strive unceasingly to improve it. I would encourage the desire for improvements in schools and those other functions of the government which serve our needs and improve our citizenship. But I would have this desire coupled with the realization that these improvements must be paid for through taxation, and with the willingness on the part of all of us to pay for them.

I am particularly anxious that there be an acute public consciousness of the danger to our State regulation of our home affairs by Federal agencies. I hope that what I have said on this subject will be helpful to that end.

It would have been much easier and more pleasant, both for you and for me, to have avoided any reference to the painful subject of taxation; to have dwelt upon the present prosperous condition of the State's finances, and to have suggested to you that, when conditions become less favorable, we have but to turn to Washington relief. But taking this easy and pleasant course would not have been consistent with the duties and responsibilities of a Virginia chief executive as I conceive them. The people are entitled to know the true facts involved in governmental policies. We are now at the crossroads. We must either do the job or the Federal Government will undertake to do so. If, in the light of this knowledge, you decide upon a policy different from that I have advocated, this is your undoubted right and privilege. I do not believe such of the facts as they exist, and not based entirely on wishful thinking. The final responsibility for the decision rests with you, the people, for this is your government. I very much want your confidence and support in the efforts of our government. Without it I can do nothing. God being willing, and with His divine help, we shall not fail one another.

Reemployment of Veterans

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the American Veterans' Committee:

This statement is being addressed to Congress by the American Veterans' Committee, which speaks for thousands of veterans of World War II.

Next to housing, the principal problem facing veterans in their return to civilian life is that of obtaining suitable employment. Congress recognized this problem and directed, in title IV of the Servicemen's Readjustment Act of 1944, that effective job placement and counseling services be provided by the United States Employment Service so as to give veterans the maximum of job opportunities in the field of gainful employment.

Several months ago, Congress took action to dismember and return the United States Employment Service to the States. This action was in the form of a rider to an appropriation rescission bill. President Truman vetoed this bill because "these problems and responsibilities (of providing an effective job counseling and placement service to veterans) cannot, in a period when millions of veterans and other workers are moving across State lines, be met adequately through 51 separate and independent public employment service systems linked only by the necessarily remote and indirect influence of a Federal agency financing the State systems through grants in aid."

A bill, H. R. 4437, has been introduced into the House of Representatives which embodies the substance of the President's proposal for delaying the return of the United States Employment Service to the States until June 30, 1947, and then returning it under standards and conditions which will guarantee that Congress' pledge to veterans can be effectively carried out. In hearings before the Labor Committee of the House of Representatives on this bill, the Administrator of Veterans' Affairs, the Secretary of Labor, and the Director of the United States Employment Service have testified that the dismemberment and return of the United States Employment Service to the States at this time would disrupt the operations of that agency and prevent the carrying out of Congress' mandate to provide an effective job placement and counseling service to veterans. There are approximately a million servicemen per month now returning to civilian life who require such service.

The reasons the return of the United States Employment Service to the States at this time would endanger this essential service to veterans are obvious. The services would be placed under new management and there would be the inevitable adjustment period; there would be a major turn-over of personnel and an impairment of the services while new personnel was being recruited and trained; the effectiveness of the personnel that remained would be undermined by the uncertainties that would surround the question of their retaining their jobs; and finally, by attacking the national reemployment problem on the limited basis of State boundaries, the veterans would be denied those employment opportunities which lie beyond the boundaries of the State in which he resides.

If Congress should in effect override the veto of the President, and in the face of the testimony stated above, return the United States Employment Service to the States, it would be violating its pledge to the veterans whereby they were to be guaranteed effective assistance in obtaining suitable employment. Congress will be playing politics with the veterans' welfare.

We are familiar with the groups which are pressuring Congress for the immediate return of the United States Employment Service to the States, and with the interests which motivate them. We understand that there are State political machines which are desirous of obtaining the patronage which might be derived from employment-service jobs if the United States Employment Service were returned to the States. We can understand their interest in obtaining control of such jobs, particularly with the 1946 congressional elections in the offing. We do not believe, however, that this constitutes justification for impairing a vital service to returning veterans.

We also understand that the State Unemployment Compensation Commissioners have maintained a lobby in Washington to pressure Congress into returning the United States Employment Service to the States immediately—a lobby which is being financed indirectly by the Federal Treasury. The State Unemployment Compensation Commissioners are motivated by an understandable, but not commendable, bureaucratic interest in expanding the scope of their authority and enhancing the prestige of their jobs. We do not believe that the bureaucratic interests of these State officials constitute an adequate justification for disrupting an essential service to returning veterans.

The State unemployment compensation officials are working in conjunction with certain employer groups which desire the immediate return of the employment service to the States because they see in a successful, federally operated USES a persuasive argument for the federalization of the unemployment compensation system. It is not that these employer groups deny the economies to be derived from integrating the administration of the unemployment-compensation system with the old-age and survivors' insurance program—both of which now duplicate the other's collection and processing of wage records and taxes—but that they fear the Federal Government would scrap the experience-rating provisions of State laws by which they have thus far been able to obtain tax abatement totaling well in excess of a billion and a quarter dollars. The question of federalizing the unemployment-compensation program is in no way related to the continued Federal operation of the USES during the reemployment emergency, and we do not regard it as any justification for the destruction of the job placement and counseling service which Congress has promised the veteran and on which the returning serviceman depends.

If and when the USES is returned to the States after June 30, 1947, when the peak load of adjusting returning servicemen to civilian employment will presumably have passed, it should be done under the conditions and standards proposed by the President so that the veteran, whose employment problems will continue beyond that date and indefinitely into the future, will be assured of effective assistance. Under the provisions of the Wagner-Peyser Act, which would have governed the return of the USES to the States had not the President vetoed the action of Congress, standards of operation were set forth with which the States had to comply as a condition for receiving Federal funds for administration. Should the States fail to provide the quality of service required to meet these standards however, the Federal Government would be confronted with the undesirable alternatives of sanctioning such substandard services to veterans, or of cutting off administrative funds and denying all services to veterans and other job seekers. This impossible situation can be avoided by adoption of the President's proposal whereby the Secretary of Labor would be empowered by Congress to operate an employment service in any State which failed to provide an adequate service in accordance with the standards set forth in the legislation.

We understand that the President's proposal with respect to the above-mentioned standards, including authorization of Federal operation where necessary to enforce those standards, is embodied in H. R. 4437. On behalf of the veterans of World War II who are members of the American Veterans' Committee, we urge Congress not to default on the promises made to veterans in the Servicemen's Readjustment Act of 1944, but to enact this legislation as recommended by the President.

Memorial Plaque to Merchant Seamen

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. GRANAHAN. Mr. Speaker, in accordance with my unanimous-consent request, which was granted, I am inserting the following remarks which I made on Saturday, January 26, 1946, when a memorial plaque was dedicated, in the new Philadelphia, Pa., headquarters of the National Maritime Union, to merchant seamen from the Philadelphia area who gave their lives during the last World War:

Today in the city of Philadelphia a memorial plaque was dedicated to the more than 600 heroic merchant seamen from this area who valiantly gave their lives in the struggle against world fascism.

It is fitting and proper that this plaque was dedicated in the new and modern Philadelphia headquarters of the National Maritime Union, the largest maritime union in America.

It is fitting also that hundreds of nonseafaring citizens from Philadelphia and the neighboring sovereign State of New Jersey should join with the seamen today in paying tribute to the memory of their fallen shipmates.

We can all subscribe with heartfelt determination to the legend inscribed on the plaque, which avows:

"We will continue your struggle.

"We will never rest until the cause for which you died has triumphed.

"We will go forward in your hallowed spirit—the spirit of freemen who never have and never will bend the knee to Fascist slavery."

I want to pay personal tribute to the veterans of the convoys represented by the National Maritime Union. I recall that our late departed Commander in Chief, Franklin Delano Roosevelt, often gave high praise to the men who braved the dangers of the seven seas to help crown our efforts with victory. The pledge not to strike, which the seamen gave to President Roosevelt and to the Nation, was not once violated throughout the war. Moreover, not a single ship under contract to the NMU was held up for even a minute ecause of any labor dispute. I recall also that the Kilgore subcommittee of the Senate Military Affairs Committee singled out this patriotic organization for signal commendation. In its report on war mobilization, that Senate committee stated, in part:

"American seamen are heroes. Thousands have died under bombardment and torpedo attack. They and their organizations, particularly the National Maritime Union, have acquitted themselves with honor. The appreciation of the American people is theirs."

From my association with the members of the National Maritime Union, I know that in war and in peace these heroes in dungarees carry their hatred of fascism like a badge of honor. That hatred of tyranny, oppression, and exploitation was the white-hot flame which 10 years ago welded seamen of all races, creeds, and colors into unbreakable unity in the National Maritime Union.

That hatred and that unity has paid dividends in advancing the cause of democracy here at home and abroad, in promoting racial harmony, and in improving the unspeakable living and working conditions which for too long had been shamefully imposed upon American seamen.

I see in this splendid new three-story building being dedicated here today a noble symbol of the growth and strength of the National Maritime Union and its democratic principles, and a living monument to the heroic dead we are gathered here to honor.

In the critical period we are now passing through, the gains which the seamen have achieved at bitter cost must not be cast by the wayside. Their contribution to our common welfare and their sacrifice in the struggle against our common enemy must be forever remembered by a grateful Nation. If necessary, the shipowners should be reminded by the people that the seamen deserve wages and working conditions that are comparable to what American workers ashore are receiving. That is the least that we can do for the men of the merchant marine. For myself, I shall continue to support all legislation in Congress that will extend to seamen the protection and benefits already assured other workers, such as unemployment insurance and minimum wage standards. These are the ways in which we can, together, pay proper homage to the men whose names are listed on this plaque and to the nearly 6,000 others who died while delivering the goods.

Occupation Troops in the Philippines

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include a letter received from a boy in the Philippines, as follows:

There are one quarter of a million American soldiers in the Philippines today. Why? We ask the War Department, we ask Congress, we ask you.

The Philippines are a friendly, Allied country that we helped liberate a few short months ago. In another few months the Philippines will be granted their independence. Yet the War Department keeps a quarter million occupation troops here, under the cover of such vague phrases as "Hostile countries" and "Commitments."

We ask what is hostile about the Philippines, and we ask what are these commitments? Are they commitments to protect the vested interests which wish to continue their exploitation of the Filipino people?

We are not satisfied with the present twice-slowed rate of redeployment of troops from the Philippines. We think that the present stand of the War Department is a step toward the establishment of military fascism, both at home and abroad. We have accomplished little if we defeat fascism in enemy lands and cannot return home because our own military Fascists decree that we must occupy a friendly country.

If there's an answer to the question of why we are being kept here, we have not heard it. If there is an explanation, it has not been given. It's up to Congress to do something, before we cease to have a government by the people and wake up to find that we have a government by the military.

Pacific Coast Management Favors Higher Wage Minimums

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I desire to call the attention of the House to the results of a Nation-wide poll, taken by Modern Industry, one of the Nation's leading industrial and management publications, on the question of increasing minimum wages.

In the November 1945 issue of this magazine, I had the extreme privilege of participating in a "debate in print," urging upon industry the necessity of advancing minimum wages by legislation to 65 cents immediately, 70 cents after a year, and 75 cents after 2 years. Dean Neil Carothers, of the School of Business Administration of Lehigh University, took the opposite view.

Our conflicting opinions were circulated by the magazine to 50,000 management readers of the magazine. They were then polled to discover their views on this vital subject.

I am proud to say that the leaders of management and industry in my own great section of the country, the Pacific coast, overwhelmingly decided that this Congress should enact into law higher minimum wages such as I have described. The welfare of the Nation's business—the opening of vast new internal markets through increased purchasing power—appealed to these forward-looking industrialists from along the shores of the great Pacific.

The national results of the poll showed that 44.7 percent of all business executives who were polled favored the higher minimums. That is a sizable showing

when we recognize that these men speak for business. Historically, business has always approached the question of increased purchasing power, of full production, and of full employment with something less than caution. Every forward-looking step, even though it is taken in the eventual interest of business itself, has been opposed by a majority of big industrialists.

Whether my article in Modern Industry influenced their views I cannot say, but I am deeply gratified that the businessmen in my own section so clearly identify the Nation's welfare with their own. I have often thought that many businessmen throughout the country could learn much from the business leaders of my own section. I am only the more convinced of my view by the result of this poll.

It would hardly be fair, however, to say that I was less than gratified with the results generally throughout the Nation, in view of the high percentage of businessmen who recognize the justice of higher minimum wages.

I am particularly impressed by the fact that slightly more than a third of business executives in the South are for higher minimum wages. I can only conclude that an overwhelming majority all over the Nation wants Congress to raise the wage floor.

Mr. Speaker, I am happy to include with these remarks the letter from Modern Industry, revealing the results of this important poll. The letter follows:

MODERN INDUSTRY,
New York, N. Y., January 9, 1946.

The Honorable HUGH DE LACY,
United States House of Representatives,
Washington, D. C.

SOUTH, 33.3 PERCENT FOR; PACIFIC COAST-MOUNTAIN, 56.2 PERCENT FOR

DEAR SIR: The above two figures represent the maximum spread in industrial opinion on the question "Should Congress Boost Minimum Wages," as indicated by Modern Industry's poll of its readers on this issue. Midwest and mid-Atlantic industrial voters are almost evenly divided. Nation-wide results show 55.3 percent against, and 44.7 percent for the proposition.

In forwarding these results to you, Modern Industry takes no editorial position. We conduct our monthly polls of industrial opinion after we present both sides of controversial issues to our 50,000 management readers in the manufacturing industries responsible for 89 percent of all United States manufacturing production. Through our debates, we are constantly reminded that there is no such thing as a unanimous industrial point of view. Like the rest of American life, segments of industry both favor and oppose most issues before Congress today.

Certainly the results of the minimum-wage poll indicate no unanimity of industrial opinion. They represent a very close division, thereby further disproving the dangerous notion that "all industry thinks alike."

Congressman HUGH DE LACY argued "yes" and Neil Carothers, dean of the School of Business Administration, Lehigh University, asserted the negative on the minimum wage question in our November issue. Below are section by section results:

	Yes	*No*
New England	41.5	58.5
Mid-Atlantic	48.9	51.1
North Central	42.3	57.7

Larcade Committee Wins Praise

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Advertiser of January 23, 1946:

THE PRESIDENT ENDORSES STATEHOOD FOR HAWAII

At long last a Chief Executive of the Nation has examined the qualifications of the people of Hawaii and declared himself for statehood. On Monday President Truman, addressing the people of America, said that both the United States Senate and House should "promptly accede to the wishes of the people of Hawaii that the Territory be admitted to statehood in our union." This was a punch line to the findings of the five-man House subcommittee "for immediate statehood" after 2 weeks of painstaking probing into the evidence.

Now the last word remains for utterance from the Halls of Congress. One-fifth of the House Committee on Territories is committed unequivocally to immediate statehood for Hawaii. If they can convince their contemporaries on the committee, then the House and the Senate, then statehood will be a reality.

The Delegate from Hawaii is charged with keeping the iron hot. The first two blows forging the actual sword of statehood have been struck. By diligent and unceasing application, Hawaii's present sole Representative in Congress can, and will, see through the shaping of the forty-ninth State.

The contrast between the 1937 congressional committee investigating the merits of statehood for Hawaii and the work of the 1946 group, from the standpoint of hard-hitting, aggressive, and effective work, needs no comment.

That they meant business was shown on the first morning of their awakening under an Hawaiian sun. Their chairman, HENRY L. LARCADE, a Louisiana Democrat, went to great pains to make plain that the committee "wore no man's collar" and would not brook any attempts to have its probe into all phases of the question stifled in the slightest degree. At each hearing throughout the islands his introductory remarks were to the effect that the committee was here to listen, learn, and ask questions. To that end he issued the broadest of invitations to everyone to be heard so long as their remarks were relevant.

There can be no justification of remarks on any basis that the testimony presented to the committee by over 100 independent witnesses was "directed." The Hawaii Equal Rights Commission, charged by Territorial law with keeping alive Hawaii's fight against discriminatory national legislation, was the logical body to present a united front of proponent testimony. Under Judge A. G. M. Robertson the commission performed an excellent job, complete in variety of fundamental facts and competent in refuting certain loose and unfounded remarks of opponent testimony.

It was unfortunate that opposing testimony was not better documented and more forcefully delivered. The underground of opposition to statehood confined itself to whispering and failed to make its points. A study of the statements made and the briefs filed show a lack of understanding of the problems as it is revealed in the harsh daylight of the postwar year of 1946.

By personal declaration, committee members revealed that they were disappointed in the lack of opposition testimony. They would have much preferred an equal number of no exponents so that they might have gone deeper into the allegations of the loyal opposition. But the preponderance of "yes" testimony caused them to believe that the people of the Territory, in a vast majority, want statehood, and they so recommended.

To the committee, which exhibited a selfless and hard-working desire to clear the air once and for all, the people of Hawaii are most grateful. To the President, who further clarified the issue, goes the same aloha.

Compensation and Pension Payments to Disabled Veterans

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter recently received from Mr. Edward F. Rzonca, commander, Disabled American Veterans, Hugh Smith Thompson 3d Chapter 17, United States Veterans' Hospital, Castle Point, N. Y.:

DISABLED AMERICAN VETERANS,
HUGH SMITH THOMPSON 3D CHAPTER 17,
Castle Point, N. Y., January 28, 1946.

Hon. JAY LEFEVRE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: We call your attention to a distinct inequality and gross discrimination in the payment of compensation and pension to a service-connected single disabled veteran of both World War I and II who are at the present time hospitalized for the treatment of their disabilities.

A service-connected single disabled veteran without dependents who enters a hospital for treatment of any kind and is rated permanent total receives an award of $115 per month. However, under the present law there is deducted the sum of $95 per month from his monthly check while he is hospitalized. In other words, he is forced to pay his own way for his sustenance in a Government hospital while he is permanently and totally disabled and undergoing treatment for his service-connected disability. Prior to the enactment of the Economy Act of 1933 these men received full benefits while hospitalized.

Many single disabled veterans, particularly those with tuberculosis, which requires an extremely long period of hospitalization, leave Government hospitals before maximum treatment is reached in order to secure full benefits due them, as they have obligations contracted prior to their hospitalization, such as insurance and family obligations, which the Veterans' Administration does not recognize as dependency. A veteran who leaves a hospital in this manner not only jeopardizes his own health but is a menace to the public in general.

Returning disabled veterans are very much disillusioned to find that their benefits are reduced to $20 a month during periods of

hospitalization for service-incurred disabilities, while in the service of their respective branches of the armed forces they had been receiving a minimum amount of $50 per month.

H. R. 536 is a bill which will correct the injustices outlined above, but for some reason the Veterans' Committee of the House of Representatives has not seen fit to act on this particular bill. We appeal and urge upon you to take some definite action in securing a favorable report and enactment of this bill, or a similar one, into law in order to eliminate existing discrimination and hardships. No longer are expressions of sympathy of any value to the disabled veteran—a greater effort must be put forth on the part of Congress.

Respectfully yours,

EDWARD F. RZONCA,
Commander.

Floor Price for Tobacco

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions memorializing Congress:

Senate resolution memorializing Congress to establish a floor price for tobacco

Whereas a ceiling price has been established, above which tobacco cannot be sold; and

Whereas tobacco is one of the chief sources of income for the farmers of Kentucky; and

Whereas the selling price of tobacco is dropping far below the ceiling price, thereby diminishing the farmers' ability to purchase the equipment needed for the operation of the farm, at the present high prices of equipment which wil be even higher when labor's demand for higher wages is granted; and

Whereas the farmers are powerless to demand adequate prices for their tobacco: Now, therefore, be it

Resolved by the Senate of the General Assembly of the Commonwealth of Kentucky:

1. It is respectfully urged that the Congress of the United States establish a floor price not more than 4 cents below the ceiling price.

2. It is further urged that the Congress strive through scientific research, to find more uses of tobacco such as fertilizer ingredient, insect control, etc., which may result in such demand for tobacco that the farmers can expect a good price for their product at any time.

Copies of this resolution shall be sent to the Secretary of Agriculture, Clerk of the United States Senate, Clerk of the United States House of Representatives, and to all Kentucky Members of House and Senate, Washington, D. C.

Attest:

EMERSON BEAUCHAMP,
Chief Clerk of Senate.

Resolution memorializing Congress

Be it resolved by the Senate of Kentucky: It is respectfully requested and urged that the Congress of the United States pass an act ordering the War and Navy Departments to pay terminal leave to all enlisted personnel who are now or have been or shall be in this War, and who are now serving, have served, or will serve in the Army, Navy, Marine Corps, or United States Coast Guard; and to pay this in the same manner and on the same basis as terminal leave is now paid to an officer: Be it further

Resolved, That a copy of this resolution be sent to the Honorable ALLEN W. BARKLEY, United States Senator from Kentucky, the Honorable W. A. STANFILL, United States Senator from Kentucky; the Honorable FRANK LESLIE CHELF, the Honorable NOBLE J. GREGORY, the Honorable EARLE C. CLEMENTS, the Honorable EMMET O'NEAL, the Honorable BRENT SPENCE, the Honorable VIRGIL CHAPMAN, the Honorable A. J. MAY, the Honorable JOE B. BATES, and the Honorable JOHN M. ROBSION, Representatives from Kentucky.

Problems Before Congress

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter recently received from my constituent, Mr. E. L. Johnson, of Poughkeepsie, N. Y.:

POUGHKEEPSIE, N. Y., *January 17, 1946.*
The Honorable JAY LEFEVRE,
House of Representatives,
Washington, D. C.

DEAR MR. LEFEVRE: I want to compliment you for the forthright statement appearing in the January 14 issue of the Poughkeepsie New Yorker. It happens I was about to write you and our Senators in line with the President's recommendation in his recent radio address; so, I take advantage of this opportunity to express my views.

Frankly, it is easy enough to criticize proposed legislation taking a stand for or against, but it is rather difficult for the average layman to give reasons for his or her viewpoint, let alone to make counter suggestions. To my mind the present session of Congress will be one of the most important in the history of our country, and therefore, we need more level-headed men, like yourself, in Washington who will think things through and apply sound reasoning in reaching decisions. Many a man seems to lose his sense of perspective when he gets involved in politics, apparently forgetting his background of experience and the problems he faced either in business or professional life.

1. Obviously the most important problem is how to stop the current epidemic of disputes between labor and management. I am inclined to agree that we have had too much legislation or regulation on this question which has helped to increase rather than to eliminate controversy. In fact, present regulations foster labor unrest. The labor laws today are absolutely unilateral and contrary to our supposed established policy of equal rights for all. Would it not be a good idea for Congress to appoint a commission to study existing legislation with a view to eliminating that which is unnecessary and correcting inequalities? What we need is less regulation—more statesmanship; less strikes—more production; less interference by central government—more emphasis on State and local government. Judging from the strike hysteria prevalent today, it would seem that we have a fifth column at work using the labor organizations and leaders as pawns to stir up strike. It might be a good idea to thoroughly investigate some of this activity.

2. Full employment bill: My attitude on this is that you cannot legislate healthy employment and maintain a balanced Budget. Throw off many of the shackles on industry and watch employment take care of itself. This country was developed by free industry and has maintained for our citizens a consistently higher standard of living than anywhere else in the world. We don't want to emulate foreign "isms" and regulations that will not only lower our standards but stifle incentive, which would be a calamity, indeed. What has happened to old-fashioned patriotism, love of country, individual pride, etc.? I hope that our soldiers and sailors will have had enough of foreign lands, and when they return, will make known in no uncertain terms that our old-fashioned principles of democracy and freedom are all right and should not be changed.

3. Minimum wages: You may be able to establish a minimum scale for each type of industry, but it is doubtful that one flat minimum rate for all industry will be practical. This subject requires considerable study before enacting legislation.

4. Atomic energy: I recommend that we keep our secret developments until such time as all other countries have demonstrated beyond any reasonable doubt that they intend to abide by the Constitution and Bylaws of the United Nations Organization. In other words, use our knowledge for trading, which in the last analysis will be for the benefit of all mankind.

5. Social-security expansion: In my opinion, this is no time for expansion. Rather we should consider and correct what has been developed up to now. For example, unemployment insurance has become a huge vacation fund and measures must be taken to correct this evil. Unemployment insurance was intended to take care of those unfortunate individuals who could not secure work of any kind. Now we have the paradox of many jobs available and plenty of workers without jobs but no vacation.

6. Foreign loans: Our system of free industry has always been successful and produced enormous wealth. This same system produced more war materials than England, Russia, France, and China combined. It met and passed the production capacity of Germany, which had 10 years' accumulation. Now other countries whose systems of government and economics, we are told, are better than ours want to borrow from us. I think we should do a great deal of trading before we lend our hard-earned money, viz.

(a) Some provision must be made to reimburse us for old loans; without interest, if necessary.

(b) We should receive concessions including strategic military bases in different parts of the world.

(c) Assurance that no borrowing country will attempt to influence our people in any other economic philosophy, instead, we should prevail on them to establish democracies patterned after our own. Make them adopt the Bill of Rights and our own Constitution and you will come close to having a real United Nations.

(d) We should be given an equal opportunity with other nations for world trade.

7. Housing: This matter should definitely be taken out of the hands of Federal agencies. Give private firms the incentive and you will be surprised how quickly homes will be built throughout the land. American ingenuity, initiative, and enterprise have never failed yet when there is promise of fair profit without throttling regulations and Government bungling.

8. Fair-employment practices: No Federal legislation is needed on this question now. Simply watch New York State for a year or two and then act accordingly.

9. Budget: Obviously this should be balanced without delay. We cannot continue our present course of spendthrift policy without meeting the same fate as other nations now practically bankrupt.

In closing I should like to point out that continued Government paternalism will only lead to ruin. We cannot afford to favor selected groups but should keep in mind that America lived in its early days of struggle for national existence because it was united. We need this unity now. This can be brought about through faith in God, ourselves, and in American institutions for the perpetuation of democracy and freedom for which many of our young men have recently sacrificed their lives and countless others maimed for life.

Yours very truly,

E. L. JOHNSON.

Philippine Churches and Collaborationists—Unequal Distribution of War Damages—Possibility of Filipino-Japanese Collaborationists Receiving War Damage Compensation From the United States

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. PHILLIPS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and illuminating article on war-damage compensation to those in the Philippines who suffered during the war.

The article appeared in the Washington Post and is by Mr. Vincente Villamin, Filipino lawyer and economist, of California.

Senate bill 1610 was passed by the Senate nearly 2 months ago. It is now in the House Committee on Insular Affairs. The Filipinos have been urging action on the bill. They want to start the rehabilitation and reconstruction of their country. Their appeals should be heeded.

The article follows:

PHILIPPINE FUTURE

(By Vicente Villamin)

CHURCHES AND COLLABORATIONISTS

The United States Senate has passed a bill (S. 1610) appropriating a total equivalent of $480,000,000 to pay an estimated compensable war damages of about $650,000,000 in the Philippines. The difference will be met by what might be obtained from Japan as reparations. In this connection, it may be stated that the Philippines as a combatant country is entitled to reparations from the enemy, the bill notwithstanding.

The appropriation is an act of grace on the part of the American Government and is in recognition of the cooperation of the Filipinos in the war and also in aid to the maintenance of their national independence, which is scheduled for July 4, 1946.

The bill will help the Philippines immensely, but at the same time it will (a) work an injustice to the churches and other religious organizations and (b) it will enable those Filipinos who collaborated with the Japanese to receive war damage compensation.

The losses of all religious organizations (excluding schools, hospitals, and other charitable institutions) amounts to about $100,000,000. The bill limits their compensation to a total of $5,000,000, or 5 percent of the total loss, while other private properties will be paid 75 percent.

Approximately 85 percent of the religious property losses are Catholic and the rest are Protestant. There is one small synagogue. As an example, if that synagogue were valued at $50,000 it would be paid 5 percent of it, or $2,500; but if it had been a nonreligious property it would be paid 75 percent of it, or $37,500.

As a result of this inequality, the following comparisons may be cited, based on figures given by the War Damage Corporation, an RFC subsidiary. A mineral oil company, with damages of only $7,500,000, stands to receive more compensation than all churches and other religious organizations. The same thing would be true of a coconut oil company and a telephone company; two gold-mining firms would each receive twice as much, and an electric power company three times as much. These examples show that the spiritual rehabilitation of the Philippines does not receive equal encouragement under the bill as the material reconstruction.

This subject was never discussed at the Senate committee hearings nor on the Senate floor when the bill was passed. However, it is on record that in a letter dated June 25 last, the War Damage Corporation recommended to the committee that public property as well as "property owned by religious organizations * * * receive as favorable consideration as property in private ownership." The recommendation as to public property is carried out in the bill, but not so as to religious property.

It is, therefore, urged that religious properties be placed in the same category as other private properties and compensated equally. If an increase in the appropriation is required, it would only be just that this be done. The determination of what claims to allow or not is left with the War Damage Commission, which the bill creates.

As to the collaborationists, the bill provides that no payment shall be made to "any person who, by civil or military court having jurisdiction, has been found guilty of collaborating with the enemy or of any act involving disloyalty to the United States or the Philippines Commonwealth."

This provision is liable to be rendered ineffectual. If, for instance, the President of the Philippines, after independence, should proclaim a general amnesty, then most of the 1,400 Filipinos now awaiting trial as collaborationists would be released and rendered eligible for war damage compensation under the bill. During the last 6 months, less than a dozen of them have been tried and at that rate the overwhelming majority of them will remain untried during the next 6 months before independence.

A vital omission in the bill is an appropriation for two purposes: First, to help the Philippine budget for 2 or 3 years when the people are not able to pay taxes and, second, to start in earnest the diversification of Philippine farm production.

The separate appropriation in the War Department budget to pay the Philippine Army and the guerrillas during the war may be considered as a compensation for the fact that the Philippine government never received lend-lease assistance.

The American Government is being most generous to the Philippines and after the inequities in the bill, which doubtless are unintentional, are corrected, the Filipino people will be even better aided and be more appreciative.

Private Enterprise in the Home Financing Field

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

UNITED STATES SAVINGS & LOAN LEAGUE,
Chicago, January 26, 1946.

HON. RALPH E. CHURCH,
House of Representatives,
Washington, D. C.

DEAR RALPH: It seems to us that the President of the United States is entitled to know the feelings of the savings and loan associations and cooperative banks in all parts of the country regarding the position of the Federal Home Loan Bank Board and the Federal Housing Administration in the structure of the Federal Government. The present situation is that the agencies which our institutions support and upon which we must rely to protect and speak for the cause of home ownership and private enterprise in the home financing field are subordinated to a group principally interested in public housing. This is, in our judgment, unsound Government management and unfair to our local institutions and to the people whose savings they are safeguarding and who believe in home ownership.

Accordingly, our officers addressed a letter to the President of the United States on this matter, a copy of which is attached. A copy of this letter is also in the hands of all our 3,640 member institutions and 47 State organizations. We know that practically without exception they strongly support the view expressed.

You have always been most interested in the welfare of these local cooperative savings and home ownership institutions and have given appropriate consideration to our needs and suggestions. I thought, therefore, you would like to see this letter to President Truman and also to know that at an appropriate time we would like to urge action on Congressman MONRONEY'S H. R. 2681 if the President fails to remedy this situation by Executive order or by exercise of his powers under the new Reorganization Act.

Sincerely yours,

MORTON BODFISH,
Executive Vice President.

UNITED STATES SAVINGS & LOAN LEAGUE,
Chicago, Ill., January 10, 1946.

To the PRESIDENT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: Executive Order 9070, issued February 24, 1942, abolished the Federal Home Loan Bank Board and transferred all of its functions, along with the Federal Housing Administration, to the National Housing Agency, which has carried on the war housing activities of the Government, both public and private, during the war. We made no objection at that time because of the war situation, but we now urgently request that these two agencies be returned to their independent status or be transferred either to the Federal Loan Agency or to the Treasury Department.

The reason for this request directly to you is that the housing situation in the country today is critical, and these agencies set up by Congress to encourage and promote home ownership through private home-financing

institutions cannot function effectively under the direction and supervision of the National Housing Agency, which is also responsible for the public housing program of the Government. This question has been fully discussed not only by the savings-and-loan people of this country, who finance about one-third of the new homes, but also by the home builders, mortgage bankers, and others deeply concerned with home building and home financing, and these groups are substantially unanimous in wishing to separate the private home-financing functions of the Government from the subsidized public housing program.

The Federal Home Loan Bank Board and the Federal Housing Administration deal exclusively with private parties and institutions. Savings-and-loan associations pay more than $5,000,000 a year for examination, supervision, and insurance of accounts; and approved mortgagees remit over $27,000,000 to the Federal Housing Administration as premiums and fees for mortgage insurance. These self-supporting financial agencies of the Government logically should be independent establishments or attached to an agency or department which is concerned with financial matters.

The public housing program of the Government is a welfare operation. The interests of private home-financing institutions and public housing activities definitely conflict. Experience in 1942, 1943, 1944, and 1945 has taught us a lesson. During these years there was an abundance of equity money, an ample supply of mortgage credit on the best possible terms, and many small builders anxious to build homes; yet, notwithstanding these facts, the National Housing Agency has caused about 40 percent of all war housing units to be built as public houses, owned and operated by the Government and local public housing authorities. The comparatively small amount of private building which has been permitted has been done mostly by large builders in the form of rental housing, and the small local builder who builds for sale has been largely eliminated from the program.

What we are requesting can be done either by Executive order or under the new Reorganization Act. It does not call for any new agency or even necessarily the return to independent status of the Federal Home Loan Bank Board and Federal Housing Administration. Our request only involves the separation of the public housing functions of the Government, which, if they proceed at all, should proceed on their own merits from those functions of the Government dealing with privately financed home ownership.

We shall be glad to submit further information or to discuss this question with you or anyone you may designate.

Respectfully yours,

HENRY P. IRR,
President,
United States Savings & Loan League.
PAUL ENDICOTT,
Chairman,
Federal Legislative Committee.
MORTON BODFISH,
Executive Vice President.

Whose White House?

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. JENNINGS. Mr. Speaker, the White House, designed by the distinguished architect, James Hoban, one of the most beautiful buildings in the world, has since its construction been one of the chief landmarks of the Nation's Capital and the pride of the American people. Up to this good hour, from the year 1800, when it was first occupied by President John Adams in November, it has been big enough to house all the great and good men who have served this Nation in the Presidency. But now, the present occupant of the White House proposes to mutilate and destroy its architectural symmetry and beauty by enlarging it so as to convert it into a movie theater, a radio station, a restaurant or cafeteria—as the case may be—a museum, and an office building.

Last week the House of Representatives emphatically vetoed this proposal by refusing to appropriate the more than $1,600,000 with which Mr. Truman proposes to make over this national shrine. He defied the will of the House of Representatives by contemptuously saying the opposition to his spoilation of the White House was nothing more than a "tempest in a teapot" and to further show his disregard of the interests of the overwhelming majority of the people of this country, he said that those who objected to opposition to his spoliation of the White House "could chain themselves to the bushes on the White House lawn."

There are other reasons why the President should hesitate in carrying out his ill-conceived and petulant plan to destroy the beauty of the White House—because of the lack of building materials, thousands of returning soldiers, sailors, and marines are unable to rent, buy, or build a home. These homeless veterans should come ahead of the use of materials or the expenditure of money to house unnecessary bureaucrats in Washington.

Then, there is the little matter, to some, of the unnecessary expenditure of more than $1,600,000 by a temporary resident of the White House. The desires of the people of this country for the preservation of the White House are permanent and will endure long after Mr. Truman has moved or been moved from this edifice. In this connection, I insert as a part of these remarks an editorial from the New York Herald Tribune of Tuesday, January 29:

THE PRESIDENT'S HOUSE

It is a little shocking to read that although the House last Thursday cut the appropriation for the proposed addition to the White House out of the independent offices bill, workmen, nevertheless, were busy on Friday clearing the way for the excavations. President Truman's own sense of fitness is strong; surely, on reflection, it will suggest to him that the concern over his suddenly revealed plans to add a radio broadcasting auditorium and a cafeteria to the historic mansion which enshrines so much of the national tradition is a great deal more than a tempest in a teapot. Americans take a fierce interest in their great monuments; the President's house certainly belongs to the American people quite as much as to any one Presidential occupant, and to launch a fairly drastic alteration of the buildings and grounds before the public at large is even aware of what is contemplated is scarcely seemly and is certainly unnecessary.

Few will doubt that the Executive Office facilities are inadequate. The answer does not lie in a plan hastily (indeed, almost secretly) put together last fall, indorsed without publicity or discussion by the unfortunately rather weak Fine Arts Commission (to which Washington's architectural development is now entrusted) and then rammed through by imperious gestures from Mr. Truman. The work should be stopped at once, and before Congress appropriates the funds it should provide for a proper review of the whole subject by competent national authorities. It may be that present plans would themselves not greatly alter the existing appearance of the White House and its grounds; but it is plain that the process of meeting Executive Office requirements by pasting on a museum here, a theater there, a cafeteria somewhere else is likely to lead to lamentable results in the end, while offering no sound solution of the real problem in the meanwhile. The Washington chapter of the American Institute of Architects has asked for time to permit a thorough study of the question and the development of a really valid treatment of it as a whole. The White House is too precious and too jealously treasured a heritage of the American people not to be accorded at least that much care and respect.

OPA

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a constituent in Nebraska, who has recently handed in his resignation as chairman of the OPA in his city.

Mr. Speaker, the views of this gentleman, who has for several years been close to the workings of the OPA, should be valuable to the Members of Congress.

This writer complains to me about the way the OPA has protected its own men from military service; the way they are now hoarding office equipment and typewriters which were formerly used in the offices of the OPA.

Mr. Speaker, this Congress should immediately give consideration to placing all pricing controls in some other agency. It seems to me that either the Department of Commerce or the Department of Agriculture could take over price control on the essential items of living. The last testimony of the OPA showed that they were trying to control prices on more than 8,000,000 separate items. These items range all the way from pictures of hula-hula girls, to teething rings, bird cages, and manhole covers. I am convinced that what price control is needed now on the essential items of living should be placed in some other agency and the vast horde of OPA agents, now roaming the country checking up on minor violations of our merchants, as well as their large office staff, should be liquidated. I trust the Members of Congress will read the letter which follows:

JANUARY 23, 1946.

Mr. J. C. ELLIOT,
OPA District Office,
Omaha, Nebr.

DEAR SIR: I hereby tender my resignation as a member of, and chairman of the OPA

price panel in this city. My reasons for doing so are many.

When I returned from 3 years of military service I was asked to become a member of the price panel. I accepted the appointment and devoted a great deal of time and personal effort to the work because I felt that it was part of my duty as a citizen to do so. I have seen inflation at its worst in Europe and I am anxious to prevent any such disaster in the United States. But I am convinced that the OPA as it is set up under the existing law and as it is administered by its present personnel is not the answer to the problem.

I have been impressed constantly with a tendency to emphasize the bureaucratic folly of following the book rather than using common sense in dealing with the problems that come before the agencies of the Office of Price Administration. It has been obvious to me that too much time and effort was being expended to harass the honest-intentioned little man and not enough to catch the bigger, dishonest-principled one.

The particular case which brought my feelings to a head was one in which a small merchant had made a 1 cent overcharge on one item. When this merchant was called before the price panel he explained that the overcharge was due to an oversight. This was because he was running the store by himself, had no assistant and just didn't have time to get through the multitudinous paper work necessary to keep abreast of the latest ceiling prices. It was the opinion of the panel that the man was not dishonest, that he had no intent to defraud his customers, and so the panel told him that he should be more careful in the future, and closed the case.

We then received an inane letter from the District Office in Omaha telling us that we should reopen the case and fine the man three times the overcharge, or $25, whichever was higher. In this case it would have been $25. In other words, we were expected to fine this man $25 when his income for a week probably wasn't much more than that, and at the same time I am told that used-car dealers are making deals which involve prices high above the ceilings, and that rents in business buildings are being steadily inflated, and nothing is being done about it.

I personally will have no part of a program which is apparently intent on persecuting small honest-intentioned businessmen. I consider the administration of the price control machinery a gross mockery of any conception of justice. I wash my hands of any part of it.

Tribute to Jack Nichols

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. STIGLER. Mr. Speaker, on November 12, 1945, the League of Young Democrats of the Second Congressional District of Oklahoma held a district convention in Muskogee.

During the convention time was set aside for memorial exercises for the late President Roosevelt and ex-Congressman Jack Nichols, of the Second Oklahoma Congressional District. The Honorable Kelly Brown, of Muskogee, Okla., Democratic county chairman of Muskogee County, and eminent lawyer, was designated to deliver the eulogy on the life of the late Jack Nichols.

Under the leave granted me to extend my remarks, I include the remarks of the Honorable Kelly Brown:

Ladies and gentlemen assembled in convention of the Second Congressional District of Oklahoma, here is the assembly of the home folks of Jack Nichols. Now is the time when it is difficult to speak. On occasions such as this for many, many years we had the drama of the living, virile character to enlighten our meeting; to gather in his absence and miss his charming personality is an anticlimax in the lives of all of us. Perhaps every one of you feel the same way that I feel, but since you have selected me to make a few remarks calculated to express the sentiments of all of us, I feel wholly inadequate to the occasion and perhaps you have selected the least appropriate personality for this occasion. He was my friend, a close personal friend, and logic and sentiment do not mix well together. Therefore, the thoughts that may come to you this morning will not be the logical, expressive, statements that should characterize this occasion. The subject was too close to this speaker for a good view and it is another occasion when we "cannot see the trees for the forest." No soldier on the battlefields of Europe or Asia has lost his last buddy and turned the sod over the remains of his last fighting companion with any deeper feeling of loss than I have when I speak the words this morning in memory of our friend, Jack Nichols.

In the year 1934, when our much beloved and highly respected Congressman, Hon. William Hastings, laid aside the congressional toga, we looked over the field with a feeling of distinct loss and abandon. We did not see and could not believe at that time that so worthy a statesman as Congressman Hastings could have his place taken over by a competent successor. But nature was still working and God was still good, and out of a field of a number of aspirants the good people of this district gave a handsome indorsement to Jack Nichols as a successor to Bill Hastings. He was comparatively a young man. For many years he had practiced his profession in all of our counties and as an advocate he had become known as an outstanding and brilliant lawyer. First of all he carried with him his library of information and his book of dramatics. His personality was invigorating. He touched the lives and hearts of our people in such a way as to fully revive the hopes for a worthy Representative. He espoused the cause of the farmer and the laboring man and in doing so also presented the best argument as to why he was likewise the friend of the businessman and any investments of money or capital. He thought the big investors and the moneyed interests were built upon the welfare of the common people and he preached the gospel in such a way that was convincing to all of our people so that he was accepted as a representative of no particular interest but the welfare of our entire district. His first session in Congress was such a convincing proof of this theory of government that his reelection was with only slight opposition. As time went on and one term of office succeeded the other, we became fully convinced that Jack Nichols was a Representative worthy of the approval of all of our people and by the time that he had served his 10 years in office he was as full a Representative of and spokesman for our district as any Congressman that ever graced the halls of our National Assembly.

The work that he did in Congress and the valuable representation that he gave to our people was of such a nature that it was only fitting that he should be called into one of the most important lines of duty of our national welfare. He was then selected to a very important position in one of our great national industries and the position that he took with the Transcontinental & Western Airlines was only another step in furthering his services in the welfare of the people of the Second Congressional District, for the welfare of the people of the entire Nation and for the promotion of the great and growing industry of air transport. He fitted into this work with a natural ease and aptitude to such a remarkable degree that at the time of the sacrifice of his life in this work he was an outstanding member of this great national industry. Never at any time did he abandon his idea of representation of our people. On frequent occasions he returned to make his report to this district in the same manner and with the same interest that he did while he was your elected representative and he has brought to us in this portion of the great central South and West a recognition with the transportation lines that has been highly valuable. At the time of the unfortunate accident that brought an end to his career he was engaged in contact work of the most valuable character. He was carrying out the idea of having the great company of which he was the representative in making a globe-circling route that would have brought in touch all of our people in the effort of truly making this one world.

The steps that he has taken and the path that he has laid out will not be forgotten. The map that he has made will be followed as the lines of travel for future generations. I recall very intimately his plans for taking your humble servant along with him and others of his friends on the first globe-circling trip and it would have been a thrill to any human mind to have followed him in this path that he had laid out. We will go over these lines. We will remember the genius of Jack Nichols in plotting the course. We will have the memory of our own man from the Second Congressional District who blazed this trail. We will greatly suffer from the loss of his dramatic personality as a companion. Why Moses was led on top of the mountain to look over the Valley of Promise and then not allowed to enter; why our great Franklin Roosevelt fought in such a valorous manner through the network of European and Asiatic wars to look upon the consummation of an Atlantic Charter; why our Congressman, Jack Nichols, was led to the peak and then not enter the fruitful valley? These things we do not know. These things we cannot comprehend except through faith.

"Flower in the crannied wall,
I pick you out of the crannies;
I hold you here, root and all,
In my hand, little flower;
But if I could understand what you are,
Root and all, and all in all,
I should know what God and man is."

To these things that have been done, to this dramatic character that has passed, to the personality of Jack Nichols that was so thrilling, we simply pay our tribute without knowing the fullness of our acts and thoughts, except this one lone thought: We do respectfully show our gratitude for what has been done and we do, through our thoughts and actions this morning, pledge our eternal loyalty to this friendship that we had and to this splendid, estimable character that was given to live with us. In utter humility we state these things and leave the verdict to be written in accordance with our constancy to these plans. We now leave with the individuals of this convention, in the homes of the men and women of the Second Congressional District, and in our own hearts, the thought that we have had a true friend, an able statesman, and a memory to revere.

"Green be the turf above thee,
My friend of better days;
None knew thee but to love thee,
Nor name thee but to praise."

A. F. of L. Wins Wage Gains for Millions Without Strike

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. CRAWFORD. Mr. Speaker, there have been two parallels in the current postwar labor-management discussions, one of which has been entirely overlooked.

On the one hand we have had mass walk-outs of the CIO with wild charges being made against management by CIO leaders. On the other hand we have had the American Federation of Labor quietly negotiating wage gains almost entirely without strikes. Out of 1,800,000 workers on strike and threatening strike on January 18, only 112,000, or a bare 6 percent, were A. F. of L. members.

At the same time the American Federation of Labor has gained for its members the same percentage of wage increases and sometimes greater increases without the hysterical, wild-eyed charges so commonly reverted to by the CIO leadership.

The A. F. of L. accomplishments in this respect are presented in the current issue of the Federation of Labor's Monthly Survey, which follows:

Since VJ-day, unions affiliated with the A. F. of L. have won wage increases averaging from 10 to 20 percent and more for at least 2,500,000 workers.[1] A large proportion of our increases have been for 15 percent or more, very many from 20 percent up to 100 percent. We are establishing the 75-cent minimum wage throughout the South.

The vast majority of these wage gains have been won without strike or threat of strike; and our unions have universally kept within the wise and sound formula laid down by President Truman: Wage increases should not force breaks in price ceilings.

When workers add to their wage demands that extra 5 cents which breaks a price ceiling, the extra nickel brings them no real gain but a serious loss. For a break in price ceilings for one or two unions brings a flood of demands for more price breaks from other unions and companies, and the tide of inflation is let loose. Then the cost of living rises and everyone loses. We know only too well what the rise in living costs meant to workers during the war. In 1944 it cost at least $500 more per year for a family to live than in 1941.[2] Although workers' average yearly income rose 50 percent from 1941 to 1944, living costs rose 32 percent.[3] These high living costs cut away the major part of the wage gain. The result is shown on the chart below. Even at the wartime peak about one-third of American families still had incomes below a health and efficiency standard, although their wage gains should have given them a far better living. Wage gains mean little if they have to be paid out in higher prices.

The administration's reversal of policy to permit price-ceiling breaks for certain unions is bringing the results to be expected. A 5 to 8 percent increase in living costs is already forecast this year. Not only will workers lose the extra nickel that breaks the price ceiling but they will force on themselves and others an even greater loss. For every family with savings or life insurance will cut away the value of those savings because each dollar will be reduced to 95 cents or 92 cents in buying power. Retired workers living on pensions or social-security benefits will lose likewise; for their pensions will not rise with increased living costs. The only way to make real gains is to keep wage demands within price ceilings. This policy has been followed by experienced unions.

AFL RAISES WAGES WITHOUT STRIKES

Labor Department figures show that AFL unions are winning their wage gains almost entirely without strikes. Out of 1,800,000 workers on strike or threatening to strike, only 112,000 were AFL union members (January 18).

Why is it that AFL unions can save their members the huge losses caused by strikes and yet win them large and lasting gains? The answer is that our experienced union leaders seek substantial progress through collective bargaining conducted privately with employers on a basis of fact and experience, with consideration of the interests of both parties. We regard collective bargaining in good faith as the normal procedure for establishing good relations with our employers and working out the terms of employment in a contract. Our unions have negotiated in good faith within the administration's declared wage-price policy.

FOUR COMMANDMENTS OF PROGRESSIVE COLLECTIVE BARGAINING

Workers can make the greatest progress by building up confidence and mutual understanding between themselves and their employer. These four commandments should be observed:

1. Good faith and square dealing on both sides of the conference table. Show your employer that you are seeking a fair and just settlement, satisfactory to both parties. Keep your contract. A broken contract is the mark of bad faith and irresponsibility.

2. Know your industry and know your company. Get such facts as costs of operation, outlook for sales and production, particular problems of your company and industry, past profits and prospective profits. Know what a wage increase will cost and what the company can pay. You cannot get these facts from the Government: But some AFL unions get this information from their companies for use at the conference table because they have proved that they are responsible organizations, interested in the success of the business and acting in good faith. Remember that your collective bargaining conference is the business of your union and your employer. The company does not want its information released to competitors. Don't injure your company's business. If you cannot secure the information you need, write to the AFL Research and Information Service.

3. Remember that three groups—workers, consumers, and management—should share the wealth created by American industry. This is the American way forward to higher living standards. Industry's profits should bring (1) wage increases; (2) price reductions; (3) reward for management as an incentive to improve production. Also, reserves must be laid aside to buy the new machinery which will increase productivity and make further wage gains possible; and investors must receive enough return on their investment to bring your company adequate financing. You cannot expect all the profit to go into wage increases.

4. Work to improve production per man-hour, so there will be more income to share. Have an understanding with the company that workers are to share the increased income they produce and get higher wages. Work out a plan for union-management cooperation. Let your employer know that your union is a strong and responsible organization, that you want to see the business succeed, that you expect to act as a partner in developing it and to share the returns as a partner should.

WHAT DOES A STRIKE COST?

Some strikes are unavoidable because management refuses to bargain in good faith. The AFL maintains, however, that a strike should be the last resort, used only after genuine efforts at collective bargaining, conciliation, and arbitration have failed. The reason for this is clear. Count the cost of a strike to the workers:

Suppose the workers are earning an average of $1 per hour. The company offers an increase of 12 cents to $1.12, but the union turns down the offer because they think a Government board may give them more. They go on strike and stay out for 8 weeks. Each worker loses an average of $358 (pay for 8 weeks of 40 hours at $1.12 an hour). At the end of that time the Government board awards 18 cents, 6 cents more than the company offered. The company accepts the award and grants 18 cents, but it will take the workers nearly 3 years' work before this extra 6 cents will amount to enough to repay their loss. If, as seems more likely, the company refuses to accept the award and gives only 3 cents more (15 cents in all), then it will take the workers nearly 6 years of work before their extra 3 cents per hour will add up to the amount they lost by the strike. If the 3 cents or 6 cents breaks a price ceiling, workers may take losses they can never regain.

If, on the other hand, the workers had avoided the strike and used every means to build up a sound relationship of good will between their union and the company, and both sides had turned their attention to getting out production, they could have gained much more than the extra 3 cents or 6 cents in further wage increases. They could have saved their strike loss and won public good will by turning out the products other people were waiting to buy. That is why responsible AFL leaders bargain in good faith and make every effort to avoid strikes.

[1] This is a conservative estimate based on information gathered from international unions, AFL organizers, and published reports.

[2] The actual dollar increase in living costs differs at different income levels. For purposes of the chart, this was the closest estimate possible with available information.

[3] Average yearly income of all workers (excluding Government) rose from $1,462 in 1941 to $2,189 in 1944; U. S. Commerce Department figures. Living-cost figures are from Labor Department Study on Consumer Expenditures.

Puerto Rico's Future

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include an article appearing in the January issue of the National Republic, published in Washington, D. C. The article, written by Ira E. Bennett, highly regarded American author and newspaperman, relates to conditions in Puerto Rico and should be of interest to all Members of Congress and the public. It shows that unrestricted communism under Gov. Rexford Tugwell is increasing the misery of the people of that island.

If the Communist experiment in Puerto Rico is a failure under the most favorable conditions, with the support of

the United States Government financially and politically, Mr. Speaker, one can easily imagine what can be expected of a communistic experiment in world government. The enlightening article by Mr. Bennett follows:

PUERTO RICO'S FUTURE?

(By Ira E. Bennett)

What is to be done about Puerto Rico? While the United States undertakes to insure democracy and promote prosperity among backward peoples all over the globe, it neglects its own half-starved stepchild at its Caribbean doorstep.

Conditions in Puerto Rico, deplorable for half a century, are now becoming worse. There is heavy overpopulation—554 persons to the square mile—and great scarcity of natural resources. Many of the people live in squalor and are ridden with disease, to such an extent that they are visibly undersized, lacking in vigor, and unable to do a good day's work. When in good health the laboring Puerto Rican is a faithful and industrious man, but in his native island he is under a heavy handicap.

Most Puerto Ricans seem to think that misgovernment is one of their chief misfortunes. They center most of their bitterness upon Gov. Rexford G. Tugwell—yes, that same shining Excelsior who led the New Deal hosts in days of yore. Tugwell is accused of having grasped the opportunity to make guinea-pig social experiments on Puerto Ricans, with resulting failure, misery, and public outcry. The insular house of representatives demands his removal. Everybody clamors for some kind of change. There is talk of statehood, independence, home-rule election of Governor and all other officials, and a dominion status, whatever that is.

Congress controls the political destiny of Puerto Rico, of course. It made Puerto Ricans United States citizens in 1901. It has given generously to the island for relief, rehabilitation, and general welfare. Since 1900, when the organic law was enacted, the United States has given to Puerto Rico in grants and loans about $325,000,000, besides relinquishing to the island in customs receipts, internal revenue, excise taxes, etc., about $275,000,000. In addition, large sums were spent by the Army and Navy during the war years, giving employment to the islanders. (Incidentally, an Army officer testified that he was compelled to bring in labor for the work, as the natives were inclined to knock off work as soon as they had accumulated a few days' pay.)

The island is 95 miles long and 35 miles wide, contains about 2,200,000 acres, of which 1,223,000 are tillable. On this patch live more than 2,000,000 people—that is, only 45 acres for every 100 people. The same density of population in the United States would give this country 1,632,000,000 inhabitants. But the Puerto Ricans, while individually underfed, are prolific to an amazing degree, with a birth rate of 40 per 1,000 annually. So the problem of survival grows more acute every year.

Sugar is the chief product of the island. Needlework by the women is a big item of income. Coffee, formerly a lucrative crop, was destroyed by hurricanes and has never recovered. Tobacco was going well a few years ago, but the employers claimed that local labor unions killed the goose. At any rate, Puerto Rican tobacco is a small item now. The island does not and apparently cannot produce enough for the population. Country people have been driven into the town slums and are living on the dole.

Islanders say that Governor Tugwell's scheme of breaking up the big landholdings and giving small farms to the farm laborers has proved a fiasco. The Government gives the laborer a lift of about $150 to furnish him forth as a farmer—and he fails. The total farm production is less now than it was under the larger landlords. Sugar making has been made a "public utility" under the peculiar political philosophy of the Tugwell regime, with the result that might have been expected—capital has been scared away. The universal complaint among businessmen in the island is that the Government is strangling private enterprise, including farming, transportation, manufacturing, banking, etc. The "Little New Deal" of Puerto Rico has installed these agencies to "supervise" the people: Puerto Rico Development Co.; Puerto Rico Development Bank; Transportation Authority; Communications Authority; Water Resources Authority; Housing Authority; Public Service Commission (having control of the sugar industry).

There is a "Planning Board," on approved New Deal lines, with authority (on paper) to approve or kill off all island activities within the planning orbit. The "plan" includes spending $411,000,000 in the 6 years ending 1950. The money is "expected" to come largely from the boom-time sales of rum, but recently the rum balloon has shown signs of sagging.

So infuriated have been the citizens of Puerto Rico against restraints upon their efforts to carry on business that the outcry has disturbed Washington. President Truman sent a message to Congress on October 16, asking that body to submit to Puerto Ricans several alternative proposals for a change of government. "The present form of government in the island," cautiously observes the President's message, "appears to be unsatisfactory to a large number of its inhabitants." Different groups advocate these changes: (1) Local election of Governor and wider self-government; (2) statehood; (3) complete independence; and (4) a dominion form of government. Nobody has clearly explained what is meant by a "dominion" form of government, but presumably it is desired that Puerto Rico shall bear to the United States the relation which Canada bears to Great Britain. The United States, in other words, is regarded as a commonwealth or empire.

President Truman takes care to suggest that Congress should not submit any proposals to the Puerto Ricans which the Congress is not prepared to enact finally into law. And there's the rub. What the Puerto Ricans may desire and what the United States may desire is not the same thing.

Puerto Rico is a fixed air base guarding the approaches to the United States and the Panama Canal. The island cannot therefore be given up. It is important to our national defense. Independence is a vain dream. Statehood is almost as vain a vision, because Congress cannot be expected to admit into the Union a region that is pauperized and doomed to live on the charity of outsiders. The only alternative left is the popular election of Governor and wider home rule—and this is questionable because of the inveterate habit of Puerto Ricans to take their politics too seriously. On the smallest questions, when the people have a right to decide it, furious passions rise, and riots and feuds develop.

So far as cure of government can cure Puerto Rico's ills, common sense would seem to require that good sound American procedure should take the place of the fancy communism that disguises itself as paternal solicitude in Puerto Rico. Encouragement of private enterprise, including investment from the mainland, might work wonders in developing agriculture and industry. The island cannot live by itself alone—it must always have help from Congress—but it could be made to help itself by a reform in the policies of the insular government. Since it is not to be expected that Governor Tugwell will admit that his policy has been wrong, a way toward betterment of conditions might be found by a change, not in the form of government, but in governors.

The Employment Service

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. LUDLOW. Mr. Speaker, no Member of this House is more strongly committed to State control and management of the Employment Service than I am, or more sincerely anxious to return the employment offices back to the permanent control of the States.

The only reason I am not voting to transfer the employment offices back to the States on June 30, 1946, as provided in the Dirksen amendment, instead of at a later date, is that Gen. Omar N. Bradley, Administrator of the GI law, tells me that the transfer of the Service on that date would have a very disturbing and disrupting influence on the veterans' program and would injuriously affect the prospects of many thousands of veterans to secure employment. General Bradley says the demobilization program will be proceeding at top speed at that time at the rate of 400,000 discharges a month and that to try to switch from Federal to State control would be very confusing and would throw a big monkey wrench into the machinery.

The time chosen in the Dirksen amendment for the transfer is especially unfortunate owing to the fact that under General Eisenhower's announced program all 2-year men and all men with 40 points are to be discharged at that time and the placement machinery will be clogged with many thousands of men looking for jobs and depending on General Bradley's organization to place them.

For these reasons I could not vote for the Dirksen amendment, as much as I approve the transfer of the Employment Service to the States, and its complete removal from Federal control.

After all, it is not important that the Employment Service shall be transferred at a certain date. The important thing is that it shall ultimately, within reasonable time, be transferred and brought exclusively under State management, and removed entirely from bureaucratic control at Washington, and that, I am sure, will be done.

Representative DIRKSEN'S amendment proposed to make the transfer of the employment offices on June 30, 1946. Representative EBERHARTER, of Pennsylvania, on behalf of a number of Members, including myself, offered an amendment to make the transfer on December 31, 1946. The Eberharter amendment would have given the Employment Service six more months to operate under its present management in the placement of veterans. By December 31, demobilization should be well over, and I supported the Eberharter amendment as the wisest possible solution of the problem. Eager as we may be to return the Employment Service to the States, surely we can wait 6 months to accomplish an orderly demobilization that will protect all the rights of the veterans.

I received today the following very illuminating letter from General Bradley, Administrator of Veterans' Affairs:

MY DEAR MR. LUDLOW: This is in response to your request made by telephone for a statement of my views with reference to possible transfer of the public employment offices to State operation June 30, 1946.

It is estimated that demobilization is now about half accomplished. It is anticipated that demobilization will continue at a rapid rate for more than a year. At the present time members of our armed forces are being discharged at the rate of about 1,000,000 per month. Employment offices are needed to provide veterans with the services the Congress has assured will be given to them.

It would be most unfortunate, in my judgment, to disrupt the service of the public employment officer by attempting to accomplish the transfer as of June 30, 1946. Demobilization will be continuing at a high rate at that date. Also it is readily understood that the transfer cannot be accomplished without at least a temporary impairment in the efficiency of the Service. Many veterans have never been previously employed. These veterans and others will need repeated assistance and counseling from the Employment Service. To disrupt the Employment Service in the midst of demobilization and in the midst of the adjustment period of veterans would be highly detrimental.

I am deeply concerned that the reintegration of our service men and women into the peacetime economy be accomplished with the greatest speed and efficiency. One of the important mediums for accomplishing this transfer is the United States Employment Service, which must be in a position to render efficient and competent service. This it cannot do unless a definite date for the transfer to the States is set sufficiently remote to maintain the service through the period of demobilization and first job adjustment of our veterans.

Yours very truly,

OMAR N. BRADLEY,
General, United States Army,
Administrator.

Industrial Disputes

EXTENSION OF REMARKS
OF

HON. BENJAMIN J. RABIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. RABIN. Mr. Speaker, the matter of industrial disputes and the approach which the Government should take toward their settlement is one of utmost importance to all of us today. On January 22, 1946, a radio address was made by Hon. Jesse Freidin in connection with that problem. Mr. Freidin is well qualified to discuss the subject inasmuch as he was formerly General Counsel and subsequently public member of the National War Labor Board. His speech is most timely. Pursuant to permission given to me to extend my remarks, I am including in the RECORD the radio address made by Mr. Freidin.

Three months ago, in a radio address to the Nation, President Truman outlined what was to be the postwar wage policy. He described the role Government was to play, following the end of the war, in the settlement of labor disputes. These are his words:

"Many people have asked the Government to step in and decide who is to increase wages and by exactly how much. I have indeed been criticized because I have not stepped in to lay down the law to business and labor. My refusal to do so has been deliberate. I am convinced that we must get away as quickly as possible from Government controls and that we must get back to the free operation of our competitive system where wages are concerned. This means that we must get back to free and fair collective bargaining."

That was a sound policy when it was announced by the President 3½ months ago. I believe it is still a sound policy today. But the proposal we are discussing here tonight—statutory fact-finding boards with power to subpena parties, witnesses, and records, and to recommend the terms on which labor disputes should be settled, with all the moral force Government recommendations carry—is the very reverse of that policy. Instead of getting away as quickly as possible from controls, the proposal would continue and perpetuate them, even though in modified form. Instead of getting back to free and fair collective bargaining and encouraging labor and industry to develop their own solutions to problems with which only they have sufficient familiarity and judgment, it continues Government in the dominant role of decision maker. Instead of reducing Government participation to an irreducible minimum, it enlarges and broadens its powers of intervention.

Anyone who has had to do with the settlement of industrial disputes will, I am confident, agree that so long as there is assurance of Government intervention parties to a labor dispute will not always exhaust the possibility of agreement. In the minds of both will always linger the hope that they will secure from Government a decision which in the case of the union will give it more than it can get in collective bargaining, and in the case of the employer will call upon it to give less than might be necessary to avoid a strike. And so long as there is held out to each side the opportunity to gain more through Government intervention than it can through its own efforts, legislation will aggravate not ameliorate the problem. I think it must be self-evident that Government wage setting and collective bargaining do not mix. We cannot insist upon the first if we want to maintain the full vitality of the second.

Regardless of what is said to the contrary, and no matter how good original intentions may be, it seems to me also true that when the Government itself undertakes to decide what one or two or three of the greatest employers in the country shall pay as a fair wage a pattern or policy begins to take shape which soon fastens itself, with little if any variation, upon many employers and many unions who were not parties to the Government's decision, and who may be faced with totally different fact situations. Once the Government sponsors a precise wage increase for a particular union, the rank and file of other unions feel themselves, and understandably so, entitled to a comparable increase. The freedom of their representatives to make a substantially different bargain is surely limited, if not wholly destroyed, no matter how compelling the particular facts in the case might be.

We have had two major experiences in the United States with Government intervention in wage disputes. One was in the railway industry, the other in the work of the National War Labor Board. But in relying on those experiences and in seeking to apply the same procedures to industry generally and in time of peace it is most important to bear two things in mind. In both instances the procedure was agreed to in advance by the parties who were to be effected by it. The railway industry and the Railway Brotherhoods in 1934 joined in devising the scheme of the Railway Labor Act and tacitly agreed in advance to conform to its provisions. The establishment of the War Labor Board was similarly prefaced by agreement between major representatives of industry and organized labor to accept the procedures of the National War Labor Board as a means of settling disputes peacefully during the war. Today, by contrast, both industry and organized labor have expressed deep and unyielding opposition to the proposal for fact-finding boards. The second circumstance to bear in mind, and indeed it may be of far greater significance, is that the railway industry is entirely and closely regulated by the Government in all of its activities—its rates, its profits and its routes, and that wage regulation by the War Labor Board was in the same way accompanied by wartime regulation of every important industrial activity—prices, manpower, hours worked, supplies, etc. The point is that if we are relying on the experience under the Railway Labor Act or on the experience of the National War Labor Board, had we not better begin by asking ourselves whether Government participation in the setting of wages can succeed without leading inevitably to the regulation of other economic and personal activities which bear directly and indirectly on the question of wages?

I have no doubt that there are many people who in utmost good faith minimize these risks—the risk that the entire fabric of collective bargaining will be impaired, that settlements will be forced upon particular employers and unions without regard to their particulular needs and problems, that wage regulation has in the past been accompanied by over-all economic regulation—these dangers may have been overlooked or ignored in the emphasis placed upon the strike features of the proposal. It has been advanced as a method of eliminating strikes. But upon analysis there is little in the proposal, at least in its present form, that furnishes the slightest assurance that strikes will be eliminated or curtailed.

The only part of the program that bears directly on strikes is the so-called 30-day cooling-off period. The bill introduced by Mrs. NORTON, for example, provides that for a period of 30 days, during which the fact-finding board is to be set up, hold its hearings, and render its report and recommendations, the parties to the dispute are to continue at work. But how effective this section of the bill may be is highly doubtful, for the measure provides no sanctions of any kind for its enforcement. The union is left free to decide whether its probabilities of success will be enhanced or reduced by striking. It is offered, in fact, simultaneous access to two forums—the pressure of the strike and the picket line and the semiarbitral machinery established by the Government. The fact-finding mechanism, in other words, is being offered not as a substitute for, but as an addition to, the strike and the lock-out. We solved that problem at the War Labor Board through the administrative device of refusing to consider any labor dispute while a strike was in progress. We insisted that, if a union wanted to air its grievances before a Government forum, it had to stop airing them on the picket line. But even that device is not referred to in the bill.

We also had experience at the War Labor Board with a cooling-off period as a strike deterrent. The War Labor Disputes Act, you will recall, provided for the filing of a notice of intention to strike and the continuance of production during the ensuing 30-day period. But the fact is that following passage of the act we had more strikes than before and they were more difficult to settle because, having followed the statutory provisions, they had the appearance of congressional approval. The month interval operated more as a heating-up than a cooling-off period. Even where no strike was intended the machinery was utilized to demon-

strate that a strike was in preparation. And it was frequently resorted to as a ceremonial ritual for the effect it might have on the public, on employers and on government officials. Far from deterring strikes, it did no more than make available government facilities as a means of dramatizing and propagandizing an intention to strike.

As to strikes after the 30-day period, the proposal is wholly silent. Either side is at liberty to reject the recommendations of the fact finders and to resort to force. Now by no means do I mean to suggest that the bill would be improved did it attempt to penalize strikes or otherwise illegalize them. For to eliminate the threat of a strike or the right of an employer to close down his plant if he cannot come to terms with the union, would be to remove from the area of collective bargaining the single most potent force which drives the disputing parties to final agreement. A great American, Mr. William H. Davis, the former Chairman of the War Labor Board, expressed the same thought in these words:

"The creative adventure of the bargaining table loses all color of reality if the workers have been deprived of the right to reject management's offer and quit or if management has lost its right to refuse the workers' terms and close the plant. It is, in the last analysis, the pressure of this right to strike or to lock out that keeps the parties at the conference table; that tests their courage, resourcefulness and decision."

And let me say that there are few men to whom deep understanding and broad experience give a greater right to express an opinion on this matter than Mr. Davis.

A democratic country, if it is going to retain its traditional principles of freedom, must place its final faith in free collective bargaining. Freedom of the workers to strike and of the employers to shut down is no more than freedom to resort to the necessary tools by which a collective bargain is reached. We ought not permit curselves to lose faith in the resourcefulness and strength of this process. Government can aid it by broadening and strengthening its mediation and conciliation facilities. These functions help the parties reach agreement. Government most assuredly will not aid it either by coercing agreement or by itself assuming responsibility for making the final decision.

The postwar problems which face industry and labor today are unique in both their economic and emotional content. They are by no means characteristic of normal peacetime operations and ought not be accepted as the basis for peacetime legislation. They are charged with an amount of tension which sheds a good deal more heat than light, and heat seldom induces the thoughtful deliberation which is the necessary preliminary to wise lawmaking. In my humble judgment legislation will not aid the present strike picture—you cannot force American workers against their will to resume jobs at wages they deeply believe are inequitable, nor can you force American employers to pay wages which they believe with equal sincerity are uneconomic. I believe the parties must be left to make their own agreement assisted, not coerced, by the Government.

H. R. 4437

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. BRYSON. Mr. Speaker, this bill (H. R. 4437) has come before the House under false pretenses. It is supposed to provide for the return of the Employment Service to our State governments but so worded that it will defeat State control of this agency and further entrench Federal control of it. I feel that the adherents of Federal control of the Employment Service, realizing that Congress fully intends to reenact legislation to return this agency to its rightful place under our State governments, have deliberately set about to circumvent the will of Congress and the people by loading H. R. 4437 with provisions which will keep Federal authorities in the saddle. This is about the most flagrant attempt at legislative sabotage I have ever seen.

There is a little FEPC in the woodpile of this bill. It is hiding under the provisions of section 212 which authorizes Federal authorities to prosecute, if not put out of business, employers accused of racial discrimination. I voted against FEPC in its full form and I am going to vote against it in this subdued form now by supporting an amendment to H. R. 4437 which will eliminate all the subterfuge elements of this bill and bring about a return of the Employment Service to the States as intended by Congress.

Views of John P. Lewis, Editor of PM, on Associated and United Press Associations

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York newspaper PM of Sunday, January 20, 1946:

DOLLAR JOURNALISM

Carl W. Ackerman, dean of Columbia University's School of Journalism and front runner for the monopolists of American journalism, has injected himself into the fight between Assistant Secretary of State William Benton on one side, and the Associated Press and United Press on the other side.

Benton is in charge of the State Department's distribution of information abroad, which has just been reorganized from a wartime to a peacetime basis. This news service was designed to consist of three parts:

1. A cable-wireless news file prepared from AP, UP and International News Service news reports and sent to Germany, Austria and Japan for publication in papers there, largely to areas where private American news agencies have not yet begun to operate. It will be discontinued as soon as possible.

2. A radio bulletin sent daily to United States embassies and missions abroad, giving texts of Government documents, speeches, and so forth, plus a brief summary of miscellaneous press news. This file is for the personal information of Government officials and not for publication.

3. Short-wave voice broadcasts to peoples abroad designed to present a well-rounded picture of the American scene.

The row over this program was precipitated when the Associated Press announced that it would refuse to provide Benton's department with its service for broadcast overseas. The United Press followed up by announcing that it, too, intended to discontinue its service to the State Department.

Benton is fighting back and has accused the directors of the Associated Press of voting to "contribute to the misunderstanding of America abroad."

Into this set-up now comes Ackerman to ask President Truman to withdraw his support from the State Department's distribution of information abroad.

"The education of the peoples of foreign countries in respect to American policies, activities, and ideals should be primarily on the same basis as the education of our people at home," he says. "That is by means of daily news, collected, interpreted, and distributed by privately operated press associations, newspapers, periodicals, books, and radio. That is the American way at home. It should be the only American way abroad. * * *"

What Ackerman is saying is that news abroad, as at home, should have a dollar sign attached to it; that information to the other peoples of the world should be made available to them only if they can pay for it.

What he is saying is that the American way—the way of a free press—is the sole province of private business—business which has developed in our own country over the course of time into a monopoly business, with fewer and fewer businessmen—businessmen, not journalists—controlling more and more outlets of news and information.

What he is saying is that informing the world of the truth of what is going on in the United States of America is not the right of the United States Government, or its President, or the State Department. He is saying that is the exclusive business of that select group, which, by virtue of circumstance and the profits that derive from monopoly in close association with the business community, happens to control the press of America.

What he is saying is that the Associated Press and United Press and the only other big news service in existence—the International News Service—if it happens to join the other two, are bigger than the United States Government and can dictate to the people of the United States of America what they can and what they cannot tell their neighbors in this world.

Dean Ackerman says: "I am convinced that freedom of international news and subsidized governmental propaganda are incompatible."

What he is saying is that, when handled by private journalists, facts are news, but when they are handled by the Government, they are propaganda.

To all of which the best and clearest answer is, "Nuts."

If democracy and the American way of life are going to be preserved in this world, it is only going to be because the people of the world know and understand what we are doing over here. That is a job that the United States of America left exclusively in the hands of the private newspaper monopolies before this war. They didn't do the job.

Millions upon millions of the people of the world—far more than those living in our particular segment of it on the North American Continent—were cut off as completely from knowledge of America and what it was doing and what it was trying to do and what it was thinking as if they lived in the Dark Ages. The monopolists couldn't do the job then. They can't do it now in a world so torn by turmoil and confusion and poverty in the wake of the war that the profits are just not there to permit the sale of news for profit to the people who need news.

There is just no way for news of the United States of America to reach most of the people on this planet unless the United States Government broadcasts it. The other nations of the world can broadcast their news

to the people abroad, but our press associations decree that our Government cannot.

And so they cut off the service to the State Department and would give only silence to the poor devils in Europe or Asia who are hungry for word of what's doing in the magic land of America.

Well, things like this AP-UP attempt at supergovernment are what's doing.

JOHN P. LEWIS.

The British Loan

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. LUDLOW. Mr. Speaker, the Indianapolis Association of Credit Men, one of the largest and most virile organizations of its kind in America, is telling the world in no uncertain tones that the proposed British loan is a bad credit risk.

A statement on this subject from the pen of Merritt Fields, the keen and forceful executive manager of the Indianapolis Association of Credit Men is attracting Nation-wide attention. Every month the association issues an economic letter by Mr. Fields, dealing with the paramount questions and issues of the day in his own original and inimitable style. The February Economic Letter of the Association is devoted almost entirely to the proposal to loan $4,400,000,000 of the American taxpayers' money to Great Britain. I believe that Mr. Fields' observations in respect to the proposed loan, coming from a practical credit executive, will be very interesting to the people of our country, and I have obtained the unanimous consent of the House to insert the statement in the CONGRESSIONAL RECORD. It is as follows:

YOUR PERSONAL STAKE IN ENGLAND'S CREDIT

All American citizens have a direct pocketbook interest in England's credit. Normally an Anglophile, this writer does not like England as a credit risk. If it were our own money or we were handling your money for you we would not give England one nickel on credit for England's credit record is bad. It is your personal money and the writer's money that is involved as we shall show.

Our politicians (Government officials) have recently agreed to give England on credit $4,400,000,000, and this huge credit is now before our Congress for approval. This association is in the credit business and you are too if you are in business at all, so let's have a look at the facts. England, remember, is just another customer. From a credit standpoint, you may be interested in knowing how long England has been in business, who owns her, how she is managed (the Socialists are running her now) .how much capital is invested, what her financial statement looks like, what "authorities consulted say" (we always wonder who these authorities are) but what you really want to know is only one thing, i. e., will England pay; and suppose you ask the Indianapolis Association of Credit Men's Service for a credit report on England, such a report as we render on any other customer of yours, large or small. We don't give you a "rating" on England—we tell you how England has paid in the past and is paying today. From that you decide whether she will likely pay in the future. We call that report a credit interchange report because the people who sell England (or anybody else) exchange or interchange their credit experience through this association as a central clearing point.

"ENGLAND IS UNCOLLECTIBLE—HAD TO CHARGE IT OFF"

Our credit interchange report without any question says England is a bad credit risk on the basis of her past paying record and her largest credit grantor makes this notation on the information he gives us which we put in our Credit Interchange Report: "Uncollectible—had to charge it off."

Who is England's largest credit grantor? Why it's good old Uncle Sam, probably humorously referred to in European circles as the C. C. C.—Champion Credit Chump. And who is Uncle Sam? You, the American taxpayer. Oh, yes, how much was charged off as uncollectible? A little matter of only $6,000,000,000! We gave England a credit including interest of $6,000,000,000 at the time of World War I, she never paid it, so her largest credit grantor, the Champion Credit Chump, lost $6,000,000,000. Here is where your personal stake in England's credit comes in. England got the money from the United States Treasury and when she didn't pay, the Treasury made you as an individual pay by simply adding England's failure to pay or perhaps it was a repudiation, on to your personal Federal tax.

WILL THE C. C. C. DO IT AGAIN?

Are we little c. c.'s (credit chumps—taxpayers who pay for the bad credits granted by the big C. C. C.) really in favor of our politicians giving England another $4,400,000,000 on credit? It is reported even before Congress votes on it that our negotiators don't really expect England to pay this new credit; that even if she doesn't pay, it will be a good investment in a customer; that we should loan her the money so she can buy from us, then we can afford to lose the money. That doesn't make credit sense. In addition to the report that our negotiators don't really expect this credit to be paid off, here is something which is not a report. Many of the British themselves frankly say in advance of congressional approval that the C. C. C. will never be paid back. We quote directly from the London News Weekly: "The chances are that long before America can collect there will be a new international conflict to throw the loan and many kindred superstitions into hogwash."

Do you as a Federal taxpayer who had to pay for that first British credit regard this new loan as a superstition? And the London economist, one of England's leading financial papers, without blushing reports the odds are "billions to one" that this new credit will not be paid and says further it is willing to bet "all Lombard Street to a China orange," etc. After World War I England was given 62 years to pay off the first credit, but she paid on it for only 9 years. What she did pay amounted to 6 cents on the dollar of the principal including interest. Then in 1933 she quit cold, and from 1933 on, the United States Treasury was not able to collect one more nickel.

In World War War II, just closed, we gave England another credit amounting to $25,000,000,000, only the ingenious Mr. Roosevelt, then President, did not call it a credit, he called it lend-lease, and in a message to Congress relating to lend-lease, Mr. Roosevelt said, "For what we send abroad we shall be repaid within a reasonable time following the close of hostilities in similar materials or at our option in other goods of many kinds, which they can produce and which we need." This $25,000,000,000 of lend-lease under the agreement now before our Congress, will be settled for 3 cents on the dollar, to be paid running into the century 2000. So, as has been pointed out by a number of good credit executives (not politicians) on the first credit granted England in World War I we collected 6 cents on the dollar and lost 94 cents on the dollar; on the twenty-five billions of lend-lease we will get 3 cents on the dollar (if England pays it, see quotes above) and now on the new credit of $4,400,000,000, we loan her the money but she pays us nothing for 5 years and then the agreement says she is to start paying off in installments ending in 2001.

For a long time we have been wondering if it is good credit judgment for we American taxpayers to try this same customer again on credit and, on the basis of England's past paying record, can we in view of our own heavy obligations afford to write off another credit of $4,400,000,000 as uncollectible? And we are also wondering, if England is a decadent nation, can we afford to keep propping her up with these credits of $6,000,000,000, 94 percent of which we wrote off as uncollectible, and $25,000,000,000 of lend-lease, 97 percent of which we have written off as uncollectible.

In passing, we are told by some American liberals that this credit to England is too complicated for the ordinary credit executive to understand; that it involves great international forces, something mysterious, etc. As to that, we have noticed in our business, which is the credit business, that whenever any credit transaction becomes too complicated to understand there is something wrong with it. There is nothing complicated about this last credit to England; on the basis of the paying record—all that really counts—England is a bad credit risk for you as a Federal taxpayer. Ask your Congressman and your two United States Senators to enlighten you further on this credit matter. Ask them to suppose that England once loaned us $6,000,000,000 and we didn't pay and she wrote it off as uncollectible. Also suppose that England gave us $25,000,000,000 worth of net lend-lease and we didn't pay that and then suppose we asked her for another credit of $4,400,000,000 so we could trade with her. Query: Would we get the money on the basis of our past credit record? Significantly, many American liberals want to loan money again to England. Over the years we have taken a good many of these liberals apart—find their mainsprings to be made of other people's money. They are always liberal with that and we think their credit judgment should be somewhat discounted. If you care to write to your Congressman and your two United States Senators, we will furnish you with three extra copies of this economic letter.

Young Men and Women Aline Themselves With Democratic Party

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. RAINS. Mr. Speaker, in the January 25 issue of the Washington Post the Gallup poll presents convincingly the unmistakable fact that the Democratic Party is regarded by the vast majority of the young men and women in this country as the party of progress and the hope for the future.

This study of political opinion presented by the Gallup poll points definitely to Democratic success in the coming elections. Since the vast majority of new voters will be from the ranks of the young people of this country, and since the overwhelming majority of these young voters will aline with the Democratic Party, Democratic success at

the fall congressional elections is apparently assured.

The poll follows:

GOP FACES SERIOUS PROBLEM ON GARNERING YOUNG VOTERS

(By George Gallup)

PRINCETON, N. J., January 24.—One of the major problems facing the Republican Party strategy committee is how to win into the GOP fold a larger share of the two or more million young people who come of voting age every year in this country.

The Republican Party is unquestionably suffering from a shortage of new blood. At the present time, out of every three arriving at voting age, one is Republican, two are Democrats.

The problem looms even more serious than at first might be supposed by further evidence from surveys showing this proportion—two-to-one Democratic; as early as the 15- to 18-year-old bracket.

This picture emerges from a study of political opinion by age groups, including a poll of young people 15 to 18 years of age. The latter were asked:

"Which political party do you think is the best in the country?"

Voters of the country were polled on the question:

"If a Presidential election were being held today, which party would you vote for—the Democratic or Republican?"

	Democratic	Republican
Teen-agers:	*Percent*	*Percent*
15–18 years of age	65	35
Other age groups:		
21–29 years of age	62	38
30–49 years of age	55	45
50 and over	49	51

Between Presidential elections, between 8 and 10 million young people become eligible to vote. If only 50 percent of these young people turn out at the polls, their vote of almost two-to-one Democratic would be enough to offset a substantial defection among older persons.

Republican strategists can take some comfort from the fact that eventually they do win a larger proportion of these voters—after they have passed the 30-year mark, as can be seen from the table presented above. As people grow older, they tend to become more conservative. As they become more conservative, more of them become Republicans.

Republicans can also take comfort from the fact that older people turn out in greater proportion at the polls on election days than younger people.

This is not a new problem for the Republican Party. It has been present in all recent elections.

In the older age group—50 years and over—political sentiment in the last two Presidential elections was almost evenly divided. It continues about that way today.

Welcome Home Banquet for Veterans of World War II

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech delivered by me at the welcome home banquet for veterans of World War II tendered by Companies K, M, and Battery C, Veterans Association, at the State armory, Lawrence, Mass., on Sunday, January 27, 1946:

In the life of every city there is a tradition handed down from father to son and grandson and carried over from family to family which binds the isolated members of a community together in the common fellowship of democracy.

That tradition is the responsibility of public service.

Too often in life we experience the feeling of being alone, of not fully sharing the great journey we are making together. Somehow, individual success is not completely satisfying. We have the urge to participate in a wider effort, teaming up with other men to work for a goal that is finer than our individual ambitions. The time comes when it is greater to give than to get.

In the life of every community, this spiritual quality is at work. Individually and by groups. Man feels the need to go out of himself to help those who are weaker. He lifts and encourages the underprivileged, the wayward, the disabled, and the aged. He lends his strength to these, so that all may live in human dignity.

Quietly, day in and day out this work goes on.

Then suddenly, a disaster stirkes. A fire, a flood, an epidemic, or a hurricane brings death and suffering. Instantly, all men of good will step forward to help. There is no thought of hours or pay or profit or publicity. The needs of the community come first and all men pitch in with no other thought in mind than to save the other members of the community. And when it is over and we have time to look around, we are amazed and thrilled by the unsuspected courage and unselfishness of our fellow citizens. The knowledge of this builds precious morale. It is well that we develop this morale, for one in a generation, the way of life of the whole community and its sister communities, is endangered and the Nation is engulfed by war.

This is the sternest test of all, requiring the greatest sacrifice in the name of group survival. The danger is immediate and it affects everyone. To meet it, we have a pathetically small Regular Army and the National Guard.

None of us will forget that cold Sunday of December 7, 1941, when the Nation was shocked from its complacency by the news that we had been attacked and defeated, losing 3,000 men before the deadliest of all weapons—surprise assault.

We did know that we had been forced into war and we were not ready for it. With all the advantage of preparation and surprise, the enemy took Wake, Guam, the Philippines, overran Java, New Guinea, and threatened Australia. Our Navy was crippled, our Army was but a token force, and our Air Corps was not yet born. We had suffered defeats at the hands of superior forces and the future was black indeed.

When General MacArthur was evacuated from Bataan against his will, he said: "I shall return." It was inspiring but, it seemed so impossible. The High Command was in some doubt as to whether it could hold Australia. And MacArthur, arriving in Australia, found that he had only two divisions available to defend a continent. Though his forces were far outnumbered, with a spirit that was typically American, he decided not to defend, but to attack. He crossed over to New Guinea to smash the preparations the Japs were making for the invasion of Australia. He established a small beachhead but he could not go far inland because the towering Owen-Stanley mountain range barred his way. The Japs held all the passes, their main base was protected by the mountains, and they looked forward to a mass slaughter of the small Allied Army if it dared to come up the mountains. At this point, MacArthur loaded a whole division into transport planes and dropped them on the other side of the range, behind the Jap lines. He kept them supplied by air and flew in an entire airdrome with fuel and ammunition. When the Americans seized the Buna base and went on, after bitter fighting to take Guadalcanal and Bougainville, it was the turning point of the land war in the Pacific.

Who were the handful of men who did this? Regulars, Marines, and the National Guard. Men from greater Lawrence were there, taking all that a powerful enemy could throw at them, then holding, and finally going over to the offensive. These men from the National Guard were all we had. They fought with unyielding courage the time we desperately needed to draft and train and send into combat the millions who were needed to win a Global War. If this thin line had failed and the Axis had the opportunity to perfect their new weapons, who knows what the result might have been?

We remember even before Pearl Harbor our National Guard units leaving to join the United States Army. It was 5 years ago this month that one of them, Battery C, went off in another direction, to fight across France and through the Siegfried Line.

We remember how a generation before their fathers had fought at the Marne, which was the turning point of the First World War. And going back still further, we remember how some served under "Black Jack" Pershing in the expeditionary force that was sent into Mexico. And before that, peacetime service and training beyond memory.

Tonight, seeing the faces of the young and the old who have, through the years, been privileged to serve with Companies K and M and Battery C, it all comes together in one piece, the pride of men in belonging to a good outfit. When the chips were really down, these men of our community had what it takes. That makes for good morale and good citizenship, in peace as well as in war. We are proud of the example which you have set because it has kept the faith. The tradition which your fathers have handed down to you, the new veterans, has gained in strength and vitality. It will go on to inspire the living of our democratic way by those who will follow us.

We do not meet here tonight to extol the glories of war. We know that it means slaughter, unspeakable suffering and destruction. The greatest single responsibility that must be met by every person who is alive today, is to work unceasingly for a way to eliminate the savagery that is war. We must do this before the techniques of mass murder crush our whole civilization and reduce the few survivors to an existence little better than that of animals wandering in a wilderness of ruins.

War is a tragedy and a paradox. It brings out the best as well as the worst in man. Courage, unselfishness, and the willingness to sacrifice all, if need be, for the sake of others—all these qualities come to the surface. The individual becomes part of a group, working for the group. He no longer feels separate and alone. He is sharing and helping in something that is bigger than himself. Out of this experience comes a new relationship, one that has given a new word to our language. Under the stress of war men become buddies, a spiritual comradeship born of understanding, loyalty, and self-sacrifice.

The word "buddy" has a deep meaning for all men who have gone through hell together, helping each other to see it through. The awful impact of war strips away false pride and mean motives. Men become honest with each other and in their mutual need they develop a courage and devotion that overcome all doubts and fears. Men are challenged to the very depths of their being and they face up to it in the name of their common humanity in a way that surprises themselves. They know that life comes to its best

and fullest expression when it is lived for others as well as for self. Veterans do not speak of this for words can never tell the fine and reverent meaning of this experience. But every veteran holds it high in his heart and treasures it there as something beyond all other understanding.

And when he comes back to the peaceful routine of the old home town, he is vaguely aware that something is missing from the picture. It is swell to see the wife or the girl friend, the folks, the old friends, the familiar places. He makes the rounds and for awhile there is all the joy of reunion. But as he begins to settle down and get back into the ways of civilian life he senses that something is missing from the picture. The veteran walks the streets and he is alone again. The people he sees have personal interests and nothing more. The comradeship he once knew and the morale-building unity of it is gone. Sometimes he wishes he were back with the old outfit again.

After all, isn't that part of the reason why we are here tonight? On the surface, we call it a "welcome-home" banquet. We want to express our admiration and our gratitude to the men who have just come back from the grim experience of war. The community wants to make them feel at home again, and to help them to find their place in civilian life. There are many urgent and difficult problems facing a returning veteran which the community as a whole must help to solve. Jobs and homes and education and rehabilitation, these and many other problems must be met and solved. I believe that the municipalities, the States, and the Nation are more thoroughly conscious of this responsibility than at any time in our history. On the international front, we are determined to work for a world system of law and order that will eliminate war. By the same token, on the domestic front, we must work to help the veterans whose sacrifices have humbly taught us this great and imperative need.

That is part of the reason why we have gathered here tonight. But there is a deeper meaning behind it. The old soldiers of greater Lawrence are extending the hand of human fellowship to our returning GI's. You have served us; now we must serve you, and in that interchange discover the basis for a continuing comradeship. We have adjustments to make as well as you. The war just ended was not merely a struggle between rival groups of nations. It marked a revolution in the affairs of men. An old order is passing, while the new has yet to be born. All of us stand at the crossroads of change. We must preserve the heritage of freedom which is our birthright, yet, consistent with that faith, we must make economic and social adaptations which will make our society function in the realities of the present. Fortunately, our democracy is not a fixed and rigid thing, resisting the needs of evolution and progress. It is a faith which grows and develops with life itself. It does not begin in Washington and spread down to us. Rather, it begins in the mind and heart and actions of each individual citizen. Its first test of performance is in the individual's relation to his community.

Ours is greater Lawrence. Here and not elsewhere is our new outfit. The racial and religious tolerance, the working together for the sake of the team, courage, intelligence, devotion, and sacrifice, all these were developed by military service. They are needed now, more than ever, in the citizenship of our community. Our duty is to carry over to the tasks of peace, the inspiring comradeship that we know in war. There are some civilians who have never awakened to this need. We must show them by our example. With this spirit we will fight and overcome any problem that may challenge us.

The enforced discipline of war must be replaced by the self-discipline of peace. Tonight we welcome you back to the free and responsible company of American community life. Through the fellowship of the veterans of all wars, who have learned the imperative need of cooperation in building a better and finer way of life, we ask you to join ranks with us. We need each other, to bind up the Nation's wounds, to clear away the road blocks of misunderstanding, to venture into the unknown future and conquer it in the name of peace and progress for all.

Tonight, with your help, we start out on the most important mission of all. With the experience and the firm faith you bring to this task we shall not fail. Welcome home, veterans of World War II, welcome home to the new America which we shall build by working together.

Who's Kiddin' Who?

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am in receipt of very graphic illustrations showing the distress of our servicemen in the various theaters of war. They are thoroughly disgusted and disheartened. Their morale is low because somebody at home apparently has not kept faith, and they are asking in the letters which I receive from them, "Who is kiddin' who?"

I wish I were able to insert in the RECORD for the reading of everyone the graphic illustrations that have been sent me. One in particular deals with five subjects, from which I quote:

1. CLOSE CALCULATIONS

January 3. "In the interest of accuracy and in order not to arouse hopes that cannot be fulfilled we are making our calculations as closely as we can." (Secretary of War Patterson.)

2. ENLISTMENTS

October: Army announces recruiting drive.

December: Army announces recruiting drive a success—original goal already two-thirds met—goal trebled.

January: Army announces return of overseas vets cut by almost two-thirds—enlistment drive a failure.

3. 2-YEAR MEN

September 20: "By mid-winter all men with 2-years' service become eligible for release." (Chief of Staff.

"Mid-winter" changed to "late winter."

"Late winter" defined as March 20.

January 3: "I am unaware" of any plan calling for the release of men with 2-years service by March 20, 1946. (Secretary of War.)

4. SHIPPING LIMITS DISCHARGES

January 3: Shipping is the "limiting factor" in demobilization. (Secretary of War.)

January 5: Return of men from overseas to be cut from rate of 800,000 to 300,000 monthly—in spite of excess shipping. (Army Chief of Information.)

5. DELAY FOR ELIGIBLES

September: No eligible enlisted personnel to be retained in service because of military necessity. (War Department.)

January: Overseas eligibles to be retained as much as 3 months. (Army Chief of Information.)

Who's kiddin' who? It wasn't made to fit.

Yours,

_____.

P. S.—Send it to our Congressmen—maybe they can make it fit.

Mr. Speaker, the least we can do as Members of Congress is to require the military authorities to keep faith with these boys. We who have had boys in the service understand fully the language of these men. It does not do for the Secretary of War to disclaim knowledge of the promises that were made the boys and their wives and parents. It will not suffice to hear the Secretary of War tell the boys in the Pacific that he was not familiar with the manner in which the point demobilization formula was worked and is being handled by those in charge at Washington. His alleged surprise will not satisfy any of us.

Accompanying some of the letters from the servicemen was the following clipping from the Daily Pacifican of January 6, 1946:

MR. TRUMAN, BRIEF US NOW

The late Al Smith campaigned, "Let's look at the record."

Let's look at the demobilization record as portrayed in the news dispatches from Washington to the Daily Pacifican:

September 22: Point scores announced: October, 70; November, 60, and after that all 2-year men.

September 25: No 36-point enlisted men, or 48-point officers, will be sent overseas.

October 20: Army must reduce point score to keep pace with demobilization.

October 21: War Department reaffirms release target dates.

October 24: Homeward sailings lag behind goal.

November 20: Pacific-based returnees promised relief as transport surplus looms for January.

December 5, 9, 12, 15: Bright prospects on shipping as backlog breaks.

December 21: 50 points good December 31.

December 28: All troops not needed to go home by March 1, says Secretary of War Patterson.

January 3: 68,000 more berths assigned to AFWESPAC.

January 5: Empty berths sail to United States for lack of eligible men.

January 5: War Secretary Patterson is reported "completely surprised" by certain facts on the demobilization set-up.

January 5: Army announces demobilization will be slowed down and the return rate of some troops delayed.

The facts read like a "war of nerves" drive. Yet, throughout all the confusion one fact stood out: policymakers were promising that men above occupation needs would be sent home quickly.

But what about the two new situations?

(1) The Secretary of War didn't know the way the point system is being operated. Does this show lack of liaison and understanding of our Washington leaders on the problem? This, with all the public clamor.

(2) Rate of remobilization is slowed down because of the difficulty of getting overseas replacements. What has happened to the thousands upon thousands of red appliers and selective-service inductees? Have not replacements been trained since VJ-day?

We ask our Commander in Chief, Harry S. Truman, to give us the facts. We were briefed on our mission during days of combat. Let us be briefed now.

SERVICEMEN PLACE BLAME WHERE IT BELONGS

Mr. Speaker, I have every reason to believe that the mail which is pouring into my office daily from the men being held in the service, and particularly from those being held overseas, know who is to blame for the failure in the demobilization scheme. The servicemen are placing the blame where it belongs. They are writing their Congressmen and

telling the story. It is in this way that we are getting the unvarnished truth.

For example, the following is a copy of a letter which I recently received from a young man who is a gradute of arts and science in one university and of law in another university. I quote:

THEY SAY THE ARMY CAN NO LONGER BE TRUSTED

JANUARY 8, 1946.

DEAR CONGRESSMAN: The Army has made us one promise after another which has been broken. Ships are leaving here with empty berths—1,800 of them on 2 ships during the past 2 days. Thousands of officers and men sit around idle. The biggest waste in the Army is the waste of time. There were 20,000 soldiers at the GI rally last night and they weren't all enlisted men. Many of them were officers. I am a pre-Pearl Harbor father with two children and, like everyone else out here, I want to know when I will go home and I want it to be soon.

We are thoroughly convinced that the Army can no longer be trusted. If men are to be demobilized at the fastest rate commensurate with available shipping and occupational needs, some action by Congress is necessary. My buddies and I hold you and other Members of the House of Representatives and Senate responsible for our predicament. You put us in the Army and you can get us out. Either demobilize us or, when given the next shot at the ballot box, we will demobilize you.

Yours truly,

_____.

Here is a letter from another well-educated officer, also a graduate from a very reputable law school. I quote:

MANILA, P. I., *January 11, 1946.*

DEAR CONGRESSMAN: I am writing you about the program called the Army demobilization program, specifically as it applies to the Pacific theater. The program here has been one continuous story of generalities, distortions, and broken promises. The last straw was when we found out that the Secretary of War did not even know that no points had been accumulating since September 2, 1945, and seemed entirely unaware of General Marshall's statement to Congress that by March 20 all men with 2 years' service would become eligible. Occupation quotas have been set, still the Army announces a slow-down of the demobilization with three or four times as many men here as they said they would need according to their own estimate. In the meantime thousands of officers and men sit around idle. The biggest waste in the Army is the waste of time! The situation applies to officers as well as enlisted men.

We have been patient and we have waited. Now 5 months after the war is over we want to know how much more of our lives the War Department wants? Is 47 months and 30 months overseas enough? Is the real reason for this the desire of a great group of high-ranking officers to keep their rank and command? Was the promise of the release of 2-year men meant merely to placate Congress while the real plans were formed underneath the scenes? Do occupation quotas mean anything? Why are ships leaving here empty? Does eligibility under the point and length of service system mean a priority for discharges or is it a system devised to keep me in the Army?

We are now convinced that our only chance for redress is with Congress! We are thoroughly convinced that the Army can no longer be trusted. My buddies and I hold you and other Members of the House of Representatives and Senate responsible for our predicament. You put us in the Army and you can get us out. Either demobilize us or, when given the next shot at the ballot box, we will demobilize you.

Yours truly,

_____,

It will be observed that these men say the Army can no longer be trusted. They are looking to Congress for relief. They blame Congress for putting them into the service, even if some of us were not here when war was declared, and they are holding Congress responsible for their discharge since they have lost faith and confidence in the Army and in our military organizations. The majority party in control of Congress and all of the committees of Congress, and especially the committees dealing with military and naval affairs, will do well to consider and weigh the statements of these intelligent young men.

MORE TROOPS IN MANILA THAN ARE NEEDED IN THE ENTIRE SOUTHWEST PACIFIC

The following is a letter which I received from a very well-educated man serving in the Army in the Pacific theater. I quote:

JANUARY 10, 1946.

DEAR CONGRESSMAN: A mere glance at the Army's plan to slow down demobilization should be sufficient to convince one of the crimes against humanity being unfolded here in the Pacific. The Army has failed completely and utterly to reduce its personnel to a figure consistent with the needs for occupation forces. There are far more troops in Manila and the immediate surrounding area than are needed for the entire Southwest Pacific.

This same condition exists throughout the entire Pacific theater, with the exception of Japan. It is therefore quite apparent that definite and drastic steps need to be taken (and we mean just that) to force the Army to release excess personnel. A lot of "stars" will have to fall, too. The more the better.

We don't want the promise of a reduction of personnel next September or later. Instead we feel that a discharge rate of 700,000 per month is justifiable. This pace should be continued until the actual numbers needed for occupation are all that remain.

Any efforts you extend along this line will be greatly appreciated by each and every fellow in the Army. Too, you can be assured, all of us from northeastern Oklahoma, plus our families and friends shall remember it and return the favor when the opportunity arises.

Respectfully yours,

_____.

The same malcontent and disappointment is expressed by the boys in the European theater, as shown by the following letter which I have just received:

EUROPE, *January 1946.*

HONORABLE SIR: We, those thousands of American exiles under military bondage, raise our voices to be heard through all the din and the clamor of the many mercenaries at work on the home front.

We are those same men who were invited here that the blood of war might not be spilled on American soil.

We are those same men who, after serving two, three, or more years through this war, are now left stranded—to wonder if anyone particularly cares how much previous time we are to sacrifice or whether it is believed that we are gullible enough to accept the various phases of the War Department's demobilization policies as being anything but a carefully timed plan of excuses to delay the whole program.

Are the lawmakers of our country no longer concerned with what is, or what is not just—to those who must build the future? And if they are concerned, do they consider it more just to let us who have already given so much, continue giving because it is in the selfish interest of others, or more convenient to the strategy of military politics? Why, we ask, are veterans not rotated with those who have not yet served?

Sincerely,

_____.

Mr. Speaker, similar letters are pouring into my office from our servicemen stationed in all parts of the world—in Manila, Korea, Guam, Luzon, Yokohama, Germany, and many other points in both the Pacific and European theaters. The first, second, and fourth letters from which I have quoted above are from commissioned officers, and the third letter is from a high-ranking noncommissioned officer. These men are men of the highest integrity, whose veracity cannot be questioned. Their intelligence is sufficient to enable them to know whereof they speak, and they are not prejudiced by their mistreatment and apparent unnecessary delays in demobilization. But, they are Americans of high standing, the boys whose voices will be heard upon their return. During the war they served well and nobly. Now, they are telling their Congressmen where the fault lies and who is to blame. They are still Americans and are following the American instinct to preserve America and prevent the inauguration of a militaristic regime.

Franklin D. Roosevelt Lives On

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address which I delivered before the Junior Board of the YMHA, Lawrence, Mass., at the Hebrew Community Center, Sunday, January 27, 1946:

He was the first global leader in history, a symbol of hope for the common man at home and abroad, a foe of privilege, a champion of the people. The hardest job in the world was his but he thrived on responsibility, turning every increase in power toward the welfare of humanity. We remember his precedent-shattering leadership, his energy and vision, his achievements in bringing economic, political, and financial power under democratic controls, his gallant fight to save the spiritual values of our civilization, his determination to outlaw aggression and bring all men together in the family of nations. We remember the long cigarette holder tilted upward at a rakish angle, the laughing eyes, the gay chuckle, and the fireside chats when he visited us in our homes. We came to know him and love him and with cheerful affection we called him F. D. R.

In many ways he was more than one man. He became the spokesman of a world-in-change, giving voice to all of our hopes and aspirations. Through storm and stress he led his people and the world by the hand out of the ruins of yesterday, through the dark night of depression and war, to the first faint glimpse of the brighter, fairer world of tomorrow. By ability and temperament he was destined to meet and master crises. But the greatness of his heart, reaching out to all of suffering humanity and taking all of its troubles to its care, was stronger than the mortal frame of man could bear. In

his thirteenth year as President of these United States, in the midst of his labors, he was called to his reward, leaving the inspiration of his memory to guide us for the rest of our journey.

Franklin D. Roosevelt is a man for the ages. History says that we must wait for the perspective of time to establish a great man's worth. With lesser men that is true. But we, living through the greatest crisis in the thousands of years that mark man's time on earth, one that has brought us to the dawn of the Atomic Age, know that F. D. R. does not have to wait. Before our eyes we have seen the revolution of his accomplishments, that history can only add to his brilliant record of public service. As time goes by, the world will catch up with the genius of his insight. Generations as yet unborn will be nourished by his example.

Of distinguished Dutch ancestry, Franklin Roosevelt was born to a life of comfortable ease. Educated at Groton and Harvard, he studied for the law and practiced his profession before engaging upon a public career. He was in the national eye long before he entered the White House. He had been a New York State senator. There as a young man he attracted attention by his single-handed attack upon, and his defeat of, the powerful political organizations of that time. He served as Assistant Secretary of the Navy in World War I and he was the unsuccessful candidate for Vice President when James M. Cox was defeated for the Presidency. Then came the tragic day in 1921 when he was stricken with infantile paralysis while swimming at the family home at Campobello, New Brunswick. He had plunged into the cold surf with his usual zest. A few hours later he had to be carried away on a stretcher. For months his life hung in the balance. And when he recovered it was only to find that he would never walk again as other men walked. A bedridden life, or one doomed to a wheel chair, was a double blow to a man of Roosevelt's vitality. He was not the type to accept defeat and watch the life he loved go by his window. There, through the terrible ordeal he endured, were forged the qualities of mind and spirit that made him utterly fearless.

One day the veteran newspaperman and devoted friend, Louie Howe, who saw his lifelong faith justified when Franklin Roosevelt finally entered the White House, came into the invalid's room. Roosevelt lay in his bed that day with his face twisted in some concentration of thought or effort. Great beads of perspiration rolled from his wrinkled forehead.

"Boss, what is it?" Louie called, as he hurried to the bedside.

The man fighting on that bed of pain, took a deep breath and opened his eyes. He looked up at Louie and a beaming smile came through the sweat on his face, like sunshine through the rain. By the power of will he made reluctant nerve centers respond.

"Louie," he said, "you don't know how much fun it is just to try to move your big toe and to do it."

Small wonder that Louie Howe had such faith in the dauntless courage of this man. Others would come to know it. Gamely, Roosevelt fought the disease and after tiresome, discouraging months of treatment, was able to walk with steel braces, crutches and finally with the aid of canes. And yet, such was the personality of the man, he turned our attention away from his afflictions. He looked, he acted like a healthy, confident man. But the newspapermen who were close to him knew, and it became an unwritten law with them, never to refer to this. The agony which marked his efforts to move about, never showed in his face. It was necessary for him to sit on the floor of an automobile, place his hands on the edge of the floor behind him and while attendants lifted his legs, he would raise himself by the strength of his arms. Once in the seat, he would immediately smile and start kidding the reporters. Before this greatness of spirit, who could but admire the man.

In spite of this handicap, Franklin Roosevelt engaged in more grueling campaigns, and traveled more miles—300,000 of them—than any President in our history. He appeared at public functions supported by a military aide or leaning upon the arm of a son. Ramps were used to assist him onto planes and railroad trains and in parts of the Executive Mansion. He permitted his birthday to be used for celebration throughout the country to raise funds for sufferers from the disease. Because he found the waters at Warm Springs, Ga., helpful, Mr. Roosevelt established the Warm Springs Foundation so that others suffering from the same affliction, but without the money to go there, might enjoy the benefits.

Once he told a close friend he thought his crippled condition was an asset. He explained that while others might be tempted to get up now and then to look out of the window or stretch their legs, he was riveted to his desk and thus was able to concentrate on his work.

After two terms as Governor of New York, he came to the White House in the midst of a strangling depression, proclaiming that there must be a "new deal" for the "forgotten man." His predecessor presented him with 12,000,000 unemployed, prices depressed to new low levels, a shrunken foreign trade and thousands of bank failures. The whole Nation had the jitters and if any man was in a tough spot, it was Franklin Delano Roosevelt. With characteristic fearlessness he told the Nation: "The only thing we have to fear is fear itself." Then he tackled the mess. One of his first acts was to proclaim a national banking holiday that closed every financial depository in the country for 10 days while readjustments were made. He summoned Congress into special session to implement by law a national recovery program that broke all precedents. One hundred days later every one of his requests had been granted and he held powers never before entrusted to a President in peacetime. The Nation rallied to his confidence and drew badly needed strength from it.

The Constitution was amended to repeal national prohibition. Social-security benefits were provided by legislation. A wage-hour law was enacted for labor. A Securities and Exchange Commission was set up to curb gambling with the Nation's economic welfare. A good-neighbor policy was established for the Western Hemisphere. The Civilian Conservation Corps, the National Youth Administration, the Works Progress Administration, these and many other alphabetical agencies, became familiar household terms. Mr. Roosevelt swiftly became known as the country's foremost practical liberal and a leader of a social revolution.

It was to hold aloft the New Deal banner for a second term that the President was unanimously renominated by the Democrats in 1936 and overwhelmingly defeated his opponent in the election. At this time he said: "America will not forget these recent years. We feared fear. Today we have conquered fear. But I cannot, with candor, tell you that all is well with the world." He raised his voice against economic despotism which he likened to the tyranny of political autocracy that precipitated the American Revolution. "Out of this modern civilization," he continued, "economic royalists carved new dynasties. They created a new despotism and wrapped it in the robes of legal sanction. The collapse of 1929 showed up the despotism for what it really was. The election of 1932 was the people's mandate to end it. Under that mandate it is being ended."

In his first two terms, Mr. Roosevelt was concerned primarily with domestic problems. The Agricultural Adjustment Administration was designed to help farmers through crop-control measures and subsidies. The TVA—Tennessee Valley Authority project of flood control, navigation, and electric power distribution—was the striking example of the President's rate yardstick for public services. In 8 years alone, Mr. Roosevelt pushed through Congress expenditures of $850,000,000 for vast construction such as Bonneville and Grand Coulee power and irrigation plants on the Columbia River. By the end of his second term, these public enterprises were supplying more than one-twentieth of the country's electricity.

Though up to his neck in the work of national economic recovery, Mr. Roosevelt, with his world view, glimpsed war on the horizon. As early as 1937, in a Chicago speech, he demanded the quarantine of aggressor nations. He repeatedly advised America to prepare for any emergency. Europe went to war in September 1939, and Mr. Roosevelt watched the Axis run roughshod over country after country. The President took realistic steps.

He and his supporters in Congress remodeled the Neutrality Act to allow cash-and-carry purchases of arms by belligerents * * * a step favoring the Allies. After the Nazis swarmed through Holland and Belgium in 1940, Mr. Roosevelt set up a billion dollar emergency arms program and a National Defense Advisory Commission. He laid down the principle that the preservation of Britain and the British Navy were necessary to defend American safety, and in September 1940 traded 50 old destroyers to Britain for naval and air base sites in the western Atlantic. The next month, selective service became law. A new army was drafted. Naval and air programs were accelerated, industry put on a wartime basis, and America became the "arsenal of democracy."

Engrossed in questions of defense and foreign policy, Mr. Roosevelt refrained from stumping for a third term until the week before election, but he defeated his opponent by 4,000,000 ballots.

In March 1941 the dollar sign was wiped from munitions for the Allies in a multibillion lend-lease program. And on May 27, 1941, a few months after his third term began, the Chief Executive declared an unlimited national emergency.

There were months of great debate, both in and out of Congress. The well-organized isolationists, closing their eyes to international realities, fought the President every step of the way. Almost alone, the President undertook the task of educating the American people to the fact that the insularity of the past was gone. Oceans were no barrier to airplanes, and radio, and propaganda, and more terrible weapons defying distance, which were already in the experimental stage. We did not live in an ivory tower where we could choose to ignore the rest of the world. We were a part of that world and we would have to face the dangers and the responsibilities that went with it. Because of the great faith which Americans had in Franklin Roosevelt, they listened and learned and applied pressure to Congress to support his policies. Thank God that we had such a realistic leader. With someone else, we might have been doomed.

But suddenly Japan, borrowing a technique of surprise and treachery from her Axis partners in crime, struck Pearl Harbor at the very moment when her mouthpieces in Washington were deceitfully talking conciliation with the Secretary of State, Cordell Hull.

It was a day, Mr. Roosevelt declared, "which will live in infamy."

Our enemies thought they had Mr. Roosevelt where they wanted him but they did not know Mr. Roosevelt. Thirty days after Pearl Harbor, Congress gasped when the Chief Executive proposed a 2-year production of 185,000 planes, 120,000 tanks, 55,000 anti-aircraft guns, and 18,000,000 tons of shipping.

Fantastic, impossible, many declared, but Mr. Roosevelt knew no such words. It was typical of the man. He had vision, but the practical capacity to make it become fact. Stalin called him "the great organizer." Production goals, stupendous as they seemed, subsequently were expanded, again and again; America amazed herself and the world. The Allies achieved a crushing superiority of arms over their foes.

Taking time out from these great efforts, Mr. Roosevelt proclaimed to Congress his famed "four freedoms"—freedom of speech and religion, freedom from want and fear—as fundamental to a lasting peace. In part, they formed the basis of our peace aims and were incorporated into the Atlantic Charter, drafted by the President and Prime Minister Churchill in their first meeting aboard warships anchored off the Newfoundland coast.

In addition to his many talents, the President was an able strategist. Churchill gave him credit for being the "author of this mighty undertaking" in north Africa. The Allies swept the enemy from the African continent, out of Sicily, and finally, in Italy, carried warfare to Europe itself. The President's activity was prodigious. He flew to Casablanca for another consultation. For the first time during the war, an American Chief Executive had gone to foreign soil. Not since the days of Abraham Lincoln, who did not have to leave the District of Columbia, had a President been in a combat zone. But this was only one of his many travels, observing and coordinating the strategy of global warfare. He journeyed to Quebec, to Cairo, to Teheran, and Hawaii.

In 1944 he was again overwhelmingly elected on a platform of winning the war and establishing the peace. But the strain was beginning to tell. By this time we had 7,000,000 men overseas. We had landed in Normandy and driven the enemy back into his own country. In the Pacific the Japs were defeated in Burma, flushed from one island stronghold after another, his navy worn down by attrition and his homeland subjected to the mounting fury of B–29 bombers.

Then came the conference with Stalin and Churchill at Yalta. Those of us who saw pictures of this meeting in the newsreels became uneasy. The President was thin and drawn, his cheeks hollow, and he wore a shawl around his shoulders. When he came back to report to Congress the anxiety of those who saw him deepened. Then he left for Warm Springs. Already he was preparing for the great peace, whose foundations would be built at the forthcoming San Francisco Conference of the United Nations. His armies were at the gates of Berlin and Tokyo. Victory was in sight. And the next task was the job of organizing the peoples of the world into a family of nations—with security and opportunity for all. On the afternoon of April 12, 1945, he was working on his papers when he looked up and said: "I have a terrific headache." In a few minutes he had lost consciousness. At 3:35 p. m. he died, of a massive cerebral hemorrhage.

The world was stunned. Common people in every country wept openly when they heard that their friend was gone. The most striking thing about his death was that millions took it as a personal loss. One of his "Young Guard" Democrats, Representative LYNDON JOHNSON, of Texas, said: "There are plenty of us left here to try to block and run interference, as he had taught us, but the man who carried the ball is gone—gone. He was just like a daddy to me always; he always talked to me just that way. He was the one person I ever knew, anywhere, who was never afraid. God, how he could take it for us all."

Mrs. Eleanor Roosevelt said, when informed of the death of the President:

"I am more sorry for the people of the country and the world than I am for us."

The First Lady received Vice President Truman in her second floor sitting room which adjoins the President's bedroom in the White House.

She told Truman "the President has just passed away."

"What can I do?" Truman said.

"Tell us what we can do," Mrs. Roosevelt replied. "Is there any way we can help you?"

There was the valiant spirit working through those close to him, reaching out to help all people. The true mark of greatness is the unselfish devotion which it inspires in others.

We meet to honor the personality of Franklin D. Roosevelt. We shall perpetuate it, as he would want us to, not in backward-looking requiem but in the spirit that never dies. We shall carry into our private lives and our public duties the gallant and generous love of mankind which was his.

And as we journey up the staircase of time, that great heart shall never be far away. In times of doubt and stress we shall hear his friendly voice saying: "Carry on. There is nothing to fear but fear itself."

Franklin D. Roosevelt showed the way. With his spirit still with us—we shall follow through, as better men and better Americans to finish the job he so nobly began. F. D. R. lives on—in us.

In the name of the junior board of the YMHA this plaque is dedicated to the continuing inspiration which he gives to our American way of life.

A Tax Exemption for Doctors

REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mrs. LUCE. Mr. Speaker, today we hear a great deal about the shortage of doctors and surgeons and dentists. Accusations have been made that the War and Navy Departments are hoarding these trained professionals to the detriment of civilian public health. Yet it is obvious that even in many service hospitals there are barely enough doctors and nurses to care adequately for those who have been physically or mentally wounded and who are certainly entitled to every bit of the finest curative talent available.

Proposals are also being made for various kinds of governmental control of the medical profession—socialized medicine as it is called—by which all doctors receive a stipend from government and would be empowered in some instances to prescribe for and operate upon citizens against the will of the patient.

None of these proposals is a logical development of the American system of recognizing, promoting, and rewarding individual choice and achievement. In our earlier history pioneer medicos were rewarded for their frequently ill-paid devotion by a very special place in the community, high respect from their fellow citizens and patients, and payment in lovingly prepared delicacies where cash was scarce. Those times have largely vanished. To become a doctor, a surgeon, a dentist now requires some 8 or 9 years of unremunerative and expensive schooling. Until he has completed all this, usually by the time he is 29 or 30, the doctor cannot even begin to earn his own bread and salt, much less begin to repay himself for the costs of learning his profession.

In addition, as every informed person knows, all reputable medical practitioners give a considerable portion of their time to treatment of patients who are unable to pay for the services in any way—except by gratitude. Surveys as to the amount of these unpaid services indicate that the percentages ranges from around 30 to 45 of all treatments given. This is a direct contribution on the part of the physician, surgeon, or dentist to the public welfare. In addition are the hours spent without pay in public research work, on hospital boards, and boards of charitable organizations. All this must be chalked up to professional devotion since it results in no return and often requires the practitioner to lengthen his working day to 15 or 16 hours or more in times of epidemic. There are no limits possible on a doctor's working day.

Under all these circumstances it seems obvious that one of the ways to restore the medical profession to its privileged place in the community and to attract the necessary number of young men and women into its ranks for future care of public health is to recognize the time spent in strictly public service by crediting such time as a deduction on the income which physicians, surgeons, and dentists actually receive from patients who can pay for service rendered. That is the reason for my introducing a measure to grant such income-tax exemptions to members of the medical and dental professions.

Democrats Continue to Hold Lead in Cities

REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. BIEMILLER. Mr. Speaker, those who have lately been giving the Eightieth Congress to the Republicans may well pause to observe the results of the recent Gallup poll which sampled the sentiment of voters in the large metropolitan centers.

The survey showed that if an election were held today over two-thirds of the voters in the 13 largest cities in the country would support Democratic candidates. These cities accounted for more than one-fifth of all the major party votes cast in 1940. The preponderance of Democratic voters was even greater than that registered in the 1940 and 1944 elections.

Another sampling of voter opinion in cities of from 100,000 to 500,000 population showed almost the same results.

Here is decisive evidence that the people—and especially organized labor—recognize the gains that have been made

under the Democratic administrations since 1933. Here is proof that they are determined not to relinquish these gains by switching their allegiance to a party that longs for a return to the good old days of special privilege for the few at the expense of the public as a whole.

If these sagacious voters want to see something that will provide a vindication of their good sense—if they want to witness an example of what would happen under a Republican Congress—I recommend that they pay particularly close attention to the proceedings here in the House during the next few days.

Within a day or two we shall be considering the labor legislation that has been reported out by the Labor Committee. There have been indications that the Republicans will undertake a concerted drive to change this legislation by amending it so that it can be used as a weapon against labor.

An informed electorate is the best guarantee against the usurpation of power by those who would crush the back of labor and return this country to industrial chaos that prevailed under the last Republican regime. It is gratifying, therefore, to note that the labor districts are still solidly Democratic.

Let's Hear Cabinet Members in Our Own Forum

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include two editorials from the Baltimore Sun. I only ask consideration of these by Members of Congress:

[From the Baltimore Sun of January 20, 1946]

MORE EVIDENCE OF THE NEED FOR MR. KEFAUVER'S QUESTION PERIOD

On Tuesday General Eisenhower appeared before a large audience in the Library of Congress and made a speech. It was a good speech and on a gravely urgent subject. In a word, the general, as Chief of Staff, was telling Americans that if they want to keep conquered nations down, as all Americans do, they will have to have an army to do it with.

What audience did the general choose to hear this speech? Oh, a Washington audience, mostly men in the middle or later years, bright men by their looks, fairly well off, intelligently interested in the subject matter. Any other thing to remark about the audience? Well, they did happen to be Members of the Congress of the United States.

But if this was the Congress of the United States listening to a discussion of high state policy by the Chief of Staff on a question of supreme national import, why did it all take place in the Library of Congress? Why was the meeting procedurally and technically informal? Why were there no questions from the floor? Why was this historic confrontation of the military and the civilian legislative authority so carefully disguised as just such a public lecture as might have taken place at the grange hall in any rural village of the Republic?

If you want a really comprehensive answer to that question, delivered with obvious though controlled passion, and with a wealth of historical background and constitutional perspective, talk to the Honorable ESTES KEFAUVER, Representative in Congress for the Third Congressional District of Tennessee. For Mr. KEFAUVER is in this, as in several previous Congresses, sponsor of a resolution which would provide for a "report and question period." And the purpose of this question-period resolution is precisely to allow men like General Eisenhower to appear before the full House of Representatives and give reports on high policy in a wholly formal and official way.

As Mr. KEFAUVER sees this question-period idea, it would permit the House committees to invite any Cabinet member or agency chief to appear before the whole body of the House. Questions would be prepared in writing in advance for the visitor to answer. In this way the whole House membership could hear what the answer was. What is more, the visitor would have to appear but once where, under the present system, he may have to say the same thing before a half dozen different committees without even then reaching the full House membership.

It is true that the Kefauver plan would not cover both House and Senate, as did the Library of Congress meeting Tuesday. There may be kinks of various kinds that will have to be ironed out. But by and large the fact that General Eisenhower, like Messrs. Stimson and Patterson before him, has had to take this extraordinary and informal way of laying his case before the National Legislature argues a certain defect in our constitutional practice. No one has diagnosed this defect better or prescribed for it more ingeniously than Mr. KEFAUVER. It is time his colleagues listened to what he says.

[From the Baltimore Sun of January 21, 1946]

MR. HULL SHOWED THE WAY

President Truman's annual message to Congress this year comes at a time when relations between the White House and the Capitol are less satisfactory than at any time in recent memory.

Congress did little in the 4 months prior to the Christmas adjournment to carry out the recommendations which the President included in a lengthy message last September. Chagrined by the delays, the President went to the microphone in the first week of the new year to urge that citizens write letters to their Congressmen demanding action.

Now the President sends up a new message restating and amplifying his program. The efficiency of our system of government in a period of grave domestic strain depends on the sort of teamwork which marks the consideration of the latest set of recommendations. This matter of teamwork between the executive and legislative arms is as important in its way as the reorganization of Congress, which was discussed in this space last week.

Indeed, there is a close relation between the two subjects. The reorganization of Congress is necessary to promote legislative efficiency just as the reorganization of the executive departments is necessary to bring about administrative efficiency. But governmental efficiency in the larger sense depends upon the harmonious cooperation of the two arms.

Such cooperation has depended in the past more on chance and personalities than on formal procedures. Strong Presidents, like Woodrow Wilson and Franklin D. Roosevelt, have by the sheer force of their leadership and the adroit use of patronage managed to create close ties between the White House and the Capitol. With weaker Presidents in the White House the ties have tended to disappear and Congress and the President have taken divergent courses, with the result that public policy has remained static for considerable periods of time.

Mr. Truman is not the strong President Mr. Roosevelt or Mr. Wilson was. Unless special efforts are made, his course and that of Congress may easily diverge. Such a divergence, with its paralyzing effect on Government, would at this time be a calamity. To prevent it should be a major object of concern on both sides.

Prevention requires compromise. That is to say, Mr. Truman cannot adopt a stiff-necked attitude and insist on his own way on every issue. Nor can Congress override the President at all times. If the energies of the two arms of the Government are to be joined in meeting the emergencies that lie ahead, there must be real give-and-take teamwork. With a run-of-mine President like Mr. Truman this calls for special procedures and organization.

How can teamwork be organized? The key to this question is to be found in the consultative procedure initiated by former Secretary Hull in preparation for the Dumbarton Oaks Conference, at which the preliminary draft of the United Nations Charter was agreed on. In anticipation of that conference Mr. Hull asked for the appointment of a bipartisan subcommittee of the Senate Foreign Relations Committee to assist in working out plans for an international organization. The committee was appointed, and its members were in close touch with the State Department throughout the whole period of the Dumbarton Oaks meeting and also in connection with the San Francisco Conference.

As a result of these consultations congressional advice was continuously available to the State Department and the President, and they were able to shape American policy accordingly. At the same time congressional leaders in the field of foreign affairs were constantly informed as to the developing interchanges with foreign governments, and their attitude toward policy was in no small degree influenced by the knowledge so acquired.

In other words, there was in the management of foreign affairs in this tremendously important enterprise a constant interweaving of executive and legislative influences. The success here at home of the program which has now brought American delegates to the UNO meeting in London is due in great measure to the arrangement which Mr. Hull suggested.

While the Hull procedure was designed to promote a nonpartisan consideration of foreign affairs as well as to secure congressional cooperation, there is no reason why it could not be adapted to the formulation of domestic policy. It would perhaps be too much to expect the cooperation of the minority party in shaping domestic measures, but arrangements could easily be made to set up Democratic congressional committees to consult with the President and his advisers on labor policy, on tax policy, on price controls, on agriculture, and perhaps other important subjects. If the consultations were conducted in the give-and-take spirit which marked the interchanges between Secretary Hull and the senatorial subcommittee on foreign affairs the effect would be beneficial.

By the use of such committees congressional influence would be brought into play in the formulation of administrative policy. A better knowledge of the grave difficulties which the administration is encountering would at the same time be brought home to congressional leaders. Given a desire in both branches of the Government to rise above petty bickering, such arrangements would lead to a greater degree of understanding and teamwork as between the two branches.

This procedure has the advantage of being extra-legal. That is to say, it could be set up without passage of any law. The only necessity would be a decision on the part of the President and the members of the

Cabinet to take this means of promoting better relations with Congress. Or, again, congressional leaders could take the initiative and approach the President with proposals of this kind.

This is not, of course, the only means of strengthening the ties between the executive and legislative arms of the Government. Other proposals of a more formal nature have frequently been suggested. The plan of Representative KEFAUVER of Tennessee to have members of the Cabinet and the heads of independent offices appear before the House and Senate at stated times to submit to questioning is especially noteworthy in this connection. The procedure used by Secretary Hull and the one proposed by Mr. KEFAUVER are not necessarily exclusive. Both might well be used.

The basic requirement is that practical procedures be set up to promote the cooperation which has been left to chance and personalities in the past. Any arrangement which provides Congress with continuous information as to what the executive departments are doing and thinking and which also provides the executive departments and the President with continuous congressional advice will contribute to this end.

MacArthur Winning Peace in Japan

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, Walter W. Van Kirk is secretary of the department of international justice and good will of the Federal Council of Churches, and recently he had the privilege, with others, to visit Japan. In the Christian Century of January 23, 1946, there appears a most interesting article by him on the situation in Japan. He pays a high compliment to General MacArthur. I am certain this article is of interest to all members. I include the article, as follows:

WINNING THE PEACE IN JAPAN

(By Walter W. Van Kirk)

The political, economic, and educational reforms initiated in Japan by General MacArthur indicate that the peace may be won in that country. This is the unanimous view of the Christian deputation that visited Japan.

Promptly upon our arrival in Tokyo we were invited by General MacArthur to a luncheon conference in the American Embassy. In the course of this 3-hour interview we were given a broad outline of the occupation policy which the Allied commander believed essential to the establishment of a free and democratic Japan. As far as MacArthur is concerned freedom for the Japanese people is more than a political shibboleth. "The war was fought," he said, "to make Japan free and I am determined to give these people their freedom." The issue, we were told, was not one of a soft peace or a hard peace, but a just peace.

"The Japanese people," MacArthur said to us, "were the only warlike people in Asia. If now these people can be given their freedom they will not again choose war. People who are free are not warlike. Wars are made by leaders. Wars do not come up out of the minds of free people. If Japan can now be led into the ways of freedom there should be peace in the Pacific for a thousand years."

MAC ARTHUR A STATESMAN

I am not one of those who believe that freedom and its concomitant blessings can be fully brought to a conquered people by an army of occupation. Freedom and democracy are the byproducts of an inner compulsion, not of externally applied pressure. But it is a matter of the greatest significance to the peace of the Pacific that in General MacArthur the Japanese people have found a friend who possesses rare gifts of statesmanship.

Accordingly, our deputation felt that we were witnessing, while in Japan, the beginning stages of one of the most remarkable reform movements in history. We saw an army of occupation everywhere hailed as an army of deliverance. This demonstration of confidence in General MacArthur and his associates is explained by the fact that the Japanese masses are entirely convinced that the present policy of the occupation authorities is designed to create a new and better Japan.

General MacArthur has scrapped the Japanese sword. With a rare understanding of oriental psychology he has pulled the props from under the military. The most unpopular people in Japan today are the war lords and their jingoistic compatriots. I am confident that if the prosecution of the Japanese militarists were left to the people whom they deceived the job would be well done. General MacArthur has dealt sternly with the notorious "thought" police. For the first time since the outbreak of the Manchurian affair the Japanese people are free to think and to express their convictions without fear of being manhandled and thrown into prison. They know that if their own military masters had won the war this freedom would have been denied them.

CHANGES IN CONSTITUTION

General MacArthur had no sooner been installed in Tokyo than he began pressing for changes in the imperial constitution. Certain of the desired changes have already been approved by the Diet. The primary purpose is the democratization of Japanese society, and the substitution of freedom for regimentation. The new constitution will guarantee freedom of speech, press, religion, and education. The sovereignty of the Emperor will be restricted and the sovereignty of the people will be expanded. The right of labor to bargain will be recognized. The existing peers law will be revised and the arbitrary legislative power once possessed by the House of Peers will be no more. There was such a favorable public response to these suggested changes in the constitution that a number of princes forthwith renounced all privileged status and declared that hereafter they would regard themselves as ordinary subjects. The most formidable obstacle to the revision of the constitution was removed when Emperor Hirohito in his New Year rescript told his people that emperors of Japan are not divine and that the Japanese are neither superior to other races nor destined to rule the world.

In the new political structure there will be litle if any opportunity for the Japanese jingoists to influence the shape of things. In one of his most recent directives, General MacArthur has ordered the Japanese Government to remove from public office and to ban from the coming general election all active exponents of military nationalism including officers of the army and navy, "influential" members of Japanese nationalist or secret patriotic societies, and all officers, directors, and local heads of the Imperial Rule Assistance Association and the Imperial Rule Political Society. These blatant protagonists of military aggression are slapped down in a most thoroughgoing manner. Slapped down, too, are the members of controling war boards, the governors and administrative council members of conquered territories, and "any person who has denounced or contributed to the seizure of opponents of the military regime."

FASCIST ORGANIZATIONS GONE

Gone with the wind are the notorious Black Dragon Society, the Greater East Asia Association, the Great Japan Renovation Society and the Great Japan Asia Alliance. The members of the new Japanese Diet may be political novices but they can at least be counted upon to give more than lip service to the building of a new and democratic Japan. Seldom, if ever, has there been such a thorough liquidation of a once proud and boastful military caste. How far underground these militaristic patrioteers have been or may yet be driven remains to be seen. But they have been driven underground. And while they are underground the Japanese people will be free to fashion a new Japan without fear of the coercive pressures once exercised by the saber rattlers.

On the economic front the feudalistic system of land tenure has fallen under the MacArthur ban. With the issuance of this directive the system of absentee ownership was dealt a body blow. The Japanese Government was given until March 15 to formulate a program of rural reform that would do two things: Facilitate transfer of land from absentee owners to land operators, and provide for the purchase of farm lands by the tenant from nonoperating owners in annual installments and at reasonable rates of interest. It was further specified that the Japanese Government must provide credit for the purchase of landlords' holdings, stabilize farm prices and protect yesterday's tenants against a possible return to a sharecropper status. Moreover, it was requested that plans be drafted for the diffusion of technical and other information of assistance to the farming class and that a program be fostered designed to accelerate the agricultural cooperative movement.

ECONOMIC AIMS

The over-all purpose of this directive was said to be "to destroy the economic bondage that has enslaved the Japanese farmer during centuries of feudal oppression," and to establish a system insuring "that those who till the soil of Japan shall have a more equal opportunity to enjoy the fruits of their labor." MacArthur knows full well that such a sweeping agrarian reform cannot be accomplished overnight. But he is determined to smash the economic power of the absentee landlords who habitually worked hand in glove with the militarists. For the first time the farmers of Japan have been given a vision of economic freedom.

Included also in the economic reforms initiated by General MacArthur is the directive ordering the Japanese Government to impose a 100-percent war-profits tax on all war industries, to levy a graduated tax up to 100 percent on all other corporations and individuals, to impose a graduated capital levy up to 70 percent, and to abolish the military pension system. The end sought by this directive is not so much the blueprinting of a permanent economic structure as the political and financial penalizing of the interests that coined swollen fortunes out of the blood of the Japanese masses. Neither Hirohito nor his imperial household is exempt from the specifications of this directive. It is expected that the recapturing of war profits, together with the capital levy, will yield in excess of 100,000,000,000 yen, thus providing a comparatively sounder financial basis for the protection of a peace economy.

Kindred in purpose is MacArthur's directive aimed at the breaking up of the zaibatsu, the monopolistic industrial combines. This reform was getting well under way while we were in Japan. I have in my files a copy of the Nippon Times with a front-page story on the dissolution of the Mitsui interests and the prospective dissolution of the Mitsubishi, Sumitoma, and Yasuda interests. The zaibatsu provided the Japanese military with

the economic sinews of war. Just as the militarists are deprived of their swords, so the zaibatsu are to be deprived of their banks, their holding companies, and their directorships. The four companies specifically dissolved controlled about 40 percent of the country's economy. Through interlocking stock ownership and intermarriage this small number of industrial czars had a stranglehold upon the Japanese people. That hand has been pried loose from the necks of Nippon's underprivileged.

A FREE PRESS

The one-time power of the zaibatsu over the press and other media of publicity has been smashed. The newspapers of Japan are freer today than for many decades. Clearly seeing the handwriting on the wall, the chairmen of many of the boards of directors of the various industrial and financial combines controlled by the zaibatsu began resigning while we were in Japan. In thus encouraging free enterprise, the occupation authorities are leading the Japanese into the ways of economic freedom.

Of crucial importance to the reform movement in Japan is the directive revamping the educational process. The official in charge of this program is Col. Ken R. Dyke, chief of the civil information and education section of general headquarters. Our deputation talked with Colonel Dyke on several occasions while in Tokyo. "This is one of the most vital directives of the occupation," the colonel told us. "Carrying it out will change the entire way of thinking of the Japanese people." We were advised that the over-all aim of this directive is to prevent the dissemination of "militaristic and ultranationalistic ideology." It prohibits all military education and drill. It provides for instruction on representative government, international peace and the dignity of the individual. A clause in the memorandum prohibits discrimination against any student, educator or official on grounds of race, creed, nationality, political opinion or social position. Textbooks and other instruction material are being examined and portions which promote the militaristic spirit are being deleted. There is to be free and unrestricted discussion of political, civil, and religious subjects. Consideration of the objectives and policies of the occupation is being encouraged.

DISMISSAL OF TEACHERS

Teachers and educational officials were being examined during our stay in Japan. Persons who had been active exponents of militarism and ultranationalism, and those antagonistic to the policies of the occupation, were being removed. Teachers who had been dismissed, suspended, or forced to resign for liberal or antimilitaristic opinions or activities were being reinstated.

Mission schools and other educational institutions sponsored by Christians of other countries are included in the investigations now under way. We talked with the president of one of these institutions who had just been informed that he was to be removed. The reason given was that he had had certain connections with the Navy in his earlier years. Officials of certain other mission schools who are believed to have violated the charter of these institutions for military or quasi-military purposes are also being relieved of their duties.

Subsequent to our leaving Japan, General MacArthur ordered the immediate suspension of all courses in geography, morals, and Japanese history. All textbooks and teachers' manuals in these and related subjects are to be collected and shipped to pulping centers where they will be destroyed and turned into new paper for use in printing new textbooks consistent with the directives on education. The Minister of Education has been instructed to prepare and submit to headquarters plans for the preparation of new texts in the suspended courses. It is hoped that these new texts will be ready to print by the spring of this year.

We held several conferences with Mr. Mayeda, the Education Minister, one a luncheon conference in his official residence. Mr. Mayeda is a Christian and he impressed us as being entirely in accord with the educational policies laid down by General MacArthur. In order to determine who is, or in the future will be, acceptable as instructors or school officials, the Japanese Government has been ordered to set up suitable administrative machinery for the investigation, screening, and certification of all present and prospective teachers and educational administrators.

Here again, as in the case of other directives, the purpose is broadly one of free inquiry as opposed to authoritarian indoctrination. The people of Japan lack understanding of the essential facts pertaining to the democratic process. Years, perhaps decades, will be required before these people can fully develop the intellectual outlook of a free as over against a regimented society. The Allied directives on education mark the beginning of a process that can be made effective only by the Japanese people themselves. That the people are being given the opportunity to do precisely this is one of the outstanding accomplishments of the MacArthur regime.

Altogether, what is happening in Japan today is a historic movement of political, economic, and social reform. We of the American church deputation observed at first hand the beginnings of this revolution by consent.

Streamline the Congress

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. WASIELEWSKI. Mr. Speaker, for as long as I can remember, and probably a long time before, there has been talk of modernizing, streamlining, and reorganizing the Congress of the United States. Congress, however, has made haste slowly in making available to itself a modernly equipped staff and facilities. It has been most generous in supplying all these needs to the executive department and to the judiciary, but has been penurious in taking care of its own needs.

The La Follette-Monroney committee has just completed its hearings and is about to make public a full report on this subject matter. Our people back home are looking to us to give full study and consideration to the suggestions and recommendations made by this committee. Today, during the transition from war to peacetime activity, it is particularly important that we be equipped with a staff of experts who are able to assist in fully appraising all legislation coming before the Congress; in holding down Government expenditures; balancing the Budget; and take immediate steps toward the liquidation of our tremendous national debt. No substantial saving or reduction in Government expenditures can be realized by mere fractional cutting of appropriations. This process has been found unscientific. Such reductions are not sufficient or efficient and can often merely paralyze some worth-while activity.

It is important that the Congress be equipped with competent staffs of experts in order that it might be able to study fully the various proposals for legislation, examine and appraise the functions of the multitudinous agencies of the Government, and decide which shall be eliminated entirely, which shall be relegated back to the States, and which shall be reduced in their scope. Only in this way can we hope to make any substantial or worth-while savings to the Nation, balance the Budget, and wipe out the debt.

As part of my remarks, Mr. Speaker, I wish to incorporate an editorial from the Milwaukee Journal of January 27, 1946, which comments on the preliminary report of the La Follette-Monroney committee:

STREAMLINE THE CONGRESS

The Congress, in the reorganization program that will soon be before it, has an unequaled opportunity to strengthen one of the bases of American democracy.

It is an American prerogative to berate Congress. James Bryce noted decades ago that Americans "are fond of running down Congressmen." "There is nothing new about the current claims that Congress is stupid, long-winded, obstinate, and out of step."

Thoughtful Congressmen have admitted in recent years that there is truth to some of the charges. They acknowledge that Congress is operating with machinery of pre-Civil War days. They confess that the legislative process, formulated for the simple economy of the pioneer Nation, is not adequate to the needs of today's complex government. This has resulted, they point out, in more and more of the policy making of Government being usurped by the President, his administrators, and bureau heads.

The crisis posed by this situation is one that cannot be ignored. Representative government is the heart of the democratic faith. The legislature, which is Congress, is the heart of representative government. Under our system the Congress is supposed to be the voice of the people. If the Congress cannot operate effectively, and as a result the executive powers expand into near dictatorship, how long can democracy continue?

On another page of this section is an article dealing with the reorganization plan offered last week by a subcommittee of the La Follette-Monroney committee, set up to study this problem. When the entire committee has studied the new proposals, enabling bills will be entered in Congress.

The proposed plan is comprehensive. Most of its points are good. A few may not be.

The Journal does not believe that Congressmen should be placed under the Federal pension system. It does not believe that each Congressman needs an $8,000-a-year assistant to handle nonlegislative matters.

The Journal does believe that Congressmen deserve a pay raise. We opposed it during the war when there were wage ceilings on everyone else. Now that this objection is gone, some raise would seem to be in order, although, as we have seen in Wisconsin, a raise in pay does not necessarily mean better qualified legislators.

We endorse wholeheartedly the proposal to cut the 33 standing committee in the Senate to 16 and the 48 in the House to 18. This is probably the crux of the whole streamlining program. We believe that each committee should be provided with the proposed staff of experts.

Senator LA FOLLETTE, who has long been in the forefront in this reorganization effort, pointed out in a magazine article several years ago that there is no rhyme or reason to the present committee set-up. Committees established for specific problems of a particular period are still in existence. One leg-

islative subject can come within the jurisdiction of six committees.

Such a system cannot but result in wasted effort, indecision and confusion. Senator LA FOLLETTE himself is on five regular committees and one special committee. Senator O'MAHONEY, of Wyoming, holds a record with seven regular committees and three special ones. No one can be expected to do his best work when he must thus scatter his efforts.

We endorse the proposals that the House Rules Committee clear all bills within 20 days after receiving them and that each committee hold a public hearing once a month on legislation pending before it. These provisions are essential to keep bills moving and prevent the pigeonholing of measures that do not have approval of a committee majority. It was this delaying practice that brought President Truman's rebuke to congress in his recent radio talk.

We favor the delegation to some other agency of the authority to settle claims against the Government. These private claims take up much time of Congressmen. Most of them are trivial.

The subcommittee did not, apparently, dare to touch the "sacred" seniority rule for committee chairmanships. This is the time-worn provision that committee chairmen shall be appointed on the basis of (a) length of service on the committee and (b) affiliation with the majority party. Competence plays no part in the appointment. In proposals made last year in Strengthening the Congress, a pamphlet of the National Planning Association, Robert Heller suggested various substitutes for what he termed this "generally recognized evil." It is to be hoped that the entire La Follette-Monroney committee will deal with this problem, which is so vexing because it is so bound up with traditions, emotions, and personalities.

The present Congress faces many challenging issues. This issue of reorganization, of modernization, is certainly one of the most challenging. Citizens who are deeply concerned with our future will hope that congress establishes a procedure by which it can function properly and assume its ever growing responsibilities in preserving democracy.

Saving the White House

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. JENNINGS. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 30, 1946:

SAVING THE WHITE HOUSE

President Truman was amused as well as surprised at the protest against his plan to add 7,250 square feet to the White House Executive Office Building. His reasoning was simple and honest. He hasn't enough office room for his staff. Since 1934, when the annex was last remodeled, some clerical employees have had to work underground. A meeting place is needed and possibly a place to eat. With the approval of the Fine Arts Commission, the President decided last December that the required space could be secured by building a new structure on ground south of the present offices, along West Executive Avenue. This structure, he added, could be seen only from the avenue or from the air. What harm could it do?

The original harm may have been done when the Executive Office Building was put up, under the Presidency of Theodore Roosevelt. That building has ever since impaired the view of the White House from the west, as well as from the air—and an increasing number of people are bound to look at Washington from the air. The proposed new building will add to the clutter. There would be more popular enthusiasm for taking down the original office building and transferring the Presidential offices to the State Department Building across the street. A President could surely commute that far without undue hardship, and he would have the inestimable advantage of a home that is really a home and not in part a factory.

If President Truman is a wise man he will bow to the opposition that has shown itself in the House of Representatives and elsewhere. The American people have a few sensitive points, among which is a reverence for historic structures. The present uproar is not, as Mr. Truman called it, a "tempest in a teapot." The White House stands for something, and so does the lot on which it sits. If new utilitarian buildings are added now more will be needed a generation hence and still more a generation after that. In time the White House will be the center of a high-class Executive Office slum. Does anyone want that? Does Mr. Truman want it? Of course not.

Our International Policies

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day Friday, January 18), 1946

Mr. CAPPER. Mr. President, I have received a copy of an able address delivered by the Honorable Alf M. Landon, of Kansas, on January 28, 1946, before the Kansas Women's Republican Club annual meeting at Topeka, Kans., on the subject of Our International Policies. I ask unanimous consent to have it printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Both the momentous political and military policies involved in our foreign relations demand the most thorough and searching debate and discussion so that the American people may know exactly what they are doing and why.

Our democracy has survived and fostered a great nation because of the ability of the people to grasp issues and dominate their solution.

The double talk and conflicting actions which the administration has given the American people, has left them in doubt and confusion. This has had a disastrous effect both at home and in the world. "Bread of deceit is sweet to man, but afterward his mouth shall be filled with gravel."

In the British financial proposal, for the first time a fundamental question of international policy is placed squarely before the entire Congress for discussion and debate.

I urge the Congress not to decide the British deal on snap judgment—the way the administration has been making its decisions on matters of the gravest import to the American people.

This is not the occasion to embark on a detailed discussion of the terms of the proposed British financing agreement.

But I hope whatever the debate over those details—that the Congress and the American people will not lose sight of the fundamental question of national policy involved.

I believe the issue is primarily a political one.

If the Congress bogs down in discussing only what we are getting and what they are getting, it will be in danger of passing up one of the most important benefits to be derived from the debate—namely the broader aspects of American foreign policy.

The great thing is that what we do shall be based on a consistent policy which the American people will support because they understand and approve it.

The mismanagement of our international relations has brought us to the place where it is vitally essential to America to keep the British Empire a going concern—strong in a world concert of nations.

Not to keep Great Britain strong would be to abandon the continent of Europe to Russia. If that happens, the weight of Russia falls across Asia as well as Europe.

Now let me say right here that I am not as much afraid of Russia or of Russia's purposes as a good many are.

We are dealing there with a strong people who have long been repressed in many directions by the outside world, and who now, feeling themselves strong, are asserting themselves in unreasonable ways.

I think we should be patient and fair with Russia—but firm. Much more firm than we have been, in standing for those principles and those international ideologies which—as far as we are concerned—were definitely involved in both World Wars. It is obvious as negotiations go on, adjustments must be made. Adjustments on details, but not principles.

By patience and fairness I do not mean appeasement. The people of the United States should be fully aware of the dangers of appeasement. Yet, aside from Germany, our foreign policy has been one of conceding today what we refused yesterday.

Our foreign policy at Moscow was different from our foreign policy at Yalta, at the Council of Ministers in London or at San Francisco.

At Moscow we conceded to Russia's demands that the Big Three write the peace—that she be permitted to dictate the peace and redraw the map of eastern Europe and the Balkans.

On October 31 Secretary Byrnes said:

"We cannot recognize regional arrangements as a substitute for a world system. To do so would not promote the common and paramount interests of all nations, large and small, in world peace."

That statement is completely in accord with the UNO set-up. It is in line with what Byrnes tried to do last September at the Council of Ministers in London. But at Moscow he walked out on the UNO Charter and the obligations we made at San Francisco.

Just 10 days ago there came another shocking example of this administration retreat from the San Francisco Charter and Secretary Byrnes' October 31 position.

At the very moment Secretary Byrnes was participating in organization of the UNO, the Assistant Secretary of State, in New York, in thinly veiled language, urged punitive action against Argentina, regardless of article 33 of the UNO.

To quote the very informing and farsighted Washington news letter, Human Events:

"Without mentioning Argentina by name, but unmistakably defining that nation as his target, Mr. Braden said, 'there is nothing in the book of diplomatic etiquette that requires us to embrace the enemies of our way of life.' Pulling no punches, he then made pointed references to the typically Fascist government in this hemisphere; compared its alleged threat to peace with that of Nazi Germany; and argued that the good-neighbor policy must not be construed as

meaning tolerance for an American republic which is governed by such a dictatorship."

"Apparently Mr. Braden did not realize, in making this speech, that he was attacking a government which is a fellow member of the United Nations. His official denunciations, as made public by the Department of State, come perilously close to violating the first paragraph of article 33 of the San Francisco Charter, which reads:

"The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

"Now, regardless of our obligations under the Charter, we are officially threatening a fellow member of the United Nations with punitive action."

Why, if that is our fundamental policy toward Argentina, did we use all our strength and influence, to get her into the UNO at San Francisco?

We were either wrong then—or wrong now.

It is simply another illustration of the complete inconsistency and expediency that is lowering American prestige and influence throughout the world.

The consequences of our actions at Moscow, our policies in the Pacific, and Assistant Secretary of State Braden's New York speech, are to weaken world confidence in our wholehearted support of the principles of collective security as stated in the UNO Charter.

People are wondering whether this administration is completely ignorant in the concrete application of those principles and are confusing internationalism with imperialism—or whether the national administration actions are not inconsistent but a definite policy of building an alternative to the UNO.

In any event, at the critical moment of the birth of the UNO, our policies are bound to create doubts as to our confidence in its workability and as to our sincerity in abiding by its terms.

Again, we reversed ourselves when we accepted at Moscow a control council for Japan, and the idea of an Asiatic commission. The worst of it is the Moscow agreement was so loosely drawn that Secretary Byrnes barely reached home before the argument started over what was actually the intent of the Big Three. It is already being differently interpreted in different countries. Thus, it already is another source of mistrust and suspicion that is the curse of the world. President Truman also must have been conversant with and a party to this appeasement policy.

In any event, no one can deny that our Government on all these points has made a long retreat from its previously announced position. If we were right before, we are wrong now. No one can claim the Moscow agreement is a democratic approach to peace settlements.

To quote Phillip Simms, "To a vast majority of the United Nations the outstanding tragedy of the Big Three meeting at Moscow was the Anglo-American surrender to the Soviet thesis that world rule belongs to the great.

"Even France—not to mention Norway, Denmark, Holland, Belgium, Czechoslovakia, and others—was banished from the European peace table. Yet, from the point of view of the United States, Britain, and free peoples everywhere, it is highly important that France be restored to her rightful place.

"That world rule belongs only to the great was the foundation of nazism and fascism. It was against this conception that the United States entered the conflict against the Axis in 1940, more than a year before our shooting war began at Pearl Harbor. It was to abolish this ideology that the people of America went into debt for $250,000,000,000 and sent hundreds of thousands of their sons to die on battlefields all over the world. World rule by a few means carrying Nazi-Fascist-Communist totalitarianism from the national to the international level. Within the Kremlin, a few men decide who shall rule the Soviet Union and how. The 190,000,000 people of that vast country have no voice whatsoever in the proceedings. Once in a while they are allowed to put their cross on the one-party ticket which the dictatorship has arranged for them.

"According to the Molotov-Byrnes-Bevin formula, the new world order is to be conducted in much the same way. First, in effect, the Big Three will dictate the peace and allow the smaller powers to give it their O. K. Then, by means of their veto the Big Three will be able to control the UNO.

"World peace based on any such arrangement, declares Australia's Foreign Minister, Dr. Herbert V. Evatt, will not work. The attempt to make it work, he says in the January number of Foreign Affairs, is largely responsible for the present world-wide pessimism and disillusionment."

We see the same undemocratic procedure slowly gaining ground at home. The agreements made at Casablanca, at Teheran, at Yalta, at Potsdam, at Moscow, all have the effects of treaties. None of them were ever submitted to the United States Senate. Exemption was claimed by the President because of their temporary character and military necessity. Their character proved to be permanent instead of temporary. Military necessity no longer exists. My point is that these executive agreements, dealing as they do virtually with the division of the world, and made with more or less snap judgments, are perilous. The danger is that they deprive the Senate and the American people from considered decisions on foreign policies according to our Constitution.

We have not been very realistic in our foreign policies. We have allowed the "hallelujah" aspect, on the one hand, and the forces of hate and revenge, on the other, to dominate our foreign policies. We have built a roof without laying the foundation that is prerequisite of world peace—world organization or no world organization.

The world, mystified by America's inconsistent foreign policy and fearing we are drifting away from the UNO, and never being very confident of its success, is threatening to divide once again into spheres of influence and power blocs that have always meant trouble and grief for mankind.

Therefore, we must attempt to work out a stable world equilibrium. In order to do that, Britain's potency must be maintained one way or another.

We have got to face the facts whether we like them or not. It would be a calamity, at this state of world affairs, if the spheres of influence drop to two major powers. Therefore, we must try to keep the British Empire going. We must bring back into the world picture, as rapidly as we can, France, the Netherlands, the Scandinavian countries, Spain, Italy, Germany, China, and Japan.

But unless we immediately and forthwith reverse some of our policies—both foreign and domestic—I believe there is no chance of us accomplishing our purpose and on our own position will steadily deteriorate.

The cruel and infamous Morgenthau plan is responsible for keeping our armies of occupation in Europe in such large numbers—for the colossal suffering and avoidable loss of life in Europe this winter—for the failure to draft a just and decent peace that will preserve some of the principles of the Atlantic Charter.

The entire break-down of the economic and political structure of Germany—for which the unworkable Morgenthau plan is primarily responsible—is preventing the reconstruction of Europe and tranquilizing the world. It is costly to the American taxpayers and prevents the sending home of our soldiers.

As I have often said, we must reverse our policies in Germany and abandon the evil Morgenthan plan, whose principles are the enemy of God, of decency, of mercy, and of common sense, if we are to build a durable peace.

Stop the New Deal policy of borrowing and borrowing—spending and spending—giving and giving. Our National Government cannot possibly carry the financial burden of the world on its shoulders, and continue to give a living to those unwilling to do an honest day's work. All issues in the end relate to a balanced budget and to economy and efficiency in Government. If we are going to achieve a sound future for the United States, the American people must not be deluded by the siren song that Government is a "sugar daddy," able to shell out money endlessly.

As far as stabilizing the world is concerned, all the money we could pour into Great Britain won't do the job—as long as our foreign policies are based on expediency, not sound principles.

Secretary of State Byrnes daily adds to his reputation as the great compromiser.

The trouble is, we always get the worst end of the dickers, with the result that we are steadily losing our stand for democratic liberalism in the world.

Compromise and inaction at home and compromise and inaction abroad is the policy of the Truman administration. The War, Navy, and State Departments are unable to agree as to our policies relating to the final disposition of the Pacific islands. Even the President's recent statement on this question, vital to our national security, was so cloudy that his own party leaders, as well as department officials, are seeking clarification as to just what the President meant. But that highly important question should have been definitely settled before our UNO delegation left for London.

No one can be sure what our foreign policies are with any degree of certainty at any time. Stop blaming our soldiers in foreign lands for losing American prestige when the lack of a clear, definite, and honest foreign policy on the part of our national administration is the main cause.

Yet, as usual, the administration is attempting to blame the people and the Congress and the soldier. "American hysteria to get the boys back home," to quote an administrative spokesman, imperils America's prestige. But eminent nonpartisan news commentators unanimously agree that our prestige is dwindling also because we have compromised our principles. That weakens our moral strength.

Let us hope that the debate on the question of the British subsidy with the representatives of the American people speaking may be the opportunity for which we have been waiting to secure for ourselves and the world, a clarification of our national policy, so that we may hereafter direct all of our international arrangements—not only the British loan—consistently with the conviction.

Congress, as I said before, has its first opportunity to make certain that America does have a clearly defined national foreign policy and to participate in what that policy shall be in the future. And let me emphasize once again that our foreign policy involves the size and the duration of our armies of occupation.

Once our foreign policy is clearly defined by our representatives, and floundering and uncertainty has disappeared, it will receive the wholehearted support of the American people.

Facts About United States Steel Pay Rolls and Profits

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. BUFFETT. Mr. Speaker, in view of the vigorous discussion on the floor of the House about United States Steel, and industry generally, Members may find some factual material both interesting and enlightening.

The earnings of United States Steel in the 1944 war-year were just under $66,000,000, including interest on borrowed money. Twenty years earlier, in 1925, the earnings were just under $118,000,000, similarly calculated.

In 1944, the wages of labor in the United States Steel Co. were over $957,000,000, including social security and pensions. In 1925, the payments to workers in United States Steel were just over $458,000,000.

Labor's take-home pay from United States Steel more than doubled between 1925 and 1944. But capital's earnings dropped to only a little more than one-half of what they were 20 years ago. However, the invested capital of United States Steel declined about 25 percent during these 20 years, which accounts for some shrinkage in earnings.

Stated another way, in 1925 the owners of United State Steel kept $1 in earnings for every $4 paid to labor. In 1944 the owners kept about $1 in earnings for every $15 paid out to workers. Labor's share of the United States Steel Co. income has increased in 20 years almost 400 percent.

Because capital had been thriftly saved and invested in United States Steel, American workmen in 1944 carried home over $900,000,000 in pay checks from that one firm.

Mr. Speaker, American business has produced the things that have given the humble people of America the most magnificent material blessings in the history of the world. That achievement was made possible because for the first time in history the individual man or groups of men were free to use their talents and energies to build businesses and humanity was the chief beneficiary.

Today, a great effort goes on in this country to destroy this system—the system that brought unbounded happiness and comfort to the humble people of this land.

Unfortunately, the management of American business seems unable to portray effectively its achievements, which give the average American more personal useful comforts than a king had only 100 years ago.

Certainly, the Members of Congress will be interested in the following statistics about United States Steel, in view of the present controversy:

United States Steel Corp. and subsidiaries

[In millions of dollars]

Year of operation	Employment costs	Amount earned on capital employed
1925	458.2	117.7
1926	469.3	143.5
1927	412.7	114.0
1928	402.9	139.8
1929	410.2	212.4
1930	371.7	110.0
1931	258.4	18.5
1932	138.5	[1] 65.9
1933	167.9	[1] 31.3
1934	214.8	[1] 16.6
1935	253.9	6.1
1936	339.0	55.4
1937	447.1	100.0
1938	294.4	.6
1939	386.6	50.4
1940	464.3	115.8
1941	628.3	122.2
1942	782.7	77.4
1943	912.9	68.9
1944	957.2	65.8
Total	[2] 8,771.0	[3] 1,404.7

[1] Deficit.
[2] Paid to workers.
[3] Available to investors.

During this 20-year period, the average percentage Steel earned on its investment was 3.52 percent. In 1944 the percentage earned on the capital employed was less than 4 percent. It was 3.79 percent. Do you wonder why risk capital is disappearing in the United States? This factual data about United States Steel should give you part of the answer.

Mr. Speaker, I have no especial regard for United States Steel. As a matter of record, I am strongly opposed to the concentration of economic power represented by United States Steel and similar industrial giants. I have long believed that such concentration of economic power automatically brings dangerous concentration of political power. Current events seem to demonstrate the accuracy of that belief.

However, I believe Congress should have the facts about what is happening in the American system of free enterprise. Our deliberations should reflect a factual appraisal of the actual situation. I have somewhat hastily prepared the foregoing tables, but the facts recorded are matters of official record.

Harry Hopkins

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post:

"A GREAT AMERICAN IS GONE FROM US"—CHURCHILL PRAISES HOPKINS FOR SERVICE TO WORLD CAUSE

MIAMI BEACH, FLA., January 29.—Former British Prime Minister Winston Churchill tonight expressed profound grief at the death of Harry Hopkins, and declared "a great American is gone from us."

"A strong, bright, fierce flame has burned out a frail body," Churchill said in a statement issued here, adding:

"Few know better than I the services he rendered to the world cause. President Roosevelt had the gift of choosing generous and noble spirits to help him in peace and war.

"In Harry Hopkins he found a man not only of wide ranging vision but piercing eye. He always went to the root of the matter.

"I have been present at several great conferences where 20 or more of the most important executive personages were gathered together. When the discussion flagged and all seemed baffled, it was on these occasions he would rap out the deadly question: 'Surely, Mr. President, here is the point we have got to settle. Are we going to face it or not?'

"Faced it always was and being faced, was conquered.

"He was a true leader of men, and alike in ardor and in wisdom in time of crisis, he has rarely been excelled.

"His love for the causes of the weak and the poor was matched by his passion against tyranny, especially when tyranny was for the time triumphant.

"To dynamic, compulsive and persuasive force he added humor and charm in an exceptional degree.

"We do well to salute his memory. We shall not see his like again."

Sale of Surplus Men's Clothing

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

CIO PROPOSES SHIRT SEIZURE

(By Gordon H. Cole)

WASHINGTON, January 30.—The CIO today urged President Truman to seize and market as surplus property, the estimated 3,000,000 men's shirts and 400,000 men's suits now being withheld from the market by manufacturers in anticipation of higher ceiling prices.

This action followed disclosures that:

The Manhattan Shirt Co., and a few smaller firms, gambling on the collapse of OPA, or serious relaxation of its regulations, had concentrated their production exclusively on high-priced shirts. (Since last June OPA has required manufacturers to produce low and medium-priced shirts in the same proportion as they did during 1943.)

Other manufacturers were withholding shirts from the stores and limiting their production until OPA decides how much of the recent increases granted the cotton mills will be passed on to the shirt makers.

Suit manufacturers are withholding their product awaiting issuance of a new price regulation by OPA from which they expect higher profits.

Some manufacturers refused to believe OPA would hold to its low-price order of last June and went ahead and made high-price articles. These shirts are now in warehouses. Manhattan, because of its disregard for OPA's regulation, has an estimated 1,200,000 shirts on hand.

The basic fact in the shirt shortage, however, is a problem in production. According to experts, the industry is now producing at

meaning tolerance for an American republic which is governed by such a dictatorship."

"Apparently Mr. Braden did not realize, in making this speech, that he was attacking a government which is a fellow member of the United Nations. His official denunciations, as made public by the Department of State, come perilously close to violating the first paragraph of article 33 of the San Francisco Charter, which reads:

"The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

"Now, regardless of our obligations under the Charter, we are officially threatening a fellow member of the United Nations with punitive action."

Why, if that is our fundamental policy toward Argentina, did we use all our strength and influence, to get her into the UNO at San Francisco?

We were either wrong then—or wrong now.

It is simply another illustration of the complete inconsistency and expediency that is lowering American prestige and influence throughout the world.

The consequences of our actions at Moscow, our policies in the Pacific, and Assistant Secretary of State Braden's New York speech, are to weaken world confidence in our wholehearted support of the principles of collective security as stated in the UNO Charter.

People are wondering whether this administration is completely ignorant in the concrete application of those principles and are confusing internationalism with imperialism—or whether the national administration actions are not inconsistent but a definite policy of building an alternative to the UNO.

In any event, at the critical moment of the birth of the UNO, our policies are bound to create doubts as to our confidence in its workability and as to our sincerity in abiding by its terms.

Again, we reversed ourselves when we accepted at Moscow a control council for Japan, and the idea of an Asiatic commission. The worst of it is the Moscow agreement was so loosely drawn that Secretary Byrnes barely reached home before the argument started over what was actually the intent of the Big Three. It is already being differently interpreted in different countries. Thus, it already is another source of mistrust and suspicion that is the curse of the world. President Truman also must have been conversant with and a party to this appeasement policy.

In any event, no one can deny that our Government on all these points has made a long retreat from its previously announced position. If we were right before, we are wrong now. No one can claim the Moscow agreement is a democratic approach to peace settlements.

To quote Phillip Simms, "To a vast majority of the United Nations the outstanding tragedy of the Big Three meeting at Moscow was the Anglo-American surrender to the Soviet thesis that world rule belongs to the great.

"Even France—not to mention Norway, Denmark, Holland, Belgium, Czechoslovakia, and others—was banished from the European peace table. Yet, from the point of view of the United States, Britain, and free peoples everywhere, it is highly important that France be restored to her rightful place.

"That world rule belongs only to the great was the foundation of nazism and fascism. It was against this conception that the United States entered the conflict against the Axis in 1940, more than a year before our shooting war began at Pearl Harbor. It was to abolish this ideology that the people of America went into debt for $250,000,000,000 and sent hundreds of thousands of their sons to die on battlefields all over the world. World rule by a few means carrying Nazi-Fascist-Communist totalitarianism from the national to the international level. Within the Kremlin, a few men decide who shall rule the Soviet Union and how. The 190,000,000 people of that vast country have no voice whatsoever in the proceedings. Once in a while they are allowed to put their cross on the one-party ticket which the dictatorship has arranged for them.

"According to the Molotov-Byrnes-Bevin formula, the new world order is to be conducted in much the same way. First, in effect, the Big Three will dictate the peace and allow the smaller powers to give it their O. K. Then, by means of their veto the Big Three will be able to control the UNO.

"World peace based on any such arrangement, declares Australia's Foreign Minister, Dr. Herbert V. Evatt, will not work. The attempt to make it work, he says in the January number of Foreign Affairs, is largely responsible for the present world-wide pessimism and disillusionment."

We see the same undemocratic procedure slowly gaining ground at home. The agreements made at Casablanca, at Teheran, at Yalta, at Potsdam, at Moscow, all have the effects of treaties. None of them were ever submitted to the United States Senate. Exemption was claimed by the President because of their temporary character and military necessity. Their character proved to be permanent instead of temporary. Military necessity no longer exists. My point is that these executive agreements, dealing as they do virtually with the division of the world, and made with more or less snap judgments, are perilous. The danger is that they deprive the Senate and the American people from considered decisions on foreign policies according to our Constitution.

We have not been very realistic in our foreign policies. We have allowed the "hallelujah" aspect, on the one hand, and the forces of hate and revenge, on the other, to dominate our foreign policies. We have built a roof without laying the foundation that is prerequisite of world peace—world organization or no world organization.

The world, mystified by America's inconsistent foreign policy and fearing we are drifting away from the UNO, and never being very confident of its success, is threatening to divide once again into spheres of influence and power blocs that have always meant trouble and grief for mankind.

Therefore, we must attempt to work out a stable world equilibrium. In order to do that, Britain's potency must be maintained one way or another.

We have got to face the facts whether we like them or not. It would be a calamity, at this state of world affairs, if the spheres of influence drop to two major powers. Therefore, we must try to keep the British Empire going. We must bring back into the world picture, as rapidly as we can, France, the Netherlands, the Scandinavian countries, Spain, Italy, Germany, China, and Japan.

But unless we immediately and forthwith reverse some of our policies—both foreign and domestic—I believe there is no chance of us accomplishing our purpose and on our own position will steadily deteriorate.

The cruel and infamous Morgenthau plan is responsible for keeping our armies of occupation in Europe in such large numbers—for the colossal suffering and avoidable loss of life in Europe this winter—for the failure to draft a just and decent peace that will preserve some of the principles of the Atlantic Charter.

The entire break-down of the economic and political structure of Germany—for which the unworkable Morgenthau plan is primarily responsible—is preventing the reconstruction of Europe and tranquilizing the world. It is costly to the American taxpayers and prevents the sending home of our soldiers.

As I have often said, we must reverse our policies in Germany and abandon the evil Morgenthan plan, whose principles are the enemy of God, of decency, of mercy, and of common sense, if we are to build a durable peace.

Stop the New Deal policy of borrowing and borrowing—spending and spending—giving and giving. Our National Government cannot possibly carry the financial burden of the world on its shoulders, and continue to give a living to those unwilling to do an honest day's work. All issues in the end relate to a balanced budget and to economy and efficiency in Government. If we are going to achieve a sound future for the United States, the American people must not be deluded by the siren song that Government is a "sugar daddy," able to shell out money endlessly.

As far as stabilizing the world is concerned, all the money we could pour into Great Britain won't do the job—as long as our foreign policies are based on expediency, not sound principles.

Secretary of State Byrnes daily adds to his reputation as the great compromiser.

The trouble is, we always get the worst end of the dickers, with the result that we are steadily losing our stand for democratic liberalism in the world.

Compromise and inaction at home and compromise and inaction abroad is the policy of the Truman administration. The War, Navy, and State Departments are unable to agree as to our policies relating to the final disposition of the Pacific islands. Even the President's recent statement on this question, vital to our national security, was so cloudy that his own party leaders, as well as department officials, are seeking clarification as to just what the President meant. But that highly important question should have been definitely settled before our UNO delegation left for London.

No one can be sure what our foreign policies are with any degree of certainty at any time. Stop blaming our soldiers in foreign lands for losing American prestige when the lack of a clear, definite, and honest foreign policy on the part of our national administration is the main cause.

Yet, as usual, the administration is attempting to blame the people and the Congress and the soldier. "American hysteria to get the boys back home," to quote an administrative spokesman, imperils America's prestige. But eminent nonpartisan news commentators unanimously agree that our prestige is dwindling also because we have compromised our principles. That weakens our moral strength.

Let us hope that the debate on the question of the British subsidy with the representatives of the American people speaking may be the opportunity for which we have been waiting to secure for ourselves and the world, a clarification of our national policy, so that we may hereafter direct all of our international arrangements—not only the British loan—consistently with the conviction.

Congress, as I said before, has its first opportunity to make certain that America does have a clearly defined national foreign policy and to participate in what that policy shall be in the future. And let me emphasize once again that our foreign policy involves the size and the duration of our armies of occupation.

Once our foreign policy is clearly defined by our representatives, and floundering and uncertainty has disappeared, it will receive the wholehearted support of the American people.

Facts About United States Steel Pay Rolls and Profits

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. BUFFETT. Mr. Speaker, in view of the vigorous discussion on the floor of the House about United States Steel, and industry generally, Members may find some factual material both interesting and enlightening.

The earnings of United States Steel in the 1944 war-year were just under $66,000,000, including interest on borrowed money. Twenty years earlier, in 1925, the earnings were just under $118,000,000, similarly calculated.

In 1944, the wages of labor in the United States Steel Co. were over $957,000,000, including social security and pensions. In 1925, the payments to workers in United States Steel were just over $458,000,000.

Labor's take-home pay from United States Steel more than doubled between 1925 and 1944. But capital's earnings dropped to only a little more than one-half of what they were 20 years ago. However, the invested capital of United States Steel declined about 25 percent during these 20 years, which accounts for some shrinkage in earnings.

Stated another way, in 1925 the owners of United State Steel kept $1 in earnings for every $4 paid to labor. In 1944 the owners kept about $1 in earnings for every $15 paid out to workers. Labor's share of the United States Steel Co. income has increased in 20 years almost 400 percent.

Because capital had been thriftly saved and invested in United States Steel, American workmen in 1944 carried home over $900,000,000 in pay checks from that one firm.

Mr. Speaker, American business has produced the things that have given the humble people of America the most magnificent material blessings in the history of the world. That achievement was made possible because for the first time in history the individual man or groups of men were free to use their talents and energies to build businesses and humanity was the chief beneficiary.

Today, a great effort goes on in this country to destroy this system—the system that brought unbounded happiness and comfort to the humble people of this land.

Unfortunately, the management of American business seems unable to portray effectively its achievements, which give the average American more personal useful comforts than a king had only 100 years ago.

Certainly, the Members of Congress will be interested in the following statistics about United States Steel, in view of the present controversy:

United States Steel Corp. and subsidiaries

[In millions of dollars]

1942	782.7	77.4
1943	912.9	68.9
1944	957.2	65.8
Total	[2] 8,771.0	[3] 1,404.7

[1] Deficit.
[2] Paid to workers.
[3] Available to investors.

During this 20-year period, the average percentage Steel earned on its investment was 3.52 percent. In 1944 the percentage earned on the capital employed was less than 4 percent. It was 3.79 percent. Do you wonder why risk capital is disappearing in the United States? This factual data about United States Steel should give you part of the answer.

Mr. Speaker, I have no especial regard for United States Steel. As a matter of record, I am strongly opposed to the concentration of economic power represented by United States Steel and similar industrial giants. I have long believed that such concentration of economic power automatically brings dangerous concentration of political power. Current events seem to demonstrate the accuracy of that belief.

However, I believe Congress should have the facts about what is happening in the American system of free enterprise. Our deliberations should reflect a factual appraisal of the actual situation. I have somewhat hastily prepared the foregoing tables, but the facts recorded are matters of official record.

Harry Hopkins

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post:

"A GREAT AMERICAN IS GONE FROM US"—CHURCHILL PRAISES HOPKINS FOR SERVICE TO WORLD CAUSE

MIAMI BEACH, FLA., January 29.—Former British Prime Minister Winston Churchill tonight expressed profound grief at the death of Harry Hopkins, and declared "a great American is gone from us."

"A strong, bright, fierce flame has burned out a frail body," Churchill said in a statement issued here, adding:

"Few know better than I the services he rendered to the world cause. President Roosevelt had the gift of choosing generous and noble spirits to help him in peace and war.

"In Harry Hopkins he found a man not only of wide ranging vision but piercing eye. He always went to the root of the matter.

"I have been present at several great conferences where 20 or more of the most important executive personages were gathered together. When the discussion flagged and all seemed baffled, it was on these occasions he would rap out the deadly question: 'Surely, Mr. President, here is the point we have got to settle. Are we going to face it or not?'

"Faced it always was and being faced, was conquered.

"He was a true leader of men, and alike in ardor and in wisdom in time of crisis, he has rarely been excelled.

"His love for the causes of the weak and the poor was matched by his passion against tyranny, especially when tyranny was for the time triumphant.

"To dynamic, compulsive and persuasive force he added humor and charm in an exceptional degree.

"We do well to salute his memory. We shall not see his like again."

Sale of Surplus Men's Clothing

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

CIO PROPOSES SHIRT SEIZURE

(By Gordon H. Cole)

WASHINGTON, January 30.—The CIO today urged President Truman to seize and market as surplus property, the estimated 3,000,000 men's shirts and 400,000 men's suits now being withheld from the market by manufacturers in anticipation of higher ceiling prices.

This action followed disclosures that:

The Manhattan Shirt Co., and a few smaller firms, gambling on the collapse of OPA, or serious relaxation of its regulations, had concentrated their production exclusively on high-priced shirts. (Since last June OPA has required manufacturers to produce low and medium-priced shirts in the same proportion as they did during 1943.)

Other manufacturers were withholding shirts from the stores and limiting their production until OPA decides how much of the recent increases granted the cotton mills will be passed on to the shirt makers.

Suit manufacturers are withholding their product awaiting issuance of a new price regulation by OPA from which they expect higher profits.

Some manufacturers refused to believe OPA would hold to its low-price order of last June and went ahead and made high-price articles. These shirts are now in warehouses. Manhattan, because of its disregard for OPA's regulation, has an estimated 1,200,000 shirts on hand.

The basic fact in the shirt shortage, however, is a problem in production. According to experts, the industry is now producing at

a rate of 60,000,000 shirts a year, 40 percent below the 1939 output.

JANUARY 30, 1946.

The following wire was sent to President Harry S. Truman at the White House yesterday:

"Press reports over 3,000,000 shirts and 400,000 men's suits now being held in warehouses in face of pressing shortages of these commodities.

"The CIO cost of living committee urges you to immediately use your war powers to seize these surplus goods made from materials, some of which were allocated under your Second War Powers Act, and make them available to the American people through the Surplus Property Administration. This action is imperative in order to assure supply of clothing to returning veterans."

CIO COST OF LIVING COMMITTEE,
DONALD MONTGOMERY, *Chairman.*
LEO GOODMAN, *Secretary.*

Position of Republic Steel Corp. in the Labor-Management Dispute

REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. KNUTSON. Mr. Speaker, without comment I desire to incorporate in my extension of remarks a letter from Mr. C. M. White, president of the Republic Steel Corp., which sets forth in a comprehensive manner the company's position in the existing labor-management dispute. I commend to my colleagues a reading of Mr. White's letter as it contains a great deal of information that has not heretofore been available to Congress:

REPUBLIC STEEL CORP.,
Cleveland, Ohio, January 24, 1946.

The Honorable HAROLD KNUTSON,
House of Representatives,
Washington, D. C.

DEAR MR. KNUTSON: You have undoubtedly read the letter which B. F. Fairless wrote to President Truman on the subject of the steel strike. I would like to comment on the entire strike situation, particularly with respect to its effect on Republic Steel Corp.

Virtually all of the 56,000 Republic employees are now idle. The strike affects 11 steel plants, 18 manufacturing plants, and several ore mines in more than 25 communities from New York State to Alabama, from Hartford, Conn., to Moline, Ill.

The strike is a flagrant violation of a contract entered into April 11, 1945, between the company and the United Steelworkers of America, CIO. This contract contains a stipulation that there shall be no strikes or work stoppages during the term of the contract which will not expire until October 15, 1946. This strike is due to an attempt of the union to enforce its demands on Republic for an increase in wages which Philip Murray, president of the steelworkers' union, now sets at 18½ cents an hour or $1.48 for an 8-hour day.

Put on an annual basis, this amounts to $22,200,000 in a normal year for Republic. Never in its history has Republic had earnings of $22,200,000 in a year of normal peacetime production, even before taxes. For example, net income in the years 1936, 1937, and 1939 averaged approximately $10,000,000 after deducting $3,000,000 Federal income taxes in each year. In 1938, Republic had a loss of approximately $3,000,000.

Republic's earnings have been affected in a startling way by the transition from war to peace. Since August 1, 1945, with the cessation of hostilities and the resumption of our normal line of products, Republic has had total losses, before taxes, averaging $831,330 per month. For the period—August 1, 1945, to December 31, 1945—there has been a total loss of $4,156,658 before taxes. It is my understanding that this is typical of the entire steel industry.

In brief, the history of steel prices and of wages for the steel workers in recent years is as follows:

Prices in effect, except for a few minor changes, are the same as they were in 1937. Even OPA admits that the steel industry is losing so heavily at today's wage-and-price levels that the industry must be granted an immediate price increase to compensate for the past wage increases. As evidence of this, and as has been shown above, Republic is losing substantial amounts on 60 percent of its regular line of steel products.

Now as to wages, Mr. Murray, in his plea for his unjustifiable wage demand, would lead one to believe that the steel workers had received no additional compensation during the war period.

Let's look at the facts. Between January 1, 1941, and December 31, 1945, the steelworkers have received a total increase of approximately 24 cents per hour. This consists of a 10-cent-an-hour general wage increase granted April 1, 1941, a second 5½-cent-per-hour general wage increase, effective February 7, 1942, a shift differential of 4 cents and 6 cents per hour for the afternoon and night shifts, the adjustment of wage-rate inequities which cannot exceed 5 cents per hour and increased vacation allowances. These last three were all effective on December 25, 1943.

As a result, in November 1945, the weekly earnings of Republic steelworkers were 58 percent higher than they were in January 1941.

The average weekly take-home pay of Republic steelworkers during the war year of 1944 was $59.57 and the average workweek was 48 hours. With 15 cents an hour increase the average take-home pay of Republic steelworkers in November 1945, long after the end of the war, would have been $61.41 even though the average workweek was 3.6 hours less than it was in 1944. Although Republic operated at a rate of only 77.9 percent of capacity during November 1945, its employees worked an average of 44.4 hours per week. This shows that, contrary to statements made by Philip Murray and other union leaders, there will always be some overtime in the steel industry.

There will be very little downgrading in the steel industry. The same jobs which existed during the war in steel plants exist today and will continue to exist for peacetime purposes, and the same rates of pay exist today for such jobs as existed during the war. The argument of union leaders that there will be a substantial reduction in take-home pay due to downgrading is wholly inapplicable to Republic.

As a matter of fact, this take-home pay has been further increased by the changes in the Federal income-tax law effective in 1946 which have removed approximately 12,500,000 taxpayers, all in the low-tax brackets, from the tax rolls. For example, under these new schedules, a married steelworker earning $2,500 a year will, through this tax reduction, have an increase in his 1946 take-home pay of approximately $65. Steelworkers earning more pay will have correspondingly larger income-tax reductions.

Excluding all overtime and vacation allowances, the straight-time average rate, in January 1941, in Republic's steel plants was 83.9 cents per hour. In November 1945, this had risen to $1.11 per hour, or an increase of 32 percent.

On the other hand, since January 1941, living costs, according to Government authorities, show an increase of 33 percent. Wage increases to date have kept pace with the increase in the cost of living. If this is to be used as a basis, the steelworkers are entitled to an increase of exactly 1 percent.

It is readily apparent that the union leaders have no interest in maintaining a parity between the cost of living and the steelworkers' wages. On the contrary, the union is attempting to freeze upon a peacetime economy, based on the 40-hour workweek, the artificially high wages of wartime production when the workweek averaged 46 to 49 hours.

In an earnest effort to avoid the disastrous steel strike, the United States Steel Corp. recently offered its employees a wage increase of 15 cents per hour, or $1.20 per eight-hour day—and increase fifteen times greater than that to which they were entitled to compensate for increases in the cost of living.

But the stubborn and all-powerful Philip Murray refused to accept this offer. Instead he now insists on 18½ cents per hour and is perfectly willing to shut down the entire steel industry and so paralyze the economy of our country for 25 cents a day.

The 15 cents per hour wage increase offered by United States Steel is in my estimation amazingly generous. It is higher than any wage increase in the history of the steel industry. It represents 60 percent of the union's original demand of 25 cents an hour or $2 per day, 75 percent of the union's amended demand of 19½ cents per hour, and 81 percent of the President's compromise proposal of 18½ cents per hour.

If Republic, too, were to make such an offer, it would cost the company $18,000,000 annually, and would increase the average straight-time hourly rate of Republic steelworkers from $1.11 to $1.26. The man who sweeps Republic's plants would receive 93 cents per hour. In addition, this straight-time rate would be further increased by overtime and vacation allowances.

Let me point out to you that the offered increase of 15 cents per hour was made in the face of vanishing profits and a definitely uncertain future.

Now we hear people ask why United States Steel would not go up another few pennies an hour, meet the President's 18½ cents compromise proposal and so avert this disastrous strike.

I cannot speak for United States Steel but I can speak for Republic.

Three and one-half cents an hour does mean only a few pennies to the steelworker. On the basis of a 40-hour week, it means $1.40 a week. On an annual basis, it means $72.80. It is interesting to note that if the steelworkers were finally to receive this additional 3½ cents per hour, they would lose all benefits of that increase for a full year were they to be on strike as much as 7 days.

To Republic, on the other hand, 3½ cents an hour means $4,200,000 a year, and this, let me emphasize, is on top of the $18,000,000 represented by the offer of a 15 cents an hour increase or a total of $22,200,000. To Philip Murray that may be a few pennies, but it's a lot of money even to the Nation's third largest steel company.

Both union officials and high Government officials are fully cognizant of the facts set forth in this letter. Yet the union's answer to an offer of a 15 cents an hour increase is a paralyzing strike of the entire steel industry.

For years Philip Murray has forced industry to capitulate to his extravagant demands, well knowing that a friendly administration in Washington would exert on industry every pressure in its power to help him gain his ends. Maintenance of membership and the check-off, forced on industry against its will by this friendly Government in Washington, now stands Murray in good stead. Through this clever device he has exacted tribute from the hundreds of thousands of employees in

the steel industry by the check-off of union dues. During the year 1945 Republic checked off for the union, as initiation fees and dues, and turned over to the union treasury, approximately $473,000. Applied to the entire industry this means millions of dollars in the union treasury, all of which, mark you, is entirely exempt from Federal taxation. As a matter of fact, only recently the steelworkers' union increased its dues by 50 percent—from $1 to $1.50 per month.

Secure in the fact that the Federal administration will be on his side, comfortable in the knowledge that he has at his command millions of dollars of tax-exempt union funds, arrogant in his disregard of the interests of all groups in the Nation, except the selfish interests of his own union membership, Philip Murray, and he alone, is responsible for the strike which now exists.

In my personal opinion, the labor situation has now gotten into a position which can only be handled in a few ways:

1. Full and complete capitulation to the union's demands, which quite apparently is President Truman's wish, but which Republic could not meet for the reasons given above. Also, an abject surrender would only lead to more extravagant demands. This is the natural consequence of permitting one man supported by Government favor to wield the power which allows him to shut down America's basic industry in an effort to enforce his unreasonable demands. Even the most powerful business monopolies of years ago were weaklings when compared to the modern labor monopoly. This is the path to a form of government which is neither democratic nor American.

2. A forthright statement of policy by the administration that it wants just so much inflation and that OPA will grant price increases concurrently with wage increases not only sufficient to compensate for the wage increases but also to bring company earnings at least up to a rate of earnings comparable to that of previous years, as intended by Congress in the OPA enabling legislation.

3. President Truman may take over the steel industry, increase the price of steel by some $12 or $13 a ton in the hope of insuring operations in the black, and then, under Government control, order an 18½ cent per hour wage rate increase, thus in effect answering No. 2 above on how much inflation the administration wants. In such event, it is Republic's present intention to hold the Government strictly accountable and to take every proper legal step to recover from the Government all damages which may be sustained by Republic as a result of such Government seizure and operation.

4. The only alternative is to let management and labor fight out their differences on the picket line and in the markets until the economy of the country drops to a level where people will appreciate a job and go back to work, or management cannot stand the losses of a long strike and capitulates or compromises.

5. Legislation is needed to prevent this wave of strikes from recurring and I am attaching a proposal which has been prepared by our general counsel, T. F. Patton, and which represents the thinking of the management of our company.

The existence of the OPA, to which we are opposed, is an important contributing factor in the current strike. Price should be a matter of supply and demand, quality, attractiveness, comfort, appeal, etc., and not the warped imaginings of a small group of people seeking a substitute for democracy. If the steel companies were free from governmental interference to adjust prices as well as wages, it is likely that the problem would soon be solved.

Very truly yours,

C. W. WHITE.

Mr. White also submits the following statement, which I commend to the members of the House Committee on Labor:

REPUBLIC STEEL CORP.'S PLATFORM ON LABOR

Republic is in favor of—

1. Collective bargaining between labor and management through representatives freely and fairly chosen without coercion of any kind.

2. Amending the one-sided Wagner Act or replacing it with a new national labor law which will be fair to employers and employees alike, and which will be administered by a board that will be impartial. Such a law must:

(a) Impose responsibilities upon and penalties against labor unions and their members for wrongful conduct in the same manner as responsibilities are now imposed upon and penalties assessed against employers;

(b) Preserve inviolate freedom of speech in labor disputes for employers, labor unions, and employees without discrimination;

(c) Penalize labor unions and strikers for indulging in violence of any kind or mass picketing during a strike;

(d) Insure union responsibility by providing for the distribution of audited financial reports to members and regular elections of union officials at reasonable intervals by secret ballots of the membership at large; and

(e) Prohibit strikes which have not been approved by a majority vote through a secret ballot of the workers directly involved.

3. Amending the Federal antitrust laws to make labor unions and their members subject to ordinary criminal laws for extortion and other crimes, just as are all other citizens.

Republic is opposed to:

1. Compulsory unionization in any form, whether it be called the closed shop, the union shop, union maintenance, or any other name. Each employee should be free to join or not to join, and to resign from, a labor union as he sees fit. No employee should be forced to belong to a labor union as a condition of his continued employment with the company.

2. The check-off of union dues. The check-off is a vehicle for entrenching labor union leaders in power without rendering service to union members. A labor union should stand or fall on its own merits, and the services it renders its members should be such that the members will voluntarily pay their dues direct to the union in return for such services.

3. The unionization of supervisory employees. Such employees are part of management, and their undivided loyalty must be accorded management. They cannot be faithful to management and to a union at the same time.

4. Compulsory arbitration of labor disputes. This deprives management of its right and duty to exercise its own judgment and make its own decisions on important labor matters.

5. The guaranteed annual wage for the steel industry. The nature of the steel business is entirely too cyclical to permit of any guaranteed annual wage.

No Defense Plan

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and timely article entitled "No Defense Plan," written by Joseph and Stewart Alsop and published in the Washington Post of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO DEFENSE PLAN

(By Joseph and Stewart Alsop)

The best commentary on the embittered Army-Navy controversy over defense unification is to be found in a single, simple fact. Six months have passed since the bomb fell on Hiroshima. Six months have passed since the strategic position of this country was completely revolutionized. Yet the responsible heads of the armed services have not yet agreed on an over-all defense plan for the United States, revised in the light of capabilities of the new weapons. No such plan exists.

It is not for want of asking that no plan has been prepared. On the contrary, President Truman asked the Joint Chiefs of Staff for a plan a good many months ago. The joint chiefs referred the problem to their strategic subcommittee. On the subcommittee the representatives of the air, naval, and ground forces soon found themselves in flat disagreement. Neither the joint chiefs themselves nor their subordinate bodies can act unless unanimous. The President did not get his plan. Sometime before the Budget went to Congress he renewed his request. Again the joint chiefs found agreement was impossible. And there, so far as is known, the matter rests.

This extraordinary state of affairs has far-reaching implications. Confiding the task of coordinating the air, ground, and sea arms to the Joint Chiefs of Staff is the essence of the compromise by which the Navy hopes to avoid unification. The idea is to secure perpetuation of the Navy's separate identity by establishing an independent Department of Air, thus buying off the air enthusiasts, while pronouncing coordination through the joint chiefs. Currently the naval strategists are predicting that this compromise will pass Congress.

As far as the War Department is concerned, these predictions are part of a naval squeeze play. Secretary of War Patterson and the Army General Staff are unalterably opposed to the three-department plan, which they consider worse than the existing set-up. Their understanding is that the President shares their view. Accordingly, they suspect the Navy of trying to block action to modernize the defense set-up by promoting a plan which will be vetoed by the President if passed by Congress.

Action may well be blocked, for there are powerful interests in Congress which will support the Navy. Meanwhile, it is difficult to find an answer to the Army's objection to the Navy plan—that the Joint Chiefs of Staff only worked well in wartime, and even then failed to settle any issue where the bureaucratic interests of the services were in conflict. There are innumerable examples of such failure.

A current and extremely disturbing case is the simultaneous experimentation on guided missiles which the ground forces, air forces, and Navy are now all carrying on. If the appropriation of all three services for this purpose were placed in a common pool we might soon master the problems of the guided missile, which is generally regarded as the major weapon of the future. As it is, none of the three is likely to have money enough to complete the job, which will, as it were, fall between three stools.

As for wartime examples, they may be multiplied endlessly. There was the case of the Army antisubmarine patrol at the beginning of the war. Only the Army had planes for the coastal antisubmarine patrol at that time. No joint communications system or

other method of effective Army-Navy cooperation in this urgent mission had been devised, and the joint chiefs, despite the emergency, failed to agree upon any. Lives and ships were therefore lost. Again, there was the case, in the Pacific, of the unification of the command before the invasion of Japan. In their fruitless search for a system which would not subordinate the admirals, the Navy proposed giving command to a sea officer until the landing was completed and our forces had marched 30 miles inland, at which magic omen MacArthur was to take over.

Again, there was the case in China, where the Navy insisted upon maintaining an independent Navy group throughout most of the war. The outstanding effort of this interesting organization was to finance and equip a series of private military forces for the notorious head of the Chinese Political Secret Service, General Tai-li. These included, incidentally, a naval camel corps in Sinkiang Province, in the wilds of central Asia.

There would be a kind of comic irony in this sort of thing if the fundamental issues were not so grave. Possibly the rules can be revised to make the work of the joint chiefs effective in cases where there is conflict of interest. But in peacetime, when men and money are short, there is conflict of interest between the services at almost all points. The best proof is the failure to agree on an over-all defense plan, which arose from the need to assign to each arm its strategic mission, and to tailor its requirements of men and money to fit this mission only. It is difficult to see how a committee system can operate, even supposing that the unanimity rule is abolished, if any individual member of the committee seldom agrees with any other member of the committee.

Reclamation

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an address I delivered in Lincoln, Nebr., on Monday of this week at the annual meeting of the Nebraska Reclamation Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies and gentlemen, I appreciate your invitation to come here today and to speak to you briefly about the reclamation picture, as I see it from my distant point of observation in Washington. I am particularly happy to be here because, as you know, I was active in reclamation work in the State for many years and at the time our association was founded, and I had the pleasure of talking to you at our first annual meeting. I am glad to see that our association is firmly founded and making good progress and the officers doing a good job.

Since our last meeting, that good friend of all of us, Harry Bashore, has retired and come back to his home in Mitchell, Nebr., to live. Harry has been a fearless leader of the reclamation movement all his life, and I believe he can look on the development that has already been made, and the projects and programs that are now under way, as a kind of permanent memorial to his life and his 39 years of service in reclamation work. Personally, I can think of no finer memorial that a man could have than that. Incidentally, it shows something of the part that Nebraska has played in the national reclamation movement that both Harry Bashore and John C. Page, his predecessor as Chief of Reclamation, were Nebraskans. So I think Nebraska can claim some of the credit for having provided the Nation with much of its leadership on this program in recent years. I am hopeful that this association, even though it was created so recently, will continue to supply Nebraskans as national leaders.

To our new Commissioner, Michael Strauss, we wish the best of luck and pledge him our cooperation toward every sound program for developing our water resources and bringing our western dry lands into production.

I had the pleasure of addressing you just 1 year ago, on the occasion of the first annual meeting of the association. At that time I pointed out that a coordinated policy for the development of the entire Missouri Valley was in process of formation, and that part of the program had already been enacted into law by Congress.

I am happy that I can now report that the fundamental programs for the complete development of the Missouri Valley program have now been enacted into law, that an administrative procedure has been set up for coordinating policy and construction, and that we can look forward to progressive completion of the program just as fast as the money is available.

This seems to me such a milestone in the development of reclamation in Nebraska and in the Missouri Valley that it seems worthwhile to review briefly the principal events of the story. You are all familiar with the passage of the Federal Reclamation Act on the recommendation of Theodore Roosevelt in 1902. Since that time the Bureau of Reclamation has been constructing storage reservoirs and irrigating our lands on an ever larger scale. During the past 44 years they have spent around $1,000,000,000, and have passed from local projects serving only a few acres to the complex, multiple-purpose storage systems of the present day. And this growth in the scope of their works has come to have an important effect on the volume and timing of the flow of water farther downstream, which is to say in the main stems, the Missouri and the Mississippi. This brings me, of course, to the work of the Army engineers, who have for an even longer period been working on flood-control and navigation facilities. The resulting argument between the irrigationists and the navigationists, both of whom wanted the same water, began to show signs of becoming the battle of the century.

At this point the suggestion was made that the only way to settle these differences was by creation of a Missouri Valley Authority.

There was another way to settle these differences, however. The Bureau of Reclamation and the Army engineers were asked to work out a coordinated plan for the development of the entire river. The views of the two agencies, along with those of all other interested activities, were reconciled in the Pick-Sloan plan. With passage of the Rivers and Harbors Act of 1944, this has now been adopted in its entirety by Congress. Furthermore, Congress, after thorough study of the problem, adopted a positive decision of policy—that navigation uses must not conflict with beneficial consumptive use of waters for domestic, municipal, stock water, irrigation, mining, or industrial purposes. I think the adoption of the Pick-Sloan plan settled that argument.

In addition, machinery was set up to maintain this coordination and to develop the unified plan for the valley in all its details, through the Missouri Basin Inter-Agency Committee, which contained representatives of the principal Federal agencies interested, as well as the States in the area. This committee has been holding regular meetings, and so far they have found it possible to come to agreement on the issues before them.

So the way has now been opened to really large-scale development of our water resources. Two hundred million dollars was authorized for the Army engineers, in addition to previous authorizations, as the first step toward completion of their program. And $200,000,000 was likewise authorized for the Bureau of Reclamation, as fast as budgetary requirements would permit.

Appropriations are, of course, another story. Yet we have had no real reason to complain to date. The sums approved by the Budget Bureau for fiscal year 1947 are the highest in our history.

But perhaps this discussion will be a bit more interesting if I bring it closer to home by talking about Nebraska projects of direct interest to Nebraska. For the next fiscal year the Budget Bureau has approved $3,621,000 for progressive work on these projects. Since portions of this money will go to benefit adjoining States under projects that cross State lines, the sum that will be of direct benefit to Nebraska is $2,976,000.

"TRUMAN ASKS FOR EXTRA FLOOD FUNDS

"WASHINGTON.—President Truman has asked Congress for an extra $16,450,000 for flood-control operations of the Federal Government in the fiscal year beginning July 1.

"In a letter to Speaker SAM RAYBURN, Mr. Truman asked that the proposed budget for War Department flood-control projects be raised from $124,765,000 to $139,114,000—an increase of $14,350,000. He also requested $2,100,000 for the Agriculture Department's flood-control work.

"Mr. Truman said that $2,000,000 of the fund would be spent by Army engineers on the Harlan County Reservoir in Nebraska."

The Republican River is the stream on which plans for development are in the most advanced stage. I know how long you people out here have been working to make the Harlan County Reservoir a reality. I understand that the Army engineers will be starting actual construction work on the Harlan Dam this year, and that the Bureau of Reclamation will be making the dirt fly on the irrigation system which will bring water from the reservoir to lands of the Bostwick project. For the Bostwick project alone $317,000 is being spent this year and $1,000,000 is in the proposed Budget for fiscal 1947. About 90,000 acres will eventually be brought under irrigation, practically all of it land that has never before been irrigated. These irrigable lands lie on both sides of the Republican River, extending from Naponee, Nebr., east and south to Concordia, Kans. Of the total acreage about 27,000 acres are in Nebraska and 63,000 acres in Kansas.

The other large Republican River project which is scheduled for construction beginning this year is the Frenchman-Cambridge project. About 53,000 acres will be irrigated by this project, of which about 36,000 acres will be new land. Proposed works for the project will extend from Enders, Nebr., eastward along Frenchman Creek and the main Republican River to Orleans, just a few miles above the Harlan County Reservoir. Two storage reservoirs will be constructed, the Enders Dam on Frenchman Creek, on which work is to start immediately, and the Medicine Creek Reservoir, 8 miles northwest of Cambridge. Ultimately, it is hoped that additional storage capacity will be provided by Culbertson Reservoir on the Republican River, and by a reservoir on Red Willow Creek.

Five hundred and thirty-two thousand dollars is available for this project during the current fiscal year, and $1,500,000 is in the budget for it for next year. Incidentally, this is one place where I feel we have a justified complaint against the budget-makers. About $3,500,000 is really needed for

this project during the coming fiscal year, and I shall try to have the 1947 appropriation for the project increased when the appropriation bill reaches the Senate.

Preconstruction surveys are under way on the Wray unit of the North Republican project, which embraces an area lying along the north fork of the river from Wray, Colo., east to Parks, Nebr. This project will provide supplemental water for about 3,000 acres of land now irrigated, and will bring about 2,000 acres of new land under irrigation in the vicinity of Haigler, Nebr. There is $40,000 available for the project this year, and another $100,000 is being asked in the 1947 budget.

Pumping projects authorized along the Republican River Basin in Kansas and Nebraska contemplate the ultimate development of five main units. About 23,500 acres would be irrigated by pumping from wells. Work on this project is starting in a small way with a $20,000 appropriation this year and a budget request for $100,000 for next year.

Work on two of our earlier projects is practically completed. The Mirage Flats project on the Niobrara River in northwestern Nebraska near Hay Springs will irrigate 12,000 acres. Likewise, the work on the Box Butte Dam on the Niobrara is nearing completion.

The other major project provided for in next year's budget is a $600,000 transmission line from Gering to Sidney. If money for this budget item is appropriated by Congress, it is expected that construction of the lines can be completed during fiscal 1947, although some additional substations and other minor works may have to be constructed during succeeding years.

Additional funds have been budgeted to carry on engineering surveys and investigations of a number of other proposed projects.

I think you can see from what I have said so far that this program is moving forward smoothly, and that it will not be long before we begin to see the Harlan County Dam and the irrigation works for the Bostwick project completed within a few years. Some of the other projects which do not have plans for development in an advanced stage will take longer.

The effect of this program on development of our State will be tremendous. Probably a million acres of additional cropland will be brought under irrigation. But more important, irrigated land guarantees a larger and more secure yield than nonirrigated acreage, particularly in a State like Nebraska. Irrigation will provide acreage for from 10,000 to 20,000 additional farms, with a resulting increase in population for the State of 200,000 to 300,000 people. Some of the reservoirs will give us power, to tie in with our rural electrification program. The damaging floods on our streams will be brought permanently under control.

All of this is being done or will be done by the Bureau of Reclamation and the Corps of Engineers, coordinated by the Interagency Committee, acting on a basic plan reconciling all divergent viewpoints, authorized by Congress, using annual appropriations, after consultation with all interested parties and adequate opportunity for all to be heard.

I know you have all followed with interest the arguments over the proposal for a Missouri Valley Authority. I believe you may be interested in a brief summary of the recent history of the proposal in Congress and an explanation of its present status.

I described to you something of the history of the development of the Missouri Valley and of the adoption by the Congress of the Pick-Sloan plan as a master plan for the entire basin. At about the time the Pick-Sloan plan was adopted Senator MURRAY, of Montana, introduced Senate bill 555, which proposed a Missouri Valley Authority, composed of three men appointed by the President, to control all water development of the basin with very broad powers. This bill was first referred to the Committee on Commerce, which reported against adoption of the measure in the following terms:

"In summarizing, the committee concludes that—

"(a) The plans recently authorized by unanimous action of both Houses of Congress provide a complete program of unified water resources development in the Missouri Basin.

"(b) Existing laws and procedures provide for full coordination between the established Federal agencies charged with the responsibility of prosecuting the several phases of water-resource development.

"(c) The procedures already established by the Congress for the development of water resources, protect States' rights and prescribe full cooperation between local, State, and Federal interests.

"(d) Development of the authorized plan under existing Federal agencies will assure proper emphasis on the primary needs of flood control and irrigation.

"(e) It is impracticable to have regular Federal agencies and a valley authority operating in the same territory.

"(f) Under S. 555, the Missouri Valley Authority would be able to control practically all aspects of economic and social life in the Missouri Valley without local interests having proper recourse to Congress: if the Congress desires to enter these questionable fields of activity such functions can best be accomplished by the established Federal agencies under the full control of Congress."

The proposal was then referred to the Committee on Irrigation and Reclamation, which held very extensive hearings, and likewise reported against the bill. I have not time to quote the conclusions of this committee in full, but, in summarizing its position, the committee said:

"The creation of an MVA would amount to the welding of economic and political powers resulting in nothing short of autocracy. It would mean the substitution of arbitrary power for democratic processes. It would mean the creation of a superstate—neither Federal nor State, and not contemplated by our Constitution. It would subject the social, cultural, and economic welfare of the Missouri Basin to the dictates and whims of a three-man board, not responsible to the people and largely irresponsible to the Congress itself. It would constitute a virtual abdication by the Congress in favor of government by a Federal corporation wielding autocratic powers. It would challenge State sovereignty and destroy systems of laws, both State and Federal, under which western agriculture has grown and prospered. It would throttle in the West the reclamation program which has been prosecuted through the years by an experienced agency and which has met with the approval of the Congress and of the people directly affected. It would permit a three-man board to avail itself of trust funds created for reclamation. It would be an excursion into an uncharted field of vast expenditures of public funds and of experimentation under a board unencumbered by the restraints that a democracy should erect against agencies of government."

Those are pretty strong words. Then the committee quotes Shakespeare against the bill.

The Senate had decided that the Committee on Agriculture and Forestry should likewise consider and report its view on the bill. When the time came for this committee to hold hearings, Senator MURRAY, the bill's author, requested that the committee defer the hearings and that no action be taken on the bill for the time being.

I interpret this chain of events to mean that sponsors of the Authority proposal are willing to permit development of the basin to proceed on the basis of the Pick-Sloan plan for the present. Our construction work is going ahead rapidly under this plan, and whatever the merits of the Authority plan might be if it were adopted, there is no need to let the argument delay us now.

I do not mean to contend that every phase of our program is perfect. The plan has not yet been completely engineered in all its details, and no doubt further study will show the advisability of some engineering changes. Furthermore, future developments may show the need for additional means of coordination among the interested agencies. It may be that the Missouri Basin Inter-Agency Committee will not work as effectively as we hope in ironing out the differences among the activities concerned. This committee was developed in the democratic way with the intention of giving all interested parties representation. But if it does not prove able to maintain development of the river on a balanced basis, there is no reason why we cannot expand and strengthen the machinery for coordination even to adoption of an MVA plan. On such matters as these, your suggestions and ideas are of the greatest assistance to me.

I hope this association will undertake a very active program for the next year. In this connection the activities of some of the other State reclamation associations may be of interest to you as a sort of a model for your own activities.

Most of the State organizations seem to function as a sort of clearinghouse for the divergent views of various groups interested in reclamation. I am fully aware of the fact that some problems have already arisen upon which your membership has taken different views. I have no doubt that you will have some difficult decisions to make. But that shouldn't disturb you too much. It reveals more forcibly than ever the need for an organization such as ours, to bring to a focus the beliefs of various individuals and groups.

Opposition to authorities proved one of the most universal activities in which State reclamation associations engaged last year. Idaho, Oregon, Washington, and Montana State reclamation associations vigorously opposed, and are continuing to fight, the Columbia Valley Authority. State groups in North and South Dakota, Montana, Wyoming, Colorado, Missouri, Nebraska, and Kansas opposed the Missouri Valley Authority, going so far as to send witnesses to appear before congressional committees to make their views known. Although not definitely affected by a proposed authority, a strong State association just formed in Texas a year ago campaigned against the authority principle.

New Mexico appears to be taking its cue from the Missouri Basin, and the State association there is seeking to develop a joint program of flood control and irrigation by the engineers and the Bureau of Reclamation covering the Rio Grande Basin. A State group is currently being organized in Arizona. You will probably want to watch them closely, for one of the announced intentions of that body is to strive to bring about some control over ground water.

I hope that brief survey will give you some ideas for your future activities. We already have most of the interested parties of the State in the association, and we have a fairly complete program of what we would like to have done toward developing our water resources. I believe it is now the principal task of this association to create a public sentiment throughout the State, and, so far as possible, throughout the Nation, to support a carefully planned program of reclamation and a general land and water development program.

The entire Nebraska congressional delegation feels as I do, that the development of 1,000,000 additional irrigable acres in this State, plus provision for flood-control, power, and other benefits, stands out as the major development open to the State in the next decade. Any of us will give top priority at any time to assist your State association or

local groups in furthering your projects when they reach the stage where they are ready for consideration in Washington.

But let me repeat one thing I have said to you before. Your congressional delegation will be helpless to assist you until you have first composed any differences at home and are able to present a united front in behalf of a specific program. We will never feel competent to act as umpires over conflicting engineering or social developments. Those are problems which must be settled by the men and women who reside in the areas where these projects lie.

And by the same token, the 17 Western States must not air widely conflicting views before Congress, or we will not have a chance. Through the aggressive influence of the National Reclamation Association, with which you are affiliated, the West must constantly work to resolve its differences. Then we can gain the support of Congress as a whole to any legitimate and sound development program for the West.

The Bureau of the Budget has recommended an appropriation of $168,000,000 for the Bureau of Reclamation alone for the 1947 fiscal year. This is an all-time record for a Budget estimate. Our job in Nebraska, and in other Western States, is to gear ourselves to this gigantic program, and to prepare the soil at home for this tremendous development.

Operation of Packing Plants by Gayle Armstrong

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Roswell (N. Mex.) Daily Record of January 25, 1946, dealing with the appointment of Mr. Gayle Armstrong, of Roswell, N. Mex., to take charge of the packing-house plants under Government control.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HE'LL DO THE JOB

Roswell can well enough take considerable pride in the fact that one of its citizens has been chosen to operate the struck meat packing plants of the nation if Government is forced to take them over Saturday, as is now ordered.

Few, perhaps, had thought it possible that Gayle Armstrong would be chosen by Secretary Anderson to step into the tremendous job of operating the packing plants, but those who are most surprised admit that the choice is in all probability a good one.

It has been learned here that Secretary Anderson holds the ability of Armstrong in high esteem, since he has made him one of his chief advisers, and the confidence the agriculture chief has displayed in the Roswell man reflects credit to him as well as to his home community.

Armstrong and President Truman are a great deal alike, in many respects. They are unassuming, do not have too much to say about most things, but have an abundant quantity of human understanding.

Armstrong's story is something along the Alger line. He has made his own way in the business world, has operated on a wide scale from a comparatively small beginning, and has been successful beyond the usual expectations. Meantime, he has grown in esteem of his townspeople.

When he was made president of the chamber of commerce last year he had to be practically pushed into the position, since his retiring nature did not permit his taking over such a position. Once assuming the job, however, he has rhown remarkable leadership, so his associates say.

In spite of the fact that he has the confidence of his home folk, however, his nomination for the post had not been many hours old when the firing began. The head of the State Federation of Labor attacked him through telegrams to the White House and to Anderson, declaring that he had not been friendly to organized labor, and therefore was not suited to the post.

The protest appears to be not only unfair but ill-advised. As the situation is understood, Armstrong will direct operations of the plants and settlement of the wage dispute is in no way involved. Therefore, the protest should lose strength, as it perhaps will. Meantime, Roswell folks know that the operation will be carried out on a high level, and that there will not be any reason for apology when the job is finished.

The Agricultural Situation in Nebraska

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the RECORD an address I made at Columbus, Nebr., January 25 last, to the Nebraska State Convention of the NRECA.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am very proud and happy that you have honored me by inviting me to your meeting and asked me to say a few words. Because I like to talk about farm electrification and I like to get back here and talk to people who are as much interested in farm electrification as I am. I take considerable pride in the fact that it was a fellow Nebraskan, the late George Norris, who first put rural electrification before the country and pushed it through the Congress. He is the real daddy of the REA, as you all know. When Senator Norris left the Senate, 3 years ago, neither Senator WHERRY nor myself was eligible to take his place on the Agriculture and Forestry Committee, because of lack of seniority. Last year, however, I got a chance to go on that committee, which passes on all REA legislation, and of course I jumped at the chance. So now I hope I will be in a still better position to serve the cause of farm electrification.

To be perfectly frank with you, I do not believe it will be too hard to get more or less the kind of REA program out of Congress that we want. This is because the REA program has been, without question, an outstanding successful program ever since it started. It has pushed ahead systematically and energetically on its job of bringing electricity to thousands and millions of farm families all over the Nation, and in Nebraska alone it has more than tripled the number of Nebraska farms having central station electric service. It has justified all the claims of its friends by keeping on an absolutely sound financial basis.

I am frank to give you gentlemen and your coworkers most of the credit for this success. It would not be very courteous of me, with the Administrator of the program our honored guest here today, to deny that the Federal Government has been very helpful, but I am sure that Mr. Wickard will agree with me that what really put this program over was the active enthusiasm and continued cooperation of users of the electricity combined with the sound management and in particular the careful financial control of those who have been responsible for the administration of your respective districts and cooperatives. In fact, it offers quite a contrast to some less successful programs that have suffered a little too much from what I call "Washington influence." In other words, this has been primarily a grass-roots proposition from the beginning. For after all there wasn't much that the REA did or could do except lend you the money and give you some advice, and after that you built your own systems, managed them yourselves, collected your revenues and paid your debts from your own earnings. I believe that just as long as farmer-users continue to manage their own systems and keep them on an even keel financially, the program will continue to be successful. We in Congress have tried to keep it that way. Let's keep politics and Washington bureaucracy out of it. That's why I have always supported the suggestion that the REA be an independent Federal agency.

I imagine that what you really want from me is not a lot of flowers and compliments, but something of my viewpoint and my knowledge of the trend of events in Washington, as it relates to the Rural Electrification Administration. Let me say this first: I believe you can confidently expect the day to come soon (and by soon I mean within the next 5 or 10 years) when cheap electric power will be available to practically every farm in Nebraska. By that I mean that Congress will see the thing through on appropriations and loan authorizations, and on as favorable and as liberal terms as any of us can rightfully expect. Just to give you an example of what I mean, in April of last year Mr. Wickard came before the Congress, to a subcommittee of which I was a member, and asked, among other things, for a loan authorization of $150,000,000 for fiscal year 1946. He wound up by getting $200,000,000 for this fiscal year. I believe he now thinks that is still not enough—and maybe it is not enough, but I tell the story just to illustrate that Congress is pretty cooperative toward the REA.

There may be a few arguments about exactly how much we appropriate and authorize, and about whether we authorize it for next year instead of the year after, and so on, but one way or another I am sure in my own mind that just so long as you show you can use it as well as you have in the past, Congress will make the necessary funds available. I believe you can count on that.

As to terms, you are all familiar with the Pace Act of 1944, which extended the authorized time limit on your loans to 35 years, and cut your interest rate to 2 percent.

REPAYMENTS GO TOWARD AMORTIZATION

On that basis—present program—probably better than two-thirds of what you repay to REA will go toward amortization of your balance rather than toward carrying a load of interest payments. So, I think you can see that Congress is with you. Incidentally, just at this time when Congress is getting a few harsh words for not cooperating with the President, I think the legislation on REA is pretty good proof that when we have a really good program, sound in every respect, Congress and the administration have no great trouble in getting together.

Now let me look for a moment at the program in Nebraska, and how much has been accomplished and how much remains to be done. At the end of the last fiscal year, last June 1945, more than 37,000 Nebraska farms had central station electric service as compared with less than 10,000 when the REA program was started in 1935. However, it is estimated that there were still more than 80,000 Nebraska farms (more than two-thirds) without electricity and in 35 of our counties, mostly in the northern and western parts of the State, there was not a single mile of REA line.

A good start toward bringing electricity to these nonelectrified areas has already been made through allotment of more than $5,000,000 in this fiscal year to build lines to serve more than 9,000 additional rural customers. In case you have not tried to keep track of our progress all over the State, let me briefly list a few new projects for you:

To the Custer Public Power District, Broken Bow, $480,000, to acquire and rehabilitate lines serving 826 rural customers and to build new lines to serve approximately 400 new rural consumers in Custer County.

To the Twin Valleys Membership Association, Cambridge, $565,000, to serve 1,317 rural consumers in Furnas, Harlan, and Phelps Counties.

Three hundred thousand dollars to the Panhandle Rural Electric Membership Association, Alliance, to serve 426 rural consumers, all of them now unserved, in Box Butte, Grant, and Sheridan Counties.

To the North Central Nebraska Rural Public Power District, in Creighton, $325,000 to serve 612 unserved rural consumers in Antelope, Holt, Knox, and Pierce Counties.

To serve 627 unserved rural consumers in Perkins County, $400,000 to the Midwest Electric Membership Corp. of Grant, Nebr.

To the South Central Membership Association, in Red Cloud, $420,000 to bring service to 971 new consumers in Clay and Webster Counties.

To the Central Nebraska Public Power and Irrigation District of Hastings, $369,000, which with $350,000 of the district's money will be used to construct 81 miles of transmission line from Elwood to McCook. This line will ultimately permit extension of low-cost power to over 4,000 farms in the southwestern corner of the State.

These are just a part of the major new projects. In addition, loans are being made to prewar borrowers for extension of new lines to consumers previously unserved. These lines, together with other projects already approved, will carry REA-financed rural power lines into 74 counties in the States, leaving only 19 counties not yet reached by REA. I am particularly encouraged by such projects as that of the Panhandle Association in Alliance, since they prove definitely that there is nothing impossible about extending this program up into parts of the State which are more sparsely settled than the areas that have been covered previously.

Estimates published by the Department of Agriculture indicate that with about $8,000,000 more, service can be extended to more than 15,000 additional consumers within the next 2 years under the programs now being considered by Congress in the Lucas and Poage bills. That would mean that just about half our farms would have electricity in 3 years or less. So you see we are beginning to cover the map. Now that doesn't mean that the job is almost done by any means. There will still be plenty of farms that are nowhere near an REA line, where new districts or cooperatives will have to be organized before electricity can be extended to them. And a lot of your existing organizations will want to extend into territories or pockets you are not serving now and some of you will need additional financing for that, although many cooperatives and districts are in strong enough financial shape so that they can undertake a little expansion out of their own resources.

But at least most of our farms in Nebraska have been brought within shouting distance of electrification. The pioneering phase is well over. Those of us who have had a dream of electric power in every farm home can begin to see daylight ahead.

WANT TO SEE NEBRASKA TAKE THE LEAD

Of course, I suppose the day will never come when electricity is in every single farm home. There will always be a few farms whose owners, for one reason or another, will not or cannot electrify although I do not think there will be many. Electricity is so pressing a convenience, and in fact so great a need for modern production farming, that there are not many farm families that will not jump at the chance of electrifying, once they are given the opportunity at reasonable rates. For my part, I don't think I will be satisfied until upwards of 90 percent of our farms here in Nebraska have electricity. I expect Nebraska to be approaching that goal very closely before the end of my next term in the Senate.

I have one final suggestion to offer before I close. We have sold this program to the American public on the promise that it is a financially sound, self-supporting proposition; that all the American farmer wanted was a loan, not a gift; and that all the money lent would be paid back, with interest. According to REA's last financial summary, that promise is being kept pretty well by Nebraska borrowers, since just about 99$^{9}/_{10}$ percent of all money due has been paid. That is a tremendous tribute to the good management of your organization. But it is also a tribute to the farm prosperity we have enjoyed pretty generally throughout the State for the last several years. It seems reasonable to expect that this coming year will likewise be prosperous, but for the years after that we have no way of knowing for sure. If drought or depression hits us again, it may not be so easy to sell electricity to your consumers, or to collect for it once it is sold. If we should meet with such adversity, that will be the real test of the financial stability of our program. So my advice to you is this: Now is the time to build up your surplus, pay off your obligations, build up your properties and your revenues, get your organizations in just as sound a condition financially as possible, so that if the storm should come, you can ride it through. We want to demonstrate to the whole country that this dream of rural electrification, which some people said was just a pipe dream, is really a vision of a prosperous agricultural America, and that no one can say the farmers did not pay their way.

Address by Secretary of Labor Before National Council for Permanent Fair Employment Practice Commission

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Honorable Louis B. Schwellenbach, Secretary of Labor, before a dinner meeting of the National Council for a Permanent Fair Employment Practice Commission, held in Washington, D. C., on January 23, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate very much the invitation you have extended me to speak at this important meeting. This meeting is important because the issue presented goes to the very heart of the fundamentals of American democracy. It goes to the basic concept of human freedom. That is so because it involves the question of equality of opportunity in employment. Without such equality, we do not meet the true test of freedom. Human freedom is the keystone upon which our American democracy stands.

Today the highest honor for bravery that our Government can give to anyone—the Congressional Medal of Honor—was given to Rev. Joseph T. O'Callahan, chaplain of the aircraft carrier, the *Franklin*, the great old warrior ship which was struck and struck again, bombed and fired, but which refused to surrender or die. You have read the stories about Father O'Callahan; perhaps you have seen the motion pictures about the fateful hours upon the ship. Father O'Callahan was proclaimed by the commander of the ship to be the bravest man he had ever seen. The chaplain wrote about the bravery of the men who had conquered their fear and, particularly, about a Filipino steward and some Negro steward mates. I want to read two paragraphs written by Father O'Callahan:

"There was a group of steward mates on board, and their reaction was even more striking than that of the Filipino boy whose story I have told. These particular steward mates were Negroes, and every one of them who remained abcard (remember that many were blown overboard) did a really magnificent job. I know personally that each of them was as frightened as the Filipino youngster, and remembrances rushed through my mind that day of the many cartoons I have seen, jokes I have heard, about how easily Negroes scare; but this group overcame their natural fear like real heroes.

"It was primarily due to their help that our executive officer was able to get a towline from the *Franklin* to the cruiser *Pittsburgh*, which was standing by. That towline was a terrific weight. There the gang was, lined up shoulder to shoulder, officers and men, black and white, sweating and straining, and all afraid. The towline was not to be budged. I have read about things like this and have been rather blase and skeptical, but there on the deck of the *Franklin* that afternoon it really happened. All of a sudden, uncertainly and slowly at first but gathering volume until it pierced the roar of flames, those Negro men started an impromptu chanting, making up the words as they went along. It was almost a Negro spiritual, and, as the rhythm of their voices found certainty, the rhythm of the gang's muscles and sinews started to work together and that heavy towline we hadn't been able to budge started to move, how God alone knows, but it was certainly the Negro stewards who led the way to a really superhuman job."

What better argument against employment discrimination is needed? Nothing that I could say or write could present so eloquently the argument on the question of equality of opportunity. There they stood shoulder to shoulder—black and white, officers and men—pulling together for freedom. There was no thought of proscription of men because of race or color or creed when lives were hanging in the balance. This was their time of great emergency. There was freedom of speech, of course; that speech rose in the form of Negro spirituals. They pulled together shoulder to shoulder, and the ship was saved. It should be of some significance

that in that hour of their fateful crisis no man aboard that ship demanded the right to debate.

At this time there is for consideration before the Senate of the United States a bill which has for its purpose the setting up of machinery by which equality of opportunity in employment might be achieved for the people of the race to which these stewards belonged and for other minority groups. For the present, action upon the bill is being delayed through the use of the Senate rule which permits unlimited debate. For 6 years I was a Member of the Senate. I was, and am, proud of my membership in that body. I have a most profound respect for the institution and its traditions. During that time, I came to know and I dealt with on terms of mutual confidence most of the men who are now opposing this measure. I never had any quarrel with them about the Senate rule which permitted unlimited debate. But I always contended then, and I still believe now, that equally important and equally essential to the effective functioning of our Government was the full recognition of another Senate rule which provided for cloture when it had approval of two-thirds of the Senators voting.

In a democracy, it is a desirable thing to have a forum where members may speak their minds fully and freely. However, every time during my tenure in the Senate when I thought that all the avenues of debate upon a particular subject had been explored and searched, I signed petitions for and voted for cloture in order that the successful functioning of the body might be assured. Were I now a Member of the Senate, when the time came that I reached a similar conclusion, I would again petition for and vote for cloture.

The argument has been made that in these troublesome times it is inappropriate to raise this issue. If that argument is valid, it must of necessity rest for its validity upon the assumption that the issue is unimportant. With that assumption, I disagree. I disagree because I believe that this issue is a moral one. The time is never inappropriate to consider moral issues. There never is a time when we can afford the luxury of silence in matters such as these. We cannot propose to become virtuous as citizens next year or the year thereafter. We cannot propose to be a little virtuous now and wink and blink as our less fortunate neighbors are denied their rights and denied them by the society of which we are a part.

I want at this point to call upon two witnesses to answer the question as to whether or not this is a moral issue. The first, Bishop G. Bromley Oxnam, speaking on behalf of the Federal Council of the Churches of Christ in America, which represents a large part of the protestant churches in this country. Let me quote from what the Bishop said.

"As Christians, each of us should give active support to the Fair Employment Practice Committee against discrimination in employment in industry. Discrimination in employment because of race, creed, or national origin, is one of the great moral issues before our Nation today. The right of a worker to be employed and paid solely on the basis of his character and ability is so clear, just and Christian that it should be protected by law.

"The religious forces, and I believe the democratic forces of the United States, face a fundamental problem here, and that is finding concrete means to translate our ethical ideals into the realities of economic justice and racial brotherhood."

Unfortunately, the other witness upon whose testimony I wish to rely died a few months ago, but his reputation as a great Catholic churchman still is remembered and his opinion about this bill is still available. I quote from a statement made by the Rt. Rev. John A. Ryan.

"In all these cases of discrimination the human dignity of the Negro is outraged and the virtues of justice or charity, or both, are violated. Such discrimination, whether practiced by employees or employers, is definitely immoral. The Christian precept of brotherly love is not satisfied by mere well-wishing, nor benevolent emotion, nor sentimental yearning. It requires action, action which assists the neighbor who is in need."

There can be no dispute about the fact that there is general and widespread discrimination against Negroes and Jews and, yes, Catholics in the matter of employment. Nor can it be denied that the basic law of our Government guarantees that there shall be no such discrimination. There can be no question about the legal right of our Government to protect its citizens against discrimination.

I contend that our Government is our trustee, holding for us in common our heritage of freedom. No faithful and worthy trustee who deserves the name of trustee can permit that which he holds in trust to be dissipated or destroyed. Certainly when the trust is one involving the most sacred of all trusts—the natural right to freedom—the trustee cannot ignore its dissipation or destruction. But more than that, the trustee who has in his trust this sacred right of freedom cannot sit silent when there is any doubt. If the trustee would retain his self-respect, he must be ready at all times to challenge anyone or any proposal that threatens to injure his trust.

Our Government cannot sit silent now. Our officials of Government cannot be silent. Nor can citizens who believe in their sacred rights as citizens be silent. The Government—trustee for all of our people—Negroes and Jews, Catholics and Protestants, black and white and yellow—must proclaim through positive act its determination to protect all of our citizens against discrimination. It cannot be merely acquiescent. It has the sacred obligation to fly the flag of freedom in order that peoples of the world everywhere will know that American freedom does mean freedom.

Freedom is not a metaphysical thing. It is difficult to define accurately because it cannot be bounded or delimited, but it is a very concrete thing, nevertheless. The right to work and an equal opportunity to obtain employment is a God-given right. We have just successfully concluded a great war during which time we carried the banner of freedom to the four corners of the earth. We proclaimed to the world and we demonstrated to the world that under American freedom a great military force could be assembled and equipped. So profound was our belief and so effective was our leadership that we conquered two of the greatest military forces the world has ever known. We drew no color line during that period. The draft boards did not say to members of minority groups that they should be the last to be called. The War Manpower Commission raised no color line when it recruited the labor force necessary to man our factories and our munition plants.

It seems to me that the least the Government of the United States can do is to tell these people that it intends to see that those principles for which they fought and labored will be protected insofar as they themselves are concerned. The Government can do this only through legislative enactment.

It is highly symbolic that the FEPC legislation should be the first among the President's program to come to the floor of the Congress. It is a test of our willingness to practice democracy as well as preach it. I quote from the President's recent message on the state of the Union:

"We have won a great war—we, the nations of plain people who hate war. In the test of that war we found a strength of unity that brought us through—a strength that crushed the power of those who sought by force to deny our faith in the dignity of man.

"During this trial the voices of disunity among us were silent or were subdued to an occasional whine that warned us they were still among us. Those voices are beginning to cry aloud again. We must learn constantly to turn deaf ears to them. They are voices which foster fear and suspicion and intolerance and hate. They seek to destroy our harmony, our understanding of each other, our American tradition of live and let live. They have become busy again, trying to set race against race, creed against creed, farmer against city dweller, worker against employer, people against their own governments. They seek only to do us mischief. They must not prevail."

The President's National Health Insurance Plan—Poll of Washington Residents

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a poll published in the Washington Post of January 28, 1946, showing 70 percent of the residents of Washington, D. C., favoring President Truman's national health-insurance plan.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

THE POST SHOWS 70 PERCENT OF WASHINGTON'S RESIDENTS FAVOR TRUMAN'S NATIONAL HEALTH-INSURANCE PLAN

An overwhelming majority of District residents support President Truman's plan for national health insurance.

Seventy percent of all Washingtonians are in favor of the President's health-insurance plan under which citizens who "work for a living would contribute to a common fund, the latest Post poll reports.

Twenty-one percent of District residents object to the health plan chiefly on the grounds that there are already too many deductions from their weekly pay check. The remaining 9 percent of those questioned were undecided.

Almost 9 of every 10 residents earning less than $4,000 yearly favor the adoption of national health insurance legislation. Those in higher income groups support the plan by a slightly smaller majority.

The President's compulsory health-insurance scheme has been written into the Wagner-Murray bill, now in the Senate Education and Labor Committee.

In a special message to Congress last November the President pointed out that the program would cost about 4 percent of each person's earnings up to $3,600 a year. But of this sum, the bill would collect only 1½ percent from the employee, 1½ percent from the employer, and leave 1 percent to come from general governmental revenues. Under the plan individuals would be free to select their own doctors.

The Post survey also shows that the average family total for doctor and hospital bills in Washington last year was about $73.

Resident opinion on the compulsory health insurance proposal was learned when interviewers asked a representative cross section of the city's population:

"The President has suggested that a small amount be paid from a worker's wages into an insurance fund that would help pay doctor, dentist, and hospital bills for the worker and his family. Do you approve or disapprove of the plan?"

Replies divided as follows:

	Percent
Approve	70
Disapprove	21
Don't know	9

Objectors to the pending compulsory health insurance bill were then asked why they disapprove of the idea. Here is a breakdown of the reasons they gave:

Reason for disapproval

	Percent
Too much deducted from salaries now	30
Will lead to socialized medicine	17
Want to select own doctor	17
Too much coddling	15
Other miscellaneous reasons	8
No reason given	13

Half of the District residents, the poll reveals, now participate in some private health, hospitalization, or accident insurance program. Among those already protected by private insurance policies, 79 percent said they favored adoption of the compulsory Government plan, while 84 percent of those without insurance support the President's national health insurance program.

In a final inquiry into the public-health question, the Post asked residents "About how much did your family doctor and hospital bills amount to during 1945?"

They answered:

Cost of family medical care:	Percent
Less than $100	59
Between $101 and $500	35
More than $500	6

AS SHOWN BY POST POLL—TYPICAL WASHINGTON VIEWS ON HEALTH-INSURANCE PLAN

Here are some representative comments of Washington residents who were asked by Post interviewers what they think of President Truman's plan for compulsory national health insurance:

Harry Gerrity, Jr., 55, a lawyer, of 6109 Nevada Avenue NW., said: "Too many people don't get proper medical attention just because they feel they can't afford to see a doctor once in a while. There are many rural sections of the country where there are no hospitals or doctors for miles around. Working people would hardly notice the small deduction from their pay check if the President's plan went through. Although I carry health insurance for my family and am able to meet my doctor's bill reasonably well, I feel very strongly that we should back up President Truman's efforts to improve the Nation's health."

"I am certainly in favor of health insurance, but I cannot see this proposed compulsory Government insurance set-up," Mrs. Edith M. McNerney, housewife, of 4523 South Dakota Avenue NE., told a Post poller.

"The pay check already looks sick from all the deductions imposed by Uncle Sam. The President has a good, worthy idea but the average wage earner can stand only so much. We have a health and hospitalization policy and it has been a big help to us but I just can't see forcing people to take it out." Mrs. McNerney's husband works at the Federal Works Administration. They have two children and have lived here for more than 30 years.

Frank S. Jerry, 36, instrument maker at the Naval Ordnance Laboratory, 15 Ocean Green SW., commented: "Harry really has a good idea in putting a health program on a national scale. If Congress passes the compulsory health insurance bill it probably won't cost the individual more than 2 percent of his earnings. I don't see how any sensible thinker could say that assurance of good medical care isn't worth 2 percent of his pay. I would jump at the chance for such a low premium insurance."

William A. Gibbons, 48, mechanic at Andrews Field, of 4420 Bowen Road SE., said: "Frankly, I don't think a whole lot of the idea. It strikes me that people should be allowed to take care of their own affairs, such as health insurance. Any compulsory insurance is getting too close to socialism for me. I have nothing but straight life insurance. But I probably am a lucky person because I have a wife and child and haven't spent a nickel on doctor's bills in more than 3 years."

Mrs. Paul M. Guild, 35, United States Coast Guard employee, of 26 Channing Road NW., commented: "By all means I approve of national health insurance. I know of many families that have become absolutely crippled financially by unforeseen accidents and sickness. A Government fund to which everyone contributes a very small percentage of their income would be of inestimable benefit to the general public. Everyone would save money under a scheme such as President Truman has suggested and it would assure medical care to the poor folk." Mrs. Guild has lived here 20 years. Her husband is a painting contractor.

Parity Prices for Agricultural Commodities

EXTENSION OF REMARKS
OF
HON. HARLAN J. BUSHFIELD
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement upon parity prices for agricultural commodities, prepared by C. C. Hanson, secretary of the Association of the Southern Commissioners of Agriculture.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of December 8, 1945]

INTERESTING NEW OVERTONES IN FEDERAL THINKING ON FARM PRICES

It has already been noted that the political farmers in Washington are showing discontent with the current parity formula. Under it, farm prices on average are above parity. Since the political farmers for 20 years have professed to want only simple parity, it seemed, by their own arguments, that the present above-parity prices were excessive. Now the political farmers are offering a series of upward revisions in the parity formula. Most of these proposals would have the highly soothing effect of pushing present prices back to parity, or below it, without affecting their actual dollar amount.

The Secretary of Agriculture, Mr. C. P. Anderson, has himself joined in the present attack on the parity formula. This looks like an official declaration that the formula long defended as sacrosanct was really something of a fake. But there may be more even in Mr. Anderson's remarks than a mere denunciation of the old parity formula.

For instance, the Secretary says that even at 110 percent of parity present milk supplies are short. By implication, that is, he seems to be arguing that the Government must fix milk prices at a level sufficient to bring out some preordained volume of milk. But this price theory differs fundamentally from the parity-price theory. As the political farmers have always argued, parity prices are those which are just in relation to nonfarm prices. Nothing in the parity theory aims at any specific volume of production. A price aimed to bring out a specific volume of production is an incentive price, pure and simple, and makes the Government in effect the master farmer of the country.

But farmers, at heart, are still individualists. They don't want Government monkeying with the running of their farms. They want price support, but they purposely sought that support by way of a parity formula which at least looked objective and scientific and beyond the reach of bureaucratic manipulation in Washington. The parity rule, in the farm view, was merely a kind of refinement of the law of supply and demand.

But a government which makes itself responsible, not for mere "parity" justice to the farmer but for the production of farm commodities in appropriate variety and volume, is a government that has taken over a good deal of the managerial authority in the farm field. Prices no longer become something to be fixed by abstract rules of parity justice. They become more like a piece-work wage which an employer offers to a hired hand to get out the work. These new overtones in Federal farm policy are worthy of close attention from thoughtful farm leaders.

ASSOCIATION OF SOUTHERN COMMISSIONERS OF AGRICULTURE,
Washington, D. C., December 11, 1945.

Memorandum for Mr. Harry D. Wilson, president, Baton Rouge, La., and our other 12 members and friends individually addressed:

Parity price means parity income, but parity income does not mean parity price.

You will recall copy of a letter sent you last week, in which the addressor discussed parity prices; will quote the concluding sentence of the sixth paragraph, page 1:

"Parity income, as distinguished from parity price, implies low agricultural prices plus grants or doles or subsidies to an extent to equal parity income."

Discussed, this morning, the reproduced editorial from the Sun with Carl H. Wilken, economic analyst and a member of the National Association of Commissioners, Secretaries and Directors of Agriculture's Educational and Economic Committee's Research Staff. Also:

Reviewed with Mr. Wilken news items and editorials of like trend, recently appearing in the Post and other Washington papers; the New York Times, Wall Street Journal, Journal of Commerce, and other publications in the Northeastern States. * * *

Certain phases of these news items and editorials seem to have aroused Mr. Wilken's "righteous indignation." * * * Attention is called to this writer's concluding paragraphs.

You will be interested in what Mr. Wilken had to say to this writer in said discussion; his remarks, in substance, follow:

"PARITY PRICES NEEDED FOR ALL GROUPS

"The Congress of the United States shou'd establish permanent parity prices for agriculture; agriculture is the largest industry in the United States and is entitled to economic equality with other groups.

"To provide for parity of price for agriculture means simply to provide a 100-cent dollar and regulate the value of it at 100 for all groups.

"To force the farmer to live in an economy which pays him only 80 cents on the dollar

means he will sell his commodities at a bankrupt price. * * *

"We have been confronted with this parity-price problem since 1800, and there have been only two 5-year periods since that time when the farmer under normal conditions received full value for his production—1910–14 and 1925–29.

"In all other periods, with the exception of war inflation, the farmer received an average of approximately 70 percent of parity price.

"The farmer has had, theoretically, equality under the Constitution of the United States, but in reality he has been exploited by being forced to sell his products at 'public auction' * * *.

"Seemingly but few of our economists and political leaders have ever recognized the importance of agriculture.

"Society has always wanted cheap food * * *.

"PARITY PRICES, THEIR RELATIONSHIP TO NATIONAL INCOME

"Agriculture is the governing factor in our economy * * *, all employment and income ratio from agriculture.

"The prices the farmer receives for his products determine whether the Nation's income shall be high or low.

"Agricultural raw materials and income determine the number of jobs and the wages which can be paid.

"We have in our economy approximately 9,000,000 business units of which 3,000,000 are nonagricultural and 6,000,000 are the individually owned and operated farms * * *.

"We have a capital economy and our farms have approximately two-thirds of the capital investment in productive enterprise.

"In 1940 our farms had 10 times the capital investment of our steel and automobile industries combined and employed 10 times as much labor.

"Agriculture produces 65 percent of the raw-material income of the Nation and the processing of agricultural products makes up almost two-thirds of our manufacturing industry.

"The agricultural industry processing raw material through livestock has the greatest manufacturing plant in the Nation * * *.

"In addition thereto, over two-thirds of all our agricultural production must be processed into other forms before it enters into our manufacturing plants.

"This factor results in agricultural income being the governing factor with a normal precedence of about 6 months.

"Only through production of our farms at a parity price level can we maintain full employment and national solvency.

"PARITY PRICES, THEIR RELATIONSHIP TO EMPLOYMENT

"In our economy each dollar of farm income creates $1 for payment of factory pay rolls and $7 of national income, the 1–1–7 formula.

"This 1–1–7 formula has never been refuted; it has held approximately constant since 1921; nor has it ever been recognized by Congress or experts in our various department of government.

"The 1–1–7 formula is probably the most important ever presented to the American people.

"Failure to use the formula in the period 1930–41 caused the Nation to lose $473,000,000,000 of national income.

"In the postwar era failure to recognize the importance of the formula can result in a loss of $75,000,000,000 annually to the United States.

"The Curtis Publishing Co., of Philadelphia, Pa., after carefully checking * * * published an article entitled 'The Key to Prosperity,' in the Country Gentleman in December 1944.

"In that article, the Curtis Publishing Co. not only pointed out these ratios * * * but they also pointed out * * * some new laws of exchange * * *.

"The Manufacturers' Record, of Baltimore, Md., in the month of October 1945, carried a page advertisement by the Tennessee Coal, Iron & R. R. Co., which is concurred in by the United States Steel Export Co., of New York, using some of the material carried in the Country Gentleman article * * * under the headline 'As southern farms go, so goes southern business.'

"They point out that each dollar of farm income results in $7 of national income; that agriculture produces 65 percent of all raw materials.

"As stated, each dollar of farm income creates the income to pay a dollar of factory pay rolls, you will note from this chart (handing one to Secretary Hanson) that factory pay rolls did not recover as rapidly from 1932–33 as did the farm income * * *.

"Factory pay rolls are tied to agricultural income and as farm prices receded in the latter part of 1937 and reduced farm income approximately a billion dollars in 1938, factory pay rolls came down in ratio.

"The only way that the Congress can increase factory pay rolls without incurring a huge addition to the national debt is to first increase the basic farm income.

"Remember, anything done that reduces the farmer's income $1, more or less, likewise affects other groups, and reduces the national income $7, more or less.

"That the reverse is also true, viz, anything done to increase the farmer's income $1, more or less, likewise affects other groups and increases the national income $7, more or less * * *.

"Can you, Colonel Hanson, not clearly see that the normal income for the farmer at parity prices for his products is the foundation for full employment and national prosperity?

"The worries in regard to synthetics replacing cotton are without foundation. * * * if we maintain our economy at a parity price level, we will create the income to consume both the cotton and the synthetics.

"PARITY PRICES—THEIR RELATIONSHIP TO PRODUCTION

"The average value of our manufactured goods is 80 percent of the national income. Do we want the value of manufactured goods to be 80 percent of $150,000,000,000 or let the farm income go back to 1940 levels, getting 80 percent of $75,000,000,000?

"For each 1 percent that farm income is below parity prices, we will have a loss of 1 percent in value of manufactures and 1 percent unemployment * * *.

"If we permit our farm income to drop back to 1940 levels we will wipe out $75,000,000,000 a year of national income * * *.

"Retail sales averaged approximately 60 percent of national income * * *. Do we want 60 percent of $150,000,000,000 of national income in retail sales volume or 60 percent of $75,000,000,000? The farm income will determine which it is to be.

"Higher farm prices don't mean higher living costs. * * * Higher farm prices do not result in higher living costs when calculated on the basis of the increased per capita income generated by higher farm income.

"The simple facts are that with higher farm prices we have a corresponding increase in income for all groups and the cost of living, on the basis of income, does not increase as farm prices increase, it remains practically constant.

"In 1932, with approximately 65 percent of farm parity, we had 65-percent employment. In 1940, with approximately 85 percent of farm parity, we had 85 percent of employment; the foundation for full employment is parity price for agriculture.

"For each 1 percent that farm prices are below parity we will lose approximately 1 percent of the physical production of our factories.

"Labor should support permanent 100 percent farm parity price, as that is the foundation for continued factory output.

"PARITY PRICES, THEIR RELATIONSHIP TO TRADE AND WORLD COMMERCE

"We have now and have had for years a surplus of underconsumption of cotton goods, due to the subnormal price farmers receive for their cotton production * * *.

"Had parity prices been maintained, America could have consumed the production of at least 10,000,000 bales of cotton annually.

"America now has no surpluses of agricultural products; there may be an accumulation of certain commodities that were held off the market * * * due to war and other conditions.

"These commodities so held off the market, now called by some surpluses, under normal or substantially normal conditions would have with parity prices and parity tariffs continuously moved from field and mine to consumer and user.

"Parity prices, parity tariffs, and new industries is the solution of our economic riddle.

"Had parity prices and parity tariffs prevailed for the period of the so-called surpluses, money for needed new industries would have been available on reasonable terms as and when it was wanted and there would have been no unemployed.

"In 1930–39 we were laboring under a surplus complex and our farm production did not expand above the 1925–29 level; we had low prices which in turn gave us a low national income and underconsumption; we did not have surplus production.

"Gross operating revenues of our railroads followed farm income down in ratio, and they followed farm income when it rose again.

"In the postwar, if we permit farm income to drop back to 1940 levels, the railroads will lose $4,500,000,000 per year, with like ratio of losses to other groups. Total transportation income is approximately one-half of gross farm income.

New construction averages approximately 12 percent of the national income. Approximately 2,800,000 jobs in the construction industry are available in the reconversion period if materials are released and other controls removed.

"In 1920 all items on this chart (handed Mr. Hanson and others) started downward together, bringing about the depression of 1921.

"The price of silver, a monetary medium in many nations, fluctuates on the world market like any other commodity.

"The price of silver dropped from $1.35 in 1920 to 80 cents per ounce in 1921.

"The drop was disastrous to those nations using silver as a monetary medium and reduced the buying power of approximately 60 percent of the world's population.

"All prices leveled off from 1922–29, and the United States went into a new period of parity prices at a level of approximately 155 percent of 1910–14. During this period the prosperity of the United States held up world prices as well as our own.

"The price of silver continued to drop; all raw material prices again started downward in 1925, the beginning of the depression which culminated in the stock-market crash in 1929, bringing on the most severe depression this Nation ever had, in 1932.

"Failure to restore farm and other raw material prices in the 1930–41 period * * * prevented our Nation from again having full employment and normal income and caused us to lose $473,000,000,000 of potential income in that 12-year period.

"At the present time, there is complete chaos in foreign exchange and, until world fiscal policies and commodity prices are stabilized, there will be no foundation upon which to build world peace.

"The record proves quite clearly that our first step as a nation is to have Congress pass legislation which will provide permanent parity prices for basic agricultural products which include the seven major crops, all of which are nonperishable, making up approximately 90 percent of all harvested crop acres.

"Permanent parity prices could be definitely stabilized with the present commodity loan program and, if such loans were made callable only at the parity level, there would not be any wide fluctuations in farm income and in turn no great fluctuation in the income of other groups.

"By stabilizing the price level in the United States, we automatically stabilize over 40 percent of the income of the world and, with full parity for farm products in the United States, we will lay the first foundation stone in bringing about world prosperity as a foundation for permanent peace.

"Our tariff should be flexible, automatically representing the difference between our parity price level and the landed cost of any imported product.

"With only 6 percent of the world's population we produced approximately 47 percent of the world's goods.

"With the natural resources to produce 98 percent of everything we need, our export trade will be trivial and insignificant * * * and we can't use but a small volume of imports except at the expense of displacing some of our own production and in turn our outlet for labor and our income from production * * *.

"Other nations will require tariffs to protect them against our efficiency, just as we must for other reasons be protected by import duties on both raw materials and finished goods up to our parity price farm levels.

"We should serve primarily as a referee in helping the world maintain a proper price level for prosperity.

"The English Empire has practically bankrupted itself with cheap raw materials in trying to make up for its inefficiency of production.

"The British Empire has a population of 700,000,000. With a price level which would permit its people to earn $400 per capita, or less than 40 percent of our per capita income, the Empire would have an annual income of $280,000,000,000, and would then have a market with her own people, much greater than her industrial capacity to produce.

"England would then be solvent instead of needing loans, whereas, if they continue to maintain a price level which permits of a 10-cents-per-day wage in India, they will have neither markets nor income.

"Permanent parity prices for farm products are necessary if we wish to maintain national solvency and, our next step is to have an accurate parity price formula.

"In the case of weights and measures the standard was selected and locked up in the Bureau of Standards for safety and future comparisons. We must establish such a formula for parity price and it must be one that is simple and one that cannot be changed at the first sign of political pressure.

"If we will maintain our present farm production and maintain our farm prices at parity we will not have any serious unemployment or depression.

"At the parity price level our farm production always creates the income to consume our production or in the case of any surplus, to consume the products of other nations for which we exchange our surplus * * *.

"Permanent parity price legislation can end the confusion which now exists as to our future economic policies and make it possible for industry to carry on a definite program of reconversion."

As stated, am telling you in substance what Mr. Wilken said; writing is based upon shorthand notes made when he was talking. Sent for Mr. Wilken, submitted to him a draft of the foregoing, which he read and said, "O. K."

In conclusion, beg leave to make this personal observation, viz: Was impressed with the sincerity and soundness of Mr. Wilken's statement of facts and his reasoning based upon them; what he said, according to this writer's records and recollections, is well in line with what he has, for months, been telling members of the national association, which includes the membership of the southern association.

Will observe further: Mr. Wilken has not said anything to this writer's knowledge that conflicts with the views of Dr. J. Lee Coulter, a Washington agricultural consultant, or Mr. Charles B. Ray, trade counselor, of Chicago, both of whom are his associates on the National Association Research Committee's research staff.

C. C. HANSON,
Secretary.

Resolutions of United States Conference of Mayors on Postwar Planning

EXTENSION OF REMARKS
OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. DAVIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include certain resolutions passed by the annual conference of the United States Conference of Mayors which was held recently. This is an organization which represents the chief executives of more than 1,000 cities in the country. Throughout the war period they have given a faithful accounting in their respective communities. I know of no group of men who have cooperated better in the national war effort. Cities have restricted their municipal programs and their citizens have supported all sorts of war drives from salvage of needed short materials to the raising of money and the purchase of Federal securities. Naturally they are concerned now with postwar planning, and I thought that it would be advantageous to us all to have this expression on public works, funds for public-works planning, airports, airport and air-traffic control, surplus property, taxation of war-surplus properties, and the release of war-surplus materials for housing purposes.

PUBLIC WORKS

Whereas it is recognized and accepted that public works constitutes an important factor in providing employment and stimulating production in times when industrial production lags; and

Whereas many cities throughout the Nation are ready with detailed plans and specifications for useful and needed public works in the event of a high level of unemployment; and

Whereas it is essential that cities know in advance the extent to which there will be Federal financial participation in a public-works program, if any: Now, therefore, be it

Resolved, That the United States Conference of Mayors petition the Congress of the United States to the end that a definite and specific statement of policy may be laid down covering all phases of Federal responsibility for the financing of those public works designed to meet possible emergency conditions.

FUNDS FOR PUBLIC-WORKS PLANNING

Whereas the Congress of the United States in title V of the War Mobilization and Reconversion Act of 1944 authorized Federal appropriations to be advanced to cities for the preparation of plans for public works to be undertaken in the reconversion and transition period; and

Whereas the amount of funds so far actually made available is so inadequate that the purpose of title V of the act has been completely emasculated: Now, therefore, be it

Resolved, That the United States Conference of Mayors petition the Congress to appropriate sufficient planning funds to enable completion of a reserve of carefully planned projects which can be put into the construction stage, should such action be necessary by reason of economic conditions.

AIRPORTS

Whereas both the Senate and the House of Representatives have passed, in different form, the bill (S. 2) authorizing a program of Federal grants for the development of public airports, and that bill is now being considered by a conference committee representing the two Houses of Congress, and

Whereas certain of the differences between the Senate and House versions of said bill are of major importance and concern to the municipalities of the United States, the Senate version being preferable in some respects and the House version in others. Now therefore be it

Resolved, That the United States Conference of Mayors unanimously and strongly recommends that the Congress agree upon and enact a Federal-aid airport act containing (1) the provisions of the House version of S. 2 permitting any municipality or other public agency to apply directly to the Civil Aeronautics Administration for grants for airport projects, and to receive such grants; (2) the provisions of the House version relative to the size and duration of the proposed Federal-aid airport program; (3) the provisions of the House version authorizing the Government to condemn lands needed for an airport project when requested to do so by the project sponsor; (4) the provisions of the Senate version permitting the Government to share the costs of acquiring property interests necessary for airport projects; and (5) the provisions of the Senate version requiring that project sponsors make available airport building space to the Government for certain purposes only if a reasonable rental is paid therefor; and be it further

Resolved, That the standing committee on legislation of the United States Conference of Mayors is hereby authorized and directed to present these recommendations to the Congress and to the Senate and House conferees on the bill S. 2, and to urge their favorable consideration and adoption.

AIRPORTS AND AIR-TRAFFIC CONTROL

Whereas the United States Conference of Mayors has for many years maintained the position with regard to air-traffic control that safety considerations should be paramount and that responsibility for safety in the air, at municipal airports essential to the national defense, commercial air transport, and the postal service, should not be divided; and

Whereas during the war the above principle as advocated, namely, complete Federal responsibility for air-traffic safety was recognized throughout the Nation; and

Whereas there has now been presented the whole question of return of operation to certain cities of airport traffic control responsibilies: Now, therefore, be it

Resolved, That the United States Conference of Mayors insist that there be no division of responsibility for air safety by return to the archaic system of Federal responsibility for safety control on civil airways and city responsibility for safety at and in

the vicinity of municipal airports; and be it further

Resolved, That the United States Conference of Mayors petition the President and the Congress of the United States to approve legislation and authorize such appropriations as may be necessary to insure CAA administration and financing of all traffic control operations at all civil airports serving the needs of national defense, commercial air transport and the postal service.

SURPLUS PROPERTY

Be it resolved by the United States Conference of Mayors, That the president and executive committee continue their efforts to insure that section 13 of the Surplus Property Act, giving priorities to cities, be effectively carried out.

TAXATION OF WAR SURPLUS PROPERTIES

Whereas the United States Government has disposed of and is presently disposing of property, through sales on time payments with title retained in the Federal Government until full payment has been made, or by lease to private individuals or corporations, the effect of which arrangement allows the purchaser or lessee to escape State and local taxes on said property because the title remains in and is still vested in the Federal Government; and

Whereas sales or leases as aforesaid are a discrimination against the taxpayers of the States and municipalities: Now, therefore, be it

Resolved, That in those cases where the property is sold on the installment payment plan, or leased for private use, the sales contract or lease shall contain a provision requiring the purchaser or lessee to pay in full all State and local taxes which would be levied on such property if the title had not been retained by the Government, or its agencies, and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States and to the presiding officers of the Senate and House of Representatives; and to all governmental agencies having control of the sale or lease of Federal properties.

RELEASE OF WAR SURPLUS MATERIALS FOR HOUSING PURPOSES

Whereas a critical shortage exists of materials for construction of housing; and

Whereas the situation is so serious that every possible item of construction materials and equipment not needed by the armed forces should be made immediately available for housing purposes: Now, therefore, be it

Resolved, That the President and other officers of the Conference confer at once with the President of the United States, the Secretary of War, and the Secretary of the Navy for the specific purpose of urging them to declare surplus and to release all possible quantities of consumer and durable goods which can be utilized and are required for the construction of housing.

I Shall Not Wholly Die

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks I include a poem by Lt. Theodore C. Agins, USNR, entitled "I Shall Not Wholly Die":

I SHALL NOT WHOLLY DIE

"NON OMNIS MORIAR"

I saw him yesterday,
Watched him ride by,
Saw his broad-brimmed hat,
His lean lined gray face.
His cape,
His thinning hand he waved,
With familiar gusty grace.
Of course he smiled.
He always did,
Warm, human, good,
And leaned forward
To let you see his eyes.
They smiled too.
I knew they would.

Sure
I've talked to him;
And every time he answered,
It was
Christmas in my heart again,
Time for all familiar men
To listen,
Leaning over a thousand neighbor fences.
His cherished voice made
Courage flare,
Brought vibrant life
Through unseen
Air.
We were close,
My President and I,
He confided, inspired,
And later,
Comforted and consoled me.
I trusted him—
Implicitly.

And I saw him ride by
Pale and thin,
Somewhat weary, yet contented within;
And his head was high,
Halo in strength against
The sky,
Shoulders squared,
Valiant, gray,
I tell you now,
He can't be
Dead.
I saw him yesterday.

—*Lt. Theodore C. Agins, USNR.*

Seizing of Hebrews Who Seek Entry to Palestine

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an advertisement entitled "The War That Still Goes On," which appeared in the New York Times of January 25, and which was inserted by the American League for a Free Palestine, of which former Senator Guy M. Gillette, is president.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

THE WAR THAT STILL GOES ON

(Extracted from American newspaper correspondents)

NINE HUNDRED HEBREWS SEIZED SEEKING ENTRY TO PALESTINE—2 EXILED IN ERITREA SLAIN, 12 WOUNDED

JERUSALEM, January 18.—More than 900 illegal Hebrew immigrants were captured off Haifa by a British naval craft yesterday. Their ship was confiscated and the captain and crew arrested.

The illegals came on a 500-ton motor vessel named for Enzo Sereni, a Palestine labor leader who was executed in northern Italy by the Germans after he parachuted behind the enemy lines.

Their ship was sighted during the afternoon by a routine air reconnaissance patrol that noted her uncertain course and her strange flag. Word was flashed back to the naval station and a British naval patrol was sent out. The ship was intercepted and boarded.

None on board had proper papers. The 900, along with captain and crew, were taken to the Athlit detention camp.

At the same time it was announced in a cryptic communiqué that as a result of a disturbance in a detention camp in Eritrea, where suspected terrorists are held, 2 Hebrews were killed and 12 wounded.

Full details are not available, but it is known that the Eritrea camp has been a hot spot since the first detainees were sent there in October 1944. About 250 persons are now being held indefintely in Eritrea.

The Hebrews are particularly concerned about them because they cannot understand by what right the British can ship persons out of the country and hold them indefinitely without trial. The British answer is "security." British officials contend that although no war is going on, there are wartime conditions in Palestine that call for wartime measures.

Mankind will always remember with gratitude how the good and brave people of England stood at Dunkerque alone and took the blitz, and thus contributed so much toward saving the world from Nazi enslavement. But we also remember how in those dark days in the history of Great Britain, when she stood disarmed, alone, defeated on the Continent and blitzed from the air, she sent a pleading voice across the Atlantic to the Government and people of America:

"Give us the tools and we will finish the job."

America's magnificent answer made a brilliant gleam in those gloomy pages of history.

Now it looks as if some of these tools are being used not to finish the job for democracy, for decency—the job that millions of our sons fought and died for—but to finish the job that Hitler started and didn't quite succeed in finishing.

Look now for what purpose some of these lend-lease tools are being used. See how Great Britain now concentrates part of its military and naval power on the shores and on the soil of a tiny country and against the survivors of Oswiecim and Bergen-Belsen, of the death factories and crematories—against these wretched survivors whom Hitler did not quite succeed in exterminating.

Now, due to Britain's action, those survivors remain in the concentration camps behind barbed wire, in ragged prison clothes, disease-ridden, with the prospect that this winter may perhaps be their last; compelled to go back to the miserable lands from which they barely escaped to be the prey of anti-Semitism, now more savage than before the war.

WEAPONS OF OPPRESSION

Ships of the Royal Navy and planes of the Royal Air Force patrol not only the shores of tiny Palestine, but the whole Mediterranean, against a handful of survivors fleeing hell to find a promised haven of life and dignity. And if a boatload of survivors is sighted, weapons forged for democracy are used to shoot at them. And if, in spite of all the warships and airplanes and shore patrols, some wretched hundreds still succeed in getting in, then they are tracked through the streets of Jerusalem and Tel-Aviv, even into the friendly houses where they expected to find shelter and hoped to spend a first night in bed after years of being hunted and

haunted. And they are caught and put into concentration camps.

This is being done to the people who were Hitler's first adversaries and greatest victims, and this is being done in a country that was entrusted to Great Britain by international agreement, not to dominate or to control, but to look after so that in it these very people might find their new life and dignity. More than that, this is being done only to that people, for there is no restriction on entry into Palestine for anyone but Hebrews.

And this is being done against the will or without the knowledge of the public opinion of Great Britain, which we believe would never tolerate such acts if they knew the facts. We therefore address ourselves not only to the people of the United States of America, but also of Great Britain, where the Hebrew freedom movement has stanch and courageous supporters.

WORLD PEACE AT STAKE

The plight of the Hebrew survivors in Europe is not the concern of one people alone. If the Hebrews are abandoned to their own gruesome fate—if the British persist in keeping the doors of Palestine barred to them—it will be an evil omen for the hope of world-wide peace.

The atomic age is here. Atomic power, plus cynicism and godlessness, equals global destruction. The fate of the Hebrew people in Europe is a test case for the United Nations.

Victor L. Anfuso

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Victor L. Anfuso, former special assistant to the Commissioner of Naturalization, and intelligence officer for the OSS on the occasion of the presentation to him of the Distinguished Service Medal for his war services by the Regular Veterans Association, at the Hotel Ambassador, New York City, Friday, January 25, 1946:

At the outset, I want to say that I deserve not the slightest credit for the very little part I played in this last war.

One of the greatest things for which all of us should always be thankful to God is that we are Americans, and live in a country wherein our troubles, no matter how big they may seem at times, when compared to the hardships and deprivations suffered by the other peoples of the world, are really trivial. For this blessing I shall always remain grateful. I shall never stop offering my little contribution to any cause which is for the general welfare and security of our country. That is the only reason which prompted me to volunteer for overseas duty and to sponsor a national security program immediately after my return in July 1945, which program I should like briefly to discuss tonight.

Up to 1941 Germany's plan for world conquest was little known in the United States. Such limited intelligence as we did have prior to our entry into World War II, however, dictated to our leaders at the time, a policy of supplying the materials of war, first to the English and later to the Russians. Our help then in some degree made El Alamein and Stalingrad possible. Had it not been for such assistance the result and the picture today might have been entirely different. I think that no one will dispute the fact that had our intelligence then been more extensive in the Far East the Pearl Harbor disaster might have been avoided.

In the future the need for intelligence will be greater than ever. The potentials and their alignments may be different, but that very fact requires our greater alertness.

The political potentials alone are numerous, and without exhausting the possibilities we might list those of England, Russia, China, and the South American countries. What is being planned for the Balkans? For Italy? For France and Spain? What underground movements are now on foot to bring back Germany and Japan as great world powers?

Greater than these potentials are those of economics. What is this new economic fascism—this synarchism of which we are beginning to hear talk? How is this fascism related to cartels? What trade alinements are being arranged? We are giving aid to war stricken nations in cooperation with the United Nations. Are any of the participating countries in UNRRA using the agency to promote their own interests?

Recent developments of the atomic bomb have brought home forcibly to us the great importance of scientific research and development in warfare. By this new weapon, which can virtually be fired from any point on the globe to any other point, it is said that all of mankind is in danger of being destroyed should there be another war. And by means of a sneak attack, a nation the size of Albania, if it has access to this and other inventions, without a large army, navy, or air force, can destroy this, the most powerful of all nations on earth.

Despite all the pledges of the statesmen and scientists never to release such destructive inventions to carry on warfare in the future, we know from experience that such studies will continue in peacetime, both by the nations who desire to preserve the peace and those who will seek new empires through a third world war. It becomes of paramount importance, therefore, to know what other nations are accomplishing in the way of scientific developments. And in the words recently uttered by Arthur Hays Sulzberger, publisher of the New York Times, "We have reached a point in our growth and scientific development where our free order rests upon being informed."

At this moment, for instance, while the well-meaning people of the world are making plans for the United Nations Organization—which is to make war impossible in the future just as the League of Nations was supposed to have outlawed war after World War I—international criminals, who might well be called synarchists, are sponsoring and conducting secret researches with regard to the atomic bomb and other inventions, which might make our own defense preparations wholly inadequate, and which, were they known by the average man on the street, might send shivers down his spine. And you may rest assured that as soon as the new superstate is established within our boundaries that this country is going to become contaminated by the greatest number of foreign agents ever, who are going to use the UNO as an excuse and as a means to visit every vital point in the United States to study our strength and our weaknesses.

What is the answer to all this? We know that what I have said is not at all fantastic.

I believe that today the President of the United States and the people as a whole are alerted to the idea that we must never again be caught asleep and that we should have a coordinated system of intelligence. This country is also well aware of the fact that since World War II, other countries have not terminated their systems of obtaining foreign intelligence nor curtailed them in any way. If anything they have expanded them. So that it is perfectly proper and natural for us to guard our own security in a similar manner. The difficulty lies in how best to establish a permanent bureau of intelligence.

A short time ago you may have read in the newspapers that our State Department had set up a system of obtaining foreign intelligence in collaboration with the Army and Navy, and more recently that President Truman created an authority under the jurisdiction of the secretarial triumvirate of the State, Army, and Navy.

I am personally opposed to setting up an intelligence bureau under the State Department. The more successful methods employed in obtaining foreign intelligence rarely follows the defined patterns of diplomacy and formality by which the State Department is required to act in its dealings with foreign powers. The State Department is so bound by the traditions of its office and the rules of protocol that it should not be burdened with the tedious and sometimes dangerous function of gathering foreign intelligence, except as to intelligence it may normally come upon through its usual overt sources.

Besides we are too proud a nation to deal with other nations with daggers under our silk gloves. For example, we could never stoop to the kind of international double-dealing as did the two silk-hatted men from Japan, who called on Secretary Hull and President Roosevelt on a seemingly friendly mission, knowing full well that while they were making their curtsies, the Japanese Navy was speeding to make the infamous attack on Pearl Harbor.

But I do say that while Mr. Byrnes is talking to any foreign diplomats, setting up plans for the United Nations Organization, he should know if those countries talking peace are at the same time preparing for war.

I also believe that when a country applies to us for a loan, whether it be for $1,000,000 or $5,000,000,000, that before granting such loans assuming that we can afford it, that we know that the money is actually needed for the purpose described; that it will be so used, and if so used that the borrower does not release other funds which it has available for selfish propaganda in other countries or in preparation for war. And in this connection I am reliably informed that many diplomats in the State Department, especially Assistant Secretary of State Spruille Braden, are opposed to having a bureau of foreign intelligence in the State Department, and in the words of Drew Pearson, Washington columnist, "believe their job is to smooth foreign relations, not ruffle them with undercover agents."

To set it up under the triumvirate would still involve the State Department in the intrigues of undercover agents which would lower the dignity and ethical standard of the State Department. To leave it under the joint chiefs of staff of the Army and Navy is all right in wartime but certainly not in peacetime.

The most effective plan of intelligence, I believe, from the experience, working with the Army, Navy, and State Departments, is to have a central bureau of information within the Department of Justice, like the FBI, except that the CBI would be concerned only with foreign intelligence.

And here if you will permit, I'd like to pause for a moment to take up the cause of the thousands of scientists, men and women, who have given many great boons to humanity on starvation pay and uncertain futures, while manufacturers have made millions on their inventions. Take for instance the scientists who developed the wonder-working drug penicillin. These men had no funds at all to work with, and at one time the experiments would have stopped had not the Rockefeller Foundation made a vitally needed grant of only $1,280. And when the scientists did make the discovery,

they didn't receive a penny for their work, although commercial drug houses profited handsomely from it.

Is it any wonder then that many scientists, not quite so scrupulous and patriotic as the penicillin prize winners, fall to the tempting offers of private, sinister interests—both foreign and domestic?

The United States Government should take more of an interest in the future in its scientists than it has in past. The majority of these men, like the majority of professional men and women—be they doctor, lawyers, engineers or dentists—do not care for great wealth; they find their greatest happiness in their pursuit of scientific endeavors. But they should not be exploited.

There is room for all scientists under a central bureau of information, which I now would like to briefly discuss.

The purposes of this central bureau of information which would have liaison connection with the State Department, Army, Navy, and all other departments which are sources of information, would be to gather and coordinate all foreign intelligence in the political, economic, psychological, sociological, and military fields. The CBI should also have a research and development branch to gather intelligence of a scientific nature and to conduct scientific researches.

The proposed central bureau of information falls naturally within the Department of Justice because the Attorney General, a member of the President's official family, is also the legal adviser and investigator of the United States Government. As such it is his duty to keep the Chief Executive and our Government properly informed as to what is going on all over the world. Such a bureau within the Department of Justice would also make possible perfect team work between it and the FBI, the internal informant of our Government, whose services and research laboratories are recognized as the finest in the world.

When we speak of creating new departments or bureaus, Congressmen, and there are many here tonight, are naturally interested in its cost to the people.

Although I am convinced that such a central bureau of information will save millions of lives which would make any monetary cost appear insignificant, I am prepared to discuss the proposal from the monetary point of view.

I am reliably informed that war activities from World War I up to 1929 cost the United States Government $37,573,960,113, and that war activities from July 1, 1940, to November 1945, cost the United States Government $310,000,000,000.

We know, too, that if we had had such a centralized, unified system of intelligence in operation from the last war much of the duplication and waste could have been avoided, money allocated for war activities could have been more effectively spent for appropriate equipment and arms in line with the knowledge we would have had on hand, and that much which was spent need not have been spent.

I sincerely believes that the United States Government and the world at large would profit more by a system which would supply to us in peacetime all the information and intelligence we need to deal with international war criminals and synarchists responsible for the commencement of all wars, rather than waiting for them to strike and then developing the weapons to stop or destroy them.

It is my firm conviction that the establishment of a unified, coordinated system of foreign intelligence should receive top priority now. It will help us to know our friends and our enemies much better than we really do and would materially help in the kind of treaties and agreements we make with other nations in the future.

Within the United States lies the power and the means to prevent another war. But we must be practical. It cannot be done alone by idealistic and well-meaning international agreements and protocols. We must know that which is not on paper to make the writing more effective.

Finally, let this or any other plan of intelligence be a guaranty to the peaceful nations of the world that the knowledge we gather will not be used to promote wars but rather to enforce the United Nations Organization and to serve as a guardian of the peace of the world.

The Caste System in the Army

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Barrack-Room View of 'the Brass,'" which appeared in the Saturday Evening Post of January 5, 1945. The editorial is one of the many protests against the Army caste system which I have read in recent weeks. I am informed that these charges apply equally to all branches of our armed forces. It would seem to be extremely unsafe to the future of our democracy to conscript our young men to live during peacetime in such an undemocratic atmosphere.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BARRACK-ROOM VIEW OF "THE BRASS"

(By Paul Jones)

They say that in Italy one German commander remarked enviously that the United States was fighting a millionaire's war. Never were any enlisted men in the history of the world better clothed, better fed, better equipped and better housed. You could add, with perfect truth, that they fought a better fight because they got good treatment.

By a curious coincidence, the rank and file were not only tops in performance and in the comforts of life—short of the front line, where life has no comforts at all. They also hold the all-time record for griping. This is a remarkable claim to make for any soldiers, but it appears well-founded. Their letters pour across every newspaper desk in the country, from Austria, Italy, Czechoslovakia, from the jungles of New Guinea, from Leyte and Okinawa and Upper Assam—wherever bitter souls by candlelight finally rouse themselves to angry composition.

What they get mad about is sometimes a standard military grouch. Food, for example. That happens in Germany, where transport is poor, Or in France, for the same reason. It is also a favorite gripe in the Pacific, where the fellows have to eat powdered eggs and dehydrated vegetables.

But this does not raise the most serious problem evident in their letters. Temporary hardship can be logically explained, and soon fades from the memory. What burns the men up more than anything else is their apparent status of peasants, while officers play the role of manorial barons. You find dark references to a caste system, and they come often enough to show that something is radically wrong.

They are not talking about ordinary discipline and subordination. They make few complaints about the basic principle that officers and men should live separate lives for the best military results. The point they raise is that, in so many places and in so many respects, the contrast is altogether too glaring.

The German general in Italy referred wistfully to the prodigal way in which our Army could use planes, gasoline, shells, transport and bombs. He didn't like it, which proves it must have been a sound idea. In that sense, our millionaire's war was the right way to proceed, and no one in his senses could quarrel with it, least of all the men it saved.

But when this notion carried over into the construction of back-area bases, the millionaire concept backfired heavily. There, too many commanders behaved as though they had just come into a large fortune in tax-free bonds. From the size and appearance of the officers' clubs the base engineers would run up, you might suppose yourself in a Florida resort hotel. Spacious and well-appointed, often handsomely landscaped, and a bar serving anything you cared to name at cost. They did themselves very well indeed.

Who would begrudge a little extra comfort, perhaps even luxury, to men serving their country far from home? Well, the enlisted men did, and apparently still do. Because what they got, while it was clean and comfortable, though crowded, was by comparison nothing. The post exchange, the day rooms, the beer garden, were all very well, excellently planned, neatly furnished, perhaps, but just down the road was that huge country club.

As one man said, he felt as if he were living in a low-cost public-housing development just across the street from the Waldorf-Astoria, assuming that he would not be permitted to enter the hotel.

He further said that he neither expected nor wanted the run of the officers' club. That wasn't the point. But he had always believed that rank had its duties as well as its privileges, and one of its duties was to observe a decent restraint.

The situation in areas now under occupation, to judge by soldier letters, is different in degree, but not in character. Some officers appear to allow themselves the utmost liberty, while imposing very severe and often unreasonable restrictions on the men under them. Once more, the point lies in the failure to maintain a responsible attitude.

Men's Clothing

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein the following joint resolution of the General Assembly of the State of Rhode Island, requesting that an increased amount of men's clothing be sent to Rhode Island. The resolution follows:

House Joint Resolution 534

Joint resolution requesting the Senators and Representatives from Rhode Island in the Congress of the United States to take up the matter of the clothing situation in Rhode Island with the Office of Price Administration in Washington, D. C., to see if there cannot be a greater increase in the amount of men's clothing sent to Rhode Island

Whereas the supply of men's clothing for Rhode Island seems to be insufficient for the

demand which at the present time, when so many veterans are being separated from the armed forces, and are trying to outfit themselves with civilian apparel creates a real hardship: Now, therefore be it

Resolved, That the Senators and Representatives from Rhode Island in the Congress of the United States be and they are earnestly urged to take up with the Office of Price Administration in Washington, D. C., the matter of the clothing shortage in Rhode Island to see if there cannot be a greater increase in the amount of men's clothing sent to Rhode Island; and be it further

Resolved, That the Secretary of State be and he hereby is directed to transmit duly certified copies of this resolution to the Senators and Representatives from Rhode Island in the Congress of the United States and to the Administrator of the Office of Price Administration in Washington, D. C.

Address of Hon. John W. McCormack, of Massachusetts

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address recently made by the Honorable JOHN W. MCCORMACK, majority leader of the House of Representatives:

The record of the Democratic Party since March 1933, when the Republicans were ousted for their inaction and lack of leadership, has been one of progressive and constructive service in the cause of the American people.

In the Congress, that record shows that the great majority of members of the Democratic Party have given sound and progressive consideration to the needs of our people.

In the Republican Party, that record of Congress shows, the great majority have looked backwards. For 13 years they have been looking back, and in their concentration on a scene that is happily passed for the majority of Americans, in their nostalgia for that heyday of the favored few, they have lost sight of this mighty, forward-marching Nation of ours. They have made a record of blind opposition.

Through the most trying period of our Nation's history—the Hoover depression—through the threatened danger to our country in the pre-Pearl Harbor years, through the war itself, the Democratic Party, first under the leadership of our late beloved President, Franklin D. Roosevelt, and now under President Harry S. Truman, has given the American people a Government that brought victory over both depression at home and aggression abroad.

The Republicans in Congress neither acknowledged that leadership nor offered constructive criticism. They could—or would—only obstruct. From the time when President Roosevelt assumed office, up to the very day of Pearl Harbor, all we met was the blind and bitter opposition on every important issue of from 80 to 100 percent of the Republican membership in Congress.

Today, my friends, offering you that kind of government, thinking you are gullible and will forget, these Republicans are once more asking you to go back to the Hoover days of inaction and indifference.

What few progressives there are in the Republican Party in Congress are given no voice in its councils. They are suppressed, isolated, politically neutralized by the deadening combination of Old Guard reactionaries dominated by big business.

It was only the other day that a prominent Member of the Congress—not a Democrat, but a progressive Republican—condemned his own party for its inaction, its self-dedication to reaction, and its blind and irresponsible obstruction to an entire program of progressive legislation for the best interests of the American people.

But the voice of this prominent progressive Republican fell upon deaf ears on his own side of the congressional aisle.

A week ago, at this very hour and over this broadcasting system, the Republican leader of the House of Representatives made what was actually an apology for the complete failure of his party to assume its proper place in our political life and its proper tasks and responsibilities in the Halls of Congress.

The other prominent Republican had condemned the Republican Party not only for its lack of vision and courage, but for its evasions its resort to empty, high-sounding verbiage in the attempt to cover a condition of complete political bankruptcy. And this denunciation from the lips of a Republican Senator was echoed and re-echoed through the rank and file of his party.

Last week, in his attempt to explain, the Republican House leader offered the curious thesis that action—or the lack of it—did not matter. He placed the emphasis on general principles—by removing that emphasis away from a specific program such as President Harry Truman has offered the Nation.

Yes, according to this new Republican thesis, what we need in this country to meet the problems of reconversion, of full employment, of safeguards against inflation, is a good resounding set of platitudes, all beautifully embroidered on cloth—whole cloth—and ready for framing.

But the people of America are not ready for this or any other kind of framing. And those who were listening to last week's Republican apology noted that not once during his speech did the party's spokesman outline a specific legislative proposal that the Republican Party stood for.

Before 1933, when the Democrats were the minority party, I remember that its representation in Congress told the people just where my party stood. The people were not left guessing, or listening to lofty words of little meaning. They knew what we stood for, and when they voted in 1932 to put the Democratic Party in power they knew we had leadership.

Before the Republicans can follow that example they will have to effect a political revolution within their own party. And from what I have learned in my experience with politics, I do not think that can happen for some years yet. The Old Guard is unlikely to relinquish its iron grip on the party merely at the invitation to do so from a handful of liberal members.

We Democrats have been accused—not by our own party but by the leaders of the opposition—of making a grave political error. That error, say the Republicans, was to carry on toward the goals set for our Nation by the late President Franklin D. Roosevelt.

When President Truman presented his 21-point program for a prosperous, secure postwar America, the Republicans in Congress immediately brought this accusation—as they regarded it—against him.

Here was a program such as might have been drawn up by Franklin D. Roosevelt himself. Here was concrete, specific action—action in the interest of our returning soldiers, our working people, our farmers, our factory hands, miners, railroadmen.

Again, it was the protection of the many, the refusal to favor the few. Yes; this was Roosevelt all over again. And that, said the Republicans, was a political error. They do not believe America wants to march ahead. They do not believe Americans want to speak today in terms of action, of progressive, forward-looking action. No; what they say America needs is—and I quote one of their leaders—"old-fashioned conservatism."

Now, in the Republican lexicon, that phrase, "old fashioned conservatism," means one thing, and one thing only. The kind of Government we had in the 1920's from Harding to Hoover, the kind of Government that let inflation run wild and then let depression spread unchecked; that looked to the stock market to relieve those who had earnings and relied upon charity to take care of those who did not; the kind of Government that blinked ruinous business practices and blocked efforts to correct them—that is old fashioned conservatism, the prescription for postwar America which the Republican Old Guard now holds out to us.

I do not believe the American people want that prescription. I do not believe they see in it the assurance of their future well-being. On the contrary, as they survey the scene today, and behold industry locked in a standstill on the very threshold of a new and promising age, I believe they can already identify the forces that have brought the wheels of industry to a stop.

Why are certain great corporations in America refusing to accept reasonable compromises of their wage disputes—compromises of the kind that have always been regarded in the past as the way of reasonable men, the American way of splitting the difference and then going ahead and getting back to work?

Why do these recalcitrant corporations suddenly abandon the American way at this time? Why do they refuse to match labor's acceptance of the compromises reached by fact-finding boards? Why do they stand pat and ignore their responsibilities to the public?

If this is a last-ditch struggle to break the back of organized labor and end collective bargaining in America, if this is a war of attrition against the working people of America, which party in Government has given its political blessing to that war? Who has flashed the green light signal?

I have sat in the Halls of Congress and I have heard some men speak bitter words about organized labor. I have witnessed the political scene setting for this crisis through many months of haranguing by my Republican colleagues in the House of Representatives.

Yes, the Republican Party has long ago given the nod to big business, has long ago said, "Go ahead and break the unions as you broke them after World War I. Crush them, fell them, and let the consequences descend upon America where they may."

But as I once believed in the integrity of government under a Democratic administration with President Franklin D. Roosevelt at its head, so do I believe in the integrity of our Government under the leadership of President Harry S. Truman.

To you—the average American, the working people of this Nation—I say, your Government under the Democratic Party is keeping the faith. The social gains of yesterday are deep in the hearts of our people of today. With a Democratic national administration and a Democratic Congress in the years ahead, that fiber will be strengthened.

America is too great to turn back. Her people, conscious of their country's great destiny, are keeping on the road of progress. They are marching on. They will continue to march on under the leadership of President Truman and the Democratic Party.

The China Crisis

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. COFFEE. Mr. Speaker, the Chicago Sun recently printed some editorial observations concerning the crisis in China. Because many American citizens are confused on this issue, I deem its reproduction into the columns of the CONGRESSIONAL RECORD justified. The editorial discusses Generals Marshall and Hurley and pays its respect to General Hurley's recent blast. The article is as follows:

[From the St. Louis (Mo.) Post-Dispatch]

HURLEY'S BLAST AND THE CHINA CRISIS

(Big policy issues outweigh personalities involved in Ambassador's melodramatic resignation, newspaper says; has used his influence against Chinese democracy and unification; goal now should be removal of our forces, and aid in bringing factions into coalition)

(From the Chicago Sun)

Far transcending all personalities involved in Ambassador Hurley's melodramatic resignation are the great issues of American policy in China.

Our immense influence will continue to waste itself there, and undermine the peace of our country as of the world, unless we exert it for a democratic, unified China. General Hurley, unwittingly no doubt, and his backers have been wielding it against such a China.

The country salutes General Marshall for his unhesitating, patriotic acceptance of a temporary assignment from President Truman to go to China on special mission. General Marshall has neither the vanity nor gullibility which so contributed to General Hurley's failure.

WHY DID HE QUIT?

Further, Marshall was Mr. Roosevelt's close coworker and knows the late President's policy to promote unity in China. May he do as much as one man on special mission can to revive that policy.

To date, the reasons for General Hurley's resignation are much clouded. He cannot have resigned simply because he was incensed over statements by some Congressmen saying that he caused dissension between Chungking and the Chinese Communists.

Not even General Hurley could have imagined that such statements were proof of State Department "leaks" when independent students of Asia, throughout this country, were castigating America's unilateral buttressing of the Chungking dictatorship, implemented by Hurley, as support for civil war.

Did the resignation, then, result from a shift by the President and Secretary Byrnes from the disastrous Hurley line? Mr. Byrnes' press conference the other day did not establish this.

AIM SHOULD BE UNITY

In actuality, General Hurley should have been removed long since. Instead, he was entreated to go back to China and given large assurances by Mr. Byrnes. Yet he must have felt that he was at least being curbed. Thus, there is some hope for the future.

If the right policy is followed, we shall withdraw the marines from the civil war zone. We shall withdraw all support from the waging of that war. It has become most dreary to hear repatriation of Japanese cited as an excuse for transporting American-armed Kuomintang troops in American planes and ships, guarded by American armed forces, to wage war on the Chinese Communists.

Given such American support, of course Chiang Kai-shek and the reactionaries of Chungking will refuse any fair compromise with the Communists and minor democratic parties of China.

Our objective should be a coalition government, including Kuomintang, Communist, and other party representation, to prepare for a constitutional regime.

It is China's responsibility, not ours, to create such a regime. But our present policy—the Hurley policy—prevents it. And it threatens to embroil us with Russia. Were we to use our friendly influence aright, without force, and in cooperation with Russia, we could bring the warring sides together.

Such are the issues which transcend personalities. It is necessary, however, that the State Department, and any congressional investigation which ensues, shall protect loyal public servants from smear attacks. General Hurley's charges of action by career diplomats against American authority are utterly without substantiation thus far.

THE GENERAL'S RECKLESSNESS

If any subordinate flouted proper authority, let the fact be established and discipline follow. But let there be an end to hounding of the career men General Hurley sent home from Chungking because he could not brook advice from experts who were undeceived by Kuomintang blandishments

And when suppression of information is investigated, let charges of General Hurley's suppression of it receive the incisive attention that has long been needed.

Assuredly, the State Department needs reorganization. But the Office of Far Eastern Affairs, with which he is furious, is relatively perhaps the best office in the Department.

Aside from the issues, General Hurley is inexcusable for the method of his resignation and his reckless broadsides and innuendoes against our allies, including Britain and Russia. His distaste for imperialism is commendable, but he has been serving it starkly in China.

Celler Deplores AP and UP Denial of Service to State Department—Letter to Assistant Secretary Benton

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 29, 1946.

Hon. WILLIAM BENTON,
Assistant Secretary of State,
Washington, D. C.

MY DEAR MR. BENTON: I applaud your efforts to induce the Associated Press to supply the State Department with material for its broadcasts and newscasts. It is difficult to understand how you can properly direct our Government's International Information Service without this service. The same reasons that actuated the Associated Press to give its news items to the Office of War Information during the war and to the War and Navy Departments should, at this juncture, compel it to render the same service to the State Department for overseas newscasts as well as for the formulation of bulletins to its embassies and legations. Such bulletins are not for publication. This latter service has always been rendered and will be continued.

The charge that the Government cannot engage in newscasts without creating the fear of propaganda is just so much eyewash.

The Supreme Court recently determined that the Associated Press could not withhold its services from the Marshall Field papers, like PM and the Chicago Sun, without violating the antitrust laws. Certainly, the United States Government should be in a better position than private newspapers.

Experience has shown us that news events of the United States concerning its people and its institutions are greatly distorted in places near and places far. News of strikes, of Hollywood scandals, are ballooned out of all proportion in, to name a few, China, in Siberia, in Australia, or in Paraguay. Americans in the eyes of Czechoslovakians, Italians, and South Africans are a bunch of lotus eaters, and our people on the eastern coast are gum-chewing illiterates, and the people of our West are all gun toters. The true perspective is never given in India, in Iran, or even Mexico. All this is so, because on the one hand there is no one medium to convey the true state of facts, and, on the other hand, the true status is distorted and slanted according to the religious, political, or economic ideology of the particular government, or sycophants of a stated government in control.

It is true that, for example, in a country like India there is the Reuters News Agency which has wide coverage there, but it is also generally known that Reuters, if not British-owned, jolly well adheres to the line of British foreign policy and British imperialism. The Associated Press and United Press serve India, too, but have not, as yet, the facilities to cover that wide area adequately. I have read Indian papers and letters from Indians and one can hardly imagine the high-falutin notions that people of that country have concerning us. They think that everyone who walks the streets of New York is a millionaire and that gangsterism is the only American way of life.

Why, therefore, should not the State Department remedy this situation and supply this news lack and remove the tremendous amount of news misinformation about America—misinformation that was deliberately planted by the machinations and propaganda of Nazi and Fascist countries? Why should not the State Department be permitted to short wave even to the nethermost parts of the world the truth about America? But the State Department has not had appropriated to it sufficient moneys to gather the news over the length and breadth of the United States. If the Associated Press lays down on the job and assumes the "dog in the manger" attitude, the efforts of the State Department to build an effective international information service will greatly suffer.

Neither the Associated Press nor the United Press (which has followed the lead of the Associated Press) bring their news service to all parts of the world. For example, there are tiny areas like the Balkans where it would be impossible for privat newspapers to be published without the loss of large sums of money. Why should not the State Department fill the lack in that regard, more particularly when the Balkans is a trouble spot.

One of the objections of the Associated Press and the United Press is that the Government would distribute their bulletins and dispatches free of charge and that this would constitute unfair competition. I recall, however, in particular the Associated Press' boast that it is a public service and was not primarily concerned with profits.

In order to get our viewpoints accepted by others in foreign climes, it is necessary for the foreign peoples to understand those

points of view, to appreciate our ideology, and our economic structure. To that end, it is essential for them to understand something of our history and our traditions. If we are to dispel these misunderstandings about us, our Government must have the right to spread the gospel of the United States throughout the world. The misunderstandings yield to dislikes and dislikes to suspicions and suspicions to unfair and discriminatory practices, all of which finally lead to war.

There are many places where there are no newspapers, and which can be reached only through the radio. While it is true those communities may have few individual radio sets, the few that do thave them will repeat and reiterate the message received.

In a way, our commerce and our national interests are involved and I am firm in the conviction that a denial of the service by the Asscciated Press and the United Press, even with the State Department willing to pay adequately, is shortsighted, unbusinesslike, and pettish.

I believe a splendid service is being rendered by your division in that it is transmitting, as I understand it, 66 programs a day in 21 languages via 36 short-wave transmitters and that newscasts are relayed through stations in Algiers, Germany, London, Saipan, Honolulu, and Manila. There is no danger to freedom of the press. As a matter of fact, I am sure your newscasts abet freedom of the press since they are reproduced in many foreign language papers all over the world.

The Associated Press and the United Press supply services to the British Broadcasting Company, which is government controlled. They supply services to Tass, a distinctly Russian Government department. How in thunder the AP and the UP can deny their service to their own Government is beyond comprehension. They give to the British and to the Communists, but not to democratic United States. Certainly, the Russian Government does not take on full faith and credit what the AP and UP give it. After Tass gets through with these reports, I am sure they would hardly be recognizable. Likewise, British imperialism colors and tints these reports.

But iron-clad assurances can be given by the State Department that it will not distort or misuse the reports, and that the State Department will only act as a sort of pipe line of intelligence to spread information. However, no such demand is made upon any other subscriber.

The AP fears that once our Government begins to function as a newscaster there will be the tendency, inevitably, to suppress or tone down news items that do not reflect creditably on the United States or parts of its people. It fears there will be an attempt to cut here and cut there, that the result, therefore, will not be "news." Well, the answer to that is, Put the State Department on trial, give it a chance for its "white alley." Let there be a probationary period, but if the State Department distorts and misinforms, then and only then let the AP refuse to continue its services.

Furthermore, subscribers are not under obligation to repeat the dispatches verbatim, unless they use the AP or UP dateline. In truth and in fact, the subscribers have axes to grind and reshape and remodel, underscore or tone down the AP reports, putting AP items in the front or back pages and headlining them as policy dictates.

Already reactionary and tory newspapers in Britain, like the Beaverbrook Daily Mail, are seeking to crack down on our State Department for setting up its newscasting organization. Lord Beaverbrook in his various newspapers has done everything in his power to distort for the British readers the American way of life. Naturally, he does not want the truth told. He would like that distortion to continue. He inveighs against so-called government-inspired propaganda. Indeed, of all the propagandists that ever lived he is the most forward and adept.

There are those in the House and in the Senate who think the same as the editors of the AP and the UP and I fear there may be difficulty in getting sufficient appropriations for your international information service. You will have to do much missionary work.

However, I pledge you every possible support so as to induce sufficient appropriations for your broadcasts and newscasts.

Sincerely yours,

EMANUEL CELLER.

Improvement of the United States Army

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. TAYLOR. Mr. President, Yank, the Army weekly, ceased publication at the close of 1945. Published by the War Department and written by and for the enlisted men of the Army, it became truly representative of the thoughts and feelings of our soldiers. It attained a high level of journalistic excellence and an enormous popularity among our troops. Its staff, composed entirely of enlisted men, was represented wherever American soldiers were. Its reporters were part of the show, rather than mere spectators. They knew what it was to carry a rifle, to police quarters, to clean latrines, to drill and to try to wheedle an overnight pass from their sergeants. Although they reported the war from every training post, every front line and every beachhead, none of them ever saw the inside of an officers' club. Their experience is thus a composite of the experience of the average soldier.

In an editorial published in Yank's issue of December 21, 1945, just before it ceased publication, the staff wrote a valedictory editorial which summarized the basic suggestions enlisted men would make for the improvement of the Army. It is a carefully reasoned, brilliantly written document.

Mr. President, I ask unanimous consent to have that editorial printed in the RECORD. Coming from so friendly and authoritative a source, I hope it will be given very serious consideration in the Pentagon, and also in Congress.

In sum, the editorial asks for a more democratic Army. It will shock many citizens who were not aware of the completely undemocratic pattern of army social life. I believe that all this is important for us to consider now, because we will soon debate legislation to entrust our young men to the tutelage and training of the Army high command. I am sure that none of us want to conscript our boys for military training if it means a steady dose of Prussianism. We want our youngsters to receive the sort of education that will qualify them to be citizens in a democracy—participants in history's greatest and most successful experiment in self-government. We want them to learn to respect themselves as the equals of others, and to respect others as their own equals. We want self-reliant, cooperative men, who know how to work as a team—who do not accept orders blindly, but are alert to make criticisms or suggest improvements. The Army and Navy do not encourage that sort of thing in their enlisted men or officers. They do not encourage ideas from the ranks—"theirs not to reason why" is still the motto of the services. Only last week we observed the Army's action in forbidding all public meetings of soldiers on the question of demobilization.

If the Army can clean its own house and bring forward a program of training that conforms to our American democratic institutions, if it can junk its caste systems and junk the drill manuals that go back to Frederick the Great, it had better do so soon. Unless it does, it will get a cool reception to its conscription plans from the people of this country and their representatives in Congress. We will be paying a high price for conscription indeed, if all our sons are discharged as civic invalids.

Mr. President, I repeat my request to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YANK RECOMMENDS—

AN ATTEMPT TO PUT TOGETHER SOME OF THE BASIC SUGGESTIONS EM HAVE FOR THE IMPROVEMENT OF THE UNITED STATES ARMY

There is sharpening of ears and a stirring of activity in the advertising business these days, and the reason is a strong rumor that the United States Army is getting ready to spend $3,000,000 a year on advertising and publicity. Naturally, the various advertising agencies are interested in securing the Army account. Fifteen percent, the usual advertising agency fee, of $3,000,000 comes to almost half a million bucks.

The purpose of the proposed advertising campaign, as we understand it, would be twofold—it would help boom recruiting for the peacetime Army we need by making service in that Army look attractive, and it would keep the general, taxpaying public informed as to the desirability of having an Army and as to what improvements were being made in training that Army.

Yank has been serving as the magazine of the enlisted man for some 3½ years now, and we feel that we know pretty much about the Army. We are even willing to give the Army—for free, without even a 15 percent commission—some advice on how to make itself more appealing to recruits, how to keep the voting public happy about it, and how to save a few millions of dollars in advertising. You see, this peacetime Army will, fortunately or unfortunately, have to be made up of a great many more enlisted men than officers. Our idea is to make it more attractive to these enlisted men—and, incidentally, a better Army all around.

The ideas we suggest are offered sincerely. They are a composite of what the enlisted man has been thinking about all along, a gathering of material which has been piling up in Yank's mail bag and of observations made by Yank enlisted-men correspondents in all theaters of the war and at home.

First, let us have more promotion from the ranks. By this we mean that every possible position requiring a commissioned officer should be filled by a man who has had some service as a GI. Let every West Pointer,

either just before entering or just after leaving the Academy, put in a year as a noncommissioned soldier. Knock out political appointments of officers and, in those cases where some officers have to be directly commissioned to do a certain job, make public their qualifications for the job and let them be passed upon by a board of officers who have had experience in the ranks before granting their commissions.

Such a system would give enlisted men an incentive to work toward eventual officership and would attract a smarter type of soldier to recruiting offices. It would also deal a blow to the "officer-caste" type of thinking which is already in danger of permeating our entire Army. Something like this "officer caste" came into power in Germany and the German General Staff, and a 130-year cycle of wars—two of them world wars—was the result.

Yank believes that a man should not be eligible for officership because of an accident of birth or education or political connection. An officer should be given the opportunity to prove himself first in the ranks. Perhaps there should be no dividing line between commissioned and noncommissioned—just a promotion ladder going straight on up from private to general.

For our second improvement, let us have all promotions—both noncommissioned and commissioned—on a basis of competitive examination without overdue attention to seniority. Between two equally qualified candidates, personal preference of the officer in charge will necessarily be the deciding factor. But let us have a few less sergeants made sergeants simply because they're good guys, and let us put an end to the ridiculous sight of capable young junior officers prancing around their CO like so many newly rich women around a reigning dowager, trying by this favor and that attention to buck their way a grade higher. As to seniority, there is no evidence that hardening of the arteries, even in colonels, is an infallible index of brain power.

And let's do something about making officers as liable under military law for their errors and faults as GI's already are. Every enlisted man knows that an officer can, and sometimes does, get away with a hell of a lot without any more serious bother than a reprimand and a change of station. If an officer is unfit, don't just ease him into a clerical job or hold up his next promotion a month or two. Bust him, as you'd bust a corporal in the same position. If the officer's good, he can climb up again. That seems to be Army reasoning in the case of GI malfeasances; why not apply it to officers?

Let's also do something about keeping distinctions of rank in their proper place. Rank, and the respect due to it, are necessary for the organization of the Army. There must be men to give orders and other men to obey them, but there is no need to differentiate between officers and men off post or off duty. This differentiation has been made in this war and it has had uniformly bad results. Let's get rid of it.

As a first step here, "let's abolish differences in uniform (except for insignia), in messing facilities, in equipment, in quarters. Perhaps in this last instance there might be fewer men assigned to a room as rank increased, but there should be no difference in type or quality of housing.

All ranks should have the same type of quarters for the same reason that they should have the same type of food. And for the additional reason that there has been no single cause of GI hatred for officers—and we use the word hatred advisedly—greater than the hatred stirred by looking out of a matchbox barracks or a dust-ridden tent to see your platoon commander breezing off to a soft bed in officers' quarters or a quick one before dinner at the chrome and plastic bar of a movie-type officers' club.

There should be no social difference because of rank, because there are no social differences in the human being involved—except as individuals. You'll find many a bore, and even a boor or three, with stars on his collar, and there are some charming and amusing people with only one stripe or less on their sleeves. There is no reason why the captain can't come to the movie early enough to get a good seat, and no reason why a GI can't cut in for a dance with the prettiest girl in town—she being willing, of course.

The most depressing spectacle of this war, and the most disgusting for some soldiers who had a slight pride in the fact that they were said to belong to a "democratic" Army, was the sign "Off limits to EM." The idea that the technical artificiality of rank, a label useful only to clarify the chain of command, could entitle one man to eat in a good hotel and banish another to a flyspecked zinc counter has no part in any Army that represents the United States.

We on Yank believe the Army can benefit by studying these suggestions. We believe that improvement within the Army is just three million times as important as publicity outside the Army. We believe that ours can be as fine an Army as its potentials promise only by hard work from within on the part of every GI and every officer, and by sharp observation from without by every civilian.

More on Atomic Energy

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 29, 1946

Mr. COFFEE. Mr. Speaker, the St. Louis Post-Dispatch, I have repeatedly asserted, is one of the great newspapers of the United States. Its editorial columns are saturated with evidence of the gifted powers of its editorial writers. Its news columns are free from cant, hypocrisy, bias, and domination by advertisers' caprices and prejudices. It is a fearless, forthright, journalistic spokesman for all the people. It is a credit to St. Louis and to the State of Missouri and to the great newspaper family which controls it. This newspaper, through the years, has been conspicuously militant in its exposure of monopoly, graft, corruption, and miscarriages of justice in general. Would that there were more newspapers possessing these superlatively laudable qualities, in other cities of America.

Recently there appeared a characteristically incisive and pentrating expression on the subject of atomic energy. Because, in my own State of Washington, at Hanford on the Columbia River and in adjacent areas, there is located the most important of the three Federal operations maintained to develop atomic energy, we in our State are especially interested. Here is the editorial:

PEACETIME CHALLENGE OF ATOMIC ENERGY

The ways of science are quiet ways, and its monumental discoveries usually come unobtrusively to the eyes of men.

There was little sense of drama among the group who saw James Watt's first steam engine pumping black water from a mine pit on a bleak English hillside in 1765, nor among the few who heard the unsteady hum of Faraday's dynamo in his laboratory in 1831. The telegraph was introduced in 1844 with an eloquent sentence "What hath God wrought," but the first telephone message was Alexander Graham Bell's simple instruction to an assistant in another room: "Mr. Watson, come here; I want you."

It was quite otherwise with the discovery of atomic fission. That burst upon the world with the most cataclysmic demonstration of searing, pulverizing, annihilating force ever released by man. It is undoubtedly because of that prodigious impact, the bearer of wholesale death in horrifying form and the virtual finishing blow in a global war, that this discovery has been associated almost entirely with its destructive possibilities, very little with its prospects for beneficence to mankind.

VAST SOURCE OF ENERGY

Those prospects are less dramatic than the awesome pictures of catastrophe to civilization from the atomic bomb which the scientists have painted, and of which the world had a glimpse at Hiroshima and Nagasaki. They must nevertheless be considered, as man's intelligence is bent to planning toward control of this new and mighty force.

Here is an untapped and seemingly illimitable source of energy whose possible uses send the imagination reeling. It may be generations or centuries before some of the more fantastic possibilities of atomic disintegration can be attained, such as Sir James Jeans' estimate that a drop of water could supply 200 horsepower for a year, or the prospect, cited by Waldemar Kaempffert in the New York Times, that "a handful of clay will produce far more power than a million tons of coal." Those are scientific dreams for the future's realization, but there are possibilities not so far ahead with revolutionary impact in store for our own times.

Atomic heat is already being produced at the Hanford plant in Washington State. Dr. Arthur H. Compton sees the possibility that city power plants will find it feasible to use uranium's atomic heat instead of coal within 10 years. In a symposium a few days ago, nine atomic scientists made estimates ranging from 3 to 20 years as the time within which atomic power could compete with coal at $15 a ton.

One present handicap is the fact that protective shields equivalent in weight to 2 or 3 feet of solid steel are required to prevent escape of dangerous rdiations from atomic power plants. This means that they can be used only in stationary form or on large steamships, perhaps on locomotives.

SCIENCE IS STILL AT WORK

There are other handicaps to be overcome, but it would be rash to predict that science, after solving the riddle of the atom, cannot overcome them. Uranium is rare and costly, yet other elements will ultimately be found capable of fission, and the possibilities of hydrogen, cheapest substance on earth, are already being investigated. Since the atomic bomb, despite its terrific explosive properties, uses only one-tenth of 1 percent of the energy released from uranium, the prospects from development of greater efficiency are staggering.

The entering wedge was driven with perfection of the bomb, and science never rests. Hence the predictions of power and heat of now unimagined cheapness, making possible the heating and lighting of cities at low cost, vast irrigation projects to make the deserts bloom, large-scale indoor agriculture, swift new forms of transportation, a literal revolution in all the forms of industry.

There are hopes, too, for great advances in science, particularly in medicine. Ordinarily conservative research workers already are predicting unprecedented progress through atomic discoveries in tracking down the causes of cancer and perfecting means for its prevention and treatment. Other

branches of medicine, notably the field of metabolism, are likewise counting on a new stimulus to their research.

All these possibilities bring mankind up against a hugely magnified version of the problems posed by the machine age problems which had been most inadequately met even before the fracturing of the atom opened up new and unknown vistas.

PROBLEMS OF JOBS FOR ALL

Mass production brought a lowering of manufacturing costs that made possible the widespread acquisition of comforts and conveniences, but it also brought mass unemployment. So we had the paradox of want in the midst of plenty, the spectacle of unemployed pick-and-shovel men idly watching the giant mechanical excavator that had taken over their jobs. How can work for all be provided in the coming day of stepped-up labor-saving devices and vastly cheaper power?

The first fruits of the industrial revolution went to the owners of the machines while the workers lived miserable lives. Small children, it was found, could tend the new power looms satisfactorily, and they were hired for shifts of 12 to 15 hours a day, housed in unheated sheds, and paid up to 4 shillings a week. Workers' wages were so low that, James Watt himself recounted, they stole the grease from his engines to use for food. How can the greater industrial revolution now made possible be kept from becoming a windfall for monopolists, and channeled to providing benefits for all?

There is a tremendous vested interest in the machines and processes that may become obsolete if the potentialities of atomic power are realized. Shall these interests be permitted to obstruct its fullest adoption at the earliest possible moment? Two billion dollars in tax funds were spent to bring about the epochal discovery, and the public is entitled to a voice in the decisions on policy.

Will man's new leisure be spent in graceful living, in recreation and cultural pursuits, or will the access of time on his hands lead to dissipation and crime?

DILEMMA OF OUR CENTURY

Scientists and educators realize the social implications of the discovery, along with the tremendous new issues of security it involves. Dr. Paul F. Douglass, president of American University in Washington, summarizes their view of the alternatives ahead in the peacetime uses of atomic power:

"We either are going to live on an animalistic plane or we are going to have a flowering of civilization which is unparalleled and which will reflect itself in art, literature, music, and beauty. * * *

"It's a question as to whether we're going to have enough inner ethical resources to keep character in society when we no longer have scarcity and drudgery and no longer have to struggle."

These questionings and doubts reiterate the dilemma of the twentieth century—the failure of man's social thinking to keep up with his scientific genius. It is this lamentable fact, no less than the civilization-wrecking potentialities of atomic power, that makes the utilization of the new force a challenge to the best intelligence humanity can develop.

The destructive potentialities are in the spotlight now, and properly so, for failure to control them will make futile all discussion of how atomic energy can be best devoted to everyday living. Yet each success of the statesmen in bringing closer an agreement on the military aspect makes more urgent the solution of the peacetime phase of the problem.

There is still time to solve the riddle, but the time for decision is growing shorter.

A Fine Citizen and Outstanding Army Officer

EXTENSION OF REMARKS
OF
HON. R. EWING THOMASON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star regarding Maj. Gen. Alexander D. Surles; knowing him as well as his Army and official record as I do, I unhesitatingly say it is well deserved:

WELL DONE

Newspapermen in general nurse a professional if impersonal grudge toward any man or group of men placed in a position to influence or impede a free flow of news.

During the war the War Department's Bureau of Public Relations was held suspect many times, taking the blame for the absurdities committed by some of the officers assigned to public relations jobs and suffering, more than once, the accusation of covering up legitimate news. As the head of this bureau, Maj. Gen. Alexander D. Surles took his share of this particular sort of rap.

But to newspapermen who came to know him during his 4 years in one of the toughest spots to which a senior officer of the Army could be assigned, few of them, indeed, failed to appreciate his difficulties and to admire the way he did his job. Quiet, friendly, and approachable, with a real conception of news values and an understanding of the newspaperman's point of view, General Surles was more anxious to help than to hinder. He was as quick to acknowledge a mistaken policy as he was firm in protecting the legitimate interests of the War Department and the Army in relations with the public. Men trusted him because of his obvious sincerity and because they knew that he was giving his best in carrying out the assignment, though he would have given a right arm to be with his beloved First Armored Division.

The test of his ability to run his job to the satisfaction of his superiors and to get along with the various media of public information lay in the fact that he held his post throughout the war and now that he has been relieved by Lt. Gen. J. Lawton Collins, he leaves with more friends among newspapermen than he had in the beginning. Alex Surles will be remembered with real affection by his friendly enemy of war times, the press.

Demobilization of the Armed Forces

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. VURSELL. Mr. Speaker, from the information coming to my desk from men being held in camps here in the United States and overseas as well, I feel certain that there are hundreds of thousands of men being held overseas and in the camps in continental United States who are badly needed at home, and whose time is absolutely being wasted in being maintained in the military service. There are fathers with one or two children in thousands of instances who are loafing about camps without anything to do who should be returned to their families.

The Government would save money, the morale of the men would be lifted by such action, and men would be returned to civilian life, where they have something constructive to do, in addition to helping take care of their families.

I have a letter today from a father in my district whose three sons were all taken into the Army. One of them has now served 42 months and is idling his time away in a camp out in the Northwest. His father operates a large and productive farm, and he writes me that he would like to get the boy out in time to get ready for spring plowing and planting. I have a letter from the boy stating that he is sitting around doing nothing, just idling his time away.

Such foolishness as this is going on all over the country regardless of what military leaders say. Anyone can well see that this boy who has been in the service 42 months would certainly do the country more good back on the farm than he can do if he is kept, at Government expense, wasting his time in a camp out West.

I have letters of this kind every day, as do doubtless the other Members, yet we are told that we must keep these men in the service and that we must continue to get all of the volunteers possible, and also that we must continue the draft if are to have enough men in the military service to do the job. It certainly is not a very promising outlook.

I have a letter which I received from a private overseas now serving in the Philippines. I think his case can best be stated by including his letter with my remarks, the signature of which I am deleting:

MANILA, P. I., *January 18, 1946.*

DEAR CONGRESSMAN VURSELL: As a resident and voter of the good State of Illinois I would like to say a few words to the man who represents our fair State.

You have no doubt received many letters before this one in regard to demobilization as a whole, but as a father I am primarily interested in the discharge of fathers. Speaking as a father, I know that all fathers feel the same way as I do about staying in the Army now that the war is over. Fathers of one and two children are still in the Army and there is no mention made as to when we will become eligible. Fathers of three children, regardless if they were in the Army only a month were declared eligible for discharge. Our families need us every bit as much as the fathers of three. I think it seems undemocratic to stop drafting all fathers and doing nothing for those already drafted and away from their families. I wish you could realize all the hardships and suffering it causes the families involved.

I and others don't think that it is necessary to keep millions of men scattered throughout the earth in uniform idleness while their personal affairs go to the rock, their opportunities for education vanish, and their wives and children cry for them to come home.

There is a bill to discharge all fathers and it needs some more signatures before it can be put on the floor for a vote. I and a lot of other fathers from our State and fathers from every State will appreciate your wholehearted support of any bill to get the fathers of two and one child home.

It is the Congress who must run our country as our representatives instead of the country being run by the coalition of the War Department and State Department.

As a voter of Illinois I am looking forward to you as our representative and will appreciate your support of any bill which will bring home soon the fathers with one and two children. We will not forget the men who helped to bring us home.

Sincerely yours.

There are several bills on the desk to speed up demobilization. One of the bills is to discharge all soldiers who have seen 18 months' service; one is to discharge all soldiers with children; one is to declare the war over. I hope the Members will sign these petitions because it is apparent we shall not be able to act upon them on the floor of the House unless they are taken away from their respective committees by such action.

The Congress must act if it can because those who are directing demobilization, including the administration and the military leaders, are not getting the job done.

United Nations Permanent Headquarters

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. HEDRICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Charleston Gazette, Charleston, W. Va., under date of January 27, 1946, entitled "Why Not White Sulphur?":

WHY NOT WHITE SULPHUR?

We are informed that there is a possibility of the United Nations permanent headquarters being located at White Sulphur Springs. Aside from our pride in the State and the section, we can think of no other place more suitable.

It is encouraging to learn that Representative E. H. HEDRICK, of this district, has been active in bringing the matter before the United Nations committee now in this country inspecting sites, and in efforts to enlist the support of President Truman, Edward R. Stettinius, Jr., the United States representative to the United Nations Organization, and other high officials in this country.

Apparently considerable preliminary work has been done toward furthering the possibilities of locating the capital of the world at White Sulphur. There must be more. The West Virginia Chamber of Commerce certainly ought to help in every way possible.

We think if the committee can be persuaded to visit and inspect the White Sulphur location, it would be impressed. The magnificent hotel, the Greenbrier, is now occupied as an Army hospital, but we are informed that the Army wants to vacate it as soon as possible. The hotel was formerly owned and operated by the Chesapeake & Ohio Railway, but we have heard the company is lukewarm about reopening it as a pleasure resort.

Everything that would be immediately required is at White Sulphur. It has an excellent airport, and the railway station is within 100 yards of the hotel. It is on a first-class national highway. Available is a tract of approximately 6,000 acres. There are fine facilities for golf, swimming, hunting, fishing, and other recreation. And the setting is one of the most beautiful in all America.

It has been suggested that the capital of the world be located away from congested centers and the coastal areas, and it is not considered desirable to have it too close to Washington. But White Sulphur is not too far away, being 500 miles from New York City by highway and rail and 150 miles from Washington by air. The location is easily accessible but admirably secluded.

The town of White Sulphur adjoins the hotel and offers all the amusements and conveniences that would at first be required. We are informed that it is the intention of the planners to build a permanent city to accommodate 30,000 people and this would include several large and ornate business buildings and a great auditorium. It is to have the finest airport in the world and the most powerful radio station The new city would be laid out by highly skilled and experienced engineers and architects Top representatives of all the nations of the world would be coming and going all the time and there would be a permanent staff of several thousand.

We respectfully suggest that all of our Senators and Representatives put their influence and best thought behind Representative Hedrick in his efforts to get the capital of the World located in West Virginia and that all our leading business men do the same.

Democracy and the Balkans

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1946

Mr. COFFEE. Mr. Speaker, George Pirinsky, executive secretary of the American Slav Congress, has written an article expressing the views generally entertained by the American Slav Congress urging nonintervention by the United States in that area. A peculiar situation obtains in these sections of Europe. The article expresses views contrary to those expressed by many editorial writers and is well worth reading by my colleagues. Here is the article:

LET THE BALKAN PEOPLES WORK OUT THEIR OWN TYPE OF DEMOCRACY

(By George Pirinsky, executive secretary, American Slav Congress)

Now that the peoples of Yugoslavia and Bulgaria have spoken, our State Department should cease any further interference in the internal affairs of these two Balkan countries for the purpose of bolstering reactionary forces. In the elections on November 11 and 18, the electorates of Yugoslavia and Bulgaria repudiated the opposition which we had taken under our sponsorship. In Yugoslavia out of more than 8,000,000 voters only 700,000 voted for the opposition. In Bulgaria, despite the last minute intervention of our State Department and the frantic appeals of the opposition to the voters to boycott the elections, more than 85 percent of the voters cast ballots.

In both countries, women voted for the first time. All persons of 18 and over had the right to vote. Only Fascist traitors and open Nazi collaborationists at the time of the German occupation were deprived of the right to vote. The National Front list in Yugoslavia and the Fatherland Front candidates in Bulgaria included the representatives of all major political parties, which represent the overwhelming majority of the people.

American correspondents in Yugoslavia and Bulgaria reported that the elections were conducted most democratically and that the people went to the voting booths in a festive mood. There were no disorders, no clashes—to the great disappointment of some of our diplomats and newspaper editors. In fact, our poll-tax States in the South could learn much from the democratic way in which the elections in Yugoslavia and Bulgaria were conducted.

Before the elections our State Department was reported to have been much concerned about the extent of democracy which actually would prove possible during the elections in these two Balkan countries. Neal Stanford of the Christian Science Monitor wrote: "Official Washington, viewing the current ferment in the Balkans, is concerned about the extent of democracy which actually will prove possible in the forthcoming elections there."

This significant dispatch raises some important questions: What is the basis for official Washington's concern about the Balkans? What is our policy there and how does it affect the future peace and security not only of the Balkan peoples but of the American people as well?

NEW BALKAN REGIMES ANTI-FASCIST

To answer the first question, it is necessary to bear in mind that the great war of liberation which the United Nations waged against the Axis aggressors brought basic changes in the nature of the Balkan regime, Greece being the only exception.

Before this war, all Balkan countries went through a terrible period of Fascist rule. The Munich diplomacy of Chamberlain and Daladier had given Hitler and Mussolini a free hand there. The regimes of all the Balkan kings, Boris in Bulgaria, Alexander in Yugoslavia, Carol in Rumania, George and General Metaxas in Greece differed little from those of Hitler and Mussolini in Germany and Italy. Constitutions were suspended, workers' and peasants' parties outlawed, thousands of the best sons of the Balkan peoples killed, tens of thousands thrown in jails and concentration camps. In Bulgaria alone 30,000 were killed during and after the 1923 June and September uprisings of the peasants and workers.

At that time no real concern was displayed in official Washington over the tragic Balkan developments that paved the way for the Nazi invasion. The concern seems to come now when the anti-Fascists have taken over the destiny of their lands.

Concern over the events in Greece, where some of the worst reactionaries are in power (thanks to British tanks and bayonets), would be understandable. But official Washington is worried not over Greece but over Bulgaria, Yugoslavia, and other countries where the people broke completely with their hateful past and are building their life on a new anti-Fascist basis.

In each of the two countries there exists at present a coalition government which includes all democratic elements who have participated in, or were sympathetic to, the national liberation struggle against the Axis. These unity governments, such as the Fatherland Front Government in Bulgaria, include the peasants party, Communists, Social Democrats and other liberal parties and individuals. Their representation in the governments depends on the strength of the respective parties and on the extent of their participation in the anti-Axis war.

Many of our newspapers complain that the opposition is not getting an adequate chance to present its program. The opposition in most instances consists of individuals who have in one way or another compromised themselves by open or secret collaboration with the Nazis and their puppets. Its main efforts are directed toward splitting the unity of the coalition governments and thus throwing the country into chaos. Naturally, in these countries where conditions are still very unsettled and where every ounce of national strength and unity is needed to overcome the supreme task of reconstruction and rehabilitation, such opposition is not welcomed by the people. They cannot afford it. They cannot permit petty disrupters and compromised elements to start undermining their national unity and program for reconstruction.

One other factor must be mentioned. In both countries the coalition governments are striving to raise the standard of living (which in most cases means simply avoiding mass starvation and famine) for the masses of people. They are taking over some industries formerly owned by those who worked in the service of Hitler and Mussolini. Naturally some people's toes are being stepped on, and they are joining this opposition in protest against the governments whose chief concern is the common man.

With this picture of people's governments, with a people's program, what then is the reason for official American concern? The answer must be sought not in the Balkan ferment, but in the American foreign policy.

UNITED STATES FOREIGN POLICY DISTURBING TO BALKAN PEOPLES

Perhaps American attitude toward the Balkan anti-Fascist regimes and their future will become clear when we observe the following:

That America still recognizes, and deals with, Franco's Fascist government in Spain which was imposed by two foreign powers, Germany and Italy.

That America sponsored Fascist Argentina's seating at the United Nations Conference in San Francisco, which was contrary to the entire spirit of its commitments to destroy fascism wherever it arises.

That in Indonesia, where the people are fighting for freedom and democracy against imperialist Dutch and British rule, use of American lend-lease supplies is sanctioned by Secretary of State Byrnes providing the labels are removed before the tanks and guns shoot down Indonesian patriots.

That in China, United States Marines were landed ostensibly to assist in the disarming of Japanese troops but in reality they are intervening to bolster Chiang Kai-shek's dictatorship all over China.

That in Greece, the British-backed government is terrorizing its people without any "official" Washington action to restore democracy there.

That in the American zone in Germany big Nazi war moguls still occupy key posts in industry and business because they are "efficient", "intelligent" and have the "proper contacts" with some of our big businessmen.

That Congress in Washington is playing international politics with relief for the peoples of the liberated countries, turning UNRRA into a club over the heads of starving people.

That economic aid to the eastern European countries is being held up because those governments are not "democratic" enough.

And lastly that the atomic bomb is being used by our Government as a political weapon of coercion of allied nations.

From the above, the only conclusion that can be reached is that official American protestations about democracy must sound very hollow to the Balkan peoples, that our policy seems to be rather one of bolstering every reactionary group and reconstituting regimes which rode roughshod over the peoples before the war.

The Balkan peoples are not too impressed with the Churchill-Bevin type of democracy in Greece, or our Mr. Byrnes' type of democracy in South Carolina where the vast majority of citizens cannot vote because of the poll tax. No, they want something better. They do not want to give their Gerald L. K. Smiths, their Bilbos, and Hearsts the freedom to destroy their hard-won gains.

Unless our policy makers understand this new upsurge of freedom in the Balkans we will commit the same blunders as before the war. Our refusal to recognize the genuinely anti-Fascist people's governments there will make the job of rebuilding there much harder, but they will go on despite all difficulties because they know that once lost, freedom is hard to regain.

In a recent interview with a group of British M. P.'s, Marshal Tito declared: "We have created that kind of democracy which corresponds best both to the nature and way of thinking of our people and to the economic conditions of our country."

After a visit to Belgrade, Dennis Almond, writing for Reynolds News, stated: "London's academic discussions of real democracy ring strange here. It amounts to an absurdity while talking of reality."

In conclusion, we might ask whether the United States policy makers have learned anything out of this war. Have they abandoned the policy of United Nations cooperation for the eradication of fascism, or are they trying to save it? Mr. Walter Lippmann, noted columnist, gave the answer in the November 1 issue of the New York Herald Tribune. Said Mr. Lippmann:

"Let no one deceive himself; we are drifting. We are drifting toward a catastrophe. Woe be to those who, when they have the responsibility to steer the ship, do not make for a safe harbor but drift with the wind and the tide."

United States Employment Service

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. MURRAY. Mr. President, because of the importance of the controversy over the USES, I believe the very interesting and enlightening discussion that took place regarding it on the American Forum of the Air program Tuesday evening, January 8, should be read by all who are concerned with the problem. Very succinctly the main points are dealt with by four individuals eminently qualified to discuss them.

I ask unanimous consent to have this included in the Appendix of the RECORD.

I have obtained an estimate of the cost of printing the manuscript in the RECORD. The cost will be $225.40.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

ANNOUNCER. What should Congress do about the President's veto? Is unemployment a national or a State problem? Who can do the job best? Should the United States Employment Service be turned over to the States immediately?

Once again the vital issue of the week heard on your American Forum of the Air. [Applause.]

Good evening, ladies and gentlemen. From the Shoreham Hotel in your Nation's Capital, Mutual proudly presents America's pioneer public-service radio program, the American Forum of the Air, founded 17 years ago by Theodore Granik, attorney and moderator. The forum presents, every Tuesday night at this time, the vital issue of the week, both sides of that issue, and the men who affect the decisions.

In Mr. Granik's absence we are honored to present as guest moderator the distinguished Chairman of the Social Security Board. He has appeared on these programs in the past as a participant. We now present the Honorable Arthur J. Altmeyer. Mr. Altmeyer.

Chairman ALTMEYER. Thank you. One of the first items of business facing a returning Congress is consideration of President Truman's pocket veto of a bill which would have returned the United States Employment Service to State operation within 100 days.

Immediately after Pearl Harbor with the consent of all the States, the Federal Government took over the various State employment agencies, welding them into a national employment service to facilitate the recruitment of workers for war plants, wherever needed throughout the country.

With the conclusion of the war, the States now demand the return of the offices. Labor and other organizations oppose the return to State jurisdiction.

The President has not opposed eventual return, but he is opposed to a return before July 1, 1947.

These are the current facts. The arguments pro and con are many and diverse.

State agencies now administer State unemployment compension laws. They argue that they cannot properly discharge their responsibility for deciding whether an individual should receive unemployment benefits unless they have control of the employment service, since it is only through the employment service that it is possible to determine whether or not a claimant is refusing to accept suitable work.

Those who argue for retention of Federal operation claim that the labor market is no longer confined to a locality or State, but is national in its scope. They point out that it will now be necessary to find jobs for millions of displaced war workers and millions of returning soldiers regardless of State lines.

This evening we will hear all views argued. We have a State official, a former State official, a past national director of United States Employment Service, and a representative of organized labor as our guests.

First, Stanley Rector, chairman, legislative committee, Interstate Conference of Employment Security Agencies. Mr. Rector.

Mr. RECTOR. Good evening. With the passing of stringent manpower controls, made necessary by war production, the efficiency of the employment service is again dependent upon its responsiveness to the needs and conditions of the many localities comprising this Nation. Administration by State government can more effectively meet the varying needs existing between localities. It is more representative and more accessible to the people and it is demonstrably more economical.

Administrators versed in employment security programs, however they may differ as to whether or not such a program should be on a State or a Federal basis, uniformly agree that unutterable confusion and inconsistencies arise through having the related functions of the unemployment compensation and employment service under two distinct and separate controls. They are no more separable than Siamese twins,

assuming they are to live and function properly.

The reconversion and demobilization process requires immediate reintegration of these related services and since there is little prospect of a Federal take-over of unemployment compensation, good management dictates that the employment service be immediately returned to the States.

Chairman ALTMEYER. Thank you, Mr. Rector.

Next, John J. Corson, former Director, United States Employment Service, and now director of research, Washington Post, Mr. Corson.

Mr. CORSON. Mr. Altmeyer, my answer to the question, "Should the United States Employment Service be turned over to the States immediately?" is "No."

If we are to keep the number of unemployed in this country even as low as 3,000,000 in the years ahead, we need an aggressive, efficient, well-knit system of local employment offices. This system of employment offices must be capable of bringing unemployed workers and jobs together, even though the workers are in Texas and the jobs in Wisconsin. It must be capable of finding workers with the skills required when employers need them promptly. It must be able to aid all workers find jobs, including those handicapped by their own inexperience, age, physical disabilities, or the color of their skin.

Almost 30 years' experience has demonstrated that a federally operated employment service is essential. In every employment crisis since World War I, this country set up Federal employment service. Between 1918 and 1946 the Federal Government has been in the business of running an employment service, with the exception of 4 or 5 years.

Hence, the question really is: Should the Federal Government abdicate its responsibilities for bringing workers and jobs together, in the light of three decades' experience and in the face of present reconversion needs? The obvious answer is "No!" If political exigencies force Congress to the opposite conclusion, then at least the United States Employment Service should not be turned over to the States until definite and precise standards as to how these States shall operate 48 separate systems are written into the legislation governing the future operation of the USES. This much is the essential minimum if we are to maintain an employment service to aid workers in finding jobs.

Chairman ALTMEYER. Thank you, Mr. Corson.

Next, Claude A. Williams, past president, Interstate Conference of Employment Security Agencies. Mr. Williams.

Mr. WILLIAMS. Thank you, Mr. Altmeyer. Good evening, ladies, and gentlemen.

I advocate the immediate return of the employment service to the States

The number of people employed or unemployed is probably due to national conditions, but the actual placement of unemployed persons in jobs is a local function and the means of doing that job must conform to local conditions. These vary, not only between States, but between localities within a State. It is impossible to cut the cloth on a national pattern to fit all situations.

Continued Federal operation of the employment service will continue the attempt to provide minimum wages far in excess of those now provided by Federal law, force upon employers so-called fair employment practice regulations which Congress has refused to enact and the use of unemployment compensation funds to finance strikes.

Only through the integration of unemployment compensation and the employment service in a State system can the confusion resulting from duplication and red tape be eliminated and displaced war workers, the veterans, and the public obtain the service to which they are entitled.

Chairman ALTMEYER. Thank you, Mr. Williams.

And now, Ted F. Silvey, chairman of the CIO Reconversion Committee. Mr. Silvey.

Mr. SILVEY. The CIO reply to the question is an emphatic "No"; neither immediately nor at any future time. The public employment service exists to give help in our complicated national labor market situation to employer, veteran, young people seeking their first jobs, handicapped person, minorities who suffer discrimination, and everybody who seeks a job which matches their skill, experience, ambition, and economic need.

It is as ridiculous to talk about operating the employment service on a State level as it would be to talk about breaking up the United States post office into 48 separate administrations, each independent of and unrelated to the other.

Should a qualified worker in Bridgeport, Ohio, be deprived of job referral a short streetcar ride away in Wheeling, W. Va., or Philadelphia people looking for work not be referred to a shipyard across the river in Camden, N. J., just because two neighboring States had entirely different political or administrative organizations?

What then is the reason for a break-up of a national, unified system? What is the motive here?

Those who are screaming for return of the federally operated, national public employment service to State operation have at least two basic motives and both of them are evil. One, they want to make the employment service an adjunct to the State unemployment compensation administrations so they may prostitute the original purposes of unemployment compensation benefit payment for workers into tax reductions for big business; and two, they want to get the 23,000 employees on State pay rolls so they may filch some of their personal earnings for State political campaign purposes and use the time of these persons, both public and personal, for beating the political bushes for votes for State governors and senators, especially Tory Republicans and reactionary southern Democrats.

Chairman ALTMEYER. Thank you, Mr. Silvey.

There we have the issues and the sides are clearly drawn.

Mr. Rector, to start our discussion, why do you think the United States Employment Service should be returned to the States at this time?

Mr. RECTOR. First, Mr. Moderator, in view of the last statement, I would like to rise to a point of personal privilege. I find that the sweeping indictment is made that the advocacy of the return of the employment service to the States is representative of the forces of evil. In that category you will find 48 governors of States, without exception; and if my memory serves me correctly, many of them were actively supported by the CIO-PAC organizations.

I can assume that these governors and State officials are representative of the attitude of the public interest and our and their feeling is this: That the interests of the displaced workers can best be served in the finding of suitable employment, and that our returned servicemen can be reintegrated into society best by the responsive, responsible back-home governments, which are certainly as interested in their welfare as removed bureaucracy in Washington.

Mr. CORSON. That draws the issue. It seems to me that Mr. Rector's argument as to a responsible back-home government is an illustration of the weakness of the State argument. Today workers are looking for jobs wherever those jobs may be, not necessarily at home.

I am told, for example, that the Selective Service records demonstrate that only 2 out of every 10 workers, or 2 out of every 10 veterans coming out of the Army, are interested in going back to the same community from which they were drafted, and not more than 6 are going back to the home State.

Today workers are looking for jobs from one end of the country to the other. They have been for a long time, and to place them in jobs a national employment service which can bring them to jobs wherever they may be is essential.

Mr. WILLIAMS. Mr. Silvey, I would like to know if you subscribe to this statement: "Even today, in wartime, when emphasis on centralized Federal control is so strong, I have found that a man or commission, sitting in Washington behind a table loaded with figures, cannot analyze the manpower problems in any State as well as the State agencies, which are so thoroughly steeped in the particular problems and particular conditions in each State."

Mr. RECTOR. If I may, I would like to return to what Mr. Corson has indicated.

Mr. WILLIAMS. I would like to get my question answered. Apparently Mr. Silvey was not listening.

Mr. CORSON. It can easily be answered. The United States Employment Service, during the period of the war, has demonstrated full well that you can administer a national program, and administer it effectively, in each local community.

During the war a whole series of local employment service programs were developed. There was the Buffalo plan; there was an employment council in Dallas; there was the Louisville plan; there were a host of others. It demonstrated how effectively a national program can be integrated on a local basis.

Mr. WILLIAMS. Mr Corson, those local plans were established because they attempted to cut the cloth on a national pattern and it didn't work, so they had to go down to the local proposition to develop a thing that would work.

Mr. CORSON. And established because they were supported and stimulated by the national War Manpower Commission.

Mr. WILLIAMS. No; because they were supported and stimulated by the local people who knew the problems.

Mr. SILVEY. I don't agree with your quotation. I think you probably found it in some obscure place and you are trying to trip me with it.

Mr. WILLIAMS. It happens to be Senator Truman's statement before the Interstate Conference of Employment Security Agencies on October 21, 1942.

Mr. SILVEY. I had a notion you were going to tell me it was a CIO member in Utah.

Mr. WILLIAMS. May I carry it just a little further? Since you think it is such a funny statement, perhaps you and your organization are responsible for changing the President's mind and causing him to veto this bill.

Mr. SILVEY. All right, Mr. Williams. I don't know whether it is Scripture or not, but some place it says that a wise man changes his mind and a fool never does. I think Mr. Truman is showing considerable wisdom on a number of questions, especially on this one.

Mr. WILLIAMS. That is why I think CIO should keep open-minded on the return to the States. There is still a chance for them to change their minds.

Mr. SILVEY. We haven't had the evidence like Mr. Truman has had it presented to him, you see.

I will contend that the maximum labor-management and community participation was in the Federal employment service during the war, in contrast to almost no such participation under State operation before the war. I think this rather indicates that State operation again would fall back into the isolated, incompetent condition that made it impossible for the country to risk

State operation during hostilities. We had to federalize in order to get on with the war.

Mr. RECTOR. Those are adjectives, Mr. Silvey, not proof.

Mr. SILVEY. We didn't have 48 separate armies to fight Germany.

Mr. RECTOR. This is Mr. Rector, Mr. Moderator; I have been very anxious to get to the item at issue which he so well set out. I am very familiar with the argument that unemployment is a national problem, therefore, QED, it can best be handled by the Federal Government. As if any phenomenon that occurs throughout the Nation, merely because we find it in the various States, therefore, QED, it can best be handled by the Federal Government. If that be true, then education, divorce, all laws governing society——

Mr. SILVEY (interposing). Including traffic?

Mr. RECTOR. All laws governing society should be under the Federal Government per se. Merely that it is a national phenomenon, it does not necessarily follow that the treatment of that problem can best be taken care of by the National Government. After all, the placement of individuals is essentially a local problem.

Mr. CORSON. Let us stick to the placement of unemployed workers and forget about divorce and public education for the moment. Probably you know more about them than I do. With respect to the placement of unemployed workers, in the first place, there are industries in this country, as you well know, such as transportation, construction, agriculture, which rely on a mobile labor force for their workers. Every year workers move from one place to another place to find jobs in those industries. In addition, we have in this country about 47 labor market areas that lap over one or more States. Mr. Silvey has pointed out already, Why is it a worker on one side of a river should be denied a job on the other side of the river, just because it happens to be in another State?

Mr. RECTOR. I wonder if you are at all familiar with the facts. I have gathered considerable data, which we are going to present before congressional committees, to the effect that there has been greater compartmentation under the present Federal set-up than under the State.

Mr. CORSON. Those are just adjectives; be specific.

Mr. RECTOR. All right. In your experience as an administrator, I am sure you know that there has been an interstate clearance system under the Wagner-Peyser Act under which the States operated, and you further know that essentially has not been changed under the present operations.

Mr. CORSON. The latter part I disagree with.

Mr. SILVEY. Mr. Altmeyer, after using that phrase "Tory Republicans," I wonder if it would be all right to make a quotation from Herber Hoover on March 7, 1931. May I do that?

Chairman ALTMEYER. There is no law against that.

Mr. SILVEY. Mr. Hoover, then President, had a bill presented to him by the Congress for signature which he vetoed, and it had to do with the establishment of employment services in the States, financed in part by the States and in part by the Federal Government. In his veto he said in part: "I have repeatedly urged a proper extension of public employment agencies, but this bill unfortunately abolishes the whole of the present well-developed Federal Employment Service and proposes, after certain requirements are complied with, to set up an entirely new plan by subsidies to the States from the Federal Treasury. * * * This bill proposes, as I have said, to destroy the Federal Employment Service in the Department of Labor, which has developed out of the many years of experience, and to substitute for it 48 practically independent agencies, each under State control." That is the end of Mr. Hoover's quotation.

I am amazed that a situation that was too reactionary for Herbert Hoover in March 1931 is being espoused here today, 14 or 15 years later.

Mr. WILLIAMS. One thing I agree with Mr. Hoover, that he shouldn't attempt to subsidize the State into surrendering any of its local prerogatives and authorities.

You talk about a federally financed employment service that is operated by the States. That employment service is not financed by the Federal Government; it is financed through a special tax upon employers, levied for the purpose of raising revenue.

Mr. SILVEY. Which employers charge to the consumer.

Mr. WILLIAMS. I don't care who they charge it to, but they don't levy the tax on everybody. The tax is levied on employers for the specific purpose of paying the expenses of the employment security program. As an employer, I think we ought to have something to say about this matter. We foot the bill. We are the ones who pay for it and certainly we ought to have something to say about the kind and character of employment service that we operate. A survey of all the employers in the United States showed that 95 percent of them favor the immediate return of the Employment Service. In fact, they think it should have been returned to the States more than 6 months ago.

Mr. SILVEY. May I come back to the question "why"? Here I come in with the charge I made in my opening statement, the people who want the return to the States want it to prevent the payment of unemployment compensation benefits to unemployed workers.

Mr. WILLIAMS. No. We want to prevent the payment of unemployed compensation benefits to workers that are not entitled to them.

Mr. SILVEY. Now, Mr. Williams, you stand up before Senate committees and make comments and they are written down. And on September 5, 1945—which isn't so very long ago—you recommended that there be a suspension of "unemployment compensation for the next 6 months and not pay any benefits to anybody."

Mr. WILLIAMS. I still advocate that.

Mr. SILVEY. O. K., then you are against unemployment compensation.

Mr. WILLIAMS. Oh, no. I said if you suspended the payment of unemployment compensation for the next 6 months that you would bring about more expeditiously than any other method the rehabilitation and reconversion and placement of discharged war workers.

Mr. SILVEY. You can explain, but here's another one from a Senate hearing on June 1, 1944. "It sounds terrible," you said, "to say that 24 percent of all checks for unemployment compensation were less than $10, and in seven States from 10 to 50 percent were for $5. * * * I think it unfair," you continued, "to make a flat statement and leave the impression that $7 a week is an inadequate sum of money to pay in unemployment compensation benefits, particularly so" (and here is the point I want to emphasize, seeing that you are from Texas) "when there are thousands of gainfully employed people throughout the South who do not earn more than $7.50 or $10 a week when they are working."

I don't think you can ring many cash registers in Texas with eight or ten dollars a week wages for working people.

Mr. WILLIAMS. Are we arguing about unemployment compensation or about Employment Service?

Mr. CORSON. I find myself in agreement with Mr. Williams. Mr. Williams has said, "Are we arguing about unemployment compensation or about the Employment Service?"

Mr. SILVEY. I am saying these people want the Employment Service back in State control so they can stop benefit payments under the State unemployment compensation laws.

Mr. CORSON. With that point of view I agree. That unfortunately is what handicaps the unemployment service in doing a job to help unemployed workers. That is the case of the tail wagging the dog, literally.

Mr. RECTOR. Do I have to talk louder?

Chairman ALTMEYER. Mr. Rector, you have the floor.

Mr. RECTOR. I have a rather single-track mind and I would like to keep on the point because it is essentially—and it is a hard-ridden horse that has been ridden to death—that this item is a national problem and there are vast numbers of workers circulating throughout this country and that we have to have a national system per se.

I would like to give you, John, some interesting data. The State of Maryland has paid on the average 35,000 checks per week since about 10 days following VJ-day to unemployed people in the State. There has not been a single month—the high month was November—in which the clearance system, worked out by the United States Employment Service, has moved 50 people across State lines, out of that 35,000, into jobs in other States, pursuant to the clearance procedures. It has gone down as far as 15; the next high figure being 40.

In the State of Wisconsin we have paid out an average of twenty to twenty-five thousand checks; twenty-five thousand being high. The high month in the State of Wisconsin for clearance to surrounding States has been forty.

With reference to the complete elimination of State lines, it is not State lines that cause the barriers. It is the departmental administration. What has actually happened, Mr. Corson, is this, and we can't put them out here on the air, but you will find them in the CONGRESSIONAL RECORD in proper time. We have conclusive evidence that the area departmentalization—as you know, the States have been broken into areas, area directors—what has happened in some States is the breaking up of that State into five more States, if you so want to call it, as far as the Employment Service, by the inability to work out effective clearances between areas. You would be surprised had you actual front-line experience; you would be surprised at the confusion, the complete confusion of the directives coming out of Washington with reference to the handling of those "back home" problems.

If I may check my facts with you, with reference to your statement that always in time of stress the Federal Government has to come to the fore. The first employment service set up on a national scale was the old Reemployment Service, the United States Reemployment Service, following out of the World War. That was the first one in the country. We had no State system, only seven separate State systems.

Mr. CORSON. Haven't you really posed your two questions? Let me try to answer them.

Mr. RECTOR. All right.

Mr. CORSON. You said, in the first place, that there is a need for the interchange of workers between these areas, even though you won't admit there is a need for the interchange of workers and the availability of jobs for workers between States. I agree with you as far as you go, and I go you one step further. It doesn't seem to me to make sense that you would break a State up into areas, nor does it make sense that just because a worker lives in Kansas City, Mo., he is not entitled to a job in Kansas City, Kans.

Your second point is that Federal administration is less efficient than State administration. On the basis of my experience I cannot see how you come to that conclusion. I had the unfortunate experience of being the Director of United States Employment Service when we took over the 48 State employment services. There were some very efficient State employment services. Wisconsin was one. Even Claude's State of Texas was one. So was Connecticut and Indiana

and a number of others. But there were some of the most atrociously inefficient State administrations you can imagine.

Mr. RECTOR. Has the War Manpower Commission's administration in the past 3 or 4 years—did you find that efficient?

Mr. CORSON. The War Manpower Commission couldn't rival at least a dozen of the State administrations which we had to rework and rebuild as quickly as we could.

Mr. SILVEY. On the point of service to the veterans, I am interested in seeing what Tom Stokes said in his column yesterday about job problems. Commenting on President Truman's veto of the bill, he said that these problems "relate to the hectic situation now existing all over the country, as incoming ships unload war veterans on top of the big task of finding jobs for civilian war workers, which still is a problem, too. President Truman is much concerned," he adds, "that war veterans shall have the most efficient service in trying to get back into normal civilian pursuits. That can be done, as the other job can be done, only by handling on a national basis and without disrupting the USES organization with its expert, trained personnel that is supervising State agencies."

Mr. WILLIAMS. What more efficiency can he have than a system located at the grass roots, where the people know and understand the problems pertaining to local employment, job opportunities, the kind and character of working conditions, and hours, better than any swivel-chair bureaucrat in Washington could ever dream about?

Mr. SILVEY. Take one of the ghost towns where there was one war industry and 700 veterans coming back, and there aren't 7 jobs in the whole town. Do you think they can place them there? Of course, they can't.

Mr. CORSON. What is the congenital difference between a swivel-chair bureaucrat in Washington and a swivel-chair bureaucrat in Austin? Is there any basic difference?

Mr. WILLIAMS. One is that we are close enough to the people so we can put the finger on them and make them squirm.

Mr. SILVEY. You have the right answer to that question, Mr. Williams. You can put your finger on the employees and sure make them squirm, and make them come across with a percentage of their salaries for your political campaign funds.

Mr. WILLIAMS. You know that is not true.

Mr. SILVEY. I have watched it work.

Mr. WILLIAMS. The main reason you want it turned over to the Federal Government is so you can get an increase in your dues, because their pay is going to be increased on the Federal pay roll.

I want you to get this straight. I want you to know that both State and Federal employees in this program operate under both little and big "Hatch Acts" which prevent any political activity and solicitation of any contributions, and the only place that I know of that it was ever attempted, both the administrators of the Employment Service and the Unemployment Compensation were removed from office for it. That happened in the State of Georgia.

Mr. RECTOR. Mr. Moderator, this is Mr. Rector. I would like to ask Mr. Silvey this. I can see where he would be quite concerned with the immediate self-interest of the rank and file of his unions, but he now proposes to speak for the veterans. I am wondering if a better spokesman of the veterans' interest would not be the veterans' organizations.

Mr. SILVEY. Well, we have 1,500,000 of our own members who are veterans and, of course, in the other large labor movements there is another 1,500,000, so we aren't entirely unrelated to that problem.

Mr. RECTOR. No; I suppose you have some veterans. I am wondering if you know the position taken by the American Legion, certainly as powerful a group as there is in the field of veterans' organizations, at their Chicago convention last September, in which they broke openly with the USES as being discriminatory and unsympathetic to the problems of the veterans.

Mr. CORSON. Mr. Rector, hasn't the Veterans' Employment Service been a national employment service for something like 15 years and do you think for a moment that the American Legion, or any other veteran organization, would agree to the breaking up of this National Veterans' Employment Service?

Mr. WILLIAMS. They want to get it out of the USES and put it into the Veterans' Administration, so the USES wouldn't have anything to do about it.

Mr. CORSON. Irrespective of where they put it, they insist on a national employment system.

Mr. WILLIAMS. Operated through State systems.

Mr. SILVEY. I make no point of speaking for the American Legion because I am not authorized to do so, and I don't know that you are, either.

Mr. RECTOR. I can quote the resolution and I can demonstrate the resolution to you. I would like to answer you, Mr. Corson, if I may. You are saying that they would not stand for a minute having it disintegrated into State systems, but I suppose you are conversant with the facts that the Veterans of Foreign Wars and the American Legion, in their sponsorship of the GI bill of rights, in title IV, provided for just that; namely, an administrative policy be laid down by the Veterans' Administrator to be executed and carried out by State agencies through the States, by State officers and State employees. You are conversant with that fact?

Mr. CORSON. By State employment officers, by State veterans' service officers appointed through the National Veterans' Service.

Mr. RECTOR. That is not correct. Look up section 602 on that.

Mr. WILLIAMS. Is not this great job that you talk about the Employment Service doing the result of about half the placements being made by your business agents in all these unions all over the country, where they go out and make the placement and send the list to the Employment Service and the Employment Service comes out with a big yell, "Look what we did! We placed all these people," when, as a matter of fact, your business agents did that.

Mr. SILVEY. That is not done to my knowledge. I don't know that it is true. It is not true in my union and I don't know that it is true in any CIO union.

Mr. RECTOR. That is the accepted practice. That is done all throughout the country in the matter of placement.

Mr. WILLIAMS. As a matter of fact, that is one of the reasons you don't want to go back to the States, because you are afraid they won't let your hiring halls and your business agents do the work of the Employment Service and they get the credit for it.

Mr. CORSON. Claude, you paint something here in very false colors. Of course, the Employment Service aids in the placement of union workers, and why not? Here you run into a situation, as we did in Camp Pickett, as we did in the early part of the war, where the employers and the union had agreed as to certain arrangements which would obtain in the employment of workers on that job. One of the arrangements that the employer agreed to, not the Employment Service, was that all the workers on that job would be union workers. All right, the union business agents refer their members to the employment office. Why not?

Mr. WILLIAMS. He doesn't refer them to the employment office; he refers them to the employer and sends the Employment Service a list of those he referred and then the Employment Service spends a lot of time writing up a lot of statistics showing what a big job they did, when they didn't do a thing.

Mr. CORSON. Claude, I guess you have been removed from the activities of the Employment Service for awhile.

Mr. SILVEY. I guess if the business agents of the unions are doing the job of the Employment Service, maybe under the carry-forward and carry-back provisions of the tax laws the union business agents ought to get a refund because they save the Government so much money.

Mr. WILLIAMS. They didn't save the money. All the money was spent making up the statistics that we did the job that the business agents did.

Mr. SILVEY. Let me ask Mr. Williams or Mr. Rector this question. If an employment service is best adapted to local conditions, as you assert, why then have it on a State level; why not set it up on a township or municipal basis?

Mr. RECTOR. Mr. Silvey, my answer to that is there can be absurdities at either extreme. There can be absurdities by having a too small basis to be efficiently administered with reference to the market. After all, a market is beyond the immediate township. When I say local, I mean relatively contiguous regions.

Mr. CORSON. Actually the Employment Service did grow up on such a local basis.

Mr. RECTOR. Right.

Mr. CORSON. Municipal service. And interestingly enough, back as far as 1907 we had a Federal employment service. This State idea has been a definitely recent idea.

Mr. WILLIAMS. Mr. Corson, what you had in 1907 was established by the Immigration Service to try to expose immigrants coming into this country to job opportunities. The thing wasn't a success. It didn't work and it fizzled out, just like the Employment Service did after the last war. It got into such disrepute that Congress would appropriate but $400,000 for its operations.

Here the States come along and build another employment service and we build up a going concern and these guys up here who want to get everything in Washington that they can, they couldn't wait to take it over under the guise of an emergency. To you guys up here there will always be an emergency and there will never be a time when the Employment Service will be returned to the States, Mr. Truman's promise to the contrary notwithstanding.

Chairman ALTMEYER. Mr. Rector.

Mr. RECTOR. John, whether it is a fact or not, it is true that in a free competitive labor market, not under the controls and forced policing that went on during the war period, and presumably for good reasons, that under a free competitive labor market, the ability of the Employment Service to efficiently function is dependent upon the jobs that are listed with it. In other words, it is dependent upon employer good will. I hold no brief for the employer's sentiments. Whatever may prompt him, it is still a fact that 92 percent on a poll conducted through the States—and very good sampling—were in favor of State management. You know, too, that the large employer organizations are all in favor of State management. One-third of the poll tickets coming back stated that under no consideration would they ever do business with the United States Employment Service.

Mr. SILVEY. Mr. Altmeyer, may I come in with a new question, just before we finish up here? I would like to ask—and I don't care who answers it—what assurance would there be with the United States Employment Service under State administration that competent Negro personnel hired to work in the agency during the war would not be discharged merely because they are colored people?

Mr. RECTOR. May I answer that?

Chairman ALTMEYER. Go ahead, Mr. Rector.

Mr. WILLIAMS. We don't have any in our State.

Mr. SILVEY. Wouldn't you hire a competent Negro in Texas at all, even though they are citizens and taxpayers?

Mr. RECTOR. We happen to have in our agency—unemployment compensation agency, if I may refer to that—a number of Negroes working in the State of Wisconsin.

Mr. SILVEY. Not janitors?

Mr. RECTOR. No; they are clerks.

Chairman ALTMEYER. Gentlemen, we will have to stop now for a summation of the arguments advanced this evening. Mr. Corson, will you sum up for your side?

Mr. CORSON. The arguments that we have presented are first and foremost that unemployment is a national problem; unemployment is not bounded by the State political boundaries.

There are a number of industries that range from one end of the country to the other seeking workers. I have enumerated them, transportation, construction, agriculture and a host of others that rely on a national labor force. In addition there are a number of centers that lap across State boundaries.

There is no sense to a system of employment offices that denies workers jobs on one side of a State line and gives workers jobs because they live on the other side of a State line. That, you may say, is an unreasonable provision that wouldn't be done even under State administration. The truth of the matter is that it was done. It was done in Kansas City, Kans., and Kansas City, Mo. I did my best to overcome it then, unsuccessfully, because of the pressure of Governors, Senators, and Congressmen from both States. That illustrates the pressures.

That is one argument. That isn't the only argument. Unfortunately, we have developed a system of unemployment insurance in this country which gives employers an incentive to deprive unemployed workers of their benefits. It is to their advantage to see that unemployed workers do not receive benefits when they are unemployed. That is very unfortunate, but it happens to be the sort of a system we have built in this country.

If I understand the arguments of Mr. Rector and Mr. Williams, it is that essentially you should have a State employment service in order that the State unemployment compensation laws can be more effectively administered. That means essentially that workers who are in search of jobs will be provided jobs if they are entitled to unemployment-compensation benefits, not necessarily that we provide jobs in order to put the best skilled worker in the job for which he is best fitted.

Chairman ALTMEYER. I am sorry, Mr. Corson, but your time has expired.

Mr. Williams, will you sum up for your side?

Mr. WILLIAMS. It is apparent that the negative side of this question has failed to show any necessity for a national system of unemployment compensation. They failed to show that there has been any improvement made in the interstate clearance of workers from one State to the other. The evidence here conclusively shows that they took the State interstate clearance procedures and used them throughout the war and did not improve them in any material respect.

There has been no proof offered that there has been any discrimination on the part of workers because they live across State lines. And secondly, the allegation that the employment service operated under the States would be used solely for the purpose of refusing benefits to unemployment compensation claimants has not been supported by any evidence here.

As a matter of fact, the only interest that the employers of this country have is in seeing that the unemployment compensation program and the employment service is operated to prevent the payment of benefits to those not entitled to them, and only in that respect are we interested in the operation of the employment service and the unemployment compensation systems.

The proposition has been alleged here that there is a lot of politics involved in this. The employers of this country have a right to have something to say about the kind and character of unemployment compensation program and employment service that is operated. The employers pay the bill; they are the ones that are taxed to support this pattern.

It is conclusively shown that 95 percent of the employers favor the operation of the employment service by the States because there they can see to it that State policies, State philosophies, are carried out in line with what is in accordance with the principles and practices of those respective communities.

Chairman ALTMEYER. I am sorry, Mr. Williams, our time is up.

Atomic Bombs in International Society

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article prepared by me on the subject of atomic bombs in international society, appearing in the October 1945 issue of the American Journal of International Law.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATOMIC BOMBS IN INTERNATIONAL SOCIETY[1]

(By ELBERT D. THOMAS, United States Senator from Utah, a vice president of the American Society of International Law)

That man could destroy his civilization has been known, theoretically, for many years; now there is actual proof that he can. Atomic bombs have been unleashed in international society, the results of which have no comparison in history.

However, the atomic bomb is proof of something more. It is proof that man's ideas can be mightier than man himself and mightier than the matter which surrounds him. The new atomic weapon is a product of the minds of brilliant scientists; it is not, in a real sense, a military development. It is an idea materialized, a frightful idea that only a few erudite physicists can grasp. It is the product of scientific laboratories and of remote electronic investigations. It is final proof that man's ideas have become superior to the very matter from which the thinking brain itself is constructed.

Much as the atomic bomb has been praised by persons of all classes since the destruction of Hiroshima the place of the atomic bomb in the history of culture does not seem to me—probably because I am so close to so many great and seemingly miraculous discoveries—to be as epic making as the invention of the wheel, the discovery of the storability of cereal foods, or the domestication of animals. From a military standpoint it is, to my mind, just another weapon. It is not as deadly as biological warfare would be if we stooped to that, nor as destructive as the use of rays or chemicals on a major scale. I say all of this despite the commonplace statement that the destructive strength of 70 bombs such as that dropped on Hiroshima would be equivalent to all other types of bombs dropped from the air over Germany and Japan. If total death, complete destruction, become the objectives of actual warfare there are many instruments more deadly and more destructive than the atomic bomb. Those who have zealously assumed that the invention of the bomb would guarantee peace because it makes war so illogical are merely echoing what was said by so many persons when international control of money was certain to make war impossible and when, through the invention of the airplane, global warfare became a fact. War has never been that logical.

In international society man's ideas are also paramount to physical matter. Law and custom will continue to be the controlling factors in that society, and they are but another product of man's thinking. The development of a new technique of destruction will not upset men's way of living together; only a change in law and custom can do that.

We can conceive of the world being a desolate place without life, for we have studied the moon. We have heard for 20 centuries the undeniable truth that "he who lives by the sword shall perish by the sword." If mankind could be transformed by fear of consequences, however, he would have been reformed centuries ago when God sent the flood down on Noah's land. Yet the Bible suggests that within a generation after the ark landed on Mount Ararat sinning was just as bad qualitatively as it was before the deluge descended.

The fact that the use of the atomic bomb may have done more good than harm is a matter of blind luck. The facts appear to be that a number of powerful nations have the formula, or something like it, and that others came so close that a correctible accident in one of the experiments changed the whole path of victory. It is not difficult to assume that the United States and Germany might well have discovered and perfected the bomb, gone into production, and come out with the weapon simultaneously. With such a hypothesis it is not difficult to appreciate the weapon, not as a fright used against a Japanese city, then a repeat performance to show we meant business, with no real thought that we should be compelled to continue its frightfulness, but as an actual day-by-day working tool of war. Add to this prospect the radar discoveries announced by the Chief of our Army Air Forces together with other new weapons which have a way of constantly coming along in greater intensity and abundance in any war, and we have the world's match boxes in two pairs of hands. We do not need to guess whether the war would have continued if we had razed Berlin and Germany had razed Washington; if we had traded Essen for Pittsburgh, the Redwood Forest for the Black, and ruined the Mississippi in exchange for the Rhine. So long as there was authority in either land there would be striking power, and there would be striking. Nations slug it out to the death in the manner of the old prize fighters who went through tens upon tens of rounds until they could no longer stand. This was true of the civil war in Spain. It was true of the War Between the States in America. It was true of cornered Japan, cornered Germany, cornered Italy. They did not quit as up-and-coming, going concerns. They dropped from their last legs.

Nor are combatants discouraged by the prospect of total decimation of a race, or a people, or a world. What sterner lesson in history than the reduction cited above, when only mates of man and of animals, two by two, were left in the Ark? What more awful thing to contemplate than that a whole Carthage may again be wiped out to the last Carthaginian, as Germany told the

[1] This article is an expansion of an unpublished interview given to a student, Glenn Everett, the day after the bomb was loosed over Hiroshima.

Germans would happen if the Allied Nations should win, as Japan told the Japanese would happen if the Allied Nations should win, or as we would have hoped for in merciful comparison with the actual prospects in the event that the Axis should win.

It is, then, a matter of blind luck that the atomic bomb did not run rampant as not merely a one-sided weapon, used with great restraint, but as a weapon in the hands of both sides, to the very death. That is, it is a matter of blind luck unless one wishes to say that it was the work of Providence.

Enduring peace cannot come through fear; it cannot be maintained by any technique of physical destruction, nor by fear of any single piece of war matériel. Peace can come only as a result of a respect for law and a desire to have such law justly enforced. Thus the structure of the world's law is more important than any bomb could ever be. The bombs can, and perhaps may, destroy much of world civilization. Only a structure of law can save it.

In the recent San Francisco Conference mankind's leaders came together for the second time in a generation to try to formulate a system of law by which the nations of the world would be governed, to amend their customary method of living together enough so that they might enjoy mutual security from the terrible weapons which modern states then had in their possession. Was the San Francisco Conference a culmination of the compact theory of the origin of the state for the purpose of saving mankind from its own destruction and brutish tendencies?

Since the adjournment of the Conference we have weapons which some thoughtful analysts predict will drive us back into the convention halls for more effective decisions, and while we do not have as many armed nations as we had a few weeks ago, and while we are working in military and political unity with those left who do have arms, nevertheless at least four great powers are left with great armies carrying many guns, and will continue to do so in greater numbers than are necessary to maintain a global police force. Competition hovers over us like a great shadow and creates today, in contemplation, a situation not different in any way, except that we are still trying to agree, from yesterday. We are more nearly trying to agree than agreeing, more nearly trying to organize than organizing; and it is only from the honesty of our effort that there is hope. Peace never will come from fear. It may come from hopeful and honest effort.

Yet if man insists upon keeping his concepts of strict nationalism, absolute independence, and complete state sovereignty, this common effort must fail and man's new inventions, such as atomic dissolution, will be used for destructive purposes in the ultimate collisions of states' wills which are bound to occur. Physics may again dominate politics and the theory of relativity may thus save the world.

Could man endure to live in such an anarchic world with the seeds of destruction sprouting all about him? History, unfortunately, suggests that he can—and may—until catastrophe eventually overtakes him. Famines and plagues have periodically carried off millions of people in India and China. Both Italy and Japan have been areas of terrible natural destruction from volcanoes and earthquakes. Yet persons have continued to live in the most dangerous areas of those lands. The Japanese devised earthquake-proof houses; the Italians did not even bother. Both India and China are apparently as far from a solution of the famine question as ever. Man can, and often has, lived uncomprehendingly upon the very brink of disaster. The uncertainty of life has often given it zest. Who wants anything but a brave young world?

The atomic bomb in many of its aspects is more terrible than any natural disaster. When an earthquake destroys man, it is nature's doing. When the atomic bomb destroys man, it is man planning his own destruction. Those who contend that the horrible prospect of future warfare will cure man of his bad habits reckon without the ability of man to live carelessly, blindly, and nonchalantly in the midst of a physical situation that may threaten to destroy him at any time. As Robert M. Hutchins declares, this indifference is "man's supreme sin."

In all of the world's history, civilization has never before presented so many excellent possibilities nor have the destroyers of civilization ever perpetrated so many ills. If as some of the philosophers held, good and evil exist eternally, never have they dwelt side by side in such close proximity as they dwell today. Man can transport himself quicker, can make for himself greater happiness, can live life more abundantly than it has ever been lived before. He can commit more evil, bring about more destruction, destroy more happiness than he has been able to do before.

In many ways, the world we have today is like the world implied in Cicero's great orations against Cataline. Cataline, a boy, a choice heir among the youths of Rome, had all of the opportunities that anyone had open to him, yet he deliberately chose evil. Perhaps the world is not so different after all. At any rate, the good and the evil are side by side. Man must awake from his lethargy. We and the world cannot be indifferent. We and the world must make a choice. In the Orient people who have long lived in fear of early death have developed a callousness to life and an indifference to human suffering which used to repel us. The Western world, however, is rapidly developing this same callousness and indifference to human values in its international society. Human butchery and starvation used to horrify us, but it has been common all over Europe for 5 years now. Evil forebodings can be drawn from this new callousness toward life

In 1904, in the Russo-Japanese War, General Nogi, of the Japanese Army, performed one of the most notable acts in all the history of warfare when in a battle to capture Port Arthur he sacrificed several brigades of men and his own sons in order to capture a certain strongly defended hill. He wanted the hill so that he could direct his artillery fire against the Russian naval base. He could have fired over the hill without taking it, but refused because blind fire would have endangered innocent noncombatants in the city below.

Less than 30 years later, in January 1932, the Japanese first practiced wanton, deliberate killing of massed civilians by their bombing of Chapei, a suburb of Shanghai. The entire world was horrified by the murderous act. Sometime between those dates Japan had changed. But it was not only Japan that had changed. The United States had changed, too, and so had the other western powers. Americans put up barricades to bar stampeding Chinese from the International Settlement. Hundreds died as they fought for safety. We were indifferent to their deaths. An American naval captain and his party callously climbed to the top of the tallest hotel to "watch the show." As this and other events of modern barbarism swept the world during the past 13 years, Americans have asked themselves in the words of Cain, "Am I my brother's keeper?"

We can look now in retrospect at the war's contribution to the horrors of history. There was Buchenwald and other places like it, where German atrocities almost defied comprehension. There was the death march from Bataan. The atrocities were so horrible from the other side that soldiers, American soldiers, have told me: these are not people; I have no more feeling in killing one of them than I would an animal; in fact, I would prefer to let the animal live. Such is retaliatory feeling. One of the first developments of the war was the instruction to our trainees not to be so lady-like about the whole thing. They were told to forget the sportsmanship they have applied on the football field. They were taught to kill suddenly in the dark and without warning. They were not told to kill a helpless enemy soldier who might be taken prisoner, but I leave it to you whether our boys always let them live. The competition was pretty fierce for dastardly conduct, and while we did not meet the competition completely, we compromised our best standards, and did lower them. Things began to be done which under 1939 standards very definitely would have amounted to American, and Russian, and English, and Chinese atrocities.

Today few citizens pause to realize that we, once the defenders of humanity and the foremost advocates of international law, have unleashed the most horrible weapon of all horrible war. The atomic bomb takes no account at all of women and children. It destroys indiscriminately and mercilessly everything in its path. Will the effect of the atomic bomb be to make Americans even more callous toward human life? Will it brutalize the men who wield it? Will it make us even more indifferent toward our international responsibilities?

The war has been bad enough, but the drift away from morality and human feelings on the part of all the world during the past decade has been even worse. Never was a reminder of sound principle in the conduct of world affairs more urgent. No one can foresee the tragic results of failure to reestablish international morality, which has so completely disintegrated before and during the present world struggle. Once again, what is happening to men's minds is more important than what has happened in the physical realm.

The world is not going to be changed overnight by any single invention. Man's mind moves slowly, over a period of years, and his laws and customs change slowly with his thinking. It is not war and not the atomic bomb which has changed the world; it is man's mind, making use of these terrible tools, that has changed it.

So long as man lives upon the earth and is the social animal that he is, man's relationship with man will continue to be the most important thing in civilization. Men have to work courageously together to improve their relationships in world society. It is a problem that urgently challenges both the church and the state.

The inability of the Christian church to cope with this wave of antihumanism and the disintegration of morality through the world is one of the most disquieting realities of modern history. The church's failure to keep abreast of the times, to provide a modern solution of political and social problems, must be held partly responsible for the present surge of aggression and moral irresponsibility which has horrified the civilized world, and which threatens the very existence of civilization. The Christian church needs to take a practical, vital, interest in men's social relationships. If man is only a savage brute modern civilization is doomed. The church declares forcefully that he is not, and if man can come to a full appreciation of his own majesty and his spiritual and moral responsibilities the teachings of Jesus may yet rise triumphant in the struggle with the philosophies of Nietzsche, the militarist, and Machiavelli, the opportunist.

I speak as a Christian and as a church member. I am sure I have many friends among my Jewish, my Confucianist, and my Buddhist associates who would speak the same of their great moral systems and for those systems' inability to cope with this

problem. With the possible exception of the Jewish, each of those systems have had their equivalents of Nietzsche and Machiavelli.

The state has the responsibility of erecting and codifying a system of international law which both nations and individual men will recognize and obey. The church can build character, and the state can transform that character into institutions which reflect it. Our own Nation has a grave responsibility for leading the world away from war and armaments, away from national selfishness and irresponsibility, and toward a united world society where the use of atomic bombs against his fellow men will be but a bad dream from man's incredibly barbaric past.

Is the task hopeless? Are the Nations so foolish that they will commit suicide rather than give up a little of what they claim for themselves in order to gain much for all?

The world must be regarded as a unit.[2] An unwholesome condition in any part affects the entire world. Despotism, treachery, and treaty breaking in any part of the world must have their evil influence on every other part. On the other hand, "A single good government is a blessing to the whole earth."[3] The interdependence of the nations, their differing abilities to produce various things of universal worth, makes it necessary to think of the world as a unit economically as well as politically. There can be and there must be a universal respect for law if not for government. By that I mean that governments can maintain separate jurisdictions within themselves and at the same time live in harmony with the will of all among themselves.

That freemen can live and work in unison has been proved by the great American experiment. The conflict in the world today is the eternal conflict. Shall we be free in a world of freemen, or shall we be passive followers of a single will? The weaknesses of Mussolini and Hitler were that they failed to see the possibilities of any unity among freemen. Their great mistake was merely that of assuming that unity can come only by the destruction of the individual in his service to a single will.

The world's great task is the same as it was when the Constitution of the United States was drafted and ratified. How to bring one out of many—e pluribus unum—is the task that faces us today as it faced our fathers. It must be done as they did it. It is because of my firm belief in the great American experiment that I always advocate that world unity can only come through American leadership and under the auspices of the American theory. It is in America that the Federal technique of government has been most fully worked out. It is in America that the theory of dual and plural citizenship has been made practical. It is in America that we can unite for some purposes and be divided for others. It is in America that liberty is maintained by voluntary cooperation instead of forced unity. It is in America that National and State sovereignty are permitted to exist side by side, not without conflict to be sure, but with those conflicts adjusted by peaceful means. It is in America that the individual has the right to have and to hold, to go and to come, to live life in a greater sense than it has ever been lived before, with each man "under his own vine and fig tree," as some prophet of old foretold man should live. After 150 years of experience, if the world would but catch America's spirit, no one need feel that the efforts being made by our leaders today are in vain. Slowly but surely man is being made conscious of the fact that, no matter what nation he belongs to, that nation in turn is but one of a community of nations. That fact realized, that fact maintained, surely then the standards for nations can be as readily set up as the standards for individuals are set up within the community or the nation. Man lives in law and is not free from the restraints of his neighbors. A nation, too, lives in law and should not be free from restraints of its neighbors. If we fail to bring about a better world through the organization of the nations we will fail because we did not realize the fact that the earth is a unit and the nations of the earth are but individual entities within that unit and must adhere to the prevailing will of the community of nations. If we but do this we shall have a sanction for international law as binding and as great as the fundamental sanction, which we have in our own Constitution.

When we say in our Constitution that "we, the people," in order to accomplish certain things do certain other things, there is no questioning our Constitution or our right to say "we, the people." What State among our 48 questions that right today? Can we not expand the idea as America has expanded from 13 small States to 48 mighty ones and say: "We, the people of the world, in order to form, in order to do, in order to act, establish the following: * * *"?[4]

Practically every pitfall that is pointed out by those without faith in the earth today was pointed out by those without faith in our American Constitution 150 years ago. If those theories which were dreamed of by the fathers, if that Constitution, which we so glibly call inspired, contain the elements of truth, why should anyone criticize me when I say that the American Revolution is still on, that it has not accomplished its ultimate objective, and that its full meaning in the earth will not be understood until world unity is made manifest, that same type of unity which we have made manifest in our 150 years of history? A unity which has destroyed war among us can by expansion destroy war in the earth.

It was a heroine in one of the early Greek dramas who wailed, "Oh, why! oh, why! do men unite so readily for war, but never unite for peace?" Is the task hopeless? Are nations so foolish that they will not give a little of that which they claim for themselves in order to gain much for all? There were those among our fathers who talked against our Constitution with that spirit, but they did not prevail. There are those in the world today who still have little faith. May I suggest this simple approach: had you lived in Washington's time would you have been happy to have been one of those without faith in Washington's cause; had you lived in Lincoln's time would you now be proud that you were one of those who were against what Lincoln was trying to do? We will have to make decisions.

The atomic bomb, itself, represents the strength of a united free people, acting through their Government. It was a whole people in action. The big fact about its successful development is that the American people threw all their resources behind it. Two billion dollars were spent. How pygmy the greatest of private or endowed experimental activities are when compared with this two billion. And, unleashing our imagination, how pygmy will be the benefits derived from atomic energy should the whole of the peoples of the earth unite and live in a peaceful community of nations for the benefit of mankind. The acquisition of any knowledge does not redound to mankind's benefit unless mankind willingly accepts the moral obligation which accompanies it.

America's Production Problem

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 30 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, last night I spoke over a coast-to-coast hook-up of the Columbia Broadcasting System on the subject of America's production problem. My address was carried over the CBS program, Congress Speaks, which has proved to be a very fine broadcasting institution for public service.

I ask unanimous consent that my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans. "Come, let us reason together."

You and I. Let us reason together tonight about the greatest domestic challenge facing America today.

That challenge is the challenge of full, uninterrupted production.

You don't need to be told that our country is still up to its neck in the worst strike crisis in a quarter century. The settlement of the Ford and Chrysler strike does not solve the strike issue.

I am going to talk turkey with you, my fellow citizens, about this strike crisis, about why we are not getting full, uninterrupted production, and about what we ought to do to get full, uninterrupted production.

Why is it necessary to have full production?

Well, suppose this current epidemic of strikes continues and a general strike occurs, then what?

Production ceases, the economic current of the Nation congeals.

Then, this will result:

1. We will be in for ruinous inflation.

What does that mean?

It means that prices will skyrocket. It will cost the housewife not $2 to prepare a meal but $200 or $2,000. It will cost the laborer not $35 for a suit but $3,500 or $35,000.

This is not fantastic. This is what happened in Europe. Money there means nothing. It cannot buy anything.

This inflation condition will happen here if strikes continue.

There will be no goods to buy, but there will be $170,000,000,000 in accumulated American savings which will blow the roof off prices in people's rush to buy anything.

The little man will be busted and so will a lot of big men.

Our money won't be worth the paper it is printed upon. We have 85,000,000 war bondholders. Their bonds won't be worth anything. We have 70,000,000 holders of life insurance. Their insurance policies won't be worth anything.

My friends, it is not too late to prevent such a catastrophe. There is no ground for hysteria, only, for constructive action. Our bonds are still good. Our insurance policies are still good. Our money is still sound. Let's keep them so. Remember the key word: "Production."

But let us continue and see what will happen if strikes continue. If they continue:

2. We will not be able to pay off our $300,000,000,000 national debt with sound money. It might be paid with worthless currency.

That means national financial collapse.

3. If strikes continue, we will not be able to fulfill our international obligations.

That means we won't have the goods to resume trade. It means we won't have goods for necessary foreign relief.

This is a grim picture. But it is a realistic picture. Let all who have eyes, see. Let all who have ears, hear, these truths.

Remember the key word: "Production."

Well, what are we going to do about the lack of production?

First, we ought to get it clear in our minds who is responsible.

Just who and what are responsible?

It is my belief that wrong thinking, wrong economic and political philosophies like communism and new dealism are responsible.

I do not speak with hate in my heart, with prejudice, with partisanship. I speak as an American for Americans, as an American to Americans. And I say that those in high places, who follow these philosophies, have brought about this condition which is threatening us with inflation, with financial collapse, with international default.

Yes; the second edition of the New Deal has brought us to the brink of disaster.

And by that I mean the CIO Political Action Committee branch of the Democratic Party and its friends in high and low places.

Well, just what have they done?

1. They have stimulated strikes. They have encouraged a handful of racketeering labor bosses to trample the rights of the public in this period when all America was calling and praying for reconversion that would give us adequate production.

These bosses have trampled the rights of the laboring man, too. They have dictated ruinous strikes apparently for wage increases. But wages are just a fake issue that doesn't mean anything because the strikes stop production, and the flow of goods, and cause the rise of prices.

We are not discussing what constitutes equitable wages. We are saying that in this postwar period, the challenge for production is so tremendous that every segment of our economy should see that challenge and not upset the applecart. The big thing in America is to get this production and then iron out any inequities in wages, prices, etc. When a cyclone strikes a community, people don't start arguing about their little creedal differences.

There are other more ominous issues behind the present strike wave.

But let us go on.

2. The PAC New Dealers have introduced a score of pieces of legislation that encourage loafing, chiseling, and dependence on Government hand-outs.

Crackpot legislation which encourages everything but full, uninterrupted production. Remember the key word: "Production."

3. The PAC New Dealers have blown up the Nation's debt balloon until it is almost about to burst.

They refuse to demobilize unnecessary Government bureaus. They refuse to cut unnecessary Federal expenditures. They play Uncle Sam's Treasury for a sucker.

4. The PAC New Dealers apply price controls in a manner that cuts production instead of increasing it.

The OPA has in innumerable instances applied price controls without reason and judgment.

The OPA has in innumerable instances forced business to operate at a loss or with negligible returns. As a result, production is cut.

The OPA has created a group of czars. They have set up a gestapo which browbeats and bullies business, and treats it as a thief and a chiseler. Until maximum production is achieved, OPA may be a necessary evil. But much of its destructive effects could be done away with by OPA's simplifying its regulations, using common sense in its enforcement and modifying its arbitrary orders.

You, my fellow Americans, sitting in your homes tonight know that present OPA tactics do not make for full uninterrupted production. Remember the key word: "Production."

All this New Deal philosophy and program sets brother against brother. It divides our house. And a house divided against itself cannot stand.

One hundred and forty million Americans demand that our house shall not divide, that it shall stand.

WHAT IS THE SOLUTION?

Here is a program which I propose. I submit it to you humbly for your thoughtful consideration.

1. Let the Congress meet the strike issue head-on—now.

Let it investigate the present strike wave. Let it find out what is behind these strikes, behind these demands for wage increases.

A handful of collectivist labor leaders can issue orders today that can paralyze our Nation, that can lay us open, helpless, to atomic and rocket invasion, that can smash our international trade and our domestic trade.

There is more to this strike situation than meets the public eye. Is labor responsible? Is capital responsible? We know that the public pays the bill and it wants to stop paying through the nose. Let Congress get the facts.

2. Let Congress enact legislation with "guts"; legislation which is for the public, for the great, honest rank and file of American labor, for our white-collar folks, our farmers, our management.

Such legislation would establish compulsory arbitration as a last resort to prevent strikes in utilities and Nation-wide industries.

Such legislation would require democratic union elections, publicized union finances, legal responsibility of unions before the law.

It would prohibit the election expenditure of slush funds by unions as well as by corporations.

I know that in submitting these proposals, I will be smeared as antilabor by the labor bosses.

But I speak for labor. I have been a laboring man myself as well as a farmer and businessman. I have worked in the sawmills of my own State for 15 cents an hour, 11 hours a day.

Particularly in this atomic age, I think the public interest and welfare are superior to that of any group. This Government doesn't belong to either labor or capital. It belongs to all the people.

3. Let us get some brains and judgment into the price-control organization.

Let us encourage production.

Let us treat the American people and the American businessmen as honest, patriotic folk.

4. Let us repudiate every piece of legislation which makes for slavery to government, which makes for financial collapse, which makes for anything but thrift, self-reliance, and energy in our people.

This is the four-point program.

Remember the key word: Production. It means sweat and toil in the American way. It means homes, autos, refrigerators, washing machines, and farm machinery, clothing for civilians and veterans. It means economic health. It means freedom from fear and want about which we have heard so much.

Come, my fellow Americans, let us return to the faith of our fathers—the faith of working, not shirking, the faith of cooperation, not division, the faith of toil and self-reliance and not dependence upon Government to do everything.

A house built on such principles will not fail. It will stand. God grant that we will prove steadfast and adequate.

The Issues of the Day

EXTENSION OF REMARKS
OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an able address delivered by the distinguished Senator from West Virginia [Mr. KILGORE] at Minneapolis on January 19 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As President Truman said in his recent radio speech addressed to the American people, "This is the year of decision."

It is the year when we Americans must decide—

Whether we shall join our neighbors in guaranteeing a lasting peace, or once again adopt the isolationist policy that can lead only to another war.

Whether we shall have jobs for all who want them, or a return to mass unemployment.

Whether we shall have wages that will maintain a high level of purchasing power, or an economy shriveled and paralyzed by substandard incomes.

Whether we shall broaden our present system of social-security benefits so that every worker will have adequate protection against loss of his job, insecurity in old age, and ill health, or leave millions of our people without protection against these insurable risks.

Whether we shall remove the blot of "second-class citizenship" from our national life, or continue to subject a large proportion of the population to a Hitler-like system of racial discrimination and blind prejudice.

Whether we shall withstand the increasing pressure for rise in prices, or open the floodgates to a wave of inflation that will submerge the country in another ruinous depression.

These are the main issues. During the next 6 or 8 months many things can and will happen to swing the balance one way or another. But I believe that the real decision—one from which there can be no turning back—will be made in November, when the people go to the polls to choose the next Congress.

Already the battle lines are closely drawn. Both sides have fired their opening guns. Both of them have selected their general staffs and mapped out the strategy they intend to follow.

On one side is the Truman administration. It has drawn up a realistic, aggressive, forward-looking program. This program is based on the same principles and on the same aspirations that enabled the country to emerge victorious from two other major struggles—the fight against the depression and the triumph over the tyranny of fascism.

It is a program that envisages the kind of America that Franklin D. Roosevelt worked to achieve. And it is written in letters to large and so clear that he who runs may read. It is impossible to mistake either its terms or its intentions.

On the other side is ranged a bankrupt bourbonocracy, a party that eyes only the dead past, but is unwilling and unable to learn from the mistakes of the past.

This party has no program except a negative one. It envisages, and longs for, an America frozen into the cracked mold of the 1920's. Its leaders, casting about for a slogan, have been able to produce nothing bet-

ter than the old and discredited siren song of the Harding regime, "back to normalcy."

Of course, they don't use those exact words. They know that would bring too many horse laughs. Instead, they take the same old song and give it a new lyric. "What this country needs," they now say, "is a return to the tried and true in government."

Well, I am quite willing to admit that the policies they advocate have been tried. They were tried in the 1920's with results that we all remember as disastrous.

When they characterize these policies as "true," however, they are really letting go of a whopper. The American people did not have to give these policies much of a trial before they discovered that the whole thing was a hoax.

In 1918 our people were tired of war and all its restrictions—just as they are today. The siren song of the Republicans—"back to normalcy"—therefore sounded particularly sweet to the public ear.

Read the Republican campaign speeches in that 1918 congressional election and see how closely they resemble the G. O. P. utterances today. Although World War I was still raging during that campaign, the Republicans came out loudly against wartime taxes, wartime food restrictions, and wartime price controls.

The public listened to the siren song, and in November the Republicans won a majority in both the Senate and House.

The world today has good reason to remember—and regret—that Republican victory. For the Republicans then, as now, had their eyes on the past rather than the future.

The first thing they did when they came to power was to scuttle American participation in the League of Nations. No; they wanted no entangling alliances or agreements with other nations that might in any way impair our sovereignty. The League, they asserted, was the creation of visionaries and "crackpots," and these hard-headed men of affairs wanted no part of it.

They even admitted that the majority of the people was for the League, but that made no difference. If the old "tried and true" system of international relations was good enough for Mr. Lodge, and Mr. Beveridge, and Mr. Watson, it ought to be good enough for the American people.

And so, for 14 crucial years America went the way of isolation.

Under the "tried and true" diplomacy of these hard-headed men of affairs, Germany was allowed to rearm and grow strong. "Why should we interfere?" they said. If we only minded our own business at home, and built up our Army and Navy, no power on earth would dare attack us. Besides, wouldn't a strong Germany be a safeguard against Russia, where a lot of new and alarming ideas were being given a try? These Bourbons, for all their isolationism, didn't like new ideas abroad any better than they did at home.

The events of the last 4 or 5 years have impressed the people of this country with the terrible folly of these mistaken Republican policies. Unfortunately, the lesson has been costly. Tens of thousands of our best American youth lie dead and tens of thousands more have been maimed—in a war that could have been prevented.

As a result of this second catastrophe in a generation, the American people have given notice in no uncertain terms that they want no more isolationism.

That does not mean, however, that they may not get it.

Let them repeat the mistake of 1918—the mistake of electing a Republican Congress—and I believe there is more than a chance that the hope of world cooperation and peace may go glimmering.

Of course, the Republicans do not come right out and say that they have reservations about the kind of world cooperation that is necessary to insure peace. That would be political suicide—especially in an election year.

Instead, because they are well aware of public feeling on the subject, they pay lip service to international cooperation in all of their public pronouncements. Many of them, again because they are aware of public feeling, even vote for international cooperation when the issue is raised on the floor of the Senate or House. And, I want to be fair and say that I am convinced that some of them sincerely believe in international cooperation, and are eager to do what is necessary to preserve the peace.

Where, then, is the hitch? It is simply this: The real leaders of the Republican Party—the ones who control the party machinery and lay down the party policy—do not believe in international cooperation, and will never commit the United States to genuine collaboration with other nations.

This was made plain on the 29th of last November, when 16 Republican Senators joined with Senator ROBERT A. TAFT, of Ohio, in an attempt to put through amendments which would have emasculated the United Nations Organization bill. These amendments would have made it impossible for the United States to play a really effective role in helping to maintain the peace.

It was made even plainer a few days later when Senator TAFT, his crippling amendments having gone down to defeat, could not bring himself to vote "yes" on the United Nations Organization bill itself. He voted "no," and thereby gave a hint of what the people might expect if a Republican Senate is elected in 1946.

Among the five other Republicans who joined Senator TAFT in voting "no" on the historic issue was Senator KENNETH S. WHERRY, of Nebraska. His vote, too, provided a hint of what the people might expect if a Republican Senate is elected in 1946.

Senator TAFT and Senator WHERRY are key figures. TAFT is chairman of the Republican Steering Committee, which controls Republican policy in the Senate. WHERRY is Republican whip.

Both of these men represent and speak for the interests that control the Republican Party. These interests are the most reactionary in America. They are isolationist to the last ditch, and their propaganda organ is the rabid McCormick-Patterson press. They are filled with venomous hatred of our allies, and they lose no opportunity to spread the seeds of discord between the nations upon whom all hope of future peace depends.

If a Republican Senate is elected in 1946 these interests will control the Senate through the leadership of men like TAFT and WHERRY.

I ask you, how could the Senate, which under our Constitution ratifies the treaties that we make with foreign countries, succeed in getting us into anything but trouble if it were under the control of such forces.

We have now, under Roosevelt and Truman, succeeded at least in laying the foundation for amicable relations with the other great powers. But we must remember that so far we have nothing but the foundation. Building the structure itself will call for as much or more good will and statesmanship as our progress to date. If we should now turn over the Senate to a wrecking crew the way we did in 1918, the fate of the United Nations Organization would be the same as that of the League of Nations. The foundation would be undermined even before the structure was raised.

Let us now consider what the 1918 Republican victory did to conditions here at home.

With characteristic inability to look ahead, the Republicans abolished the wartime price controls that had, until then, kept living costs within some kind of reason.

The results of this pell-mell return to the tried and true way of doing things was just what might have been expected. Prices hit out for the stratosphere, rents soared, and even wages went up somewhat.

By June 1920, a year and a half after the armistice, living costs were up 108 percent above the 1914 level.

The cost of food went up 126 percent above what it had been in 1914.

Clothing went up 200 percent above the 1914 level.

Rents went up 54 percent.

House furnishings went up 179 percent.

The wholesale price of sugar rose from 8.8 cents a pound at the time of the armistice to 28.5 cents.

Nearly everyone was happy on this typical Republican spree. We had returned to normalcy, the kind of normalcy in which everybody looks out for himself and the devil take the consequences.

The consequences were quick in coming. Within a little over a year the entire Nation was suffering from a first-class economic hang-over.

The price of sugar slid from 28.5 cents wholesale to 4.8 cents.

Wholesale milk prices dropped 32 percent.

Beef cattle, 58 percent.

Lamb, 61 percent.

Hogs, 69 percent.

Eggs, 73 percent.

Cotton, 75 percent.

Corn, 77 percent.

Potatoes, 85 percent.

Before the farmers knew what had hit them, net farm income in the country had dropped from $8,800,000,000 in 1919 to less than $3,000,000,000 in 1921.

Average farm income shrank from $1,360 in 1919 to $460.

Unable to meet the debts they had contracted during the short-lived boom, nearly half a million farmers lost their farms through mortgage foreclosures between the years 1922 and 1926, inclusive.

Businessmen, too, felt the pinch. The number of business failures in 1919 was just under 10,000. Two years later, in 1921, approximately 20,000 businesses went broke and quit operations. And the failures increased steadily until 1932 when, after 10 years of the tried and true policies of Coolidge and Hoover, no less than 31,822 businesses went to the wall. Most of them, of course, were small businesses.

Corporation profits, likewise, took a nose dive. In 1919, corporation earnings, after taxes, were about $6,500,000,000. By 1921 the ink on the company books was red instead of black, and there was a total net loss that year of $55,000,000.

The workingman, too, took it on the chin. Between 1920 and 1922, factory pay rolls decreased 44 percent. And between 1919 and 1921, 5,500,000 workers lost their jobs.

Do we want that sort of thing to happen again?

Certainly not. But there is a great danger that it may. Even with an administration in Washington that is determined to hold the line against rising prices, the inflationary pressures are great. They are greater, in fact, than they were after World War I. It would be the greatest imaginable folly to hamstring this administration by turning the control of Congress over to the very men who are now clamoring most loudly for the lifting of price controls.

Despite the many danger signals that are plainly visible, the country today is in good condition.

National income is twice as large as it was in the predepression year 1929. It is more than four times as large as it was when Mr. Hoover left the White House.

Farmers are in better condition than they ever were before. Net income of farmers reached an all-time high of about $13,000,000,000 in 1945, compared with a prewar yearly average of less than $5,000,000,000.

Net income per farm operator averaged more than $2,000 yearly during the war. This

compares favorably with the earnings of the average city worker.

Farm prices in 1945 were almost double the prewar average, and were about 15 percent above parity.

Food production in 1945 was 36 percent over the prewar annual average, and total agricultural production was 31 percent above the prewar level.

During World War II farmers paid off their debts, whereas during and after World War I they continued to go into debt. At the time of Pearl Harbor farm-mortgage indebtedness stood at $6,500,000,000. Today it is down to about $5,000,000,000, and is steadily decreasing. This is in striking contrast to the situation after the First World War. In 1917 farm-mortgage debt amounted to $5,800,000,000, but by 1923 it had risen to a peak of $10,800,000,000.

Total agricultural assets amounted to more than $95,000,000,000 on January 1, 1946, compared with $54,000,000,000 on January 1, 1940.

As the farmers of the country entered upon this new year, 1946, their financial assets, such as war bonds, cash, bank deposits, and warehouse receipts, were considerably more than twice the amount of their indebtedness. Before the war their debts amounted to much more than their assets.

Annual foreclosures of farm mortgages have been reduced to one-twentieth of the 1932 total.

What about business? Here, too, we are in a period of unprecedented prosperity. In 1944, corporation profits, after taxes, were $10,000,000,000—an all-time high; 1945 profits were probably in the neighborhood of $9,500,000,000, and 1946, with elimination of the excess-profits tax, is expected to provide earnings that have never been equalled.

Manufacturing profits before taxes in 1944 were 450 percent above the 1936–39 yearly average.

The rise in retail profits for the same periods ranged from 117 percent among independent grocers to 1,324 percent among department and specialty stores.

Business failures have fallen from a peak of 31,822 in 1932 to an all-time low of 1,222 in 1944.

I believe that these figures are all the evidence we need to show that neither the farmer nor the businessman has suffered unduly because of wartime price controls.

The industrial worker, likewise, has substantially bettered his condition. The average weekly dollar income for such workers in 1944 was approximately $46. This is almost three times as much as in 1932, and approximately twice as much as in 1939.

Despite this tremendously increased income, accompanied by an acute shortage of many types of goods, prices have, on the whole, been kept relatively stable.

Yes, we have had inflation in some instances. But the price rises have been as nothing compared to those that followed immediately upon the lifting of controls after the last war.

The over-all cost of living has been held to a rise of a little more than 30 percent. Inflation has been limited to luxuries, and to certain items on which controls have unwisely been lifted in response to the pressure of those who want to get back to normalcy.

For example, the prices of citrus fruits advanced from 50 to 100 percent within a few days after ceiling price regulations were removed.

Similarly, sums of $1,000 or more were suddenly added to the prices of houses when the priority system on building materials was lifted some months ago.

Now, fortunately, citrus ceilings and building priorities have been restored.

The brief but unhappy experience in these two instances should be a warning to us of what will happen if we let go of controls before the normal relationship between supply and demand is established.

It should be a warning to us of what will happen if we again heed the siren song of those rugged individualists who, as Sam Grafton said in his column the other day, hate regimentation but always think alike.

President Truman, in his 21-point program, has charted a course that will take us safely around the worst pitfalls in the rough road of reconversion.

It is the course that will lead to fulfillment of America's tremendous potentialities. It is the way of more jobs, higher wages, increased purchasing power, and greater security against the economic hazards that beset us all.

The Roosevelt-Truman policy of good will toward other nations, and wholehearted cooperation with them, is also the only road to future peace.

The leaders of the opposition—the Tafts and the Wherrys—will not and cannot travel either of these paths. Their eyes are too firmly fixed on the past. Their hearts are too fond of the old ways—the ways that once before led us all to disaster.

I am convinced that in this year of decision the American people will choose those leaders who look ahead, who see the dangers, and will do what is necessary to avoid them.

British Trade Disputes Act of 1927

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following English Trade Disputes and Trade Unions Act of 1927, taken from Chitty's Statutes of Practical Utility:

SOCIETIES (TRADE UNIONS)—TRADE DISPUTES AND TRADE UNIONS ACT, 1927

Seventeenth and eighteenth, George V, chapter 22: An act to declare and amend the law relating to trade disputes and trade unions, to regulate the position of civil servants and persons employed by public authorities in respect of membership of trade unions and similar organisations, to extend section five of the Conspiracy, and Protection of Property Act, 1875, and for other purposes connected with the purposes aforesaid.

Be it enacted, etc.—

1. (1) It is hereby declared—

(a) that any strike is illegal if it—

(i) has any object other than or in addition to the furtherance of a trade dispute within the trade or industry in which the strikers are engaged; and

(ii) is a strike designed or calculated to coerce the Government either directly or by inflicting hardship upon the community; and

(b) That any lock-out is illegal if it—

(i) has any object other than or in addition to the furtherance of a trade dispute within the trade or industry in which the employers locking-out are engaged; and

(ii) is a lock-out designed or calculated to coerce the Government either directly or by inflicting hardship upon the community;

And it is further declared that it is illegal to commence, or continue, or to apply any sums in furtherance or support of, any such illegal strike or lock-out.

For the purposes of the foregoing provisions—

(a) A trade dispute shall not be deemed to be within a trade or industry unless it is a dispute between employers and workmen, or between workmen and workmen, in that trade or industry, which is connected with the employment or non-employment or the terms of the employment, or with the conditions of labour, or persons in that trade or industry; and

(b) Without prejudice to the generality of the expression "trade or industry" workmen shall be deemed to be within the same trade or industry if their wages or conditions of employment are determined in accordance with the conclusions of the same joint industrial council, conciliation board, or other similar body, or in accordance with agreements made with the same employer or group of employers.

(2) If any person declares, instigates, incites others to take part in or otherwise acts in furtherance of a strike or lock-out, declared by this act to be illegal, he shall be liable on summary conviction to a fine not exceeding ten pounds or to imprisonment for a term not exceeding three months, or on conviction on indictment to imprisonment for a term not exceeding two years:

Provided that no person shall be deemed to have committed an offence under this section or at common law by reason only of his having ceased work or refused to continue to work or to accept employment.

(3) Where any person is charged before any court with an offence under this section, no further proceedings in respect thereof shall be taken against him without the consent of the Attorney-General, except such as the court may think necessary by remand (whether in custody or on bail) or otherwise to secure the safe custody of the person charged, but this subsection shall not apply to Scotland, or to any prosecution instituted by or on behalf of the Director of Public Prosecutions.

(4) The provisions of the Trade Disputes Act, 1906, shall not, nor shall the second proviso to subsection (1) of section two of the Emergency Powers Act, 1920, apply to any act done in contemplation or furtherance of a strike or lock-out which is by this Act declared to be illegal, and any such act shall not be deemed for the purposes of any enactment to be done in contemplation or furtherance of a trade dispute:

Provided that no person shall be deemed to have committed an offence under any regulations made under the Emergency Powers Act, 1920, by reason only of his having ceased work or having refused to continue to work or to accept employment.

2. (1) No person refusing to take part or to continue to take part in any strike or lock-out which is by this Act declared to be illegal, shall be, by reason of such refusal or by reason of any action taken by him under this section, subject to expulsion from any trade union or society, or to any fine or penalty, or to deprivation of any right or benefit to which he or his legal personal representatives would otherwise be entitled, or liable to be placed in any respect either directly or indirectly under any disability or at any disadvantage as compared with other members of the union or society, anything to the contrary in the rules of a trade-union or society notwithstanding.

(2) No provisions of the Trade Unions Acts, 1871 to 1917, limiting the proceedings which may be entertained by any court, and nothing in the rules of a trade-union or society requiring the settlement of disputes in any manner shall apply to any proceeding for enforcing any right or exemption secured by this section, and in any such proceeding the court may, in lieu of ordering a person who has been expelled from membership of a trade-union or society to be restored to membership, order that he be paid out of the funds of the trade-union or society such sum by way of compensation or damages as the court thinks just.

(3) As respects any strike or lock-out before the passing of this Act but since the first day of May, nineteen hundred and twenty-six, which, according to the law as declared by this Act, was illegal, this section shall have effect as if it had been in operation when the strike or lock-out took place.

3. (1) It is hereby declared that it is unlawful for one or more persons (whether acting on their own behalf or on behalf of a trade union or of an individual employer or firm, and notwithstanding that they may be acting in contemplation or furtherance of a trade dispute) to attend at or near a house or place where a person resides or works or carries on business or happens to be, for the purpose of obtaining or communicating information or of persuading or inducing any person to work or to abstain from working, if they so attend in such numbers or otherwise in such manner as to be calculated to intimidate any person in that house or place, or to obstruct the approach thereto or egress therefrom, or to lead to a breach of the peace; and attending at or near any house or place in such numbers or in such manner as is by this subsection declared to be unlawful shall be deemed to be a watching or besetting of that house or place within the meaning of section 7 of the Conspiracy and Protection of Property Act, 1875.

(2) In this section the expression "to intimidate" means to cause in the mind of a person a reasonable apprehension of injury to him or to any member of his family or to any of his dependents or of violence or damage to any person or property, and the expression "injury" includes injury to a person in respect of his business, occupation, employment, or other source of income, and includes any actionable wrong.

(3) In section 7 of the Conspiracy and Protection of Property Act, 1875, the expression "intimidate" shall be construed as having the same meaning as in this section.

(4) Notwithstanding anything in any act, it shall not be lawful for one or more persons, for the purpose of inducing any person to work or to abstain from working, to watch or beset a house or place where a person resides or the approach to such a house or place, and any person who acts in contravention of this subsection shall be liable on summary conviction to a fine not exceeding 20 pounds or to imprisonment for a term not exceeding 3 months.

4. (1) It shall not be lawful to require any member of a trade union to make any contribution to the political fund of a trade union unless he has at some time after the commencement of this act and before he is first after the thirty-first day of December, nineteen hundred and twenty-seven, required to make such a contribution delivered at the head office or some branch office of the trade union, notice in writing in the form set out in the first schedule to this act of his willingness to contribute to that fund and has not withdrawn the notice in manner hereinafter provided; and every member of a trade union who has not delivered such a notice as aforesaid, or who, having delivered such a notice, has withdrawn it in manner hereinafter provided, shall be deemed for the purposes of the Trade Union Act, 1913, to be a member who is exempt from the obligation to contribute to the political fund of the union, and references in that act to a member who is so exempt shall be construed accordingly:

Provided that, if at any time a member of a trade union who has delivered such a notice as aforesaid gives notice of withdrawal thereof, delivered at the head office or at any branch office of the trade union, he shall be deemed for the purposes of this subsection to have withdrawn the notice as from the first day of January next after the delivery of the notice of withdrawal.

For the purposes of this subsection, a notice may be delivered personally or by any authorized agent and any notice shall be deemed to have been delivered at the head or a branch office of a trade union if it has been sent by post properly addressed to that office.

(2) All contributions to the political fund of a trade union from members of the trade union who are liable to contribute to that fund shall be levied and made separately from any contributions to the other funds of the trade union and no assets of the trade union, other than the amount raised by such a separate levy as aforesaid, shall be carried to that fund, and no assets of a trade union other than those forming part of the political fund shall be directly or indirectly applied or charged in furtherance of any political object to which section three of the Trade Union Act, 1913, applies; and any charge in contravention of this subsection shall be void.

(3) All rules of a trade union made and approved in accordance with the requirements of section 3 of the Trade Union Act, 1913 (*k*), shall be amended so as to conform to the requirements of this act, and as so amended shall be approved by the Registrar of Friendly Societies (in this act referred to as "the Registrar") within 6 months after the commencement of this act or within such further time as the Registrar may in special circumstances allow, and if the rules of any trade union are not so amended and approved as aforesaid they shall be deemed not to comply with the requirements of the said section.

(4) Notwithstanding anything in this act, until the 31st day of December, 1927, it shall be lawful to require any member of a trade union to contribute to the political fund of the trade union as if this act had not been passed.

(5) If the Registrar is satisfied, and certifies, that rules for the purpose of complying with the provisions of this section, or for the purposes of the Trade Union Act, 1913, as amended by this act, which require approval by the Registrar have been approved by a majority of the members of a trade-union voting for the purpose, by the executive or other governing body of such a trade-union, or by a majority of delegates of such a trade-union voting at a meeting called for the purpose, the Registrar may approve those rules and those rules shall thereupon have effect as rules of the union notwithstanding that the provisions of the rules of the union as to the alteration of rules or the making of new rules have not been complied with.

(6) Section sixteen of the Trade Union Act, 1871 (which provides for the transmission to the Registrar of annual returns by registered trade-unions), shall apply to every unregistered trade-union so far as respects the receipts, funds, effects, expenditures, assets and liabilities of the political fund thereof.

5. (1) Amongst the regulations as to the conditions of service in His Majesty's civil establishments there shall be included regulations prohibiting established civil servants from being members, delegates, or representatives of any organisation of which the primary object is to influence or affect the remuneration and conditions of employment of its members, unless the organisation is an organisation of which the membership is confined to persons employed by or under the Crown and is an organisation which complies with such provisions as may be contained in the regulations for securing that it is in all respects, independent of, and not affiliated to, any such organisation as aforesaid the membership of which is not confined to persons employed by or under the Crown or any federation comprising such organisations, that its objects do not include political objects, and that it is not associated directly or indirectly with any political party or organisation:

Provided that the regulations made in compliance with the provisions of this section shall not prevent—

(a) any person who is at the commencement of this Act an established civil servant from remaining a member of any trade union or organization not composed wholly or mainly of persons employed by or under the Crown of which he had, at the commencement of this act, been a member for more than six months, if under the rules thereof there had on the fourth day of April, nineteen hundred and twenty-seven, accrued or begun to accrue to him a right to any future payment during incapacity, or by way of superannuation, or on the death of himself or his wife, or as provision for his children; or

(b) any person employed at the commencement of this act by or under the Crown who thereafter becomes an established civil servant from remaining, so long as he is not appointed to a position of supervision or management, a member of any trade union or organisation, not composed wholly or mainly of persons employed by or under the Crown, of which he is a member at the date when he so becomes an established civil servant, if under the rules thereof there has at that date accrued, or begun to accrue, to him a right to any future payment during incapacity, or by way of superannuation, or on the death of himself or his wife, or as provision for his children; or

(c) a person who in addition to being an established civil servant is, apart from his service as such, also engaged in some other employment or occupation from being a member, delegate, or representative of any trade union or organization, of which the primary object is to influence or affect the remuneration or conditions of employment of persons engaged in that employment or occupation.

(2) Subject as hereinafter provided, any established civil servant who contravenes the regulations made under this section shall be disqualified for being a member of the Civil Service:

Provided that, in the case of a first offence, a civil servant shall forthwith be warned by the head of his department, and the said disqualification shall not take effect if within one month after such warning the civil servant ceases to contravene the said regulations.

(3) In this section—

(a) the expression "established civil servant" means a person serving in an established capacity in the permanent service of the Crown, and includes any person who, having been granted a certificate by the Civil Service Commission, is serving a probationary period preliminary to establishment; and

(b) the expression "conditions of employment" means in relation to persons other than persons employed by or under the Crown the conditions of employment of persons employed under a contract of service.

6. (1) It shall not be lawful for any local or other public authority to make it a condition of the employment or continuance in employment of any person that he shall or shall not be a member of a trade-union, or to impose any condition upon persons employed by the authority whereby employees who are or who are not members of a trade-union are liable to be placed in any respect either directly or indirectly under any disability or disadvantage as compared with other employees.

(2) It shall not be lawful for any local or other public authority to make it a condition of any contract made or proposed to be made with the authority, or of the consideration or acceptance of any tender in connection with such a contract, that any person to be employed by any party to the contract shall or shall not be a member of a trade-union.

(3) Any condition imposed in contravention of this section shall be void.

(4) There shall be added to section 5 of the Conspiracy and Protection of Property Act, 1875, the following provision, that is to say:

"If any person employed by a local or other public authority wilfully breaks a contract of service with that authority, knowing or having reasonable cause to believe that the probable consequence of his so doing, either alone or in combination with others, will be to cause injury or danger or grave inconvenience to the community, he shall be liable, on summary conviction, to a fine not exceeding £10 or to imprisonment for a term not exceeding 3 months."

7. Without prejudice to the right of any person having a sufficient interest in the relief sought to sue or apply for an injunction to restrain any application of the funds of a trade-union in contravention of the provisions of this act, an injunction restraining any application of the funds of a trade-union in contravention of the provisions of section 1 of this act may be granted at the suit or upon the application of the Attorney General.

In the application of this section to Scotland, there shall be substituted therein for references to an injunction references to an interdict, and for the reference to the Attorney General a reference to the Lord Advocate.

8. (1) This act may be cited as the Trade Disputes and Trade Unions Act, 1927, and shall be construed as one with the Trade Union Acts, 1871 to 1917, and this act and the Trade Union Acts, 1871 to 1917, may be cited together as the Trade Union Acts, 1871 to 1927.

(2) For the purposes of this act—

(a) the expression "strike" means the cessation of work by a body of persons employed in any trade or industry acting in combination, or a concerted refusal, or a refusal under a common understanding of any number of persons who are, or have been so employed, to continue to work or to accept employment;

(b) the expression "lock-out" means the closing of a place of employment or the suspension of work, or the refusal by an employer to continue to employ any number of persons employed by him in consequence of a dispute, done with a view to compelling those persons, or to aid another employer in compelling persons employed by him, to accept terms or conditions of or affecting employment; and

(c) a strike or lock-out shall not be deemed to be calculated to coerce the Government unless such coercion ought reasonably to be expected as a consequence thereof.

(3) This act shall not extend to Northern Ireland, except that the provisions of this act relating to civil servants shall apply to civil servants employed in Northern Ireland in the administration of services with respect to which the Parliament of Northern Ireland has not power to make laws.

(4) The enactments mentioned in the second schedule to this act are hereby repealed to the extent specified in the third column of that schedule.

The Proposed Loan to Great Britain

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Should Congress Approve the Proposed Loan to Britain?" delivered by the Senator from Illinois [Mr. BROOKS] before the Illinois Manufacturers Association at Chicago, Ill., on January 15, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. MacKeever, thank you very much for your very generous and kind invitation and your kind introduction. I never cease to worry about any opportunity that has been given to me to speak to any distinguished group of citizens and tonight is no exception. In fact, it is amplified a bit by the fact that I am to discuss, in part, a subject that was discussed before here on December 11 by Mr. Philip Reed.

I appreciate the opportunity of appearing before the joint session of the Illinois Manufacturers' Association and the Illinois Manufacturers' Costs Association.

Before I go further, I have just heard about a matter that I should bring to your attention. We have just come out of the worst war in all recorded history. We, out here in the Middle West, have taken a leading part in the production of the instruments of war, and that doesn't just happen. It is a result of leadership; the result of patriotism, and I have just learned that Gen. Thomas Hammond, who, in the early days of this war, was the Chief of the Chicago Ordnance, has just been awarded the highest award that the War Department and the Government of the United States can give to a civilian in the war effort, the exceptional meritorious service award, which will soon be presented to him. At least, I want to pay my compliments, and I am sure you want to pay yours to Gen. Tom Hammond, tonight. General Hammond: (General Hammond arose and was applauded:)

I have seen the record of this great Chicago Ordnance Department. I would like to present it sometime, and I may do so on the floor of the Senate. I would like to show what we out here in the Middle West really have contributed, not only in leadership, but industrial production as well. I have also a very high regard for the man who followed General Hammond, Col. John Slezak, who has done an equally magnificent job. [Applause.]

The subject which has been assigned to me tonight could probably be divided into many sections: The world affairs, foreign policy, our participation, and our responsibilities. They are all vast and cannot be treated lightly or hurriedly. We are the leading power of the world and our responsibility is very, very great, and it should not be approached with any sense of narrowness or partisanship or bigotry. We have finally arrived at, and we are presently, the outstanding example of man's humanity to man. We have also proven that we can develop as a people into the fiercest fighting force that has ever been known in the history of mankind.

The loan which I have been asked to discuss, is not a simple loan. It is one of a series of agreements. Its complication is confused by the number of agreements. It was presented to the Congress accompanied by two statements from the joint executive departments of Great Britain and the United States; two financial agreements, one for a loan of $3,750,000,000, and the other, the final settlement of the lend-lease that deals with more than $20,000,000,000 worth of goods and services which we rendered to the United Kingdom alone. And, it was connected, as it was presented to Great Britain, with their acceptance of the Bretton Woods agreement, which is complicated in itself because it comprises two separate undertakings; namely, the monetary fund devised to develop and maintain some kind of stable currency throughout the world, and the Reconstruction Bank. In addition to this, there was sent to the Congress and will be presented to the Congress, a commercial policy declaration that has to be discussed some day, somehow, in the future. This commercial policy declaration is a result of two different agreements; namely, the statement that was issued originally in the Atlantic Charter and section 7 of the Mutual Aid Agreement, by which we furnished so much aid to Great Britain.

I am sure you are clear now as to just exactly where we are. I feel about like the lawyer who was explaining to the judge when he said, "Judge, this law is based upon a statute that was passed in 1654, amended by another statute in 1684. It was partially repealed by an enactment of the legislature in 1754, but was reestablished by the legislative act of 1851. Do you follow me, Judge?"

The judge said, "Yes, but if I knew my way back I would quit you now." [Laughter.]

The loan to Great Britain has been presented on several grounds, and if I can I want to clarify the terms. You hear the term "four billion four hundred million" and again the term "three billion seven hundred and fifty million." The four billion four hundred million comprises the loan of three billion seven hundred and fifty million plus six hundred and fifty million, which is the definitive final settlement of more than $20,000,000,000 worth of goods which we supplied to Great Britain during the war, plus all the goods she has received since VJ-day, plus all of the surplus property belonging to the United States within the United Kingdom, which is now in the possession of the American Government, plus all of the installations in which we have an interest within the United Kingdom.

One hundred and eighteen million of the six hundred and fifty million is for the goods that they received from us after VJ-day. Many of them are salable goods. The $532,000,000 balance is for settlement of all the other goods comprising almost $20,000,000,000, plus the surplus property, plus the food, plus the ammunition, plus the guns, plus our interest in the installations throughout the United Kingdom. So, if we may clarify our discussion, I would like to state that the loan of three billion seven hundred and fifty millions is only part of the total agreement, which I contend was forced upon the British people.

I wish to read to you the statement I have released to the press and then I wish to discuss it a little further.

I am opposed to the loan of $3,750,000,000 to Great Britain for many reasons. It was not presented to the British Parliament on its own merits and it will not be so presented to the American Congress. It was, and will be, presented in conjunction with the agreement finally settling all lend-lease accounts between the United States and Great Britain whereby we virtually forgive more than $20,000,000,000 of lend-lease for practically nothing, and it is presented in conjunction with a proposed future program of commercial policy declaration which is full of evasive promises.

In short, we forgive more than $20,000,000,000 lend-lease debt, and give up a fresh three billion seven hundred and fifty million American dollars and get contracts of future promises full of escape clauses and loopholes. It is not the kind of a loan that any businessman in America would make and recommend to the company he heads.

I am opposed because the British didn't want this loan, but we forced them to take it, along with their hasty agreeing to Bretton Woods, settling lend-lease accounts, and agreeing to some time consult about lowering tariffs and eliminating imperial preference in foreign trade.

When the discussions originated last summer, the British press and the British negotiators frankly and honestly stated they didn't want a loan. They couldn't pay a loan.

They wanted a grant-in-aid or another gift or at least an interest-free loan over a long period of time.

Sydney Campbell, financial editor of Reuter's, said in July:

"One thing should be made clear about the present discussions in the United States about a loan of three to five billion dollars to Britain. Britain would almost certainly refuse any such loan, however big it might be or however low the interest. They are rather mystified as to why Americans trouble to discuss the matter. A grant-in-aid would, of course, be accepted."

Lord Keynes, the principal British negotiator, also, frankly expressed their position. He arrived in September and he told us he was here to make some kind of an arrangement about lend-lease, and about some way of helping England struggle out of her economic difficulties. But, there was one thing he wanted to make plain to us. That was, Britain could not afford to make a commercial loan in this country. To quote him, he said:

"No doubt an easy course would be for you to offer and for us to put our name to a substantial loan, on more or less commercial terms, without either party to the transaction troubling to pay too much attention to the question of the likelihood of our being able to fulfill the obligations which we were undertaking.

"'However this may be,' he said, 'we shall not lend ourselves to any such soft and deceptive expedient.' He continued: 'We are not in the mood, and we believe and hope that you are not in the mood, to repeat the experiences of last time's war debt. We would far rather do what we can to get on as best we can on any other lines which are open to us.'"

The New York Times, commenting at the time, said:

"Not only did he fear that deception would probably have a very short life, but it would be extremely shortsighted if the absence of friction and bad feeling between the two countries is one of the principal aims."

Nevertheless, our negotiators insisted they accept a loan of $3,750,000,000 at 1.62 percent interest over a 55-year period, even though we will have to borrow this money from the American people, paying at least 2½ percent interest through the sale of additional bonds. The agreement provides that the interest from the British does not start until the end of 5 years, and then at any time the United Kingdom decides that the exchange conditions are not favorable they can request a waiver, and the United States must grant it. There is no provision, however, that the American people will not have to pay the 2½ percent interest every year and the principal, too, in the event of a British default.

The British couldn't pay a $4,000,000,000 debt after the last war. They themselves tell us they can't pay it now. And still our negotiators insisted on calling it a loan and demanded that the British accept it as such.

I am opposed to it because I am confident that it will prove to be a gift and the language and form of the agreement is subterfuge to deceive the American people and to make it easier for those whose interests are largely concerned with foreign trade to secure its approval by the American Congress.

The British believe that the $4,000,000,000 they spent for munitions of war before we established Lend-Lease should be paid back to them now in the form of this gift. They frankly stated so, and asked for this amount as a gift or a grant-in-aid. This supposed loan, coupled with diverse and sundry other agreements and joint statements with loopholes and escape clauses, is a complicated method for accomplishing this unwarranted request.

Lord Keynes, in explaining in the House of Lords the reasons why this supposed loan had to be accepted instead of an out-and-out grant or gift, said: "The American Congress and the American people have never accepted any literal principle of equal sacrifice, financial or otherwise, between all of the Allied participants."

You simply cannot sell that theory to the American soldiers who stormed and streamed across Normandy Beach, constituting over three-fourths of the total number of men fighting on the western front.

I am opposed to it because it is a part of several agreements, one of which wipes out our contribution of more than 20,000,000,000 American dollars without securing a single additional island base for our Navy or Air Corps for our own protection and the peace of the world in the future; because we give all surplus property and all construction and installations located in the United Kingdom without acquiring any permanent rights in airports built by American sacrifice, blood, and money throughout the British Empire to aid our future civilian commerce as we struggle to pay the debt caused by our enormous contribution to the winning of the war throughout the world.

I am opposed to any loan to any foreign government of billions of dollars at 1.62 percent interest as long as we charge all veterans of our own country, including our badly wounded men, 4 percent on the money we loan them to establish their homes or businesses when they return and give them no waiver of interest and no consultation clauses to adjust the payment of the principal.

I am opposed to this gift of $4,400,000,000 of the American people's money under the guise of a loan that has no collateral, knowing full well that it is only the forerunner of additional huge loans to Russia, China, France, the Netherlands, and all the rest to come.

We have already made a loan to Great Britain through the Reconstruction Finance Corporation. We have committed ourselves to the extent of $2,700,000,000 for UNRRA. We have extended the credit capacity of the Export-Import Bank to $3,500,000,000. We have committed our country to contribute $5,925,000,000 to the Bretton Woods Fund and Bank. We have authorized vast changes in our export-import status through the reciprocal trade agreements.

I am opposed to any vast loans or gifts to any foreign countries until the administration tells the people honestly how many demands or requests it has received up to date and presents a balance sheet to show the American people just what our foreign commitments really are and what additional burden each gift or so-called loan will place on our already heavy and strained economy. [Applause.]

I am opposed to any series of world-wide gifts or loans that play a part of the Lord Keynes and the American New Deal plan for a world-wide WPA project that will lower our American standard of living at a time when we are beset with Nation-wide strikes demanding an even higher standard of living in America this very night.

In presenting the so-called loan to the House of Lords in Great Britain, Lord Keynes stated, and I quote him again:

"Fifthly—and perhaps this is the consideration which is least prominent in people's minds—the United States is rapidly becoming a high-living and a high-cost country. Their wages are two and a half times ours. These are the historic classical methods by which, in the long run, international equilibrium will be restored."

I am opposed, for I know that this loan does not meet the full financial needs of Great Britain, but is merely a stopgap arrangement which we have forced upon them in connection with the other agreements that are presented with it. It will lead only to bad feeling and ill-will between our two countries who should always be the closest friends in peace.

Mr. Winston Churchill, who so gallantly led the British Empire through the darkest hours of its history, also opposed this loan and allied agreements and led his colleagues in abstaining from voting for them, saying on December 12, 1945, in the House of Commons:

"It is a pity that we should have allowed a commercial loan agreement to be mixed up and linked up with our transactions." He said further: "Not only is there disappointment, there is deep misgiving as to what the consequences will be and also our ability, however hard we try, to discharge successfully the obligation imposed upon us."

I agree with Mr. Churchill.

If we are going to forgive $20,000,000,000 of lend-lease obligation, let's do it on its own merits and let's secure some permanent rights to bases and airports which were bought with the blood, sweat, tears, and money of the American people.

If we are going to make commercial loans, let us make them on sound commercial terms with collateral to secure them.

For the sake of future good and friendly relations between our two countries who were such stanch allies in the war and should be such close friends in peace, for the sake of protecting the standard of living of our people who must carry the heavy burden of our present enormous national debt, for the sake of being honest with the American people whose money we would be giving away, this British loan agreement should be defeated, and I shall oppose it in the Congress of the United States. [Applause.]

I said when I started that it was difficult to know where to start and where to stop. There are many questions connected with it. What is the alternative? They always say if you oppose something, you ought to present an alternative. I have said I would oppose this loan and I do, because I know that this does not meet even the financial needs of Great Britain. She owes, in addition to it, twenty billion or twenty-five billion—I don't know what the figure is.

When I say these things, I am not speaking disparagingly of Great Britain. Nobody can, in my presence, without challenge, belittle the sacrifice, the courage, the devotion, the fortitude, the patriotism of the British people. They are in trouble, but they are the master diplomats of the whole world, and suddenly we become the leading power of the world and we'd better stay the leader and not be drawn down or we will not fulfill our mission, as God has given us the right and the power to do. Living as we do, without titles, without distinction of religion or race or creed, we have become the most powerful people on earth and we must now assert our leadership, and when we meet a problem presented like Great Britain's, we'd better analyze it and do it honestly so the American people who will pay the bill will know what their obligations will be and then give them a chance to decide whether they want to undertake it.

Great Britain owes, in addition to the $20,000,000,000 lend-lease which we will forgive, $14,000,000,000 in the sterling area. Those sterling bloc countries through the necessity of war have blocked their sterling so that it is not available for trade outside of that area. I say, Great Britain owes in that area alone, $14,000,000,000. She has, according to Mr. Dalton, the Chancelor of the Exchequer, $1,800,000,000 in gold and dollar reserves today. They have, in addition, what is variously estimated to be between two billion five hundred million and three billion five hundred million liquid assets in foreign investments, many of them in our country. They have, according to another report, 4,000,000,000 pounds of wool. The world needs clothes. We

can't get them even for our returning soldiers. They might very well sell this wool. But, the plan as I see it under this loan is for us to loan them $3,750,000,000 and they then will sell some of their assets to satisfy their other creditors within their sterling area alone. But, all this is being done at the expense of the American people under the guise that Great Britain will some day give up their imperial preference.

I give you my word tonight that they have never given up their imperial preference, and under this loan they are not obliged to give up their imperial preference and they never will. In the darkest hours of Britain's history, when Churchill was leading them and they didn't have any idea whether they could win the war, and when our representatives were asking him to agree to the statement of the Atlantic Charter, even then he protected the imperial preference of Great Britain. And, later, when they drew up the Mutual Aid Agreement by which we were ultimately—and no one dreamed it would reach such fantastic figures—to give them $25,000,000,000 of American goods, he still protected the British imperial preference.

When we say we will wipe out the $20,000,000,000 to Great Britain, that is a generous statement and we are, indeed, a generous people.

It was said in Parliament that this will make a fine, clean finish to the lend-lease between our two countries. But it doesn't finish it for the American people. We haven't paid this bill. We still have to pay the interest on these $25,000,000,000 worth of bonds, and some day we've got to earn and pay taxes to pay the bonds themselves to the American people.

I simply don't understand how the gentlemen of the State Department and the Treasury can so blithely give away, with a broad gesture, twenty-five billions of obligations, knowing there isn't a man in this room or a man in America that will ever live long enough to finally see the obligation met by the American people who still must pay it.

May I quote Winston Churchill when he was leading the Conservatives and begging them to abstain from voting for this loan in the Parliament, saying they wanted no part of the responsibility for it? He said this:

"Finally, there is one point I must put on record about the Commercial Policy Declaration."

Now, keep those words in your mind because you are going to hear the Treasury and the businessman like Mr. Philip Reed—you are going to hear Mr. Vinson and Mr. Acheson talking about that wonderful golden era that will come when the Commercial Policy Declaration is put into effect. Under this agreement they make no agreement except they will consult in the future. But, while Mr. Churchill was discussing it, I repeat, quoting Mr. Churchill:

"Finally, there is one point I must put on record about the Commercial Policy Declaration. At my first meeting with President Roosevelt in Argentia in 1941, I was very careful that the terms of the Atlantic Charter in no way prejudiced our rights to maintain this system of imperial preference.

"Those were not easy days. The United States was neutral. It was hard to see how the war could be won, but even then I insisted upon that. Similarly, when it came to the mutual aid agreement, I received from President Roosevelt the explicit assurances which have since been published, we were no more committed by article 7 to abandoning of imperial preference than was the United States to abolish her tariffs."

I give you that as an illustration of the attitude of the British on the commercial declaration of the future.

I would like to take a long time to show that when they were here asking for a gift—not for a loan—when they were here asking for a grant-in-aid, they were told, not what Mr. Vinson said the other night on the radio, "The gift was not possible"; they were told it was not "practical politics" in America because they couldn't get the Congress to go through with it. But, as Mr. Dalton was explaining to the House of Commons, a new device has been inserted, the waiver of interest. And, never before, said he, in any agreement of this kind, has it ever been installed in an agreement. Lord Keynes in urging that they accept it said, if they (meaning us) wanted to preserve the essence of interest, must we, the British be fooled? The terms of this loan are more liberal with no interest for 6 years and a waiver of interest after 6 years, whenever our exports do not measure up to 50 times what they were before the war. He said, it is even a better deal, but the Congress wouldn't accept it any other way.

That is why I said to you that it is a device to deceive the American people and to get the American Congress to accept it as a loan. If we make this loan to Britain, Russia will soon be here. If they say, "We've got to make this loan to Britain for peace"—there will be no peace without Russia. If they say, "We've got to make this loan to control the atomic bomb"—we've got the bomb. We are the ones that have the bomb. Other countries may have it. Russia may have something like it. We don't know.

Our scientists—I have talked with many who followed the bomb from beginning to end. I have talked with those who were present at the demonstration in New Mexico. I talked with those who flew with the elements that made up the bomb on the tiny Pacific Island. I talked with one of the men who flew in the plane that dropped the bomb. They all have high regard for the Russian scientists, but they will all tell you we know nothing about what they have done, how far they are, and there will be no peace in this world until Russia raises that iron curtain of secrecy behind which she will not even let as trusted allies as we take a look. Right now, while they are meeting in the United Nations Organization, they are not discussing the terms of the Atlantic Charter. They are not discussing the high ideals of America. They are not discussing who is running hard across the little nations and why.

If we don't look out, we are going to wind up as coconspirators to subject little people and destroy the liberty of people who would like to be free even as our forefathers wanted to be free when they were ready to die for it in 1776. [Applause.]

I said I was opposed to this loan because it is a part of so many other agreements and our leaders don't give us a balance sheet and tell us what our commitments are.

Even during the war we had to get our information from the British, and I guess we will have to get it from them on this loan. So I sent to the Parliament and got the discussion and debates in the Parliament, and I have them here.

Lord Keynes said that when he was here the demands of foreign countries for like loans were reported reliably to be four to five times as much as their maximum demands. Well, if their maximum demand was $5,000,000,000, then the requests are already in for $20,000,000,000. Will that satisfy them? Will that buy peace? What will we do when we grant $20,000,000,000?

During the last fiscal year our taxes and our borrowing did not completely meet the expense of this Government, so we dipped back into the reserves that were already available from earlier borrowings from the American people. But, you can't go on forever deficit-spending and borrowing to pay for the deficits you create while you are dishing out money to the world under the guise it is good for the American workingman.

What is going to happen to us? That is what Lord Keynes was talking about when he said, "The American people are rapidly becoming a high-living and a high-cost country. Their wages are two and a half times ours. These are the historic, classical methods by which in the long run, international equilibrium will be restored." He means, we will be restored down to the level of the rest of the world. There is no other answer to that one.

You cannot tell me that you can meet the demands of the strikers of this country, asking for more money, which puts more costs on production, by adding to the debt of our country in continuous vast loans to foreign countries. We have set out as the people of a great nation to raise the standard of living, and we have already imposed all manner of taxes and restrictions and controls, all of which add to the cost of our production. We have unemployment insurance, old-age insurance, sickness insurance, factory inspection, regulation of investment houses, control of everything—and now we will add more wages, and then are you going to let the goods come in here from all the nations of the world where they pay from 15 cents to $1 a day for slave labor, with no restrictions and no restraints—it simply does not add up.

What is happening to us at this very minute, gentlemen, is that Lord Keynes, the New Deal, the Treasury Department, and the State Department of this Government have a major operation in mind for our entire protective tariff system that Lord Keynes said is the "historic, classical methods by which in the long run international equilibrium will be restored." The plain answer to that is we will be restored downward instead of bringing them up.

To those who insist that we must make this gift, under the guise of a loan, to preserve peace, let me say—first, you cannot buy peace; and second, every other nation can insist on a similar gift in the name of peace, and we simply cannot finance this whole world.

Great Britain needs help. Every other country of consequence needs help. We don't know ourselves how broke we are or what our present and anticipated commitments are.

Great Britain needs to set her house in order. She should adjust her debts with her sterling area countries before she asks us to add more than $4,000,000,000 more to our contribution to her welfare.

Then she should use any credit we give her to modernize her production facilities to raise the standard of living of her own people and the millions under her command and rule.

The whole world has been blown and torn by the roots in this devastating war of destruction. No country can meet its obligations and survive without rigid economy and hard work.

We cannot survive and preserve our standard of living or our representative form of government without economy and hard work. We cannot survive as a people living under a private enterprise system unless we get to work fast to produce real wealth in the form of goods so badly needed by all of our people.

Maybe we will have to have new leadership in Washington. Maybe we will have to have a better leadership at home as well as in our foreign affairs.

What we need most desperately in foreign affairs is men who will be absolutely honest with the American people and not try to foster these pet schemes by dragging us down to the standards of the rest of the world or by giving away the substance of America.

We need diplomats today who will truly stand up for America. [Rising applause.]

The Tragedy of Truman: He Has Failed the Nation in Crisis

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Journal and American of January 20, 1946:

THE TRAGEDY OF TRUMAN: HE HAS FAILED THE NATION IN CRISIS

(By Samuel Crowther)

I

On the night of Thursday, January 3, President Truman, speaking over the radio from the White House, asked the American people to join with Sidney Hillman's Political Action Committee in bringing pressure upon the Congress to enact a program of legislation which would socialize America and foreclose what remains of American freedom.

Principally Mr. Truman urged that the despotic powers granted on the pretense they were needed for war be strengthened and extended into peace.

He asked that the OPA's power to dictate the price at which a citizen may buy or sell his goods and services be confirmed into the far future.

In addition, he asked for the passage of laws extending the already vast Federal bureaucracy through new or bigger agencies to look after employment, medical care, anti-discrimination, and full employment.

And, finally, he asked for a bill to settle labor disputes by referring them to fact-finding boards which he would appoint.

The program advanced by President Truman is, with the exception of the "fact finding" boards, the program of the PAC-CIO.

It is even more drastic than that of the popular front which reduced a once powerful France to a mere shell that collapsed at a touch by the Germans. It is even more drastic than the British Labor program which has reduced that once great nation to a mendicant bitterly standing on the international street corner snarling for alms.

The American people have wanted to believe in Harry S. Truman. They have wanted to believe in him as a plain American who would never yield to the superman delusion and who would battle to rid the White House of the despotism which a series of rubber-stamp Congresses and the war had lodged there.

The people have hoped and prayed that President Truman would use the transition from war to peace to mark a transition from control of the people to control by the people.

In the beginning the Truman words were fair and heartening. Now it stands revealed that Harry S. Truman, no matter how good were his original intentions and no matter how good are his present intentions, is President of the United States in name only.

Today our Nation is in crisis. There is no point in being optimistic or pessimistic. Those words are worn out. The facts are plain.

We have passed, with the speed that night follows day and with scarcely a twilight, from being the world's dominant power with the might to make right to being the world's dominated power equally impotent to control either our external or our internal affairs.

No one could defeat us. No one has defeated us. We have defeated ourselves. We have permitted the forces of evil pretending to be the forces of good to rob us of our birthright of freedom and our proud chivalry that the Stars and Stripes never marches except to make men free.

We have been robbed of our birthright and stripped of our honor because President Truman and his picked associates forming the administration have had neither the wit nor the courage to face their duties as Americans but, on the contrary, have approached our great national and international problems with the capacity and the attitude of ward politicians and have permitted themselves to be the tools of the efficient and well-organized groups that grew up inside and outside the departments of Government under the Roosevelt administration and which for an indeterminate number of years before his death were really running Roosevelt.

This group is at the core communistic and takes its orders from Moscow. These are the guiding spirits, for they know the technique of modern revolution.

But the strongest men are the political adventurers, acting as the heads of CIO unions, who, having received the right from the Roosevelt administration to make faceless serfs of their members, have combined in a ruthless drive against private ownership in America under the pretense that they are only asking for higher wages for their serfs.

This drive is becoming an unofficial general strike.

The drive would not be possible in its present form, were it not for the Truman administration program of inflating the money supply with the one hand and attempting to control the effects of inflation with the other through the elaborate and sinister system of the OPA.

These policies are being used as pincers by the CIO buccaneers to squeeze out private ownership and thus despoil America of the savings of the millions of hard-working men and women who made America the land of opportunity.

The drive is being conducted with the complete ruthlessness and the complete contempt for truth and honor which mark every Communist movement.

It can be made to mark the beginning or the end of alien control of America. It cannot be compromised.

Nero fiddled while Rome burned. Truman plays the piano.

OPA—An Appreciation

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 30, 1946

Mr. WHITE. Mr. Speaker, in the barrage of criticism descending on the OPA it is encouraging to find a word of commendation in the editorial columns of an Idaho Republican paper, which is inserted herewith:

FAIRNESS TO ALL

The Office of Price Administration is this month having its fourth anniversary. Born of war emergency, the boards over the country have handled rationing and price control with fairness to all to the best of their ability. Members of OPA boards and employees in offices have been subject to severe criticism at times, because orders from higher-ups were bound to cause inconvenience to some. Those who served on boards are especially to be commended for their good work. They served without pay, giving of their valuable time, suffering from some who felt they were not being treated right, often to the extent of losing friends and customers in their own line of business.

With rationing ended, except for sugar, and price problems increasingly pressing under the dangers of inflation, the boards are now known as Price Control Boards, their major job holding the price line steady to keep down costs of living in communities. The threat of inflation is greater today than ever before.

Even though we have had our toes tramped on at times, let us now be broadminded over the past of rationing and the price control of the future. The work of rationing and price administration is truly of the democratic nature of "government of the people, by the people, for the people."

Loopholes in Election Laws

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Loopholes in Election Laws," written by me and published in the February issue of the magazine Nation's Business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOPHOLES IN ELECTION LAWS

(By ALEXANDER WILEY, United States Senator from Wisconsin)

POLITICAL CAMPAIGNS, IN SPITE OF CONGRESSIONAL INTENTION, STILL INVOLVE PRACTICES WHICH, THOUGH WITHIN THE LAW, ARE UNFAIR TO THE VOTERS

"Sad as it may seem in this democracy of ours, Congressmen must be greased, that is, wined, dined, and bribed for their votes, and they can be—very effectively. This greasing process costs a tidy sum with every session of Congress. That is what your dollar goes for."

The dollar referred to in this quotation was the political assessment on each member of the United Automobile Workers Union in the 1944 election.

The quotation itself is from a letter signed by William Booher, financial secretary of UAW Local No. 2. It was sent on July 6, 1943, to union workers in Fleetwings, Inc., Bristol, Pa.

The letter is in the record of the Senate Campaign Expenditures Committee. It was written to inform CIO members why they were being assessed $1 per head for the Political Action Committee's campaign chest. Its writer's ambition was apparently not only to fill the congressional seats but to make them pleasant and profitable.

With the first guns already booming in the 1946 campaign, the threats of greased elections again demand the voters' attention.

Though Sidney Hillman, chairman of PAC, after a consultation with its counsel, John J. Abt, denounced the letter as stupid, unfair, and untrue when it was produced at the committee hearing, nevertheless it indicates a kind of thinking that has no place in a democracy.

Political assessments, the action which this thinking purports to justify, deserve the clear-headed, unbiased consideration of every American. The subject is larger than its union aspect. It also affects individuals, partnerships, and corporations. Its potent influence on elections strikes at the very roots of our concepts of republican government.

Slush money in elections

Everyone knows that American elections often have been cursed by the use of slush funds—money employed for personal bribery or corruptive propaganda. Far too often, tainted money has been used to grease the election of political stooges. The very use of gigantic sums of money by any one private source to steamroller an election is an action which sticks in the average American's craw.

Various Federal and State laws to limit the use of slush funds in elections are on the books. Loopholes and weasel words are so plentiful in them that a steamroller and caravan of political workers can drive through. The large-scale activities of PAC in the 1944 election and its girding for a repeat performance this year have limelighted the bare spots in these laws as never before.

Preventing election abuses is the supreme challenge to lawmakers. On one side is the need for an aroused electorate, an essential for democratic government where every citizen is free to express his opinions and to participate in choosing officials. For that reason, we who are eager to amend the present laws and plug their loopholes must be careful that we do not infringe on the freedom of speech which is the right of every worker, of every group, and of every organization. The obligation of Congress and legislatures is both to prevent such extravagant use of money or other pressure that individual citizens are denied an equal voice in elections and to require publicity so citizens will know what interests are providing the money and arguments. For half a century, Congress has been trying to meet the challenge.

A brief review of past legislation clearly shows that the present Federal election laws are more like scattered posts which can be avoided than a solid barrier against slush funds and pressure groups.

Congress became sufficiently aroused in 1909 to make certain election practices of that gaslight era amenable to the Criminal Code. That was in the happy heyday when corporations boasted of carrying State legislatures and Senators in their vest pockets. In 1910 Congress passed another law requiring publicity of campaign expenditures.

Prohibits some contributions

The present Corrupt Practices Act was not enacted until 1925. In addition to enforcing publicity of collections and expenditures for elections, it limits the expenditure by a candidate for Senate or House of Representatives to $25,000 and $5,000, respectively, unless his home State fixes a lower limit. It also prohibits contributions by any corporation or national bank to a candidate campaigning for a Federal office. The words in quotations chart the loopholes.

The only substantial effect of the Hatch Act of 1939 is to bar Federal civil-service employees from political activities. Its other restrictions are easily side-stepped. It limits contributions to a national candidate or committee to $5,000 by any individual, corporation, or organization. It generously fixes $3,000,000 as the limit for contributions to, or expenditures by, any one national political committee. State or local committees or organizations are specifically exempted from any limitations.

The Smith-Connally Labor Disputes Act which followed on June 25, 1943, added labor unions to the corporations and national banks which are banned from contributing to national elections.

The ban on political contributions by corporations, banks, and trade unions serves the worthy purpose of protecting an individual stockholder or member from the use of funds, in which he has an interest, for candidates or political parties which he does not support. That is a broad principle of safeguarding investments in which political activity is only one incident.

More pertinent are the loopholes in the election laws. In brief, they are:

1. These Federal laws apply only to Presidential and congressional elections. They are not concerned with State or local elections.

2. They do not prohibit expenditures labeled "educational" activities though their practical purpose may be to elect particular candidates. Any activity to promote wider discussion of national issues must be encouraged but it should not be given a fanciful label to avoid the election laws when its purpose is purely political.

3. Also, as the acts are largely concerned with cash expenditures, they are ambiguous in evaluating many possible services by individuals, corporations, unions, or other organizations which are in contravention of the spirit rather than the letter of the law and which may be more helpful than money in a campaign.

4. The Corrupt Practices Act applies only to elections and not to the party primaries where candidates are nominated, which is equivalent to election in many States, or to the selection of delegates to national conventions which draft party platforms and name candidates.

5. While the act prohibits certain contributions to a candidate, it does not prohibit expenditures by the same organizations in behalf of a candidate.

6. Though the Hatch Act limits the contribution of an individual, corporation, or organization to $5,000 in a primary or election campaign, an unlimited number of individuals in the same family or groups can each contribute up to that amount.

7. This can be varied by organizing campaign committees under different names, each of which will be eligible for a separate $5,000 contribution from the same individual or organization.

8. As the latter may encourage campaign chests which tried and true party wheelhorses will not control, the act thoughtfully includes a detour sign by exempting State and local committees. Though a $3,000,000 limit is set for a national committee jackpot, each regular State or local committee, as well as any committee organized for a particular campaign, can collect and spend to or even above the same limit.

9. The Smith-Connally Act, while bringing labor unions into the fold, did not close any loopholes in the previous acts.

These loopholes were not new, but it remained for the Congress of Industrial Organizations to go through them in a big way and with all the fanfare of an old-time torchlight parade on a national scale.

Two weeks after the Smith-Connally Act became effective, CIO's executive board organized the Political Action Committee and charged it with the task of conducting a program of political education. Within a short time PAC was to demonstrate the clearest object lesson of the flaws in our election statutes. Its spending in the 1944 campaign gave America a preview of still more distasteful slush-funding to come in the 1946 and 1948 elections. How true that preview was could be seen in the 1945 mayoralty election in Detroit when PAC put on an unsuccessful campaign to elect a UAW vice president, Richard Frankensteen, as mayor. The exact sums PAC spent in Detroit are unknown but it is known that, during the 1944 fourth-term campaign, $647,000 of funds from union treasuries were turned over to PAC, ostensibly for educational expenditures.

How much more was turned over to State and local PAC's no one outside PAC will ever know. It may have been many millions of dollars more and may have resulted in the reproduction of far more than the one hundred million pieces of literature printed and distributed by the national PAC.

Five checks for $100,000 each in that $647,000 were from CIO's national treasury, and the union treasuries of the Amalgamated Clothing Workers, the United Automobile Workers of America, the United Electrical, Radio, and Machine Workers, and the United Steelworkers of America.

No universal coercion-free vote was taken among the rank and file of the CIO unions or CIO as a whole for the allocation of such huge sums from their treasuries. (For that matter, neither did John L. Lewis democratically consult all of his miners before he lent $500,000 to the Democratic National Committee in 1936, a loan which was later repaid. The law classifies such advances or loans as contributions.)

Funds allocated to PAC from unions may be derived from one of two sources or both:

(a) Special political assessments on members.

(b) The union treasuries accruing from dues, etc.

In either case, two sinister results may obtain:

1. The funds of all members may be used on behalf of the election of candidates to which some members are opposed. (This would be equally possible in the case of stockholders' funds.)

2. Refusal to allow their union treasuries to be so used or to pay assessments on the line may cause members to be expelled outright or things may be made so uncomfortable for them that they will "voluntarily" quit their jobs. In plants with maintenance-of-membership contracts, such loss of union status automatically deprives a worker of his job.

The Superior Court of Cook County, Ill., recently decided a case on this point in favor of a workingman. The decision affected 82 other employees in the same plant who resigned from a CIO union on the ground that it was Communist-dominated. The Court ruled:

"Morgan's expulsion from union membership, which in turn compels the employer, under the maintenance-of-membership contract, to discharge him regardless of his value as a worker, is * * * a violation of his legal rights and cannot be sustained."

Unfortunately, not many workers will fight such a case in the courts, and this decision has not been confirmed by higher courts.

PAC makes a self-conscious effort to comply with the letter of the law. From the time President Roosevelt was renominated for President in 1944 until he was reelected, PAC froze all its funds gained through trade-union contributions. It spent only those funds ($470,000) gained from individuals' contributions. Thus, Mr. Hillman could claim scrupulous compliance with the strictest possible interpretation of the Corrupt Practices Act as amended by the Smith-Connally Act because he had lived up to the law by abstaining from using trade-union contributions in the postprimary period.

Even had he used trade-union contributions during that period, he might have relied on the argument that PAC's contributions were expenditures and therefore allowable under the law.

To broaden the source of individual contributions, particularly from nonunion supporters, the National Citizens Political Action Committee was created in July 1944. It received $380,000, exclusively in individuals' contributions, and spent $378,000 in behalf of the fourth term and progressive congressional candidates. The activities of PAC and NCPAC were admittedly synchronized; personnel and offices were substantially the same and Mr. Hillman was the chairman of both groups.

In its report filed with the Clerk of the House of Representatives, NCPAC tabulated the financing, as follows:

	Received	*Spent*
Trade-unions account	$547,903.26	$478,498.82
Individual contributions	376,910.77	470,852.32
NCPAC	380,306.45	378,424.78
Total	1,405,120.48	1,327,775.92

The individual sources of NCPAC funds may be relatively impervious to further legal restraint, but assessments and trade-union sources of PAC funds are not.

I have introduced legislation to ban political expenditures as well as contributions by any union, national bank, or corporation and thus preserve their treasury funds inviolate. Other congressional colleagues have bills pending which would extend the expenditure and contribution ban to primaries and national conventions as well as elections and which would specifically prohibit political assessments by unions.

New laws are no panacea

Passage of such legislation would by no means be a panacea against the use of slush funds. Even if enacted, the laws would only prohibit contributions and expenditures to national committees. Moreover, the courts would still have to differentiate between political and educational expenditures in national elections.

A further differentiation would have to be made between, for example, what it costs an established newspaper corporation to support certain candidates or political issues during a campaign and the expenditures by temporary campaign newspapers set up by individuals, unions, national banks, or corporations. Affiliated or sponsored organizations, not only of unions but of all interested groups which engage in election work, also would continue to pose a problem.

The enactment of the expenditure ban would at least help to plug a national loophole through which a minimum of $750,000 of trade-union funds were poured in 1944.

The loopholes and jokers should be eliminated by a complete overhaul of our Federal election laws. Vigorous action will be necessary to extend the expenditure ban to State and local committees. State and local governments also must legislate until the country eventually has uniform election laws guaranteeing honest elections to every citizen.

No law can be valid which might hamper or discourage a qualified voter's participation in elections. Every effort is to stimulate greater participation. Election laws are needed to protect the voter from coercion; from forced assessments by unions, employers, or political parties and from funds which can make his vote worthless.

Active participation in elections is the first duty of a free citizen. He must decide the issues between candidates and parties. To form his opinion, he should know what goes on behind the scenes—the secret pressure groups, the interests backing the candidates and the sources of campaign funds.

Publicity, and publicity alone, can give him that information. Election campaigns should not be allowed to hide secrets from the public.

Publicity is a great cleanser and should be obligatory.

It already is obligatory for contributions of money to a candidate or political party, the sources and amounts, and where the money is spent.

However, the final reports may not be filed until weeks after the ballots are counted, too late to help the voter in picking candidates. If the deadline for contributions and final reports were a reasonable time before an election, he would know who and what is behind the candidates. The bill which I have introduced will include expenditures for a candidate as well as contributions to a candidate or party, further broadening the benefits of publicity.

Elections are too serious to be left in their present state, wide open to the wiles of the unscrupulous. Greater political squeezes are in the offing. For the benefit of labor, for the benefit of business and, more than all, for the benefit of the public, such squeezes must be prevented.

The Tragedy of Truman

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Journal and American of January 21, 1946:

THE TRAGEDY OF TRUMAN
(By Samuel Crowther)
II

Our Nation, only a few months ago on the day when Japan surrendered, was mightier, both absolutely and comparatively, than any power the world had ever known.

Our Nation is now impotent to defend itself from aggression and powerless to make war.

And further, by a series of almost incredibly fantastic acts, it has given up not only the ideals for which the people thought they were fighting and sacrificing but also the power to control its external relations and to an unknown degree the power to control its internal relations.

As a world power, we collapsed before we got started.

The precipitate withdrawal of our troops from Europe was in response to everyone's natural desire to get the boys home, but it is not without significance that the Communist periodicals which once were screaming for a second front to help Russia, regardless of the cost in American blood, screamed even louder to get the boys home when the presence of a great American Army in Europe could have lent weight to our discussions with Russia on the state of freedom in the little countries that we were supposed to have helped liberate.

We have already eliminated ourselves as a military power in Europe and are on the way to doing so in Asia.

The covenants limiting our power to manage ourselves are contained in the International Fund and the International Bank, growing out of the Bretton Woods meeting; in the United Nations Organization, growing out of the San Francisco Conference; and in the as yet obscure food, air, and relief international organizations variously put together at various places. In the Reciprocal Trade Agreements Act, the Congress divested itself of its constitutional obligation to regulate tariffs.

During the Bretton Woods meeting, the Hearst newspapers pointed out that the agreements being fashioned had almost nothing to do with the stabilization of exchanges or any other worthy purpose and a great deal to do with draining off American resources and rigging the American dollar. The power to rig the dollar is the power to control the American economy.

During the San Francisco Conference, the Hearst newspapers pointed out that the elaborate Charter being evolved, although festooned with fine words and noble purposes, could be made a device by which the United States might obligate itself to defend tyranny and slavery.

The Congress approved the Bretton Woods Agreements and the San Francisco Charter and passed the Reciprocal Trade Agreements Act under tremendous pressure from Hillman's Political Action Committee and no end of organizations mobilized for the purpose.

President Truman lent himself to these campaigns—although it is now evident that he did not know what any of the obligations were—on the ground that he needed these votes of confidence for the Big Three meeting at Potsdam.

It is clear that, if he had intended to do any bargaining, he would have held up the approval of these various articles and used them for trading purposes. But the President did no trading at Potsdam. He signed what was given to him.

He agreed—without any comprehension of what he was doing—to have America enforce the Morgenthau plan by which future generations of Germans are forcibly to be kept at a substandard of living.

By inference and again without knowing what he was doing, he endorsed communism by engaging to exterminate all other forms of collectivism.

Secretary Byrnes went to London, and his meeting with Messrs. Bevin and Molotoff broke up in a row because he and Mr. Bevin would not agree for Russia to make puppet States out of Rumania, Bulgaria, and Yugoslavia in the way that it had already made puppets out of Czechoslovakia, Poland, and the Baltic States.

Mr. Byrnes, having made a stand for the right, made an about-face, went to Moscow and in effect told Commissar Molotoff that the right was whatever the Soviet wanted it to be. In addition, he put the Soviet in a position to interfere with the rule of General MacArthur in Japan—which was the one creditable and honorable piece of fine Americanism left in the world.

Russia, having gained or being about to gain everything it desired in the way of domination of peoples, permitted the United Nations Organization with great pomp and circumstance to come into being in London.

The single purpose of that Organization, outside of providing a haven for lame ducks and a hall for orators, is to make the United States the guarantor of Russian imperialism. By the terms of the deed, the UNO can take no action against Russia without the unanimous consent of the Security Council. Russia is a member of that Council.

At San Francisco, the American delegation, brilliantly led by Mr. Stettinius and Senator VANDENBERG, admitted the Argentine to the Conference against the protest of Russia and pledged the American Republics that the Act of Chapultepec would be confirmed by a treaty guaranteeing hemisphere solidarity. That meant an offensive and defensive alliance of all the Americas and a barrier against communism.

The treaty was due to be drawn at Rio de Janeiro last November. It was blasted by Under Secretary of State Acheson and others in the State Department.

The solemn pledge made to these republics—on which a hemisphere unity could have been built—has been broken and Messrs. Stettinius and VANDENBERG seem to have traded their personal honor for the empty privilege of being delegates to the UNO.

Our country under Messrs. Truman and Byrnes, with the mute acquiescence of the Senate and House Foreign Relations Committees, has followed the Communist Party line and has eliminated itself as a world power.

And, as if to top off the half-comic tragedy, Great Britain has arranged for a gift-loan from us which may or may not be approved by the Congress—and Russia is standing by for another and bigger gift-loan.

Both hope to rehabilitate themselves at our expense and also to pay their quotas in the Bretton Woods scheme in order to take more of our money.

Never has a nation nose-dived so quickly.

The Schuylkill River Restoration Program

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Schuylkill River Restoration Program," delivered by me at a dinner meeting of the Interstate Commission on the Delaware River Basin, held at Philadelphia, Pa., on January 25, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The keystone around which I am going to build my talk with you concerning programs for the restoration of the Schuylkill River can be described by a simple and homey word. Successful progress in any and all fields of endeavor depends, in my judgment, upon the sensible application of that word more than any other factor. The word to which I allude is: Teamwork.

The advancement of programs for the restoration of the Schuylkill River which has taken place in the last 2 or 3 years is an example of teamwork in the field of public works and governmental administration which would be pretty hard to beat. I say this without fear of contradiction. I am sure our good friend, Grover Ladner, who unquestionably has worked longer and more earnestly for its accomplishment than any other person, will agree with me.

Unfortunately for the river, Incodel was only a fledgling when Grover and I were connected with State government in Pennsylvania. But it is fortunate today when Incodel has grown up that someone like Attorney General Duff occupies a position in public life to convince industry and government of the fallacy of their reasoning that rivers are just places to throw stuff into. Too often have both industry and government seemed to search for ways to shirk their responsibility.

With Incodel's help and the assistance of the Schuylkill River Restoration Association, things changed rapidly. The program has been moving forward at an encouraging pace ever since it announced in October 1943 that the practice of the pot calling the kettle black was leading nowhere; that the solution of the problem involved a three-way teamwork attack by industry, the Commonwealth of Pennsylvania, and the Federal Government.

The Commonwealth of Pennsylvania rightly was called upon to take the first step. Both parties in both branches of the legislature responded splendidly and, working as a team, passed a law during the 1945 session specifically outlawing the practice of using Pennsylvania streams as the dumping grounds for mine wastes. A companion act, No. 441, authorized the execution of a $15,000,000 project for dredging an estimated 20,000,000 tons of accumulated coal culm and silt from the section of the river above Norristown. Five million dollars was appropriated to cover the cost of work to be accomplished during the present biennium, which ends July 1, next year.

While concentrating its efforts on getting Pennsylvania to take the initiative, Incodel also gave attention to that part of the project which it deemed should be handled by the Federal Government, namely, the dredging of the river from Norristown to Philadelphia. By means of good teamwork with representatives of the Schuylkill River restoration and of other conservation agencies, it succeeded in securing the authorization of a review survey of the problem by the Army engineers. Based upon new factors, of which the most important was the adoption of the project by Pennsylvania to clean the upper river, all of the officers of the United States engineers, from the district engineer to the chief engineer, reversed their previous conclusions that the project was the sole responsibility of Pennsylvania, and concurred in a new recommendation calling upon the Federal Government to dredge the lower river of silt deposits, at an estimated cost of $13,000,000.

In the case of both the State project and the Federal project, the estimated time required for completion of the entire job is 6 years. The people are expecting that it will be accomplished within that schedule. It will take teamwork of the highest order to do this. I assure you that I shall be happy to carry out my part in this endeavor.

Progress in the immediate future, in my judgment, depends chiefly upon the Commonwealth of Pennsylvania. One reason I say this is because the Army engineers have recommended that Federal participation in the program should not be started until the Commonwealth of Pennsylvania has completed at least 50 percent of its job. That, it seems to me, is a reasonable condition. There certainly would be no object in having the Federal Government commence dredging the lower part of the river unless there is definite assurance that the State will meet its obligation upstream. The faster the State moves, the quicker the river will be redeemed. It is up to Pennsylvania to set the pace.

Personally I do not know how much progress has been made in this direction. I do know, however, that while the program was being discussed during the legislative session in which it was passed the press reported that engineers had estimated that preparatory plans could be well advanced in 6 months. Time flies. That period and an additional month already have elapsed. If work has proceeded in accordance with the calculated schedule, construction and dredging operations should soon get under way. And, indeed, they must if the schedule is to be met. Twenty million tons of silt is a lot of material. If it is to be dredged within the next 5½ to 6 years, it will have to be taken from the river at a rate of more than 3,500,000 tons a year. That is a sizable job.

According to recent reports in the press, I note that the State is giving consideration to requests that private interests be permitted to dredge silt from the river. Apparently such dredging is to be undertaken in conjunction with programs for the recovery of coal, as it was stated that the removal of the silt would involve no cost and possibly result in a profit to the State. I also noted that Ellwood Turner, ever alert, sounded a word of caution regarding such proposals. He is reported to have stated that industry should be encouraged to take all of the material from the river which it can use, provided it is required to dispose properly of the unused wastes. But he also warned the State not to get itself into a position where the over-all program would be hampered or drawn out unduly on the prospect of getting part of the job done for nothing.

That is sound advice. I would like to supplement it by pointing out that the State's interest and industry's interest in the desilting program of necessity are different, although not necessarily conflicting. The State's primary responsibility is to clear and properly dispose of deposits from the river within a period of 6 years at the least possible expense. Industry's main objective, to the contrary, is not centered upon the redemption of the river. Its interest is to secure from the river those deposits from which usable coal and other material can be recovered most economically.

As far as actual dredging is concerned, it will cost money no matter who does it. If, therefore, such operations can be done, in whole or in part, at no cost or a possible profit to the State it is because of the value of the materials which can be reclaimed. That this is a prospect is splendid news.

I understand that the act which authorizes the project gives power to the administrative agency to sell the deposits taken from the river. In view of this provision, it would seem to me that the State should retain as complete control as possible over dredging operations throughout the prosecution of the program. It certainly should not allow the program to be hamstrung on the uncertainty of an indefinite policy.

Like Ellwood, I am 100 percent in favor of having industry participate with the State in the Schuylkill program. But such participation must be on a teamwork basis. All participants must pull in the same direction and toward the goal of relieving the river of its choking mess before the next 6 years have elapsed.

The necessity of enforcing laws which require coal operators to keep solid coal wastes from getting into the river in the future is another important State responsibility. Everyone realizes, of course, that it is not economically feasible to keep out the last grain of coal dust. I am sure no one expects this result. But it is common knowledge that it is now practicable to keep from streams a very high percentage of the wastes being plopped into them. The Lehigh Coal & Navigation Co. is building plants to accomplish this result and I understand, that the reclaimed fuel will be marketed at a profit. If one company can do this there is no obvious reason why the industry as a whole cannot follow suit. Certainly, if the coal which now lies mixed with mud and dirt in the channel of the Schuylkill River can be reclaimed profitably, as seems probable, it follows as a commonsense deduction that the wastes at the point of operations must be even more valuable.

Now to get away from the State's part of the program and on to the Federal Government's responsibility for a while.

The Army engineers' recommendations regarding this phase of the program have not yet been filed with Congress. Following the new policy for Federal-State cooperation as established in the recent flood-control and river and harbor acts, the Chief of Engineers has first submitted his report to the Governors of the States affected by the project—Pennsylvania, New Jersey, and Delaware—for a statement of their views. In each case the Governor filed a report approving the engineers' recommendations.

It is hardly necessary to tell you that I shall be most happy to sponsor the necessary legislation for authorization of the Federal project and to do everything in my power to secure Congress' approval. Many of you know that during the congressional session of 1945 I attempted to secure an appropriation of $10,000,000 for this program in the then pending omnibus flood-control bill. As a definite project had not been formulated at that time, the effort proved to be premature. Now that a fixed program has been developed, which has received endorsement from all sides, it will be a privilege and an honor to head up efforts to secure its authorization. This is another part of the over-all program for the development of the Delaware River watershed which can be successfully consummated by effective teamwork.

I am sure that I can count on the assistance of all interested conservation agencies. Incodel's help will be particularly effective.

The project for the restoration of the Schuylkill River is a vital part of an over-all program for the unified development of the Delaware watershed and for the basin-wide abatement of stream pollution. Completion of the Schuylkill project, supplemented by the construction of adequate sewage collection and treatment facilities in Philadelphia and Camden, will do more, in my judgment, to advance this broad objective and the related problem of the development of the port of the Delaware River than almost anything else that could be done.

The abuse to which the rivers and streams in this country have been subjected in the past is a national disgrace. It is gratifying to know that agencies in the Philadelphia metropolitan region are finally taking steps to end such practices. The program, however, in my judgment is Nation-wide. It is for this reason that I have sponsored one of the stream-pollution measures now before Congress. While I am in favor of the principle of the States and their local subdivisions assuming the initiative, I believe that it is time for the Federal Government to step into the picture after the States have had a reasonable opportunity to meet their responsibility and have failed. That is the underlying purpose of the bill which I have sponsored for putting an end to the defilement of our rivers.

There are many extremely pressing and important issues confronting this country today. Aside from the part which we must play in taking the leadership in securing an enduring world-wide peace and in devising plans for the establishment of friendly relationships between capital and labor, none is more important, in my opinion, than working out practical procedures for the conservation of our natural resources.

Incodel, by demonstrating effective teamwork, is setting an outstanding example in this field.

The Decisive Issues of 1946

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, on behalf of my colleague the Senator from West Virginia [Mr. KILGORE], I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "The Decisive Issues of 1946," delivered by him on the CBS network program, Congress Speaks, on January 15, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Communities all over the country today are plagued by problems of postwar readjustment. In my home town of Beckley, W. Va.—and in the other towns and cities of West Virginia—we are faced with rising prices, lack of housing for returned veterans, a scarcity of civilian goods, cuts in take-home pay, and inexcusable delays in the release of husbands, sons, and brothers from the armed services. These are not problems which can be solved by Beckley nor by the State of West Virginia. They are problems not only of the cities and towns of West Virginia but of the whole Nation. Common hardships are bringing home to the American people that the welfare of their own communities is dependent upon national—and in some respects international—action.

These Nation-wide difficulties need not have occurred. Two years ago, along with several of my Senate colleagues, including President Truman, then a Member of the Senate, I urged the immediate enactment of a comprehensive reconversion program embodied in what became known as the Kilgore bill. The objectives of that program were full production and full employment through speedy reemployment of war workers and returning veterans, the maintenance of high purchasing power, and the orderly expansion of civilian production as war contracts were terminated. The Senate bill embodying that program asserted the clear Federal responsibility for adequate housing and in similar areas where national action is now proving absolutely necessary.

Let me emphasize this point. Every major reconversion problem of today was anticipated in this legislation of 2 years ago. Housing, full production, reemployment of veterans. This program was actively opposed by spokesmen for financial interests. They contended that reconversion would take care of itself if large financial reserves were made available to industry. Their counsels in large measure prevailed. The American people are now suffering the consequences. The bill which was finally passed omitted Federal responsibility for full employment, and such crucial matters as a housing program and maintaining of postwar purchasing power were deleted.

Handicapped as we are by this heritage of failure, the Congress of 1946 must take bold and decisive steps to put us back on the road to full production and full employment. Our first task in domestic affairs is to support an effective program for maintaining the Nation's purchasing power. This is essential in order to guarantee high living standards not only to industrial workers but to farmers and small businessmen whose prosperity is dependent upon the ability of workers to buy their products.

Since VJ-day, the take-home pay of industrial workers has been cut by an average of 25 percent through the termination of overtime and by down-grading. In some industries, notably in steel, in electrical goods, and in the automobile industry, the decrease has been even sharper. In the absence of an orderly program for maintaining purchasing power, labor has resorted to direct action of its own. This is the real reason for the strikes. The resistance of the management in some of these industries to take a realistic view of the reduced purchasing power of their workers is a blow not only at one group of our people but at the stability of our entire economy. A policy of low wages and high profits through high prices provides but a temporary gain to a small minority of people who possess concentrated economic power. It means ruin for the vast majority of the people who make up this Nation. Our large corporations have come out of the war with financial reserves greater by far than at any previous time in their history. These reserves have been safeguarded and expanded by special legislation. Congress must lead the American people in supporting the Nation's purchasing power. We must face this issue squarely. If this purchasing power is allowed to shrink, we will find ourself in another depression far more severe than that of the 1930's. It is the movement of the money through trade that sustains business, not the stagnant dollars hoarded away.

The only sure way that Congress can effectively solve labor-management strife is to enact the President's program for a 65-cent minimum wage, expanded social security, and other measures designed to develop the Nation's resources, maintain purchasing power, and assure a minimum of decent living for all Americans. In all legislation on economic matters, Congress must take account of the vast increase in productive capacity of this Nation. If we set our sights too low with respect to production goals and earnings and living standards of the great mass of the American people, Congress will again fail to meet the Nation's postwar economic problems.

One national emergency resulting from our do-nothing policy is in the field of housing. Systematic planning 2 years ago could have foreseen and met our present housing needs. In the present housing crisis, we must mobilize all available resources if we are even to come close to meeting the shortage of 5,000,000 homes. This cannot be accomplished by thinking in terms of the traditional goals of 300,000 or 500,000 housing units per year. We must raise our sights so that in 1946 we will produce at least 1,000,000 units and in 1947 2,000,000. This can be done, just as we produced 100,000 planes per year when men of little vision said we could not produce 50,000. But these goals cannot be met without active Federal planning and support. Congress should enact this month measures such as the Wagner-Ellender bill and the Mitchell-Kilgore bill. It must give the executive agencies the green light to aid and promote housing construction in every possible way. We must break the bottlenecks on short materials by using surplus supplies of the armed services, by enlisting the now idle facilities of war plants, and by introducing new construction materials and new types of housing. The Government must set the objective of a great number of low-priced housing units and not permit construction resources to be diverted to a comparatively small number of high-priced homes.

The shortage of housing, the cut-backs in take-home pay, and the constantly rising cost of living, are inflicting special hardships upon the returned veterans. These men are finding that the decent life for which they fought is being denied them by our failure to provide them with jobs at decent wages or to produce the goods they need. The war has uprooted these men from their homes, jobs, and families. Now the Nation has a serious obligation to these men. We owe it to our veterans to establish our economy on a sound, stable, and prosperous basis. Only in this way can we provide our veterans with decent opportunities to reenter civilian life. Congress must, in addition, provide solutions for the special problems of readjustment faced by veterans. For example, the Mitchell-Kilgore emergency housing bill is primarily concerned with supplying new homes for veterans.

The discharged veteran, even with his many problems, is still an object of envy to the millions of GI's who remain in the armed services. It has been said that our commitments in the field of foreign policy require a large army. This point of view has been urged particularly, though not exclusively, by those who advocate solutions of international problems by a display of American military might. Such a policy constitutes not only an injustice to the GI who is kept in the Army or Navy unnecessarily, but it prevents the development of mutual confidence among nations so essential to the building of a secure peace. There are only two areas in the world where the United States must maintain sizable armed forces. They are Japan and the one-fourth of Germany which we are administering. And in these areas large numbers of troops are required only to the extent that we fail to eradicate nazism and shintoism and fail to destroy the economic power of the Germans and the Japanese to make war. As many of you know, I have followed closely our policy in Germany. It is apparent that our military administrators there have so far failed effectively to carry out the Potsdam agreements

requiring the denazification and industrial disarmament of Germany. It has been suggested that to carry out these commitments would require a large occupying force for policing purposes. This is not true. If we eliminate speedily and effectively the German war-making power, we obviously have a much smaller policing burden. It is our administrators with cartel connections who are obstructing the elimination of their former German partners and who are in fact using the large occupying forces to hasten the reconstruction of German industry.

This reluctance to carry out the Potsdam agreement amounts to sabotage of world peace. It protects the German's industrial might, and German cartelists who have always spearheaded her aggressions. It tends to create suspicion and a lack of confidence among the Allies, particularly those who have been promised reparations in the form of dismantled German equipment to rehabilitate their devastated lands.

The 1946 Congress has a decisive role to play in securing the peace by implementing and strengthening the machinery of international cooperation. Congress must support the efforts for international regulation of atomic power. It has been urged particularly by short-sighted isolationists that we proceed independently with a view to maintaining an atomic armaments supremacy. I have talked with the scientists who developed the atomic bomb and they assure me that such a supremacy would be meaningless. For in a few years all major nations will know how to manufacture atomic bombs. And a small number of crude bombs could utterly destroy our great cities. In the meantime, our attitude would have generated an atomic armaments race of which we and the other peoples of the world would alike be victims. Secretary Byrnes has already initiated agreements providing for international cooperation in the field of atomic power. This agreement must be carried out in good faith. We must not give heed to the carping of isolationists who continue to advocate American unilateral action by their emphasis on secrecy, who seek to disrupt international negotiations by constantly questioning the honesty of our allies. It is up to us, who have the atomic bomb, to show our good faith by halting its manufacture and by furthering international efforts for the elimination of atomic weapons.

If we would build a lasting peace, we must cease giving aid and comfort to the reactionary forces throughout the world which are endeavoring to suppress patriotic movements of the common people of colonial and undeveloped countries. Many of these movements are comparable to our own Revolutionary War and have as their aim the winning of elementary economic and political rights upon which our own democracy is based. The people of the United States have nothing to fear from these movements. Their success will build free and prosperous nations with whom we can live in peace. It does violence to our American traditions to employ our military or economic resources to deny the hopes of peoples who should look to us as a model democracy.

Let us divest ourselves of the responsibility of supporting reactionary regimes which are odious to their own peoples. Saber-rattling canot secure the peace. Let us resolve that the cooperation and friendship among nations born in war and shall be strengthened in the peace which we must build together. In domestic affairs, let us provide decent living for all Americans by maintaining wages high enough to purchase the products of American industry and agriculture. Let us act to build peace abroad and create full employment at home. Let us release our surplus soldiers from the services and bring them back to homes and jobs.

Development of the REA Program in Nebraska

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Development of the REA Program in Nebraska," delivered by Claude R. Wickard, Administrator of the Rural Electrification Administration, before the Nebraska Association of Rural Power Districts, at its meeting at Columbus, Nebr., on January 25, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am always glad to have the opportunity to attend a meeting of the officials of the REA borrowers. Such meetings make it possible for me to become better acquainted with the people who are closely associated with this great program. I get much inspiration from meeting with these people. I find that they are invariably enthusiastic about the program, and are untiring in their efforts to make it of maximum benefit to the rural people in their areas. Such meetings give me an excellent opportunity to learn about the REA progress in the field. It is easier for me to get a clear picture of the problems in the different areas when I have an opportunity to visit with the people who are chiefly responsible for it. Of lesser importance is the fact that at these meetings it is also possible for me to give people first-hand my ideas about the program and to make a report as to what is being done by the national office to help the borrowers.

In my talk today it is my purpose to review the REA objectives as they relate to Nebraska and to discuss some of the problems attendant to reaching those objectives. It is only appropriate that when I speak in this State of REA objectives and accomplishments I mention the fact that much of the accomplishment of REA is due to the vision and courage and the untiring efforts of one of the greatest statesmen this Nation ever produced—your own George Norris. It was his conviction that the Government, in sound and practical ways, should help people live happier and more prosperous lives. He wanted to see our natural resources and our ingenuity for developing those resources used for the benefit of the great masses of people in this country. His desire to see happier homes and more efficient methods must, at least to some extent, have come out of his boyhood experiences when he lived on a farm in northwestern Ohio.

I heard Senator Norris describe one of his experiences which indicates that he, like so many other great men, was greatly influenced by a saintly mother. You will remember that his widowed mother had several children and that he as a youth had the great responsibility of assisting his mother in keeping the family together by helping to make a living for them. Times were hard and good-paying jobs were scarce. One of the sources of income in those days came at harvest time when a great number of men were employed in cradling the wheat crop and binding it by hand. Senator Norris explained to me that this work gave him an opportunity to earn money needed to buy the children's shoes and other clothes for the winter. There was great consternation in the neighborhood when the news spread that a man had invented a harvester which did away with all of the cradling and binding of wheat, and that one of these machines was already in the neighborhood.

On this particular occasion the youthful Norris had been away all week working in the harvest field. He returned home late on Saturday evening, very tired, and went directly to bed. The next morning when he arose he was confronted by his mother who asked him if he knew anything about the destroying of the new harvesting machine on a neighboring farm. He was questioned very closely by his mother. She knew that he had shared her anxiety about the way in which this modern invention might eliminate the need for so many people to work in harvest fields. He knew nothing about it. His mother was very happy to know that her son had not played a part in the destruction of property of other people.

This incident was never forgotten by George Norris. It must have intensified his desire to see that modern facilities are used to take the drudgery out of the life of rural people and make them more efficient in their daily tasks. Every farm wife and mother in America who has the REA service in her home owes much to George Norris.

Today, unfortunately, a little less than half of the farm homes in America have electricity, despite the great progress that has been made in the last 10 years since the REA was created. At that time, only 10 percent of the Nation's farms were electrified. Here in Nebraska, although great gains have been made in the last decade, nearly 70 percent of the farms are still without this most essential convenience. In addition to the farm homes which do not have electricity there are a great number of homes in small towns and villages which are unelectrified. There are also rural schools, churches and other establishments such as stores, shops and small industries which greatly need electricity.

In my estimation the first objective of the REA program is to reduce the number of unelectrified rural homes and establishments as rapidly as we possibly can. We must strive toward this objective with every means at hand until central station electric service is available to every rural area in this State and in all other States of the Union.

Before the REA was created only very thickly populated rural areas had the benefit of central station electric service. The outlook for people living in the more sparsely settled areas was dark indeed. The power companies said that it was financially impossible for them to provide service for the great majority of rural people. The REA has proven that this theory is absolutely wrong. Through REA loans and other assistance some 900 borrowers throughout the United States have been able to take central station service to over 1,400,000 rural consumers. These borrowers are furnishing energy to their consumers at costs lower than was thought possible a few years ago. The consumers are using the energy in larger amounts than was anticipated, and the borrowers are paying back their loans and interest. Only about 1 percent of the loans are delinquent more than 30 days and about $20,000,000 of principal payments have been paid back in advance of the date due.

Here in Nebraska since the start of the program $13,225,000 have been advanced to 28 borrowers to take electricity to 26,000 rural consumers. The latest statistics indicate that these borrowers have paid $2,700,000 on principal and interest due. In addition, they have paid $153,000 in advance of the due date. Many of them have bought war bonds. Only $3,400, according to latest information, is due more than 30 days.

These facts should convince all of the skeptics that it is possible for rural people

to ably manage their own central station electric facilities. It should be remembered that these records have been made despite the fact that the development of the projects and utilization of electricity have been hampered because of wartime scarcities.

For the most part, REA construction is financed by borrowing money from the Reconstruction Finance Corporation. The amount which may be borrowed for this purpose is established each year by the Congress. For the fiscal year beginning July 1, 1945, and ending June 30, 1946, Congress has made available $200,000,000 for loans to REA projects. Due to an unprecedented demand for REA service, $142,000,000 of this amount has already been allocated to the borrowers. In many States the funds are exhausted or nearly exhausted. Nebraska is one of these States. Out of the $200,000,000, $6,000,000, in round numbers, was set aside for Nebraska. Over $5,000,000 of this amount have already been allocated, and we now have on hand, or in process, over $10,000,000 in applications which have not been covered by allotments. In other words, with the fiscal year only a little over half gone, we have only $1,000,000 to satisfy $10,000,000 of demands for funds.

I have given you these figures because I want you to know just what the situation is so far as funds for allotment are concerned.

Several weeks ago I was honored by being invited to a breakfast of the Nebraska congressional delegation. I informed them at that time that REA funds for allotments would be exhausted in many States long before the end of the fiscal year. Members of the Nebraska delegation are always interested in the REA program. They were perhaps surprised to know that the largest amount of loan funds ever available to REA was not going to be sufficient to meet the demand. Here in Nebraska, as is generally true throughout the country, more people than ever before are anxiously seeking REA service.

Let us look briefly at the construction side of the REA program. For the Nation, in recent months, about 20,000 new REA consumers are being added each month. In Nebraska you have been able to connect about 635 new consumers each month. You and I, as well as the unserved people, wish we were extending the service to far greater numbers. REA borrowers, like everyone else engaged in construction, have been hampered by shortages of labor and materials.

The most serious shortage in the REA field has been that of poles. We have been making a special effort in the national REA headquarters to get the facts and to see that our program is hampered as little as possible by pole shortages. It is evident to us that the supply of poles is going to be inadequate to meet the demand unless entirely new sources of poles are found.

During late September we started on a definite program to step up production and treating capacity. Progress has been made. In the Douglas fir country on the north coast and in the lodgepole pine section of the Rocky Mountains several new operators are now turning out poles. Others are in the process of installing treating plants and arranging for timber.

The new operators and those definitely coming into production will have a capacity of some 500,000 to 600,000 poles per year. Interest among other prospective producers is keen. The prospects are bright that before 1946 draws to a close we will see treating capacity under way sufficient to care for all the lodgepoles that can be taken from the forests on a sustained-yield basis.

In the Southern States the labor supply is improving. One new commercial treating plant in east Texas is going in to supply us with poles. So the southern production is on the upgrade also.

However, the South can't supply all our need in the Central Valley States. Nebraska and other States west of the Mississippi must look to the Douglas fir and lodgepole pine country for a large part of their supply. These species properly treated make a long-life pole, according to the reports of wood experts. So much for what has been done and the prospects.

Now comes a darkening cloud over the horizon. The steel strike will reduce the supply of creosote. That oil is derived from coal tar produced in the coke ovens of the steel plants. There is a small inventory of creosote in the country.

Pole cutting can go forward, however. Thus a stock of white poles can be built up in the West to keep the treating plants going on an around-the-clock basis when creosote again becomes plentiful.

We will solve the pole problem and other construction problems in time. I pledge that the REA organization will give you every assistance. I am sure the time will come when we will be building REA lines much faster than we ever have before. I know that you and every other person connected with the REA program are going to be much happier when that time arrives.

In my opinion the pattern for the future REA development in Nebraska is clear where the REA projects have been well established and lines have been energized. Nebraska compares very well with other sparsely settled states so far as the percentages of farms electrified is concerned. In fact, it is ahead of 13 other states in the Union. Yet, there are 35 counties in Nebraska that do not have a single mile of REA line. For the most part they are in the sparsely settled areas in the States. Now, the people in those areas want electricity and need electricity just as much as they do in any other part of the Nation. Can they get it through the REA program? My answer is "Yes," if we have sufficient vision and courage. We must have the vision to see how much brighter and happier the REA homes of the future will be. We must try to visualize all the new uses that farm people are going to make of electricity to save labor and to produce better products. It should be clear to us by now that central station electric service is an investment not just in happiness but in more efficient farming. We can see now that not only do the REA borrowers pay their own way but that electricity pays for itself so far as the individual consumer is concerned.

We must have the courage to make plans now to take electricity to everyone in the project areas. We must lay out territory and design systems so that everyone in the project areas will be served in due time. This means that the people in the hills and on the plains will get electricity just the same as the people in the fertile valleys. The people in the small towns and villages in the sparsely settled areas should get their electricity from the REA projects. The same is true for the small rural industries and other rural establishments. In other words, we can make it possible for all rural people to have electricity only if we include all rural people in the planning of our projects. It is most essential to keep this in mind as we proceed with the REA program in Nebraska. In the last year 12 new projects have been organized in Nebraska. We should give these new projects every assistance so they can get started and gain needed experience and confidence.

We should take full advantage of the easier terms which Congress has provided through lower interest rates and longer amortization periods in order that more people can become REA consumers. Also, we must plan to make full use of the cheaper electricity which is made possible by the various hydroelectric projects in Nebraska and surrounding areas. This cheaper electrity means that more people can use the REA service and that all consumers can use more of it. Cheaper electricity means that all REA borrowers will make even better financial records.

The future is bright for the full development of the REA program in Nebraska if we make it bright. We need the vision and the courage of the pioneers who came to Nebraska in the face of adversity. We need the vision and courage of George Norris. You and I, as leaders in the REA movement, must never fail to have the proper vision and courage because we dare not fail the people in the unserved areas of this great State.

The Need for Housing Facilities and Housing Supplies

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release issued by the Chamber of Commerce of the United States stressing the need for housing facilities and housing supplies in the United States.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

WASHINGTON, January 25.—More than 1,100 cities in every State in the Union reported to the Chamber of Commerce of the United States today that lack of materials and equipment is primarily responsible for the current serious housing shortage encountered by veterans.

Replying to President Eric A. Johnston's inquiry for a report on their local situations and possible solutions the chambers of commerce in those cities and towns said four principal steps should be taken:

1. Overcome reluctance of OPA to make price adjustments urgently needed.

2. Speed up the release of unused Army barracks, prisoner-of-war camps and like buildings either for conversion to residential use or to be torn down to permit the lumber and other materials in them to be used for new housing units.

3. Release lumber and plumbing, heating and other equipment now in the hands of the Army and Navy.

4. Stop the diversion of lumber for export. (The Office of War Mobilization and Reconversion last week said that exports were not a major consideration.)

These replies were to this telegram sent by Mr. Johnston to the 1,735 chambers of commerce which are members of the United States Chamber:

"Reports from all parts of the country indicate increasing anxiety over inability of veterans to find housing. Please wire immediately report on situation in your community including what steps are being taken to relieve situation and what measures, in your judgment, would be helpful in speeding up the provision of permanent housing and of temporary housing where necessary."

The replies available to date showed 596 reporting the housing situation acute; 401 reported it serious; and only 75 said they had no housing problem at all. Only a small percent reported the number of houses needed, but recent studies indicate the acute need is somewhere between 800,000 and 1,000,000. About 880 of the chambers laid the housing shortage directly to lack of material, and 165 reported a lack of skilled labor.

Typical of the replies was this one from John D. Adams, general secretary of Des Moines Chamber of Commerce:

"Veterans' housing growing more and more acute. We are trying everything. Have been turned down on trailers and demountable

units. Now trying to get surplus wooden buildings for salvage and home building. Greatest need is availability of materials. We have adequate finances and labor to build necessary houses but lack lumber."

In the field of temporary housing the survey developed the fact that businessmen in some communities are forming local nonprofit corporations by popular subscription to finance construction where builders can't take the risks currently involved. The sponsor is the local chamber of commerce.

For example, Girard C. Vanrum, president of the St. Louis County Chamber of Commerce, informed Mr. Johnston of such a plan for Clayton, Mo. The city accepted a plan of the builders' guild to build 16 units of temporary housing for veterans, with the city providing sites tax-free. The entire construction cost of the project would be subscribed by citizens, and the units would be built at no profit.

Also typical was the report from William E. Morrow, secretary of the Louisville Board of Trade:

"Housing situation here very critical. No vacancies in normal supply except where family moves to another city. Existing housing utilized fullest extent; 5,000 to 7,000 families doubled up; badly overcrowded conditions.

"War housing center has approximately 3,000 applications waiting to be filled. At present 300 vacancies available to veterans at Charlestown, Ind., war-housing project but rapidly being filled. City has applied for conversion surplus barracks at Bowman Field to provide approximately 300 units and for removal of 50 temporary housing units to Louisville for Negroes. Approximately 31,000 persons in services from this county yet to return. This means greatly increased overcrowding next 3 months. Not over 500 to 1,000 homes can be built here this year by private capital, number depending on availability of materials, but none ready for occupancy for 6 months.

"Private conversions of existing single-family structures into multiples practically exhausted during war. In our opinion, Government assistance to speed-up production prefabricated permanent style housing offers quickest and best answer to housing need with least economic damage to general housing values. That program would provide housing faster than temporary housing could be built. More temporary housing in our opinion very damaging to economic values."

The United States Chamber said that it was too early to appraise the working of the new Government program to give priorities on materials to builders of homes for veterans which do not cost more than $10,000, except that, obviously, if materials are not available, priorities become only slips of paper.

Many applications have been made under the congressional appropriation of $200,000,000 to permit the Federal Public Housing Authority to move temporary housing units to places badly in need of them. The survey showed that this procedure was adopted only as a last resort. In New England, the cities and towns showed no interest in this plan, primarily because of the colder weather.

How We Can Make Jobs for Millions

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. McCARRAN. Mr. President, in the January issue of the American magazine there appears a very able and scholarly article by Mr. J. A. Krug, retiring Chairman of the War Production Board, entitled "How We Can Make Jobs for Millions," with the subheading, "If you want to have a good job tomorrow, or any job at all, this article is of vital importance to you. Here is the first clear, authoritative explanation of a little-understood subject—the need for redistributing industry throughout our underdeveloped States. Decentralization is the best insurance, says Mr. Krug, against the threat of mounting unemployment."

I ask that the article, together with the subheadings, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW WE CAN MAKE JOBS FOR MILLIONS

(By J. A. Krug, retiring Chairman, War Production Board)

IF YOU WANT TO HAVE A GOOD JOB TOMORROW, OR ANY JOB AT ALL, THIS ARTICLE IS OF VITAL IMPORTANCE TO YOU. HERE IS THE FIRST CLEAR, AUTHORITATIVE EXPLANATION OF A LITTLE-UNDERSTOOD SUBJECT—THE NEED FOR REDISTRIBUTING INDUSTRY THROUGHOUT OUR UNDERDEVELOPED STATES. DECENTRALIZATION IS THE BEST INSURANCE, SAYS MR. KRUG, AGAINST THE THREAT OF MOUNTING UNEMPLOYMENT

When I was a boy, some of our industrialists eager to expand, looked wistfully at China, with its millions of consumers, as a future market for our goods. The only difficulty was, as it is now, that the Chinese could not afford to buy our goods. Today, some of our industrialists, with facilities to serve the whole world, advocate the building up of a huge export trade with Europe as an outlet for the vast productive system we created during the war. Again they are faced with the same difficulty. Can bankrupt Europe afford to buy our goods?

But all is not lost. There is yet another country they may serve—a country as large as Europe, leaving out Russia, unimaginably wealthy in natural resources, highly civilized, and ambitious to get ahead in the world. That country is the western half of the United States; indeed, more than half, because it comprises 61 percent of our national area. It embraces the States of North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Montana, Wyoming, Colorado, New Mexico, Idaho, Utah, Arizona, Washington, Oregon, Nevada, and California.

These 17 States contain 21 percent of our population but account for only 11 percent of our manufacturing. But they produce half of the Nation's minerals and contain 70 percent of our timber. During the war they were equipped, through the development of water power, to provide about 75 percent of our electric energy.

TOO MUCH OF OUR INDUSTRY WAS CONCENTRATED IN DETROIT, BETHLEHEM, PITTSBURGH, AND SUCH GREAT CENTERS. IF THEY HAD BEEN DESTROYED BY BOMBERS WE WOULD HAVE BEEN PUT OUT OF THE WAR

But, strangely, despite its great wealth, this land, with its millions of ambitious people, may soon fall very short of the all-out consumption that will be necessary if we maintain all-out production. Already the shadow of mass unemployment falls across these 17 States.

Here is what has happened: Since the war began, it has been estimated, at least 3,000,000 people in this region have moved to its urban centers to find employment in war plants or in the many services which spring up around centers of population and prosperity. When the war plants are all closed, these 3,000,000 probably will be out of work. They can't all go back to the farms, now that farms are mechanized and can be operated by fewer workers.

Thousands by thousands, this region's 2,000,000 servicemen are returning home. Many of them who were on farms before the war are coming back with new skills they were taught in mechanized warfare. They now want jobs in industry. But how can they be accommodated in a region which accounts for only 11 percent of our manufacturing and which normally employs less than 1,000,000 persons in industry?

Thus, the potential unemployment in the West may mount into millions before we see the end of it unless we use the utmost initiative, daring, imagination, and resourcefulness to meet the situation. If we don't solve the problem, these millions and the millions dependent upon them cannot buy goods from the East. If the factories of the East aren't going full blast, unemployment will begin to snowball in other parts of the country.

I am not being pessimistic. There is a solution, in which every American may participate, which I shall discuss later in this article, but first I want to speak of still another country, which is also a great potential market for top production.

EVERYTHING NECESSARY FOR THE DEVELOPMENT OF INDUSTRY IS AT HAND IN THE WEST AND THE SOUTH, AND YET THEY HAVE NO INDUSTRY—WHY?—ONE REASON IS THAT SOME INDUSTRIALISTS IN THE EAST WON'T LET THEM

This country is rich in fertile soil, timber, potential hydroelectric power, and strong, intelligent people. But many of these people are poor, although undeveloped wealth lies at their doors. This future market for the "exports" of the industrial East also is part of the United States, consisting of the contiguous States of Arkansas, Mississippi, Alabama, Tennessee, Georgia, South Carolina, North Carolina, Kentucky, West Virginia, and Virginia.

While this vast region contains 20 percent of our population and embraces 39 percent of our farm population, it receives only 11 percent of our national income and receives only 20 percent of the farm income. Figures are dry, indeed, compared to the lines of a good play, but in these figures lies the tragedy of the South—the drama of a fallen empire. And as long as it stays down we all stay down. If the income of this region were raised to the per capita level of the United States as a whole, it has been estimated that the national income would be increased by $10,000,000,000 annually. That is money with which to buy goods in the East and elsewhere.

While this region had the highest ratio of investments in war plants and facilities during the war, in terms of population, it had the smallest volume of war contracts—only 69 percent more than its 1939 production. And this great region, believe it or not, has only 10 percent of the Nation's manufacturing. Those war plants and facilities, for the most part, consisted of shipyards, airplane factories, and chemical plants, all requiring a high rate of investment. One by one these industries are ceasing to operate. Workers are drifting back to the farms. Most of the farms are poor. And labor will be poorer when electric cotton pickers begin to do the work of millions.

What is the chance of boosting the income of this region? It looks as if it may go down, rather than up. It will, unless we act, and act soon. And remember, if the workers of the South have no jobs they can't buy goods, and our eastern industries go to pot and eastern workers lose their jobs. The crisis, then, begins to snowball.

You don't have to be a Joel Kupperman to see by now that 75 percent of the geographical area of the United States accounts for only 20 percent of our manufacturing. And we are the greatest manufacturing Nation on earth. And this three-quarters of our Nation, with 40 percent of our popula-

tion, also contains most of our basic wealth, our natural resources. What a paradox! And now it in faced with something approaching economic disaster. Why?

The answer, by now, should be obvious: Because it has no heavy industry to speak of to support its increasing urban populations and, in the case of the 17 Western States, to draw new population. These Western States could support many new millions of population if there were industries to maintain them. Without heavy basic industries, such as steel, aluminum, and such, there can be no fabricating industries—not with the steel industry in the East. And without a multiplicity of industries, businesses and services do not increase. They are all tied up together.

At a glance, you may think I have contradicted my original thesis—that jobs and incomes in these underdeveloped regions of the Nation will mean greater manufacturing production in the East. But how, you may ask, if those regions have a greater share of manufacturing, and themselves are producing goods, will they not be competitors?

That is shortsighted hokum. I am speaking long-range of a nation which can support a far greater population than it now has, of a nation whose productive capacity, even though we served the world in the war, has never been realized. Full employment and a higher rate of per capita income, a larger population, and a level of living higher than we have ever dreamed of would enable us to cover the Nation with factories and deprive no region of productive opportunity.

As the years go by, given peace and the fulfillment of the objectives of the war, Europe and Asia will be able to buy again, and our surpluses can go to them. With the industrialization of the vast West, we shall be better able to serve Asiatic markets than ever before. The West, we may have forgotten, has a seacoast, although, before the war, it had little opportunity to use it except for fishing and bathing.

And now for the most incredible fact in this story:

While 75 percent of this Nation has only 20 percent of our manufacturing, less than 10 percent of it has 65 percent of the manufacturing industry. This tiny area is pretty well concentrated in the northeastern region of the United States. It consists of Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Ohio, Michigan, Illinois, Delaware, and Maryland.

This region—it might better be called a district—produces only 4 percent of our lumber and 26 percent of our minerals. In natural resources, when compared with the vast underdeveloped regions of the Nation, it is comparatively poor. Yet it contains 43 percent of our total population and receives, as of 1940, 56 percent of our national income. More than one-half of the $17,500,000,000 spent on plants and facilities for war production throughout the Nation was spent right in this little area, which, in 1939, paid 75 percent of the Federal income taxes.

Incredible? Yes; and incredibly unjust. Of course, in the war emergency, the Government had to take advantage of facilities already in existence, and they existed for the most part in these 11 States. But why?

There was a time when our economy was very simple. The steel industry was in Pennsylvania because fuel, water transportation, markets, and a labor supply were near at hand. Around steel sprang up the fabricators—the makers of machinery, railroad rolling stock, washtubs, and so on. In New England, where water power, good ports, and a dense population were available, other great factories came into being. It was all sound and necessary. The rest of the country was left to the farmers—and the Indians.

But since that time we have discovered America. We have found that most of the wealth of the Nation lies elsewhere than in the little empire of the Northeastern States—that the West and the South are far richer in timber, ore, and agricultural products for fabrication than the 11 little States which have two-thirds of our industry.

We have found, too, that the now underprivileged and underdeveloped regions of the Nation can produce more power more cheaply than the rest of the Nation. Our Government has already developed some of it in such projects as the Boulder, Bonneville, and Grand Coulee Dams in the West and the TVA power project in the South, and has outlined for the future many other projects, including the St. Lawrence seaway and hydroelectric project, and new dams on the Columbia River and in the Missouri Valley.

The vast western region has, through hydroelectric installations, more than seven times the electric power of the little industrial empire of the East—and cheaper power. The Nation is crisscrossed with highways and railroads. The South and the West have seacoasts. Everything necessary for the development of industry is at hand in these regions, and yet they have no industry. Why?

One reason is that some of the industrialists of the East won't let them. For years they have lobbied and publicized their cause. They are still doing it. They cry their old economics, which won't stand up any more. They don't want to decentralize industry. No labor out there, they cry. To them I say that skilled labor has already been widely distributed in the United States because war plants were widely distributed. No transportation out there, they say. There is cheaper transportation now than ever before, because recently the Interstate Commerce Commission granted an equality of freight rates to the West and Middle West, which will make it possible for shippers there to compete with the Panama Canal. Why wasn't this equality granted before? The established and entrenched magnates were afraid of competition. If they persist in their ways, they will ruin not only themselves, but the national economy as well.

We built many war plants in the nonindustrial regions during the war, not necessarily as economic measures always, but for purposes of strategy. Too much of our industry was concentrated in Detroit, Bethlehem, Pittsburgh, and such great centers. If they had been destroyed by bombers, we would have been put out of the war. We had to spread until the danger of bombing had passed. But has the danger passed yet? Do not consider the possibility of our destruction a fantastic idea, lest we have another more disastrous Pearl Harbor.

A dozen long-range atomic rockets might simultaneously wipe out the principal industrial centers of the United States. Scientists of other nations will soon know our secrets; they may soon have greater secrets of their own. It would be wise to move quickly—just as a matter of security.

But our first consideration is living, not dying. The underprivileged regions of our Nation also want to live, and live well. If it is not immediately sound economically to decentralize and more widely distribute industry in this country, to provide jobs and incomes for all, it will be in the long run. Factories will attract population; population will create markets. If it is necessary, the Government should see to it that the war plants now being closed in nonindustrial regions are converted somehow to the purposes of peace and maintained until they can stand on their own feet. It may be necessary. This is not a matter for a near-sighted accountant, but for a long-range Government policy of credit and interest.

The great $200,000,000 Geneva war steel-producing plant near Provo, Utah, was built and operated, without fee, at the request of the Government, by United States Steel. Later its officials considered the idea of buying or leasing it. Then, presumably because of rising pressures against big business, they announced no action would be taken in the matter. Twenty-nine other of our 30 large steel concerns were asked to bid on the plant. They made no offers. Will Geneva be sold at auction for salvage? It would be a crime. Around Geneva will spring fabricators, businesses, services, prosperity. And what of the war-born airplane plants? Must they be doomed because we lack enough imagination to find peacetime uses for them?

During this war, mostly in the nonindustrial regions, the Government built 9 aluminum plants and 45 aluminum fabrication plants, at a cost of $760,000,000 of public money. The American Aluminum Corporation of America in the East could not produce enough of this metal to keep our planes flying. Can we keep these plants open, or is the industry going back to the East, to limited production, and higher prices? If we can't immediately use enough to keep the best of the western plants running, it seems to me that the surplus ingots might be stored in a Government stock pile against shortages or emergencies. In my simple economics, the wealth of a nation is measured by its stores of materials, its plants, its distribution network, and its people. We cannot afford to close down plants and lose the contribution they might make to our economic security.

Walter P. Reuther, vice president of the Automobile, Aircraft, and Agricultural Implement Workers of America, suggested recently that the railroad rolling stock of America, broken down in war services, might be rebuilt with aluminum, so as to put fast, streamlined, lightweight, and inexpensive cars on the rails of the Nation. He suggested, too, that airplane plants would make ideal fabrication centers. It's an idea. That's what we need if we are to save the Nation economically—ideas for the continuation of what decentralization we have already accomplished, and ideas for new industries in the underdeveloped regions. Incidentally, if we had more plants in the rest of America, strikers in the East couldn't tie up the production of the Nation as they have been doing.

Already, I am glad to say, legislative action will soon be proposed to enlist the Secretaries of the Departments of Labor, Commerce, and Agriculture in a joint committee to recommend other legislation to stimulate industrial development in the underdeveloped three-fourths of the Nation. They may attempt to remove such handicaps as inadequate sources of loans for new enterprises, burdensome taxes, discriminatory transportation rates, and lack of research information for small manufacturers and businessmen. This last is most important. Having had little industry, the underdeveloped regions are not industrially minded. They should not only be aided in research problems, which they cannot solve without laboratories, but be helped to find industrial opportunities suitable to their districts. There are other bills in Congress which make provisions for such services.

So many of these neglected States have opportunity at their door. The plastic industry is in its infancy. Ramie, the new fibrous plant, grown with a minimum of cultivation, can be produced on any land that grows cotton. It is said to make better canvas than cotton or flax and better rope than hemp. Combined with other fibers, it makes excellent suiting and cloth. Can it be fabricated on the spot in the cotton country? Here, perhaps, is a new industry.

What of the plastic crops, such as soybeans? Glucose is now being made from potatoes; potable alcohol, which can be used for fuel, from wood. What of the great magnesium plant at Velasco, Tex.? Around it, no doubt, can spring up fabricating industries. Aluminum is available not far away. The alloys could be substituted in many cases for copper, of which there is a shortage, and copper could be stock-piled.

These are not necessarily practical hints; I pose them merely to excite the imagination of businessmen and investors in this vast underdeveloped empire within our own country.

One does not need to wait for legislation. I think every chamber of commerce in the country should be exploring, planning, suggesting, at this very moment. Every returning serviceman should be thinking, thinking, and planning for his opportunity in this vast country of opportunities. The individual worker, about to lose his job in the West or South, may give his manager a practical suggestion for a new industry that will save the jobs of thousands.

If you, or you, no matter where you live, are to have a good job tomorrow, or any job at all, believe me, this is your personal problem, to promote a thriving industry in the underdeveloped States.

It is the job of the people in the States which I have not mentioned—Maine, New Hampshire, Vermont, Indiana, Wisconsin, Minnesota, Iowa, Missouri, Florida, and Louisiana. They have a relatively balanced development, but they may not continue to have it if the standard of living declines in this country.

It is the job of the industrialists of the East, too, if free enterprise is to continue and the country flourish.

But only recently I heard an industrialist cry out against the decentralization of industry in these unreasonable words: "Want to tear down the big cities, eh? Destroy the East? Give everybody a little shop and a truck garden?"

You couldn't tell him no. He wouldn't listen. He ignored my assurance that what is proposed is supplement, not destruction. He didn't believe that all of us could work together and prosper together. But we can. We did it magnificently in the war. We can do it again. The best example, and it has many ramifications, was our vast wartime power pools.

Governmental and private utilities can operate together peaceably, profitably, and for the good of all. In an electric-power emergency during the war, all the Nation's power systems—private, municipal, county, State, and Federal—were assembled in great operating pools. By this means, without new installations, we increased our output of electric energy fivefold.

For example, all the power systems in Tennessee, Alabama, Georgia, Florida, North Carolina, South Carolina, and Kentucky, were tied together and operated as a single network. This network, through a tie-up at Memphis, was linked, in turn, with the great power pool in the Southwest, embracing the utilities of Oklahoma, Kansas, Arkansas, Texas, and Louisiana. Similar pools were established in the Pacific Southwest, Pacific Northwest, the Middle West, New England, and in the Middle Atlantic States, all of them tied together.

When a Cleveland war plant demanded more power than its Midwest pool could fill, the emergency was met by the automatic opening of floodgates at a hydro dam of the Southwest pool in Arkansas. Here was cooperation

Now the private power companies have reported that they will continue expanding during this postwar period at the rate of $1,200,000,000 a year. Their programs will be combined with public programs of electrification such as TVA and will serve to hasten the spread of power into every habitable section of the Union. With power must come industry.

Before TVA, the Government had engaged in separate and unrelated projects of flood control, navigation, forestry, agriculture, and research. In TVA it combined, for the first time and in one comprehensive program, the purposes of control, conservation, and industrial development, while promoting the well-being of all the men and women of a region. It worked; industry knows it worked.

The interests of public and private systems thus welded together in the valley of the Tennessee add progressively to the Nation's wealth. Because of its combination of skills and experience in working together, the organization that brought them into being and operates them, itself constitutes an added national resource.

It is a pattern of power that has made possible the dawning atomic age, and it is destined to harness this power for an epochal advance in civilization. It is also a pattern for national teamwork, which alone will make all of us great and prosperous. It should silence the noncooperative opponent of decentralization, whose very selfishness will destroy him unless he sees the light.

An Equal Pay for Equal Work Bill

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1946

Mrs. LUCE. Mr. Speaker, Americans generally agree that the spirit of the Constitution is a guaranty of equal opportunity for every human being according to his talent. We all know that the fulfillment of this ideal of the founding fathers has yet to be achieved. Yet we also are aware that we have made very substantial progress toward the achievement of the ideal during the century and three quarters of our national independence. No where else on earth has an individual had so much opportunity to make the fullest use of talent as in the United States. That is still true today, although the difficulties of demonstrating talent in an industrial society are much greater than in an agricultural or frontier community.

It is the highest duty of government, according to many of our foremost authorities to maintain the balance between mass pressures and the right to development of the individual citizen. That is the contrary of attempting to liberate mankind by classes or by color, creed, and partisan allegiance. In the spirit of the Constitution it is the essence of a free society. Under present conditions of industrial employment the basic guaranty of such individual development is the assurance of equal pay for equally efficient work, without respect to the sex, color, religious, or political belief of the worker. Unless this guaranty is supported by law there is no sufficient safeguard under present conditions for those members of minority groups who may be forced by necessity to undertake employment at less than the wage a more fortunately placed individual may get for performing the same task. There is no reason why some sweatshop owner should be able to hire a woman bushelman at less cost per garment than a man, or why a Negro welder should receive less than a white welder, or why Christians are unwelcome in some industrial plants, and Jews in others, as we all know to be the fact and as innumerable volumes of statistics and reports attest.

Under our basic charter and our traditions the only fair gage of payment for work done is the quality of the work itself and not the peculiarities or prejudices of the worker or the employer. Violation of this principle will immeasurably complicate the present industrial unrest and will react unfavorably upon the veterans who are now beginning their readjustment to civilian life.

For these reasons I have today introduced the following bill providing for the elimination of unfair wage practices by establishing in law the principle of equal pay for equal work:

A bill providing for the elimination of unfair wage practices by establishing a principle of equal pay for equal work without respect of the sex or color of the worker

Be it enacted, etc., That the Congress hereby declares that the existence in industry of wage differentials based on the sex or color of workers who perform equal work with equal efficiency is prejudicial to the common welfare and is without basis in equity or in law or economics.

SEC. 2. That the Congress finds that such practices tend to increase labor disputes, to establish false standards of employment, to raise artificial and unjust barriers against improvement of living standards by discrimination against women and colored workers, and that this condition is without adequate relief in present statutory law.

SEC. 3. Therefore, it is hereby declared to be the purpose of this act to establish as a principle of all employment, subject to the exercise by Congress of its power to regulate commerce among the several States, that, equal pay in respect to actual wages, hours of work, and working conditions, shall be given to all those who perform equal tasks with equal efficiency, irrespective of whether such employees are men or women, white or colored.

SEC. 4. This act shall be known as the Equal Pay for Equal Work Act of 1946.

Birthday of the Late President Roosevelt

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 31 (legislative day of Friday, January 18), 1946

Mr. JOHNSTON of South Carolina. Mr. President, in view of the fact that yesterday was the anniversary of the birth of the late President Roosevelt, I think it is appropriate that I should ask unanimous consent to have printed in the RECORD a poem which makes an appealing reference to the late President. The poem was written by George W. Ward, who is a native of my State of South Carolina.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

We honor the birthday of one now past.
A birthday destined through ages to last.
As we cannot say greetings with his clasped hand,
We'll carry on the work of our honored man.

'Tis many moons since he from us has gone,
But the March of Dimes lives on and on,
Preserving the work of Warm Springs Foundation,
That it may give its good for our Nation.

Denied now his natal cake to see,
One counting candles three score and three,
Yet spared in life a foundation to lay,
Where unfortunates have a comfortable stay.

Receiving the best of science and skill,
While the March of Dimes pays the bill,
With President Balls adding their share,
As F. D. R. is honored year by year.

Being struck with this malady himself,
And of his walking strength bereft,
And doomed to aids and braces to be led,
Yet ne'er complained or bewailed, 'tis said.

Still in celebration we miss his presence,
Who heedless of handicap was ere life's essence,
With his eternal stately smile,
Lifting man up and making life worthwhile.

—George W. Ward, a native of South Carolina.

Naval Torpedo Station, Newport, R. I.

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD I include joint resolution of the General Assembly of the State of Rhode Island, reciting the hardships inflicted upon a large number of civilian employees as a result of the Navy Department's decision to terminate the manufacture of torpedoes at Newport—a station established 75 years ago—and transferring this activity to Forest Park, Ill., a plant built during the war to supplement the requirements of torpedoes needed during the war.

There is grave question in my mind as to the authority for such action by the Navy Department without a specific directive from the Congress. Utter disregard of the human element involved is most regrettable.

Newport is the birthplace of the torpedo. There it was invented and improved over the years by men whose craftsmanship is unexcelled. Many of the men who have been discharged from the station have spent their lifetime on this important work. They have married and raised families and they own their own homes. With the removal of the torpedo factory from Newport these men, many of them with 25 and 30 years of civil service to their credit, and because they are only around their fifties, are thrown out into the street without the benefit of civil-service retirement—something that had been held out to them as an incentive to retain their employment at the Torpedo Station, the only industry in the city of Newport.

While too young to be eligible for civil service-retirement benefits they are told they are too old when they seek positions in private employment. This is a most regrettable fact and I believe is a situation which Congress should take steps to correct.

In view of the small amount of torpedo manufacturing scheduled for the immediate future I strongly urge that what work in that line is available be concentrated at Newport. This would not only be more economical from a point of view of finance but it would also be a gesture of fairness and justice for the present and former employees of the Torpedo Station and would prove of great help to the economy of the city of Newport. Other work for which the station is equipped, should also be assigned there.

In addition, prompt action should be taken on my bill, H. R. 4718, now pending before the Civil Service Committee, to provide that civil-service employees with 25 years of service to their credit be given the full benefits of retirement as now computed under existing law for a longer period of service.

Throughout the war we were given to understand that the construction of facilities to aid the war effort were not to supplement our regular naval facilities and not to be substituted in the postwar period for the prewar Naval Establishment.

The action taken by the Navy Department in closing the manufacturing facilities at Newport is contrary to the understanding of all of us who did everything possible to expedite the closing of the war by furnishing additional war facilities. It is most unfair to have the Navy Department now take advantage of the situation to throw out of employment men of greater skill who unselfishly trained inexperienced help to man war facilities and who now find that those whom they trained are being brought into civil service to man in the postwar facilities that have been built during the war and that they, the experienced craftsmen, are being thrown out into the streets without even the consolation of receiving civil-service retirement benefits.

I trust that the Congress will consider the merit of our plea and see to it that justice is done to the people of Newport.

The resolution follows:

House Joint Resolution 587

Joint resolution protesting emphatically against the decision of the United States Navy Department to terminate the manufacture of torpedoes at the United States Naval Torpedo Station at Newport, R. I., and the transferring of such activity to Forest Park, Ill.

Whereas the United States Naval Torpedo Station at Newport, R. I., was established by act of Congress approximately 75 years ago and is one of the oldest naval institutions in the country, a New England institution as well as a Rhode Island one; and

Whereas there is serious question upon the part of the citizens of this State concerning the right of the United States Navy Department to substitute for the main plant at Newport, R. I., established by act of Congress, a temporary war activity for the future manufacture of torpedoes; and

Whereas the termination of the activity at the Naval Torpedo Station at Newport, R. I., has caused extreme hardship to hundreds of civil-service employees who have given the best years of their lives to the Federal Government service only to learn that involuntary separation in a very large number of cases will mean loss of retirement benefits; and

Whereas the said termination of activity presents a serious unemployment problem in a community which has depended over the years upon torpedo manufacture as practically the sole industry in the city of Newport; and

Whereas a large number of former employees at the Naval Torpedo Station have their families and homes to support and maintain and find it a severe sacrifice or impossible to move out of Newport to find new employment: Now, therefore, be it

Resolved, That the members of the general assembly protest earnestly and vigorously the decision of the United States Navy Department to terminate the manufacturing of torpedoes at the United States Naval Torpedo Station at Newport, R. I., and the transfer of such activity to Forest Park, Ill., directing the Senators and Representatives from Rhode Island in the Congress of the United States to use every effort at their command to halt this said proceeding and to have said decision reconsidered; directing the secretary of state to transmit duly certified copies of this resolution to the Honorable Harry S. Truman, President of the United States of America, to the Secretary of the Navy, and to the Senators and Representatives from Rhode Island in the Congress of the United States.

What a Tangled Web We Weave When—

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of January 30, 1946:

MR. ROOSEVELT'S LAPSE

Secretary Byrnes has now confirmed the Russian contention that at the Yalta Conference in February 1945, a secret three-power agreement was made promising the Kurile Islands and southern Sakhalin to Russia after the defeat of Japan. The news comes as something of a shock. It shows that the late President Roosevelt was not entirely candid when, some time before his death, he said that, aside from the agreement to give representation to the Ukraine and White Russia at the United Nations Conference—that fact leaked out not very long after Yalta—no other secret agreements had been made at the Crimea Conference.

It is true that at the time Mr. Roosevelt made this statement Russia was still neutral in the Pacific war. It is also true that any revelation as to the future disposition of the Kuriles would have tipped off Japan regarding Russia's intentions. A valid argument could therefore be made for the secrecy of the agreement. But this does not explain Mr. Roosevelt's assurance. Nor does it explain why President Roosevelt kept the arrangement secret even from the State Department. Secretary Byrnes says that he did not hear about it until after Japan's defeat. It appears doubtful whether former Secretary Stettinius was informed. And there is no copy of the agreement in the State Department archives. No wonder that when asked about the Kuriles at a press conference on January 22, the then Acting Secretary of State, Dean Acheson, said that it was his understanding—now proved to have been mistaken—that Russia was only to occupy the Kuriles, not to keep them permanently.

The fact is that at Yalta President Roosevelt was a very sick man. This is a charitable explanation not only of his lack of candor but also of the arrangement itself. Had Mr. Roosevelt been in full vigor, he would no doubt have hesitated to accept such an arrangement. It was not within Mr. Roosevelt's authority to give the Kurile Islands to Russia or anyone else. That can

only be done by treaty, which means with the Senate's advice and consent. Accordingly, the Kurile arrangement must be regarded as tentative rather than final.

Evidently Russia was promised the Kuriles outright with no strings attached. No quid pro quo was asked or given. Nor was any question raised about putting those strategically important islands under international trusteeship. This we must now try to do. The American Government ought not to oppose the cession as such. For strategic reasons, they are just off Russia's coast, those islands are vital to Russia's security, and there can be no valid objection to Russian occupation of them. But we must press Russia to accept the same kind of trusteeship arrangement for these islands that is made in respect of other Pacific islands. The whole trusteeship arrangement is endangered by the new revelation.

An Open Letter and Reply Thereto

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 30, 1946

Mr. HOFFMAN. Mr. Speaker, in response to the President's fireside request that constituents put the heat on Congressmen, the Hastings (Mich.) Banner, published and edited by Richard Cook, on January 10, 1946, printed an open letter addressed to me, which is as follows:

AN OPEN LETTER TO CONGRESSMAN CLARE E. HOFFMAN

DEAR CLARE: President Truman in his address to the Nation Thursday evening suggested that the people back home put heat under their Representatives in Congress to speed up action on perplexing domestic problems—preferably, we presume, the sort of heat which would force Congress to accept bills and measures of his own choosing.

So, here goes.

In the first place, Clare, I recognize that Congress is not an efficient institution. Much of the criticism directed against it is deserved. It is a highly political body—just as political, in fact, as the executive branch headed by our President. Many of its actions appear to be unduly influenced by concern over some forthcoming election—just as Presidential policies are.

But in spite of all its faults, Clare, I hope that none of us lose sight of the fact that Congress is the one and only barrier which stands between the people of the United States and the ever-expanding tentacles of the Federal octopus.

Frankly, Clare, I fear this ever-growing Federal power which concentrates too much authority in the executive branch of government and tends to give us government by Federal bureau and commission instead of the representative form of rule our Constitution was supposed to provide and protect.

Personally, Clare, I like Truman. I don't think he ever aspired to the Presidency. I don't think he was guilty of false modesty when he said that the job was too big for him. But fate decreed otherwise and so he is in there pitching. However, sympathy for the man and the job he is trying to do, is no reason why we should automatically support every measure he advocates—especially when those measures mean an extension of Federal power and bureaus.

A powerful Federal Government is not necessarily a benevolent one just because it is in the United States. The secret of democratic rule is a proper balance of power between the executive, legislative, and judicial branches of government. During the depression years of the thirties and continuing on into the war years, an undue amount of power was concentrated in the executive branch. During the war years, this was an utter necessity. But now that the emergency is over, the executive branch appears very reluctant to loose its hold on these extraordinary powers.

Frankly, I hope that Congress never again forgets that it is the duly elected representative of the people, nor that it has been granted a position of great responsibility and dignity by the Constitution of the United States.

So, Clare, when a President appeals to the people to "put the heat" under Congress to force support of a legislative program he sponsors, I hope that all of us will realize what we are being asked to do.

It is our privilege, Clare, to write to you as our Representative in Congress—either in praise or criticism. If such communications represent independent, thoughtful opinion, I believe you will agree that they perform a valuable function (even if you fail to agree with the thoughts and conclusions expressed). But, if the public or any considerable portion of it is stampeded into bombarding Congress with critical broadsides merely in response to a Presidential request, that is a dangerous form of mob action aimed at undercutting the authority and prestige of one of the most important of the three props of our democracy—the legislative one.

Having vivid memories of what can happen when Congress abdicates its responsibilities and becomes a mere rubber stamp for executive authority, I have no wish to see the experiment repeated.

President Truman has frequently stated that he would like to see an end of Government paternalism and a more definite trend toward individual initiative and free enterprise. Yet, Clare, it seems to me that most of the measures advocated by the President call for a still further extension of Federal powers and controls. In this respect, you have to judge a man by what he does. Good intentions are nice—but nothing more.

As to the specific measures which the President advocates, I cannot agree with many of them. Congress, it seems to me, will be accomplishing something useful if it does no more than prevent some of these questionable measures from becoming law.

I am not in favor of the President's fact-finding plan (so-called) to settle labor-management disputes. It sounds reasonable on the surface but I fear that it is merely an entering wedge for Federal control of wages, profits, prices, etc., all of which is not consistent with free enterprise—and it was free enterprise not federally regulated enterprise, which changed the United States from a wilderness to the world's leading industrial power in less than 200 years.

Ability to pay is something which changes from quarter to quarter and year to year. It is something which depends on wage costs, material prices, and efficiency in production. Frankly, I doubt the competency of any Government bureau to arrive at a sound formula to determine "ability to pay."

As to extending the Price Control Act beyond June 30, it seems to me that if you use your own best personal judgment, not many will criticize you—no matter how you vote. It is a sharp question as to whether OPA is now doing more good than harm or vice versa. It seems to me that OPA's attempt to hold artificial retail price ceilings (while the Government, itself, is upping production costs by encouraging wage boosts and lifting ceilings on many of the materials which go into finished products) is slowing the reconversion effort and laying the groundwork for a long series of labor-management disputes. Right now, I can't go out and buy a white shirt at present ceiling prices because none are to be had, although I can go out and get plenty of sport shirts at fancy prices. Under OPA, the maker of ordinary shirts is denied the privilege of an ordinary profit because of OPA ceilings, but the fancy shirt maker can produce the limit at really fancy profits. Butter is short not because there is a scarcity of milk, but rather because existing price ceilings and production costs, make butter a comparatively unprofitable item to market. White shirts are cheaply priced if you can get 'em—but you can't get 'em and butter is not expensive but there isn't much of it. That is life a la OPA and illustrates what happens when Government officials (who don't always seem to know what they are doing) attempt to monkey with our complex economic mechanism. But if you think that there is good reason for extending price controls beyond June 30, by all means vote for it.

The full employment bill, it seems to me, is a mere political hoax. We all favor full employment. No one who lived through the last depression wants to see it return. But I don't believe that any Government law or any Government agency is ever going to insure full employment. The problem of full employment is a world-wide one—not just a national one. I am against this bill because it would pave the way for another Federal bureau, and we have too many of them already.

When it comes to Federal unemployment compensation, please proceed with caution. A Federal bill insuring adequate help to those genuinely unemployed would be fine. But I am definitely opposed to any bill which is so loosely written that aid would be given to those who would like to loaf at Federal expense rather than accept work which is available. A wide-open unemployment-compensation bill would be a great vote getter—but I do not see why people of the United States should help pay Steve Hannegan's political bills. When it comes to believing that a just unemployment-compensation bill will be written, I am definitely from Missouri—and I hope that the President will remember that he is, too. However, if a bill is written which you feel compensates the genuinely unemployed and at the same time excludes the would-be loafers, I hope you will give it your support.

A permanent fair employment practice committee is basically a sound idea. But here, too, some caution is needed. It is another Federal bureau, and therefore I am suspicious of it. On a commission of this sort there should be representatives of labor, management, and the public. If the law is not carefully drawn and the powers rigidly defined, a committee of this sort could do more harm than good—could become an impediment in industrial progress and labor-management relations instead of a help.

Higher minimum wages will probably hinge on the outcome of present wage disputes. However, no matter what happens in the wage field, this Nation is going to find that production and not money is the key to a better standard of living. I know you never liked Wendell L. Willkie (one of the many issues on which we have disagreed) but you will have to admit that his statement to the effect that "we are wealthy only as we produce" is eminently correct—also his contention that a better standard of living is something that we, ourselves, must produce. So many people have their minds fixed on money—and yet, China, should serve as a warning to us all that money without production is valueless. China has more money, less production and lower living standards than any other major nation in the world. But, if wage averages go up, the minimum should also be raised proportionately. I wish to go on record, however, as, stating that wage raises alone will never give this country a better standard of

living. Higher standards will be attained only if we match higher wages by better production which will supply an abundance of goods at reasonable prices.

Emergency housing legislation is undoubtedly a necessity. However, I believe, the President is not entirely correct when he states that private enterprise alone could solve the problem, if it would. The trouble is that too many restrictions and hindrances have been placed in the path of free enterprise. The building trades have consistently opposed the development of prefabricated housing—and yet it is difficult to see how conventional building methods can ever meet the demand in time even if materials were immediately available.

I am definitely opposed to a program of universal military training. A highly trained professional army of soldiers and technicians is the answer to our defense—not a cumbersome hoard of partially trained citizen soldiers. France is a good example of what happens when an army of trainees meets a smaller, more compact, and better-equipped professional army. Money spent on universal service would be so great that our proper professional defenses would, in all probability, be neglected. Universal military training is not the answer to our defense problems. Therefore I am against it.

The Government should, I believe, sponsor and vigorously support a comprehensive scientific research program such as the President outlined. If such a department could be taken out of politics, like the FBI or the Bureau of Standards—and kept out—that would be fine At present the United States leads the world in most branches of science. A Government program of research to supplement work being done by private enterprise would benefit us all and help safeguard the future. I am for it.

A Federal health and medical program is another political bill which sounds good but means nothing. Here again, Congressman, it seems to me that such a bill merely gives the excuse for the creation of another Federal agency. Frankly, Clare, I don't care to have the Government tell me what doctor I have to patronize, what hospital I must go to for care and what sort of medicine I must take for a cold. A better job of health work can and should be done in this Nation but I believe that this problem can be handled more effectively at State and local levels than by superimposing another big Federal bureau on a nation that is already overburdened with bureaus.

Higher pay for Federal employees will have to come. Wage scales have already risen considerably in this country since the last adjustment in pay was granted to Federal employees, and an increase (especially in view of probable further increases in the auto and steel industries) is definitely in line. I believe that this increase should also include the salaries of Senators and Representatives, since living costs in Washington have risen tremendously (despite the OPA—ha).

A Presidential succession bill is desirable. The necessity for using such a bill may never arise but the death of President Roosevelt and the elevation of Vice President Truman at a time when a comparative newcomer to Government held the office of Secretary of State, focused attention on a situation which might have developed. If Truman had died after assuming office, this Secretary of State would have become Chief Executive.

I am against extension of the Tennessee Valley Authority because I think that the Federal Government has already gone too far in competition with private enterprise. In the Tennessee Valley Authority, the Government has what it wants—a yardstick for measuring power utility costs. Unless the United States is to drift definitely toward Federal socialism, then let's resist Federal pressure to expand further as a direct competitor of private enterprise.

So, there it is—the heat which President Truman suggested. I know he is facing a tough job and is trying to do his best. There are times, however, when I feel that if he were more the man from Missouri and less a Democratic politician, he would inspire more universal confidence and support. Also, knowing you as I do, I feel confident that you will read this communication through to its conclusion (as well as other letters which may come from the district) and then go out and vote the way you feel you should vote—all of which is not a bad trait for a Congressman to have and is one of the main reasons why the district has consistently supported you even though it has frequently disagreed with you. But that is something Walter Winchell would never understand.

Best of luck,

R. M. COOK.

I replied:

JANUARY 11, 1946.

Mr. RICHARD COOK,
Editor, the Hastings Banner,
Hastings, Mich.

DEAR EDITOR: In response to President Truman's request, in his fireside chat of January 3, that the people of the district pressurize their Congressman into support of the proposals he mentioned, you have printed in the Hastings Banner of the 10th an open letter addressed to me, expressing your views.

To save space and repetition, your comments will be answered in the order they were made.

THE CONGRESS

Because all Members of the House and a third of the Senate Members are elected by the people every 2 years, the Congress is, as you state, the only barrier which prevents the destruction of representative government by ever-growing and continuing bureaucracy.

Permit me to join you in the hope that never again will the people's duly elected representatives forget their constitutional obligations, abjectly become a rubber-stamp of the executive department.

AN ALL-POWERFUL FEDERAL GOVERNMENT

In Government, as with individual, one grant of power almost inevitably causes those exercising it to seek ever-increasing authority; causes those who first grant the power to become the subjects of the exercise of autocratic, arbitrary, unworkable rules, directives and regulations.

The people's experience during the last 10 years—if their letters and complaints which come to me are any indication of their feelings—has convinced me that there is today in this country entirely too much authority centered in Washington.

President Roosevelt said, in substance, that in 34 months his administration had returned to Washington the powers which, improperly used, would shackle the liberties of the citizen. Millions of citizens can testify that their liberties have been shackled, and that without a corresponding benefit to the people as a whole.

I have no intention of voting for blank checks or grants of arbitrary power to either the President or any other executive, or to any agency or department of the Federal Government.

COMPLIANCE WITH THE PRESIDENT'S REQUEST

It is your privilege—permit me to go further—it is your duty to write to your representative in Congress, "either in praise or in criticism," advising him of any complaint you may have—of any policy you may wish supported or opposed. As the result of such praise or criticism, his ability to serve should be continually increased.

The only qualification is that when suggestions are made they should be the result of the citizen's independent judgment—his own wish—not something merely passed on as the result of manufactured propaganda.

THE SO-CALLED FACT-FINDING PLAN

The Committee on Labor, of which it is my privilege to be a member, has heard Green, Murray, and Lewis, representing the three largest unions; Schwellenbach, Secretary of Labor; Johnston, of the United States Chamber of Commerce; Mosher, of the National Association of Manufacturers. None favored the President's plan. Other hearings will be held.

The bill, as written, would authorize any member of the Board to call any individual from any Territory in the possession of the United States to any other place in the United States, there to give testimony, produce his books and records.

So great a power is not even granted to the United States Supreme Court. Never will I vote to grant that power to an executive agency.

Ability to pay should be given consideration in the fixing of a wage, but it is not the true measure of a wage. If it were, the employee of an employer which did not make a profit would be required to accept less than a subsistence wage—an unthinkable policy.

The value of the service rendered or the article purchased, not the ability to pay, should determine the wage or price to be paid. Certainly the union man earning the highest wage would blow his top if he was required to pay 30 percent more for his loaf of bread, pound of meat, or peck of potatoes than was asked of the worker earning a lesser wage.

If profits each year are to be disbursed as wages, there will be no money for replacements of worn-out facilities, improvements, expansion, or research. Logically followed, it would mean the end of the business; the end of present jobs when the machinery wore out; no jobs in new industries.

Unless stockholders have some hope of profit, they will not invest to create new jobs nor contribute to support present ones.

Had the policy of dividing profits as wages prevailed in the past, we might still be riding in a model T Ford; be without radios, refrigerators, and many other items now regarded as necessities by the members of the unions which are now on strike.

OPA

You have by illustration demonstrated the failure of OPA to hold the price line Further illustrations might be these.

The President, speaking in favor of continuing the price-fixing powers of OPA, said:

"Of the three major components which make up our standard of living—food, clothing, and housing—housing presents our most difficult problem. As for food, there is every prospect that 1946 will be a peak year of production."

Yet, in spite of OPA, all three are scarce and prices have been continually rising.

There is a scarcity of housing, and it is due not only to wartime restrictions, to the orders of executive agencies, but to the price-fixing policies of OPA.

There is a shortage of clothing. That likewise is due to the orders issued by OPA which prevent production of low-priced quality items. The same is true as to many articles of food.

The administration has spent millions of dollars in attempts to rig the market on various farm products. All too often, it has failed miserably.

First, eggs were scarce. Then Government hiked the price, and the first thing we knew there were 25,000,000,000 cases of eggs—30 dozen to a case—which could not be used and which the Government finally disposed of for either fertilizer or for the manufacture of fowl or animal food, at a price of 6 cents a case. Recently eggs in Washington were 70 cents a dozen.

OPA's regulations caused the accumulation and later the dumping of carloads of potatoes; millions of pounds of lard.

Today, butter is almost off the market, not because there is a scarcity of milk and cream, but because of price regulations made by OPA.

If OPA was ended tomorrow, there would probably be a rise in prices, but it would be a temporary one and production of the higher priced items would shortly bring down excessive prices.

It has been my privilege to listen to the testimony of manufacturers, middlemen, retailers, consumers, unions' representatives, protesting OPA's regulations, and to hear Chester Bowles and his aides in their efforts to justify their rules and regulations.

On one occasion, before our committee and in the presence of Mr. Bowles and his aides, manufacturers and retail merchants produced 64 exhibits, each having at least two items, some several, and all demonstrating that OPA regulations had resulted in an increase in price; a loss in quality of the articles shown.

Neither Mr. Bowles, faced with this exhibit, nor any of his topranking aides—and several were there—was able to explain or to justify the ruling which caused the increase in price, the lowering in quality.

After hearing thousands of words of testimony from those engaged in making and selling merchandise and farm products, it is my conviction that no group of men, however intelligent or sincere, can by over-all regulations effectively and beneficially control prices; repeal the law of supply and demand.

In 1940, I proposed legislation to fix, as of a certain date, the prices of all things and all services and to require the enforcement of the law by local authorities. No consideration was given to that plan, which, in my judgment, is the only feasible plan to, for a period, stabilize prices—this because prices of merchandise and wages are tied together, each dependent in some degree upon the other.

THE FULL EMPLOYMENT BILL

During 2 months, testimony on the original full-employment bill advocated by the President was taken by a committee of which I am a member, and the printed record contains more than 1,100 pages.

The President sent up Secretaries Wallace, Vinson, and Schwellenbach; Director of the Budget Smith; Reconversion Director Snyder, and many other prominent men appeared.

The bill originally supported by the President and his advisers would require the Federal Government to provide regular, full time, remunerative employment for those who were unemployed, either because there were no jobs available in private enterprise or because employees left their jobs for any reason.

The jobs, however, under present Federal laws and the administration practice, would be limited to members of the unions who were in good standing.

When I support legislation which takes the money of the nonunion taxpayer and uses it to create a Federal job which is available only to the member of a union in good standing, a job which is denied to the unemployed citizen whose tax money helped provide it, I'll be a lot older than I am now. Such a policy can have back of it no moral nor legal justification.

Everyone favors full employment. Everyone wants to see all who wish to work given the opportunity to work and, if the planners and the do-gooders will just relax and let us proceed as we have, while there may be booms and depressions, there will continue to be, as there has been in the past, a better opportunity here in America for the man who wants to work than in any other place in the world.

FEDERAL UNEMPLOYMENT COMPENSATION

The unfortunate, those willing to work but who cannot care for themselves, can and will be cared for.

The history of our country shows there has always been less suffering here than anywhere else.

The duty of caring for the unfortunate should, however, first fall upon the local communities, for they, better than a Federal agency, know the need and the extent of the relief which should be given.

Too many people look to the Federal Government for aid, evidently believing that it has an inexhaustible fund; that the cost of the things they advocate will fall on the other fellow.

FAIR EMPLOYMENT PRACTICE

Certainly, there should be no discrimination in employment because of race, creed, color, or state of origin. But the problem is an educational one; cannot be solved by law.

We have an executive FEPC. Its own records disclose that, while it was created to prevent discrimination, in its own activities it has given 59 percent of its jobs, 55 percent of its money to Negroes, who, according to census reports, make up 9 percent of the population.

With that kind of an example and practice before me, can you wonder why I have little faith in a Federal agency's ability or, more properly, willingness to prevent discrimination?

HIGHER MINIMUM WAGES

The advocates of this measure maintain that the minimum wage should be raised from 40 to 65 cents per hour; later to 75 cents per hour; that no one should be given a job unless he or she receives 65 cents per hour.

Some people just cannot earn in productivity either 65 or 40 cents per hour. I am quite sure that, if the only available job open to me was in a foundry or on the farm, I could not turn out work which would be worth enough to pay me 65 cents an hour. But I could perhaps earn something.

Should I be denied the opportunity of employment because of a law which prevented an employer giving me a job at what I was worth? What is to become of all those who, because they cannot earn the minimum wage, will not be given jobs? Are they to be denied opportunity to help support themselves and the whole burden thrown upon the taxpayers?

EMERGENCY HOUSING LEGISLATION

If the President will call off the OPA and various other Federal agencies, competition will give us material and investors will give us houses.

America will never have enough of anything until we change our policy of caring first for all unfortunate people abroad.

UNIVERSAL MILITARY TRAINING

I want none of it, if it requires taking young men out of their home surroundings, turning them over for a year to the Army or the Navy.

Military training—yes; in schools, colleges, and universities. Throughout our history, American fighting men, wherever they came in contact with professional soldiers, have won in the end.

A COMPREHENSIVE SCIENTIFIC RESEARCH PROGRAM

By all means we should have it, and the results of such a program, combined with adequate pay to volunteers who desire to serve with the armed forces, will give us an adequate national defense.

FEDERAL HEALTH AND MEDICAL PROGRAM

The less the Federal Government interferes with the family, with local educational and health programs, the better.

I will never vote for any program which imposes upon the citizen the duty of calling as his medical adviser an individual designated by the Federal Government. In my judgment, anyone giving 5 minutes serious thought to the proposition should be against it.

The war has shown us how unjust, unreasonable, and arbitrary Federal agencies and their employees can be.

HIGHER PAY FOR FEDERAL EMPLOYEES

If wages throughout the country, for all except white-collar workers and Congressmen, are to go up, Federal employees should receive their share of the increase.

It might be better, however, if we would all be content with our present pay and devote our efforts to a drive toward production, which will automatically bring down the cost of living. Wage increases followed by price increases get us nowhere.

PRESIDENTIAL SUCCESSION BILL

One should be enacted without delay.

TENNESSEE VALLEY AUTHORITY

I can see no excuse for increasing the number or extending the authority of Government corporations engaged in what we have always believed to be private business.

The less the Government meddles in the system which has shown itself to be the best in the world, the better for all.

The foregoing are the views held by me at the moment. They are based upon my experience as a worker in a factory, on the farm, in a law office and, later, over some 30 years in the practice of the law in a city of 4,000 population, and upon my personal observation of the manner in which the Congress, executive department, and the courts have functioned here in Washington over a period of 10 years.

On some of the proposed legislation hearings have been held by committees of which I am a member; not a little testimony has been taken; more will be taken, and, if that testimony is persuasive and the views of the people of the District indicate that the views outlined are erroneous, they will of course be modified.

"THE HEAT"

So, Dick, thanks for "the heat" requested by the President and please excuse the length of this reply, which, however, in view of the issues involved, is very, very brief.

On the general subject of the President's message, let me add a few observations.

Unbiased citizens, with a knowledge of the facts, insist that some way to end labor disputes and strikes which are preventing reconversion, provide fertile soil for inflation by limiting production and bringing about unemployment, must be found.

But the panacea of a fact-finding board, with a 30-day cooling-off period during which, after it has been found to be impossible to amicably settle a labor dispute, neither lock-outs nor strikes will be permitted, is not the remedy.

Of his fact-finding recommendation the President said:

"It is nothing new to have the Government get accurate information from a corporation. It is now done by many Federal agencies—by the Bureau of Internal Revenue, by the Securities and Exchange Commission, by the Wage and Hour Division of the Department of Labor, by the Interstate Commerce Commission, and by many others."

Inasmuch as the Government already has the facts, why ask for another fact-finding agency, in the interest of one party to a labor dispute, to determine the amount of profit which a corporation has made or may make, and to use such a conclusion, sound or unsound, as the basis for a wage agreement?

The President's inconsistency is shown, when, in one paragraph, he states:

"Experience has repeatedly shown that, once the public knows the facts, it can make its opinion felt in a practical way",

and then says,

"No detailed information obtained from the books of the company is to be revealed."

Just how does the President expect the public, upon whose opinion he relies for the settlement of labor disputes, to know the facts, if no detailed information obtained from the books of any company is to be revealed?

And why does he limit his fact finding to the books of the employer? He is following the fallacy which permeates the National Labor Relations Act, which confers benefits upon organized labor; imposes penalties upon employers but none upon either unions or employees; confers no benefits upon employers.

Today, with that law in force, we have more labor disputes, more strikes, than ever before.

Until the administration takes the heat off Congress and permits so-called labor legislation (and it is in no sense antilabor legislation) which has been proposed to be enacted, labor disputes and man-days lost through strikes may be increased.

Many sound, constructive proposals looking toward the lessening and the solution of labor disputes have been offered by me and by others, but, because of the political power claimed and the fear engendered by labor politicians backed by organized labor, exerted upon the administration and Members of Congress, they have not been enacted into law.

Let me cite just two offered by myself: An amendment to the Wagner law, providing that employees should be free to join or not to join a union. Another, first offered by Senator TYDINGS when the original bill was under consideration; later introduced by me in the House on several occasions, providing that employees should be free from coercion from any source.

If the President, instead of talking in the interests of the public but acting in favor of labor politicians, will approve of legislation, the enactment of which would aid in protecting the interests of all the people, he can get action without delay.

It is unfortunate that when the President said:

"I have indicated my opposition, and I repeat it now, to the antilabor bills pending in the Congress which seek to deprive labor of a right to bargain collectively, or which seek to deprive a union of its ultimate right to strike," he did not make it clear which bill, if any, now before the Congress would deprive unions of the right to bargain collectively.

I know of no such bill. Nor do I find any legislation which would deprive a union of its ultimate right to strike.

I do contend—and if the President disagrees, I would like to have him make it clear—that, where a public utility and its employees are engaged, under authority granted by a municipality, a State, or the Federal Government, in furnishing light, heat, power, communication, or transportation to a community, neither the corporation nor its employees should be permitted to endanger the health and well-being of the whole community by a strike until after reasonable warning had been given.

Every contract between an employer and a union, an employer and employees, engaged in furnishing the service just referred to, should contain a provision that the corporation could not shut off the service, put in force a lock-out; that the union and the employees should be required to give at least 30 or 60 days' notice of any proposed strike.

The day has gone by when the interests of the people as a whole, when the public welfare, should give way to the demands of any corporation, of any union, of any group of employees, however just or reasonable the demands of either.

The opportunity to hold a job with a public utility corporation should carry with it the obligation to serve without joining in a strike until adequate notice has been given of the intention so to do.

Moreover, if employers and employees cannot, after collective bargaining, after a strike has existed for a reasonable length of time, agree upon terms, employees should not be forced to work, nor should the continuance of the business be jeopardized by a refusal to work, backed by a massed picket line which denies to all other citizens the opportunity to work, prevents employers continuing a business.

There should be a time after which employees engaged in a strike cease to be employees under the National Labor Relations Act, and the employer be given opportunity to hire others seeking jobs.

The President has himself refused to actively support legislation which is not antilabor, which would protect the public from the racketeering activities of a labor union.

From a decision of the Supreme Court of the United States rendered on March 2, 1942, it appears that members of Dan J. Tobin's teamsters union have made it a practice to hold up trucks using the public streets and highways and to require the drivers or the owners of the trucks to pay a tribute of either $8.41 or $9.42, depending upon the size of the truck, for every load of produce or merchandise entering that territory in interstate commerce.

The House passed and, on April 12, 1943, sent over to the Senate a bill to end the practice above outlined and which the Supreme Court labeled as extortion.

For 2 years, or from April 12, 1943, to April 12, 1945, when he became President, Mr. Truman was a Member of the Senate. So far as I know, he never raised his voice in behalf of that legislation while he was Senator, and certainly he has never made an appeal to the Senate to pass it since he became President. By his silence, he has given his consent to that type of extortion as practiced by the Teamsters Union.

If President Truman will strike from the House and the Senate the shackles which have prevented them from acting on strike legislation, beneficial not only to the public but to employees—the men and women who do the work—he can, if he wishes, get appropriate legislation out of the House in 2 days and probably out of the Senate within a week.

Instead of berating members of his own party for opposing legislation which they honestly believe would harm, rather than help; instead of calling upon the people throughout the country to add to the burden of the already overworked congressional staffs by calling for a reply to the thousands of protests received—and the overwhelming majority of those I have are opposed to his policies—let him start a house-cleaning job in his Executive department.

Let him kick the left-wingers and the New Dealers out of his advisory council. Let him get back to the policies and the principles which have made us the most powerful and the foremost nation of the world.

He can get action out of Congress anytime, if he will ask for the right kind of action; but it will be a long and a cold day before he will get the majority of Congress to support any policy which tends to undermine the foundations of our Republic. He knows it and he was just talking in his fireside chat.

The President also said:

"I intend no blanket criticism of the Congress."

Again, he said:

"And let me make it very clear that, when I speak of bills not getting any action, it is not the Congress as a whole which is responsible. It is the committees which hold up action on bills. What I am asking is that these various committees at least give the representatives of the people a chance to vote 'yes' or 'no' on these vital issues—and that they give them that chance soon."

The President said that one of the measures he recommended "is now locked up in the Ways and Means Committee." Of another, he said, "A small handful of Congressmen in the Rules Committee of the House have prevented this legislation from reaching a vote by the Congress."

"Other bills," he stated, "are now resting in the Education and Labor Committee of the Senate and in the Labor Committee of the House. And so it goes with measure after measure now in the Congress."

It is regrettable that the President was not more accurate in his "fireside chat." As a former Member of the Congress, with 10 years' experience, he knows that, in the House at least, a majority of the House can at any time bring before the Congress any proposed legislation by the signing of a petition.

Both the House and the Senate have passed so-called full employment bills, but the President complains because the House bill does not meet his views.

He ignores the fact that it is not only the privilege, but the duty of the House to pass the kind of legislation of which it approves, and that it is his privilege and duty to veto it if he does not like the measure which finally comes out of the joint action of the House and Senate.

The President's whole plea is based upon the fact that the Congress exercised its independent judgment and that its judgment is not in accord with his views. He is complaining because the Congress is not a rubber-stamp body; that it is not "yessing" everything proposed by the administration.

He forgets that the Congress represents the people—not the President. He would deny to it the same right to independent action which he claims for himself and his subordinates.

Thanks again for your letter and for the other letters which have come to me because of the President's radio talk. The opportunity to reply is appreciated.

Sincerely,

CLARE.

A Case in Point

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Thomas L. Stokes from the Washington Daily News:

A CASE IN POINT

(By Thomas L. Stokes)

Something was written here a few days ago about accumulating evidence tending to show a concerted effort by big interests to move in at this time and try to break the power of labor unions and the Truman administration.

Various significant developments were cited. One was the refusal a few days apart of General Motors and United States Steel to accept compromise wage findings by a Presidentailly appointed wage board, in the motors case, and by the President himself, in the steel case.

There was reference also to the coalition of Republicans and Southern Democrats in Congress which fought progressive measures in the domestic field all during the war and have intensified their fight since.

Now another chapter begins to unfold here, openly and brazenly, under management of that coalition. A few simple facts will tell the story, although you'll have to hang on close, for this particular conspiracy involves tricky parliamentary procedure.

After some deliberation, the House Labor Committee reported a much modified version of President Truman's proposal for fact-finding boards. This measure then went to the

Rules Committee, which is supposed to be a procedural committee to arrange for consideration of bills by the House, but which long ago arrogated to itself powers far beyond this.

After a couple of days of public hearings about this bill, which went as usual beyond procedure into merits, Representative CASE, Republican, South Dakota, turned up before the Rules Committee Tuesday afternoon with a brand new bill he had just introduced. It had never been considered by any legislative committee. He didn't even have printed copies, only a few typewritten copies. He asked that the committee grant a rule to make this bill in order as a substitute for the Labor Committee bill on the floor.

Chairman SABATH, Democrat, Illinois, an administration supporter, heard about the bill for the first time only the night before. He wasn't in on the secret. But Republican and southern Democratic Members were thoroughly familiar with it, revealing the plot. Mr. CASE admitted he had help in writing the bill. It was obvious he was the front.

The next day, according to plan, the Republican-southern Democratic coalition on the committee voted a rule for the Labor Committee bill which authorized the Case bill to be offered as the only substitute. Even for the Rules Committee it is unprecedented to permit the offering as a substitute of a new bill never considered by a legislative committee.

The Case bill, creating a mediation board to settle labor disputes, has a beautiful preamble about being fair to both industry and labor. Yet it carries provisions to abrogate fundamental rights of labor. These include, for some purposes, repeal of the Norris-LaGuardia anti-injunction law. This law was put on the books 14 years ago, after a long battle, to protect labor from sweeping court injunctions such as that by which Attorney General Daugherty broke the railway maintenance workers' strike in the Harding administration.

* * * * *

The Case bill is recognized as an "anti-labor" bill by anybody familiar with labor-law history.

Recognized as its real sponsors are Representatives SMITH, Democrat, Virginia; COX, Democrat, Georgia; and HALLECK, Republican, Indiana; all veterans on the Rules Committee and active figures in the coalition. When you have watched Congress for many years and have found out the motives of Members, it is easy to smell out one like this, and what the real purpose is. Messrs. SMITH and COX are known for their antagonism to labor, and Mr. HALLECK is one of the Republican House leaders.

They have done a job here, make no mistake about that. The facts speak for themselves, both in the brazen way they used the Rules Committee and in the objectives of the bill itself.

This is the story behind this story.

Settlement of Industrial Disputes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the board of aldermen of the city of Chelsea, Mass.:

Resolved, That President Truman, Secretary of Labor Schwellenbach, Congressman Lane, Senators Walsh and Saltonstall, and Governor Tobin use their good offices in helping to establish industrial peace between management and labor, with a view of speeding up the process of reconversion from wartime to peacetime production. We believe that if the American standard of life is to be maintained and improved for the American people, and particularly for the men and women who served in the armed forces, that American industry maintain full production with jobs for all willing and able to work at decent pay which will permit workers and their families to meet the present cost of living adequately and decently. Furthermore, if the consumers, which include the masses of American workers and farmers, are to be in a position to purchase products of American industry they must have a sufficient income power to pay to help to maintain the American way of life. It is our fervent hope that American businessmen, as well as labor leaders, under the help of our Government will adjust their differences and help bring about peace and prosperity in our great county.

Resolved, That a copy of this resolution be sent to President Truman, Secretary of Labor Schwellenbach, Congressman Lane, Senators Walsh and Saltonstall, and Governor Tobin.

Address of Hon. John W. Hanes, Former Under Secretary of the Treasury

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks, I include the following address made by the Honorable John W. Hanes, former Under Secretary of the Treasury, at a meeting of the Pittsburgh Advertising Club in Pittsburgh, Pa., on January 22, 1946:

Ladies and gentlemen of the Pittsburgh Advertising Club, I am always glad to come back to Pittsburgh. Pittsburgh is in many ways our most characteristic American city. Here one feels the mighty throb of American industry; here is the very heart of the great steel empire. That spirit of daring and enterprise which is part of America's great tradition is no less a part of Pittsburgh's birthright. I particularly welcome the opportunity of talking here today with a representative group of advertising men and women. It is the very nature of your profession that you must be concerned with the future. Your stethoscopes on the sales' prospects for various industries very often indicate what lies ahead for the country.

The subject of my discussion here today is Business and Politics. You will remember a few years back we had a popular slogan, "More business in Government, less government in business." The order of today seems to be just the opposite. Whether we like it or not, business is in politics, and we are there to stay. Labor has announced its intention of capturing the local and State governments, as well as the Congress of the United States and the Federal Government. The question is, therefore, "Will the United States be run for the benefit of a few privileged groups, or will we accept again the basic philosophy of Thomas Jefferson?" You well remember his famous slogan, "Equal rights for all, special privilege for none."

During the past 12 years the greatest injury to our industrial system has been brought about by a new use of the taxing power. Instead of taxing our people for revenue only, we have seen the revenue department used as an active instrument of social reform. We have been taught to believe that the burdens of taxation are to be borne only by the rich. It has become popular, in the politician's belief, to levy high taxes upon the corporations, and here is the greatest crime against every man, woman, and child in the United States. It is a fallacy to say that corporations pay taxes; they do not; they collect taxes from the people and transmit them to the Government. The ultimate consumer pays the corporation tax in the price of every manufactured article he buys. For instance, in the price of your new automobile—when, as, and if you can buy a new automobile—there will be included the cost of labor, materials, overhead, and, last but not least, taxes; and the same thing holds true for every other purchase made by 135,000,000 consumers in this country. The higher taxes go, the higher will go prices, and the lower our standard of living will go. Thus, to drain off into the hands of Government, through excessive taxation, any arbitrarily set portion of earnings, is to weaken industry and make it incapable of performing its true function of creating more and more jobs in an ever-expanding economy.

There are many convincing demonstrations of the power of advertising when it is applied as an economic or social force. The facts seem to be exactly the reverse when advertising is employed in the political sphere. When it comes to selling the American people on the benefits and virtues of our free-enterprise system, we must admit that the results have been somewhat disappointing. Many attempts have been made by the best advertising brains in the country during the past decade to write persuasive copy on this theme. By and large, these efforts have not measured up to expectations. The public has remained highly skeptical even when great business and trade associations have sought to win popular followings for slogans like "What's good for business is good for you."

Why was it that in this, the most vital of all assignments, business did not succeed? Was it that the problem had been only superficially studied or that causes of popular economic discontent had not been properly analyzed? There was, and there still is, a strong case to be made for the business point of view; to be made, if you please, for sane and experienced guidance of our national affairs as against irresponsible promises by demogogs seeking to capitalize on popular dissatisfactions. But against the smear campaigns waged by the radicals who falsely call themselves liberals and progressives, business leadership has been ineffective; too frequently it has either abdicated or sought to play a game of appeasement with its critics. Our business leaders, remembering what happened to their predecessors after the economic collapse of 1929, are often too timid or so lacking in faith in their own "case" that they fail to convince the American public either of their own sincerity or their own ability to lead.

Nowhere has this practice of appeasement been carried to a greater point than in the use of radio. Here again the advertising fraternity must carry a high degree of responsibility. Too often, in this very critical period through which the Nation is passing, principles have been suborned for an easy opportunism. One has only to listen to many of these so-called commentators over the air to perceive where they take their stand on these vital issues. Most of these artful molders of public opinion are frankly contemptuous and condescending toward the businessmen who provide their pay checks. For everyone of those who conscientiously believes in free enterprise, I will name you a dozen who are deliberately distorting the facts for their own personal gain and abusing the right of free speech. You

know their names as well as I do—all busily engaged in tearing down the business system which gives them their jobs. Too many businessmen, whenever we get together, are "viewing with alarm" while at the same time, our advertising agencies or our own advertising executives are aiding and abetting these detractors of American business. There are many who throw up their hands, despondent and discouraged, and say that business must go with, and not try to oppose, this rising tide. They do not think that any kind of advertising approach will solve the problem. They think that America is caught in a world-wide drift toward socialism—toward totalitarianism—which it is foolish to oppose.

More and more, lip service is being given to the common man who is now seen as coming into his own. This John Q. Public is to become the ward of a great, all-powerful welfare state which will undertake to guarantee him a job as well as his future economic security. Those rights of the individual which our ancestors fought for so bitterly during the eighteenth and nineteenth centuries, are today suspected and under attack by the very men who call themselves liberals. In every country the trend is toward the aggrandizement of government and giving the bureaucrat unlimited power. The issue is joined between two distinct political philosophies, this new worship of absolutism—call it communism, socialism, or what you will—and that simple, old-fashioned Jeffersonian type of democracy under which I grew up and in which millions of Americans still believe. One group would place the management of the national economy in the hands of bureaucrats rather than in the hands of skilled technicians. One would nationalize industry and finance and seek to divide rather than create new wealth. The choice is between men who talk and the men who act.

Do not misunderstand me. I believe that the politician has a very important role to play in American life. Our job is to keep him in his rightful place; not to permit him to become intoxicated with his new-found power and start messing around in economic affairs which he will never, never understand.

We ought to look carefully at the blueprints for this totalitarian state which is now being prepared for America. These plans date back to before the war; they were greatly accelerated by that conflict and right now they are being pushed ahead for early application in the postwar period. Don't be lulled into believing that Mr. Truman has fired all Mr. Roosevelt's radical advisers or that the country once more is turning conservative. Our radical friends are biding their time. They expect to triumph with the arrival of the first sizable postwar depression. I do not believe a postwar depression is necessary. This economic collapse, so these prophets say, will be so far reaching and so much more severe than the depression of the thirties that the American public will welcome the advent of a new socialist welfare state.

Some well-informed people even go so far as to assert that the present wave of CIO strikes has been deliberately designed to bring about a postwar depression. Plans for the rebuilding of America into new economic patterns will be found in much of the CIO literature that has been published. Many of these proposals are incorporated in bills that are now pending before Congress. The CIO has two objectives which are clearly defined. It seeks first, through industry-wide strikes, particularly in the fields of transportation and communication, to accustom CIO unions to the use of mass power; and, second, through employing pressure politics at the Capitol, to teach forcibly that Members of Congress are dependent upon the voting strength of labor, its political allies, and its friends.

Here is a list of seven bills, six of which the CIO-PAC groups are demanding that the Congress pass or face the consequences. Note, also, that practically every one of these bills is being actively supported by the administration. You may draw your own conclusions as to whether this is merely a coincidence or reflects some deeper alliance. In every one of these bills there is a worthy objective and it is stated in language with which no one can disagree. I quote from a CIO pamphlet which lists these bills, together with the CIO explanation for them.

1. Unemployment compensation of $25 (maximum) per week up to 26 weeks (Kilgore-Forand bill, S. 1274, H. R. 3891).

Note what the CIO says: "President Truman's program for Federal funds to supplement State unemployment compensation constitutes an emergency measure to bring benefits up to the level long recommended by the Social Security Board. Opposition to it has been based on a fear that it will make workers unwilling to accept jobs at less than $25 a week. This open intention to cut wages to substandard levels is a drastic attack on the American standard of living."

2. Full-employment bill (Murray-Patman bill, S. 380, H. R. 2202).

The CIO says, "The right to a good job was a key plank in the Roosevelt platform. To establish that right is a mandate of the people through the overwhelming victory Roosevelt won in 1944. The Murray-Patman bill makes this right a Government policy. There is no question of taking the initiative away from private industry There is simply a method of planning ahead to meet, by means of worthy public works, the gaps which the past three decades have shown private industry alone cannot prevent."

3. Sixty-five-cent minimum wage (Pepper-Thomas bill, S. 1349, H. R. 3914)

The CIO says, "This measure, raising minimum legal wages to 65 cents per hour immediately, and 70 cents and 75 cents after a year and 2 respectively, is the indispensable floor under purchasing power and living standards. It is necessary for the protection of millions of workers from misery and malnutrition, and also for the prosperity of business and agriculture whose products these workers should buy."

4. Permanent Fair Employment Practice Committee (S. 101, H. R. 2232).

The CIO says, "As manpower shortage is replaced by growing unemployment, many employers are reverting to racist personnel practices which are one of the earmarks of fascism. Organized labor cannot tolerate the reestablishment of a group of low-wage workers who can be used to pull down all labor standards. Nondiscrimination in employment must be made a permanent Government responsibility. Congressmen must sign discharge petition to have opportunity to vote on this legislation."

5. Abolition of poll tax for voting in Federal elections (H. R. 7) (has passed the House).

The CIO says, "Two Congresses have failed to guarantee American citizens their elementary democratic rights, without the full Senate ever having a chance to vote on the issue. Poll-tax politics and poll-tax Congressmen are a stumbling block to every bill in the people's interest. Senators this year must refuse to tolerate diversion, delay, and filibuster which frustrate the will of the majority of the Senate."

6. Generous treatment of returning veterans.

The CIO says "The niggardly benefits so far provided by Congress for veterans of this war do not reflect the sentiments of the Nation. The Rankin amendments (H. R. 3749) to the GI bill of rights, are only trivial improvements. The law must be amended to provide $25 per week unemployment compensation, with $5 additional for veterans with dependents, to liberalize loan provisions, and to liberalize several other provisions. We also support a generous 'bonus' or adjusted service compensation. We condemn all attempts to divert the veterans from their real rights by playing them off against the labor movement and using them to undermine collective bargaining, wages, and working standards."

7. Ball-Burton-Hatch bill (S. 1171).

The CIO says, "Passage of this bill would destroy the National Labor Relations Act and the democratic principles of free collective bargaining. It would enable reactionary employers to tie workers' organizations up in endless litigation and paralyze their efforts for better wages and working conditions."

Now these measures, all except the last one, President Truman is actively supporting. They fall within the power-politics program of the militant CIO-PAC organization headed up by Sidney Hillman. They constitute some of the basic issues of the 1946–48 campaign, for which the preliminary skirmishes are now under way. The Nation has thus been put on notice as to the economic objectives which are being pursued by these radical groups. That these objectives go far beyond the ordinary "demands" of labor in collective-bargaining procedures has likewise been admitted by one of the CIO's most influential leaders, Walter Reuther, who leads the strike against General Motors. Referring to that conflict and its significance, Reuther declared: "This issue is bigger than an ordinary wage argument, bigger than the corporation, bigger than the union. The current issue * * * transcends the narrow economic interest of labor and management and * * * gets to the very heart of the basic economic problem facing this Nation." That statement, I submit, confesses the revolutionary intent behind the Nation-wide strikes which now paralyze the country's industries, retard employment of returning veterans, and seriously threaten the entire 1946 reconversion program.

That free enterprise is now battling for its very life was also made definitely clear by another socialist leader speaking at about the same time that Mr. Reuther spoke. This new declaration came from the head of the British Labor Party, Harold Laski, on a recent visit to the United States when he spoke with Sidney Hillman and others in New York City. Said Mr. Laski: "There is no middle way. Free enterprise and the market economy mean war; socialism and planned economy mean peace * * *. It is significant that only in the new world of Russia has the businessman ceased to count. The day of the middle class is over. Their thought is bankrupt, their ethical values are obsolete, their dogmas an angry anachronism. A new social philosophy is necessary for a new world. Let us admit that it can be born only of a new social order."

Take the legislative program of the CIO and these various statements; what do they add up to? Is there any doubt of the direction in which they point? They express the same contempt for the business classes, for the capitalistic system, that has led to the nationalization of industry not only in England but in virtually every liberated country in Europe. Here is a direct challenge that can be evaded no longer. It must be met, not by appeasement, not by reliance upon legal defense mechanisms, but by courageous resistance to the further aggrandizement of the power of big government, to the power of pressure groups operating from within the very framework of government itself. Those who believe in America and American institutions must make a decisive choice; there can be no further retreat or surrender of principles that are fundamental to the preservation of our form of government and the rights and liberties of the individual citizen. That choice must be made now because I agree at least this much with these radical groups: it's later, much later, than you think.

The first problem that requires decisive action is to correct at once an increasingly serious defect in our political machinery. This means that like-minded men must join hands and make common cause against the subversive influences now at work in

America. Just as the effort is now being made, under the auspices of the CIO–PAC groups to organize all minority and dissident factions into one dominant self-interest bloc, so the time has come when imaginary differences between forthright, progressive Republicans and forthright, progressive Democrats should be resolved in a common cause. Only thus can we remedy the existing weakness within the two major political parties, a weakness which the pressure groups have so skillfully exploited. If a political action committee for the left is justified to strong-arm Congress into accepting a program like that of the CIO, then a political action committee for the right, which will actively oppose force with force, is no less justifiable.

Let's utilize the pattern adopted by Mr. Hillman's followers and organize every village, and every city to counter these threats to true representative and democratic government. In this way I earnestly believe that we can get our country back into the middle of the road, away from extremists of the left, or reactionaries of the right. Let's create a new political consciousness among the American people that will overcome their complacency and inertia and unite them into a militant citizenry against un-American, political "goon squads" now attempting to regiment our national life. The gulf between these two political philosophies, one that upholds American principles and American traditions, and one intent on building up a totalitarian police state, that gulf is increasingly wide and unbridgeable. We can maintain free government only as we, each and every individual, are prepared to rally to its defense.

Ford Tells United States It Can Remove Labor Trouble by Ending OPA

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. SCHWABE of Missouri. Mr. Speaker, the following headline in the Washington Post this morning bears out statements I have made to the press and in correspondence that United States can remove labor trouble by ending OPA. Mr. Henry Ford 2d, president of the Ford Motor Co., has been noted for his forward-looking policies in connection with labor, and his courageous statement, as follows, should cause all Americans to stop, look, and listen to his warning and weigh in their own minds the reasoning it presents. I quote:

FORD TELLS UNITED STATES IT CAN REMOVE LABOR TROUBLE BY ENDING OPA

DETROIT, January 30.—Henry Ford 2d, president of the Ford Motor Co., today told Federal officials he was "convinced that if Government control of prices is removed promptly, management and labor will settle their differences without running to the Government."

Ford warned that "unless steel can be made available to us and to our suppliers promptly we will have to shut down completely sometime this week."

Ford outlined his views in a telegram to Reconversion Director John W. Snyder at Washington.

The youthful executive asserted that at "current OPA ceiling prices we are currently losing about $300 on every car we make."

He repeated previous statements that his company's reconversion program has been hampered by parts shortages, which he said were due in part to the fact that some of the company's suppliers "have stopped making our parts because they lost money at their ceiling prices."

Ford said some suppliers were hampered by strikes or because they could not raise wages. He said others are unable to get steel.

Ford added:

"To my mind, you cannot have a freely competitive mass production industry with even 'just a little' Government price control. When you fix prices you control every production operation. * * * Nobody wants runaway inflation, but if we continue to stifle America's ability to produce, that is exactly, in my opinion, where we are heading for. * * * Inflation grows out of scarcity."

Beginning To See the Light

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following article on the subject of strikes printed in the Chicago Daily Times of January 29, 1946:

BEGINNING TO SEE THE LIGHT

A few beams of light and gusts of fresh air have been let into the dark atmosphere of the national industrial scene.

There is now a basis for hope that the country will escape general shutdown or a condition such as prevailed in 1919. In that first postwar year, one out of every five employed workers went out on strike.

The return of the packing-house workers to their jobs has averted a national meat famine. Wisely the union members decided that they would gain little by keeping food from the public after they had been assured that the Government would adjust their wage grievance on the basis of the President's fact-finding-board report.

The packing-house dispute, however, has merely been put on ice, and has not been settled. Moreover, until the steel impasse has been broken there can be no cause for general jubilation. It will avail us little to settle auto and electrical workers' strikes if there is no steel to work with.

It is a matter for satisfaction, however, that the settlement of the Chrysler, Ford, and Radio Corp. of America wage issues set a possible wage pattern and also showed what can be done if collective bargaining is carried on in good faith by both sides. In these industries management and labor seem to have put into practice the homespun philosophies of President Truman. They made collective bargaining work.

COLLECTIVE BARGAINING CAN WORK

The question arises: Why haven't these same principles worked in the Steel and General Motors disputes? Who's at fault there? Negotiations between RCA and the CIO electrical workers were in progress for 3 months. But agreement on a 17½ cents an hour wage increase for 8,000 Camden, N. J., workers was reached without a strike and without Government intervention. The agreement may become a basis of settlement for the 2-week-old strike of 200,000 CIO electrical workers.

Ford negotiations lasted 9 weeks, during which, said the CIO representative, "we got to know more about the company's financial condition. * * * We are convinced 18 cents an hour is all they can afford right now."

In the Chrysler case, settled on the basis of an 18½ cents an hour increase, a joint Chrysler-union statement gave a clue as to why, perhaps, collective bargaining worked in this case and has failed in the case of General Motors. It said, "We negotiated in a friendly and constructive spirit * * * In the same spirit we agree there should be no vilification of the other by either the union or the company."

So far, in other cases, there has been too much vilification—of management, of labor and of the President. It is difficult to settle human problems in such an atmosphere.

It is a sad commentary on our lack of rules for handling serious economic matters when the President of the United States can be accused by a steel company president of playing politics because he proposed a wage compromise to avert a national catastrophe for all the people that would result if the steel industry shut down. The same deplorable condition is shown when a labor leader can accuse the President of strikebreaking when, in the interests of all the people, the President decided to take over the meat-packing industry under a law passed by Congress.

TOO MUCH SHOUTING GOING ON

And everyone knows the battle cries that have come forth from the camps of capital and the fox-holes of labor in the past few weeks. It had been charged that labor was attempting to bankrupt industry, that management was trying to smash unions.

There may be some industrialists who, as reported by Louis Stark, New York Times labor expert, are in agreement that unions must be curbed. And there may be some Communists in the labor movement who promote unrest for the sake of unrest. But neither of these represent the real American spirit because they deliberately would threaten the general welfare for selfish ends. Stockholders would be wise to remove those reactionary leaders who refuse to bargain collectively and labor must insist that its trusted spokesmen come down off the soap boxes.

The public has had an example in the Ford, Chrysler, Oil, and RCA sessions that collective bargaining does work when the parties keep their minds on their important tasks and live up to their responsibilities. It is going to be difficult to convince the public that General Motors and Steel can't work out their problems, too.

Steel's problem is tied up with prices, and the Government apparently is prepared to grant a steel price increase. That will have an effect on all other products fabricated from steel. A little more frankness from Washington on this vital subject might help to clarify the afore-mentioned dark industrial atmosphere.

Great Lakes Naval Training Station

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following resolution adopted by the Common Council of the City of Milwaukee on January 21, 1946, on the Great Lakes Naval Training Station:

Whereas a movement is now on foot to discontinue recruit training at the Great Lakes Naval Training Station; and

Whereas the Great Lakes Naval Training Station is the oldest and largest establishment of its kind in the United States, having at the disposal of its trainees modern facilities and equipment and an excellent official staff; and

Whereas the Great Lakes Naval Training Station is centrally located which makes it convenient for trainees to visit and receive visits from members of their respective families: Now, therefore, be it

Resolved by this Common Council of the City of Milwaukee, That the Navy Department of the United States be respectfully petitioned and urged to continue recruit training at the Great Lakes Naval Training Station, and that necessary funds be set up in the Budget for this purpose; be it further

Resolved, That a certified copy of this resolution be sent to the Honorable Secretary of the Navy and to Members of Congress representing Milwaukee, including the United States Senators from Wisconsin.

Big Things Are Stirring in the Mighty Northwest

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. KEFAUVER. Mr. Speaker, Richard L. Neuberger, distinguished American writer, has recently written an article on the proposed Columbia Valley Authority in the Pacific Northwest which appears in the January 26 issue of the Liberty magazine. Knowing as I do of the tremendous benefits accruing from the Tennessee Valley Authority in my own State of Tennessee, I recommend to the Members of the House this brilliant description of what the Columbia Valley Authority might accomplish for the Pacific Northwest region. This proposed legislation is sponsored by my distinguished colleagues, Senator HUGH B. MITCHELL and Congressman HENRY M. JACKSON, of Washington.

The article is as follows:

BIG THINGS ARE STIRRING IN THE MIGHTY NORTHWEST

(By Richard L. Neuberger)

American soldiers home from war have always followed the frontier. Meriwether Lewis and William Clark, the greatest frontiersmen of all, served together under the Revolutionary hero, Gen. "Mad Anthony" Wayne. Pioneers in tattered Confederate gray and faded Union blue first broke the sod in mountain valleys beyond the Continental Divide. Veterans of World War I took up homesteads in what was left of the vast public domain.

Today, the victorious fighting men of the Second World War are looking toward the last American frontier—the dry uplands of the Columbia Basin, in the heart of the State of Washington. This region is now a desert, but water from Grand Coulee Dam can turn 1,250,000 acres of it into what President Truman recently described as "thousands of new family-sized farms upon which returning veterans can secure a livelihood for themselves and their families and create new wealth for the Nation."

The first land under the proposed project would not be ready for cultivation until 1947, when it is hoped to have a small section of 6,000 acres irrigated near the junction of the Snake and Columbia Rivers. It would be 1950 before settlement could begin on a large scale, but by then 400,000 acres could be available for homesteading. This area would be subdivided into approximately 7,000 "family-sized farms." After 1950 the Government plans call for opening up 50,000 additional acres each year, until the entire 1,250,000 have been reclaimed.

Congress has already been asked by the President to appropriate funds for clearing the sagebrush and tumbleweed from this area as the first step in changing the high prairie from a wilderness into a Garden of Eden.

Will the development be undertaken by a regional authority patterned after TVA? The principal political and economic issue in the Northwest today is a proposal to establish a CVA—Columbia Valley Authority. It is sponsored by two of the youngest members of Congress: Senator HUGH B. MITCHELL and Representative HENRY M. (SCOOP) JACKSON, both of Washington State. MITCHELL is 38, and JACKSON, a former private first class in the Army, is 33.

As proposed by MITCHELL and JACKSON, CVA would develop the forest and mountain solitudes of the Pacific Northwest. It would take in all of Oregon, Washington, and Idaho, as well as portions of Montana, Wyoming, Nevada, and Utah, a region that contains 14 percent of the Nation's area but only 3 percent of its people. It includes entire counties the size of New England States that are without a railroad or a paved highway. And countless vistas are exactly as Lewis and Clark and other early pioneers saw them.

An American census map tells the story. White space on this map means fewer than two persons a square mile. The only white space east of the Mississippi is a tiny patch indicating Florida's swampy Everglades. But white space practically predominates in the far-flung 282,000 square miles which MITCHELL and JACKSON hope to include in their Columbia Valley Authority. The task of the TVA was to restore an old, settled region where soil had been exhausted and forests destroyed. CVA is designed for a region that has scarcely been settled at all.

The forests in the area contain more than half of America's standing timber. Locked in the swift reaches of the Columbia River is 42 percent of the water power of the entire Nation. A pair of dams on this river, Bonneville and Grand Coulee, are capable of producing more electricity than the 260 power plants in the State of New York. Compare the 114,200,000,000 kilowatt-hours of energy of the Columbia and its tributaries with the 21,075,000,000 available in the basin of the St. Lawrence, for example. On the Columbia's main tributary, the Snake, the United States Army Engineers have designed a dam to be wedged into the bottom of Hell's Canyon, a chasm deeper than the Grand Canyon of the Colorado. White Monument, a peak on the rim of Hell's Canyon, towers 7,400 feet above the river; six Empire State Buildings, piled one on top of the other, would fail to reach the height of the summit.

A quarter of a century ago a young man rode along the Columbia on a train that clung to a narrow ledge above the water. On the back of a dining-car menu he scrawled this observation:

"When you cross the Mountain States and that portion of the coast States that lies well back from the ocean, you are impressed by those great stretches of physical territory, just land, territory now practically unused but destined some day to contain the homes of thousands and hundreds of thousands of citizens like us, a territory to be developed by the Nation and for the Nation. As we were coming down the river today, I could not help thinking, as everyone does, of all that water running down unchecked to the sea."

Franklin Delano Roosevelt wrote those words—when he was 38 years old.

Senator MITCHELL and Representative JACKSON recalled this prophecy when they introduced their bill for a Columbia Valley Authority. "CVA will help make Mr. Roosevelt's vision come true," said JACKSON. "In America a new chance has always meant going west. We seek to give modern application to Horace Greeley's famous motto. 'Go west, young man, go west,' is still pretty good advice."

The CVA bill would set up a regional board of three. The members would report to the President and Congress, as do the directors of the Tennessee Valley Authority, but they would be responsible to no particular Government department o Cabinet member. Headquarters would be in the Northwest, probably at Portland, Oreg., or Wenatchee, Wash. They would be appointed by the President with the assent of the United States Senate and would direct the diverse resources of the Columbia River from the British Columbia border to the sea.

They would develop water power for industries, farms, and homes. They would protect the Chinook salmon runs, most valuable fish resource in the United States. They would improve navigation all the way from the Columbia's stormy mouth to Lewiston, Idaho, at the lower end of Hell's Canyon. They would have charge of irrigating the 1,250,000 acres of the Columbia Basin with a network of canals, an enterprise which the late President Roosevelt referred to as a "Promised Land." And beyond all the present projects, they would render the final verdicts on a vast variety of future undertakings—new dams and powerhouses, immense fish hatcheries, deep-navigation locks, 230,000-volt transmission lines, great networks of irrigation ditches and canals.

MITCHELL and JACKSON see a regional authority as the one practical way to insure full development of the country's last frontier. They believe that a host of Federal bureaus, all reporting to different heads in Washington, D. C., makes for competitive chaos rather than unified cooperation. They also favor regional autonomy, with important decisions reached in the Northwest rather than 3,000 miles away in the National Capital.

Many labor unions and the powerful Oregon, Idaho, and Washington State Granges favor the CVA proposal. So does a chubby Wenatchee editor named Rufus Woods, who in 1918 first suggested the construction of Grand Coulee, man's biggest construction job. Wood is a Republican, but not all members of his party agree with him. The Oregon State Legislature, with Republicans in control, has condemned the CVA proposal as calling for a "superbureaucracy." Judge Robert Sawyer, veteran Oregon conservationist and vice president of the National Reclamation Association, believes that CVA would impede development of the West. He thinks the Army engineers and the United States Bureau of Reclamation have demonstrated far greater competence to do the job.

Opponents of CVA contend that the sponsors plan a colossal political organization extending into seven States and jeopardizing State governments. Supporters of CVA reply that the opposition is dominated by private utility companies.

In the final analysis, President Truman's stand may decide the issue in Congress. He has indicated that he favors some kind of regional authority for Columbia's Valley, but he has yet to give specific backing to the Mitchell-Jackson bill. Until then foes of the CVA can say that the President has yet to make up his mind.

However, most inside political observers in the Pacific Northwest are willing to wager their fishing tackle that Mr. Truman will endorse the bill introduced by the two young Congressmen. This bet seemed safe when the measure was approved recently by Mon

C. Wallgren, Governor of the State of Washington and Harry Truman's close friend. The new President's first vacation trip was a visit with Wallgren in the Pacific Northwest.

"Mon Wallgren wouldn't be backing CVA," said a political insider in Olympia, Washington's capital, "unless Harry Truman intended to put his O. K. on the bill, too."

Many famous American rivers will be part of the CVA if it is established—the Snake, the Salmon, the Willamette, the Clark Fork, the Flathead. But one river will dominate the entire undertaking—the Columbia.

Second in size in the United States only to the Mississippi, the Columbia, 1,400 miles long from the Canadian Rockies to the Pacific, has been called the greatest power river in the world by no less an authority than Col. Hugh L. Cooper, the engineer who built the biggest dam ever constructed outside the United States—the huge Dnieprostroy project in Russia. And he lived to help plan a project six times bigger—Grand Coulee.

If Senator MITCHELL and Representative JACKSON succeed in passing their CVA bill, Grand Coulee will be the key unit of the new authority Four ocean liners the size of the Queen Mary could be placed on the parapet of this great dam. In bulk it exceeds the 10 next largest dams combined. Behind the dam extends a broad lake 151 miles long, stretching to the Canadian boundary. This lake is already one of the West's leading recreation spots, and last summer it was named in honor of Franklin D Roosevelt.

Colonel Cooper's prediction, that power could be generated more cheaply at Grand Coulee than any other place on the globe, has been proved correct. Columbia River power is now sold at wholesale to the new industrial plants along the stream for 2 mills a kilowatt-hour. This contrasts with 3.25 mills in the Tennessee Valley Authority, the next lowest rate in the Nation. Many utility companies charge a rate of 10 mills or more.

The existence of Grand Coulee's 2,646,000 horsepower brought about the erection of the huge Hanford plutonium plant on the sagebrush flats where the Columbia and Snake Rivers join. A few miles from where Capt. Meriwether Lewis first saw the Columbia, the United States Army engineers built this key unit of the atomic-bomb project. The plant was located at Hanford for two reasons—the 230,000-volt transmission line linking Bonneville and Grand Coulee Dams, and the fact that the deep and icy Columbia offered the best facilities for cooling the tons of red-hot slag and residue incidental to the production of the ingredients in this stage of the atomic bomb.

The Hanford atomic works cover thousands of acres at the lower tip of the tract which is expected to provide family sized farms for returning soldiers. Congress, in fact, has begun consideration of a bill to give former servicemen prior rights to this land, and the measure has been reported favorably in the House. MITCHELL and JACKSON have included many of its provisions in their CVA bill. Secretary of the Interior Ickes has said that completion of this irrigation undertaking will "make 17,000 fertile farms available to returning veterans, and provide jobs for 25,000 men on construction in the immediate postwar period."

If the CVA proposal is approved by Congress and the President, the three directors will have charge of the most elaborate land-settlement project in history. The Coulee land will grow any crop from alfalfa to peaches. This already has been demonstrated on experimental farms in the nearby area. The Coulee farms would be limited in size. A single man could own only 40 acres; a family, 80 acres. This is to prevent corporate farming as a business venture.

Not only power, irrigation, and fertile land will claim the attention of the CVA directors, if the regional authority plan is enacted. Dams also mean hazards to the millions of fish that migrate up the Columbia each spring and autumn. Chinook salmon must reach the spot of their birthplace or they will not spawn. Grand Coulee Dam, for example, shuts off the salmon from the Columbia's last, lingering reaches. The largest Chinook salmon always spawn far upstream. In an experiment to save the most spectacular fish runs in the United States, the salmon have been artificially hatched and the resulting young released into streams which enter the main stem of the Columbia below Grand Coulee. Thus far the experiment has worked. Dr. Ira N. Gabrielson, Director of the Fish and Wildlife Service, believes the Chinook runs are safe to date. He emphasized this qualification, for he fears that construction of additional dams on the river may wipe out the lordly Chinook, largest of all salmon.

Such a decision would have to be faced by the new CVA board. Kilowatts or fish? Nature's bounty or man's industrial techniques? Can both exist side by side in the same river?

The migrating salmon can surmount Bonneville Dam, 370 miles down the Columbia from Grand Coulee, by flipping up a series of curving fish ladders. Grand Coulee, as lofty as a 40-story skyscraper, is too high for such devices. The Bonneville ladders are wide concrete steps over which the water falls in gentle cascades. Their construction cost $7,022,000, but the Fish and Wildlife Service believes they have been worth it. Millions of salmon have journeyed through them.

Naturalists agree, that the Bonneville salmon ladders have been a success. Yet the upstream migration is not the only peril which threatens these nomadic fish. Do the baby Chinooks, the tiny fingerlings, travel safely downstream to the sea, where they grow to maturity? Tests conducted by the Oregon State Fish Commission cast doubt on this question. The fins of 100,000 fingerlings were clipped in two distinctive patterns. Fish marked in one way were released below Bonneville, those marked differently were put in the water above the dam. The proportion of these two groups caught in the lower river indicated that a fourth of the baby salmon die in the plunge over the spillway.

Indians who fish the Columbia and sports fishermen and biologists insist that the damage to the $10,000,000 annual salmon industry by additional dams would more than erase the benefits in irrigation and power development. Advocates of the Columbia Valley Authority answer that dams and fish can exist in the same river. They say that the projects actually will stabilize the Columbia and cover treacherous rapids where many fish once were buffeted to death against the rocks.

These are some of the problems which will be at issue when Congress votes on the question of a Columbia Valley Authority.

"There are parts of this Nation that are not as favored as the Northwest," Franklin D. Roosevelt said not long before he died. "I am thinking about those people as well as you people. You have got room for them here in the Northwest where they can make homes—where they can live happily and prosperously." Will a regional authority modeled on the TVA supervise and manage the development of this wilderness in the West? Would such an agency improve the value to the Nation of our only remaining region where men can sink their plows in new ground?

The TVA is now an integral part of the South, where it has bolstered the economy of the Tennessee Valley. The proposed Missouri Valley Authority, still a highly controversial plan, would deal with the problems of the Middle West and the Great Plains—the Nation's breakbasket. The CVA, most unique of all, would go to work on our last frontier, whose development is the issue at stake in the question of a Columbia Valley Authority.

Fair Employment Practice Committee

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include in the RECORD a resolution adopted by the Common Council of the city of Milwaukee on January 21, 1946, on H. R. 2232, providing for a permanent Fair Employment Practice Committee:

Resolved by the Common Council of the City of Milwaukee, That it hereby goes on record in favor of the passage of bill H. R. 2232, providing for a permanent Fair Employment Practice Committee;

Resolved further, That certified copies of this resolution be forwarded to Senators LA FOLLETTE and WILEY and Congressmen WASIELEWSKI and BIEMILLER, to the Speaker of the House of Representatives and the reading clerk of the United States Senate.

OPA

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Washington Herald, of date January 30, 1946, as follows:

OPA AND CPA PLAN TO FORCE MEN'S SHIRTS, SUITS ON MARKET—MANUFACTURERS ADMIT HOARDING GOODS BECAUSE OF PRICE REGULATIONS

The Government yesterday promised action in a day or two to force hidden shirts and suits back on the retail market.

The Civilian Production Administration said it would notify manufacturers of its power to take away priorities from those guilty of hoarding. The OPA said it had field agents investigating alleged inequalities in its price program.

THREE MILLION ON SHELVES

The National Association of Shirt and Pajama Manufacturers had charged in New York that OPA regulations have kept more than 3,000,000 men's shirts made to sell at $3 or more on factory shelves.

The OPA promised that if inequalities in its maximum pricing program are found, adjustments will be made to bring hoarded goods back on the market. A CPA official said that agency has the power to take away priorities from manufacturers if hoarding regulations are violated.

NEW YORK, January 29.—More than 3,000,000 men's shirts made to sell at $3 and up are held on factory shelves because of OPA sales regulations, the National Association of Shirt and Pajama Manufacturers said today.

PRICES APPROVED BY OPA

Prices of the shirts have been approved by the OPA. The obstacle to their sale is the lack of low-cost shirts. An OPA order requires that manufacturers must keep the same balance of low-cost shirt production that they did in 1943. Because of a shortage

of low-cost fabrics, shirt makers say they have been unable to make low-cost shirts.

Negotiations have been held with the OPA to arrange for a reconsideration of the order, known as the maximum average price regulation, but according to the association's secretary, Max Lovell, so far "we've had nothing but promises that they'll think it over."

TWO METHODS OUT

"Only two things could free these shirts to a shirt-hungry public," Lovell said, "a change in the OPA ruling or a greater volume of low-cost fabric production. The latter could not possibly come in less than 6 months."

If shirt makers bucked the OPA to sell the shirts, Lovell said, they would face treble damage penalties for every dollar they made over 1943 profits.

United States Urged To Put Own House in Order Before Seeking World Leadership

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, from the Washington Evening Star:

UNITED STATES URGED TO PUT OWN HOUSE IN ORDER BEFORE SEEKING WORLD LEADERSHIP

(By Frank R. Kent)

No real American wants a dictatorship for this country. We entered the last war, fought and won it largely to avert the threat of another and to preserve our own democratic form of government. Yet the almost incredible incompetency with which our system operates makes it utterly ridiculous for us to urge its adoption upon other nations with other ideas.

We do not want to change, but certainly we should not boast about it. On the contrary, we should as a people feel profoundly mortified. For the spectacle of impotent confusion which we now present to the world is unparalleled in history, and the extraordinary demonstration of our complete inability to manage our own affairs is the most impressive thing about us.

Under such conditions our pretensions to world leadership become preposterous. We cannot run the world if we cannot run ourselves. The first qualification for world leadership is to put our own house in order.

That seems a strong indictment, but those who think it too strong might take a look at the house. Here we are the greatest of all the countries engaged in the war (and the one that suffered least) in a condition that must alarm every citizen.

NOT FAR FROM CHAOS

Our internal disorder is not far from chaos. Neither the judicial, the executive, nor the legislative branch of our Government is functioning satisfactorily and not one of the three is in harmony with another. The Supreme Court, split in two sharply separated factions, is further handicapped by the insistent political propaganda that centers around one of its members—Justice Douglas—and the prolonged absence of another—Justice Jackson—upon an assignment not remotely connected with the Court.

The Democratic President, unable to get even a small part of his large domestic program through a Democratic Congress, and, in the main surrounded by obviously inadequate men, in the great industrial-labor struggle now going on has thrown his weight on the side of the union faction in which the subversive elements which seek to undermine our institutions are most influential—to wit, the CIO. In this he follows the example of his predecessor who formed a political alliance with the CIO and its PAC which the Truman political managers apparently are anxious to continue.

And Congress, faced with a national crisis and a call for action, is unable to act. With important measures waiting consideration, a filibustering Senate minority has tied itself into a tight knot over the so-called Fair Employment Practices Act, originally sponsored by the Communists, now endorsed by both Republican and Democratic Parties, but really pressed by the CIO.

That isn't all by any means. Badgered by the political demagogues, the Army has been forced to demobilize at dangerous speed and is nearing the mark where its size will be inadequate to carry out our commitments abroad. At the same time Congress thus far has refused to tighten up or extend the draft and, so far, has sidetracked the universal military training bill recommended by the President and the Army as the least we can do if we are not to descend from the mightiest power in the world to one of the feeblest. Its passage, as has been pointed out again and again, is vital.

Nor is that all. With a long period of great prosperity in prospect, provided our production can measurably meet the tremendous demand for our products, we appear deliberately intent upon killing the prospect.

MORE THAN MILLION IDLE

More than a million men have been thrown into idleness by the great strikes in the steel and automobile fields. Others, such as the meat strike, have forced the Government to seize plants to protect the food supply. In New York City the radical union leader, Michael Quill, compelled the mayor of New York humiliatingly to surrender to his purely political demands to avoid what would have been a calamitous tie-up in the transit system. Other strikes are bursting out all over the place, and the administration has no labor policy worthy of the name and no restraining law on the books to protect the people's interests.

Add to all this the fact that Federal finances are still out of control. We preach economy but practice extravagance. We call for a reduction in the swollen Federal pay roll and for a decrease in waste. Yet, as Senator BYRD points out, instead of reducing the civilian personnel since peace came, it has been increased. The pay roll instead of going down has gone up. The only big reductions have been in the Army and Navy, and these were inevitable when the shooting stopped.

With the national debt close to three hundred billions we deliberately reduced taxes by more than seven billions and we lend abroad billions which we do not really have. More could be put in the picture, but this seems enough to make the point that our cherished system has bogged down pretty badly. There will be those to say that this is too black a picture, that things eventually will be straightened out and, as usual, we will pull through. And, of course, that is so this time. But the cost of the struggle will be terrific and the strain upon the system will leave it weakened.

A few more crises like the one on us now and it will be unrecognizable and we all will be worse off. The sad state we are now in represents the accumulation of years. How to achieve the governmental teamwork and competency essential to save us is the great problem. If that cannot somehow be done, we shall steadily slide downward to the grand bust-up.

Amendment of the Internal Revenue Code

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks regarding my bill to permit physicians, surgeons, and dentists to deduct from their taxable income the time spent in giving free professional service, I want to insert the provisions of the bill itself, as follows:

H. R. 5296

A bill to amend the Internal Revenue Code, as amended, and for other purposes

Be it enacted, etc., That section 23-q of the Internal Revenue Code is amended by adding the following new paragraph, to read as follows:

"(4) That commencing with the taxable year 1946, physicians, surgeons, and dentists shall be allowed an additional credit as a deduction on their income tax equal in terms of percentages to that portion of their time each year which is devoted to charity, free clinic work, and/or public research work;

"(5) The Commissioner of Internal Revenue shall prescribe by regulation the method of computing such time and the proof which shall be required in substantiation thereof."

Pensions of Retired Railway Employees

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter that I have received from the John Fritz Chapter, No. 6, of the International Association of Retired Railway Employees, of East St. Louis, Ill., with regard to their railroad pension:

DEAR CONGRESSMAN: At a meeting of the John Fritz Chapter No. 6, held last Friday, the officers were asked to write you with reference to our railroad pension. As you know, the cost of living has increased considerably and we find it difficult to make both ends meet. There was a time when we could indulge in an occasional luxury but no more. In fact we are continuously obliged to curtail on necessities.

In this chapter there are 400 retired railway workers, all over 65—some 70, 75, 80, and a few 85. At least 50 percent of the homes represented have one or more dependents. Dependents are likewise suffering for the need of necessities. The pension increase we ask for is more reasonable. The act levies a tax of 3¼ percent on wages of railroad workers up to $300 a month—the railroads contributing the like amount of 3¼ percent. This increase we believe can be made without having to increase the tax levy (Railroad Retirement Board in its last report showed a large surplus). However, if an increase should be necessary the tax could be made 3½ percent or 4 percent and this would answer. Such an increase, we believe, neither the railroads or railroad employees would object to, it being so small.

The increase we have asked for is—for those who are getting $100 to $120 (maximum—5 percent; $75 to $100, 10 percent; $50 to $75, 15 percent; $25 to $50, 20 percent. Those who get $25 or less, 25 percent. Very few get the higher amounts—the average pension is $42.

Unlike some other kinds of pensions, the railroad pension does not cost the Government a penny. If a bill, separate from others, calling for such an increase is not now before Congress, we wish one might be introduced, and that Congress enact the pension change, as herein indicated, into a law without delay.

We really need the pension increase.

Please, please, please, please help us now.

Sincerely yours,

C. A. DUNCAN,
President.

V. C. POWERS,
Vice President and Treasurer.

E. C. JENKINS,
Secretary.

ERNEST COOMBS,
Chairman, Board of Directors.

FRANK C. SMITH,
Counsel.

Some of the Causes for the Shortage of Hosiery

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. DURHAM. Mr. Speaker, due to the fact that there has been quite a lot of misunderstanding as to the reason for the shortage of women's hosiery, I wish to include a statement from the Greensboro Daily News, Greensboro, N. C., January 30, 1946, issue, which I feel explains the facts as exist in the hosiery manufacturing industry:

MATERIAL SHORTAGE AND BIG-BUYING DEMAND CAUSING HOSIERY SHORTAGE—PROSPECTS FOR 1946 NONE TOO BRIGHT FOR LADIES UNLESS SUPPLIES INCREASE

(By DeWitt Carroll)

An acute Nation-wide shortage of women's hosiery is due to the cumulative effect of factors ranging from lack of raw materials to increased buying power of the public, a survey of manufacturers and retailers revealed here last night.

Greensboro merchants who are fortunate enough to get shipments of stockings report that what would have been several days' supply in normal times is now snapped up in an hour. Retailers' estimates on current hosiery shipments range from 10 to 20 percent of normal.

LITTLE BLACK MARKET

Although it is reported that nylons are being sold on the black market in Greensboro, both manufacturers and merchants were overwhelmingly of the opinion that the illegal traffic is very small. Black-market nylons are being offered at about $3 a pair, one source reported. Another pointed out that if the black market were active here, the effect would be seen in a lessening demand at the stores and the demand is as great as ever.

Taylor R. Durham, executive secretary of the Southern Hosiery Manufacturers Association, of Charlotte, attributed the shortage mainly to a lack of nylon and rayon yarn. Unless these supplies increase, he said, fewer women's stockings will be made this year.

In 1941, the last normal year, a total of 57,400,000 dozen pair of women's hose, all types, were made in the United States. Final figures for 1945 are not in yet, Durham said, but the total is expected to be about 43,000,000 dozen. Unless manufacturers are able to get more nylon and rayon yarn, he predicted the total for this year would be about 33,000,000 dozen, including nylon, rayon, and cotton.

APPEAL MADE

Durham said his group had appealed to the Civilian Production Administration to restore some rayon to hosiery mills, and he expressed hope of some relief from this quarter. However, there is pressure from the regular customers of rayon manufacturers, who are also in need of the material for woven products.

The association secretary said North Carolina leads the Nation in the manufacture of hosiery of all kinds, by volume. It makes nearly 40 percent of all seamless hose for men, women, and children, and about 22 percent of all full-fashioned hosiery.

Main cause of the hosiery shortage, one manufacturer said, is the lack of nylon and rayon yarns. When war broke out, silk and nylon were taken away from hosiery mills and replaced with rayon. Now the supply of nylon yarn being allotted to hosiery concerns is not sufficient to fill their demand. He would not say what percentage of his nylon yarn requirements is being met, but did say that his company is utilizing available nylon at full capacity.

RAYON SOUGHT

Since he is unable to get enough nylon, his firm is trying to buy rayon in the open market to obtain supplies to make this kind of hose. With the war over, the bulk of the rayon is going to weavers, half-hose manufacturers, and other regular prewar customers, and his firm is able to get only a comparatively small amount.

Du Pont is releasing enough nylon to make 30,000,000 pairs of stockings a month, but he believes this figure includes full-fashioned, seamless, half-hose, and other types. Export of 4,500,000 pairs of nylon hose over a 2-month period last year added to the shortage, he said.

A further factor in the current shortage, this source said, was the difficulty in converting production back to nylon. Manufacturers had more troubles than they had anticipated, he explained, and some of them are still having these difficulties.

OTHER FACTORS

Still another factor with some manufacturers is a shortage of sizing and preboarding equipment. A sizing machine puts a film on the yarn to protect it while it is being knitted, and preboarding machines subject nylon hose to pressure at a temperature of 240° to make them hold their shape. Before the war this equipment was not as much in demand as it is now, and, until it can be obtained, these manufacturers are working under a double handicap.

Another hosiery-manufacturing official voiced the same reasons for the shortage, and added several more. Manufacturers have had to build up working inventories of yarn before they could operate smoothly in all stages of hosiery fabrication, he said. His concern, he continued, is getting about 40 percent of the nylon yarn it could use. Another strong factor is that the hose made during the war years did not have the wearing qualities of the prewar variety.

A third hosiery official felt that additional purchasing power is having its effect on the way women are cleaning out the shelves of local stores in efforts to buy leg wear. Manufacturers and merchants agreed that no one along the line has any backlog of women's hosiery. And the women, wearing out precious hose as they hike from store to store, vehemently make it unanimous.

Strike Settlements

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. HOOK. Mr. Speaker, the rejection by General Motors Corp. of the recommendations of the President's fact-finding board and the refusal of the United States Steel Corp. to accept the President's compromise settlement have precipitated the greatest industrial crisis in the history of our economy. The actions of these corporations indicate that fact-finding boards will not solve this crisis.

The unions have accepted the compromise proposals and have charged that the refusal of these corporations is part of a concerted plan to destroy labor unions and endanger the welfare of the American people.

To solve this crisis we call upon General Motors and the United States Steel Corp. to accept the Government's proposal for settlement of the disputes.

Signed by Congressmen CLEVELAND M. BAILEY, of West Virginia; ANDREW J. BIEMILLER, of Wisconsin; EMANUEL CELLER, of New York; JOHN M. COFFEE, of Washington; WILLIAM L. DAWSON, of Illinois; HUGH DE LACY, of Washington; HELEN GAHAGAN DOUGLAS, of California; CLYDE DOYLE, of California; HERMAN P. EBERHARTER, of Pennsylvania; WILLIAM J. GALLAGHER, of Minnesota; JAMES P. GEELAN, of Connecticut; THOMAS S. GORDON, of Illinois; WILLIAM T. GRANAHAN, of Pennsylvania; FRANCK R. HAVENNER, of California; NED R. HEALY, of California; FRANK F. HOOK, of Michigan; AUGUSTINE B. KELLEY, of Pennsylvania; CECIL R. KING, of California; LOUIS C. RABAUT, of Michigan; JOHN LESINSKI, of Michigan; CHARLES M. LAFOLLETTE, of Indiana; WILLIAM W. LINK, of Illinois; VITO MARCANTONIO, of New York; GEORGE P. MILLER, of California; THOMAS E. MORGAN, of Pennsylvania; THOMAS J. O'BRIEN, of Illinois; DONALD L. O'TOOLE, of New York; GEORGE E. OUTLAND, of California; ELLIS E. PATTERSON, of California; ADAM C. POWELL, Jr., of New York; MELVIN PRICE, of Illinois; BENJAMIN J. RABIN, of New York; LEO F. RAYFIEL, of New York; GEORGE F. ROGERS, of New York; JOHN J. ROONEY, of New York; ADOLPH J. SABATH, of Illinois; CHARLES R. SAVAGE, of Washington; JAMES H. TORRENS, of New York; RICHARD J. WELCH, of California; GEORGE G. SADOWSKI, of Michigan; and GEORGE D. O'BRIEN, of Michigan.

Sales of Surplus Army Vehicles

EXTENSION OF REMARKS
OF
HON. CHARLES E. McKENZIE
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 31, 1946

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I enclose herewith an Associated Press news item from my home-town paper, the Monroe News-Star, which has to do with the shenanigans of surplus property sales at Camp Claiborne, La. Many veterans have complained to me that they have traveled many miles trying to get a line on surplus property, particularly automobiles, trucks, and housing, and when they finally did arrive at the place the property was supposed to be located they ran into all kinds of misinformation or lack of information or lack of authority or just plain incompetence and indifference. There is no reason why a veteran of the United States Army or Navy should not receive accurate information including both the description and price of the surplus property he is trying to buy. He is also entitled to know exactly where this property is located and who is in charge of it and at what time he can see it. The time and travel expenses of an American citizen and veteran are just as important to him as the time and martinet authority of some brass hat or bureaucrat.

Why cannot the Government put a price on surplus property and offer it for sale at a given date and place and stick to its decision just like any business firm would be expected to do? Is it because some bureaucrat is afraid an American citizen might get a good buy? It is ridiculous. They want to give the stuff to some foreigner but are actually reluctant to give an American veteran an equal opportunity to buy what he wants and needs.

Mr. Speaker, why does every fool who goes to work for the Government feel that he has to get up some long-winded, complicated, red-tape formula for everything he does? Why does he seem to think the American citizen is someone to be given as little consideration as possible? Why do we put up with it? Well, for one, I am not going to put up with it. From now on it is going to be my intention to try to get action from the surplus-property authorities. People need the stuff they have to offer, and if it was put on the market at once it could benefit both the citizen and the Government.

Look over the following. Is not it a disgrace?

VETERANS ASSERT SALES ARE UNFAIR

ALEXANDRIA, LA., January 25.—Fred Gray, a representative of the Veterans' Administration, today checked on compiaints made by veterans that prices on surplus Army vehicles had been raised and that other irregularities had been noted during the sale of surplus equipment at Camp Claiborne.

A Captain Overton and a Lieutenant Munves, both of Dallas, told Gray that a truck bearing RFC No. 434 (Army 394192) had been raised from a price of $1,023 in the sale announcement to $1,466.90, and another truck, bearing RFC No. 441 (Army 389676), had been upped from $1,072.33 to $1,531.90.

E. G. Haas, of Fort Worth, reported that RFC No. 442, listed at $669.76, had been raised to $956.81.

N. R. Clement, of Lubbock, Tex., said he had asked an RFC official why prices had been increased, and was tolc that some repairs had been made, and, therefore, the selling price had to be increased.

Clement reported that at Wednesday's sale, set aside for city, county, and State governments, he had noted several wrong transactions. He said a man who claimed he represented a county in Oklahoma had bought 11 vehicles and later offered them to individuals at mark-ups of about $100 each.

Gray said Captain Overton and Lieutenant Munves told him they thought the prices were changed after sales to Government agencies had ended.

H. W. Wright, an RFC official at Claiborne, admitted to Gray that "some prices are too high, but there is nothing we can do about it." Wright said the prices were fixed by an analyst in Washington.

Issues Underlying General Motors Wage Dispute

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks, I include in the Appendix the texts of two news articles by Mr. Peter Edson, the distinguished correspondent for NEA Service. On Friday, January 25, Mr. Edson attended the Senate Education and Labor Committee hearing at which Mr. C. E. Wilson, president of the General Motors Corp., testified and that evening wrote a report for his service. The following day, readers of the Washington Daily News were presented with a news picture showing Walter P. Reuther, vice president of the UAW-CIO, declining to shake hands with Mr. Wilson until and unless Mr. Wilson signed a satisfactory wage agreement with the union.

The news caption stated that:

Peter Edson, the news expert, termed Wilson's testimony before the Senate committee "one of the finest demonstrations of issue dodging ever heard."

Readers of the News, including myself, strained their eyes trying to find Mr. Edson's article in the News, but to no avail. I understand that the News was besieged with inquiries. In the final edition, two sentences from Mr. Edson's article were published.

Because I suppose that many Members of both Houses searched through the News as I did for Mr. Edson's report, I am sure that they will read the full text with interest. Also an article written the following day about the appearance before the same committee of Mr. Reuther. Read together, the two articles provide an interesting and important report on the issues underlying the General Motors wage dispute. The texts follow:

GM BOSS SAYS A MOUTHFUL

(By Peter Edson)

WASHINGTON, January 25.—Charles E. Wilson, big, tough, white-haired president of General Motors, came down to Washington as first witness before the Senate Labor Committee on fact finding. In morning and afternoon sessions of 2 hours each, he gave one of the finest demonstrations of dodging the issue ever seen or heard in this home of indirect answers to direct questions.

Wilson smoked countless cigarettes, one after the other, and kept on talking great mouthfuls of words with sincerity, conviction, and many gestures. But whenever one of the able panel of Senators—MURRAY, ELLENDER, TAFT, MORSE, SMITH, DONNELL, GUFFEY, and LA FOLLETTE—backed the General Motors head right up against a leading question, he skidded to one side and started to talk about other things. It was masterful.

It was all highly entertaining and perhaps even informative. But as for producing anything that would help settle the present industrial muddle, nothing came out, except maybe a little indirect evidence that, if this is the way labor negotiations are conducted, it's no wonder the General Motors strike isn't settled yet.

STILL IN THE DARK

All the committee wanted, said Senator MORSE, was to know what, if any, legislation Congress should pass to help solve industrial warfare.

Well, Mr. Wilson said that was a big question. He said he wasn't a lawyer or a politician but a production man.

Coming down on the train the night before, Mr. Wilson had made a few notes on what should be the guiding principles for Congress. There were 14 points. Did Congress believe in free competition, private ownership, profit and loss, industrial liberty, the right to work, to strike, to organize unions, to bargain collectively, the American standard of living, monopolies, sound currency, a balanced budget and inflation—when and how much?

Mr. Wilson had four measuring sticks for this program. He would give up trying to find political solutions for economic problems. But whatever laws were passed should be socially sound, legally sound, enforceable and practical.

In brief, he seemed to be afraid of fact-finding. The procedure would interfere with collective bargaining, and it might start finding principles. Principles were apparently bad.

STILL ASTRADDLE OF THE FENCE

Senator ELLENDER wanted to know if Wilson entertained the view that Congress should do nothing. Answer—Oh, no, but the primary trouble now came out of the war. The relation of government to industry and labor got away from the free competitive principle.

Senator TAFT wanted to know if Wilson was opposed to contracts preventing strikes. Well, it was hard to generalize. The trouble was that there were two policies.

Which policy did Wilson want Congress to declare, TAFT wanted to know. Wilson said he thought we could do it if we went back to work. That was the way to do it. We ought to work more. Then we ought to decide what we're going to do on the workweek, union security, inflation and the wage policy.

Later, Wilson said neither side would agree to arbitrate on hours, wages, union security or the right of management to manage.

Senator DONNELL then tried to pin Wilson down on the idea that, where bargaining failed, Congress should legislate for compulsory settlement.

If we have the free competitive system, Wilson replied, we must have strikes. If we believe in free enterprise, we should go down that road.

NOTE.—If this column is a bit incoherent, you've got the idea.

WALTER REUTHER'S IDEAS

WASHINGTON, January 26.—Red-headed Walter Reuther's 3 hours of nonstop testimony before the Senate Labor Committee cleared up a lot of misconceptions about the General Motors strike which this young United Auto Workers' official is directing.

It clears up the degree to which the corporation has refused to bargain collectively. It clears up the much chawed-over "wanting to look at the books." It clears up the basic ideas this husky giant of a union is shooting at.

As Senator FULBRIGHT observed, Reuther's indictment of the General Motors management "amounts to saying there was no collective bargaining."

In brief, General Motors, after 6 weeks' deliberation refused to consider the union's 30-percent wage-increase demand, even when told that if the company could not afford to pay without increasing prices, the demands would be scaled down. When asked if a 1-cent increase could be paid without an increase in prices, the union was told this was none of its business.

Wanting to look at the books grew out of that. The union didn't want to look at the books, says Reuther. All it wanted was the basic cost data on auto production as it related to wages, hours, and working conditions—data probably contained on three or four sheets of paper and known only to the company.

COUNTERPROPOSAL FIRST OFFERED NOTHING

GM counterproposals have been, first, nothing, then a 45- to 48-hour workweek, then 10 cents, and finally 13½ cents an hour increase, after the strike was called.

When it became apparent negotiations were at a stalemate, the union suggested conciliators from the Labor Department. For a week the management refused to admit them to negotiations. The second week they were admitted as observers, to sit in a corner and say nothing.

The final effort at settlement came in a union proposal for three-man arbitration, one selected by the union, one by the company, these two to pick a third. After 3 days, the answer came back that if the company arbitrated, it would be abdicating.

"Are you willing to arbitrate now?" asked Senator GUFFEY.

"Oh, no," said Reuther. "We gave them two chances."

So the strike was called. Since then the management has refused to meet with the union, it has declined to participate before Presidential fact finders, it has canceled the union's contract, which would not have expired until April 28.

That is a sorry record of labor relations. But the interesting thing in all this is what motives are driving young Reuther and his union.

When the company's offer of 45 to 48 hours a week was turned down, it was because, that would mean prosperity for a few, unemployment for others. That is not the answer.

HE SEES INCREASED PRODUCTION AS ANSWER

When wage increases without price increases were demanded, it was because "We don't want to get ours at the expense of the public."

Economically, Reuther believes the answer to everything is in increased production. Before the war the country had an $80,000,000,000 production machine. Now it's a $200,000,000,000 machine. He calls it a B-29 production, and he says it has to be put to work. He quotes Treasury Secretary Vinson's statement that the living standard has to be raised 50 percent to do it.

Legislatively, Reuther proposes restoration of the excess-profits tax, repeal of the carry-back tax, and extension of price control, "to make management go back to work."

He would strengthen the conciliation service.

He would require management to file data on wages, hours, and conditions of labor so that such data would be available for collective-bargaining negotiations.

He would be willing to have union financial data made equally available. His own union now publishes trimonthly statements.

But legislation is not the answer, he says, because no law can make men work and no one can legislate good will.

Elmer Twitchell Writes His Congressman

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 31, 1946

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article sent me by one of my constituents entitled "Elmer Twitchell Writes His Congressman," from the column of H. I. Phillips, as follows:

THE ONCE OVER

(By H. I. Phillips)

ELMER TWITCHELL WRITES HIS CONGRESSMAN

DEAR CONGRESSMAN: Well, on account of President Truman asked me to, I am taking up with you direct the terrible mess the country is in. I am like a man going down a ski jump in a fog, only even more scared and I guess you are the same. (The difference is that you get paid for the trip.) For me to take up with you direct the troubles of America seems funny, as I had an idea you being a Congressman must know what they were, but who am I to turn down a request by the President?

First of all I will come right out and admit I am not too sure who is right and who is wrong in the assorted disturbances, but I think it would be helpful if you decided on the following program:

1. Cut the double talk, which is America's trouble No. 1.

2. Put your soul above the election returns.

3. Try to regard the words, "It's close with 22 districts missing," as less vital than "No matter what happens to me I have been a man."

4. Wipe off that goose-pimply look and do what is best for the people of America, let the votes fall where they may.

5. Realize that this is not one of those times when it is enough to be an artful dodger, a main-chancer and a pussy-footer.

6. Get it into your head, Mr. Congressman, that a man can be right and still not be in a newsreel often.

7. Try to understand that America never needed straight-shooting, straight-talking leaders so desperately.

8. Take the stand that you would not only rather be right than be President but rather be nearly right than be a Congressman.

9. Smarten up to the fact that the national appetite for baloney is slowly but surely on the decline.

10. Remember that on your words and actions today depend the future happiness, yes, and the very lives of millions of Americans and their kids.

11. In the words of "the State of the Union," stop thinking of the next election and start thinking of the next generation.

12. Be a United States public servant, not a waltzing mouse with a Washington address, or a Potomac River hanger for coat and pants.

Well, I could give you some more advice but a Congressman can absorb only a little at a time, so I will quit at this point. The fate of America is in your lap or would be, if you had a lap. Your kids and your constituents' kids may be the happy citizens of tomorrow or penniless bums, depending on whether you are a man or a halibut in these grave times. Whether America will continue to be the land of the free and the home of the brave or wind up as the Quonset hut of the hog-tied and the home of the baffled goat is up to you. For once in our life forget the votes. Yours in a cold sweat,

ELMER TWITCHELL.

P. S.—You are not only fiddling while Rome burns, but trying to combat the fire and the music into a regular radio program.

Answering Attack on the Veterans' Administration

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. RANKIN. Mr. Speaker, it seems to me that the gentleman from Pennsylvania [Mr. FULTON], if he is really interested in the welfare of the disabled veterans, should make some investigation before he comes on this floor and repeats these charges against the present Veterans' Administration, headed by Gen. Omar N. Bradley, one of the greatest soldiers of this war and one of our finest living Americans.

I happen to know something about what is going on. General Bradley is doing the very best he can. He is doing everything possible to speed up the construction of veterans' hospitals, get every disabled veteran into a hospital as quickly as possible, and to process every claim that comes in.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. He has had trouble getting sufficient help in the Veterans' Administration.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. Yes, I will yield.

Mr. FULTON. Of course, this is the first time you have heard me because I am a new Member of Congress.

Mr. RANKIN. I thought so.

Mr. FULTON. There are many of these veterans in my district. I want to ask this question. Is it not true that there are hundreds of thousands of letters?

Mr. RANKIN. Now, I will give the complete answer to that question in a letter from General Bradley which I am inserting as a part of my remarks, I would read it but I have only 1 minute.

This is the most unjust attack on General Bradley and the Veterans' Administration I have ever heard. It sounds like communism to me.

Mr. FULTON. I am asking for information.

Mr. RANKIN. In my opinion this man Stelle is doing the Veterans' Administration a grave injustice as well as doing great harm to the American Legion.

General Bradley's letter follows:

Hon. J. E. RANKIN,
Chairman, Committee on World War Veterans' Legislation,
House Office Building,
Washington, D. C.

MY DEAR MR. RANKIN: Receipt is acknowledged of your letter of this date enclosing

a letter addressed to you, dated January 31, 1946, from Commander John Stelle, national commander of the American Legion, on which you desire information, which is furnished as follows:

I assumed office as Administrator of Veterans' Affairs on August 14, 1945. The following facts are presented as a review of the operations of the Veterans' Administration since that date and facts pertaining to the current load of work.

Separations from the armed services from October 1, 1940, to July 31, 1945, were 2,688,600. From August 1, 1945, to December 31 of that year there were 5,656,000 separations, making a total of 8,344,000 separations from service in World War II. The estimated separations from active service for January 1946 are 1,180,000, making a grand total of 9,524,000 veterans who have served in World War II. By an examination of these figures it will be noted that 28 percent of the total separations were accomplished in 5 years and 72 percent during the last 6 months. This will give you some idea of the accelerated load which the Veterans' Administration has had to assume during my administration.

DISABILITY PENSION CLAIMS

On August 1, 1945, there had been filed 985,182 disability pension claims by veterans of World War II; of this number, 120,920 were pending; 283,262 had been adjudicated; 616,467 had been allowed, and 266,795 had been disallowed. The percentage of allowed claims as of August 1, 1945, was 74.6.

On December 31, 1945, 1,820,093 disability claims had been filed; of this number 392,642 were pending; 1,427,451 had been adjudicated; 967,141 had been allowed, and 460,310 disallowed. The percentage of allowed claims as of December 31, 1945, was 67.8.

The vast majority of claims now pending were filed subsequent to the veterans' discharge, and, according to a recent survey made in the territory of one of the Veterans' Administration branch offices, 77 percent of the cases pending were awaiting AGO records from the Service Department. It is not possible to adjudicate these cases until the Service Department records are received. Based on available information, it is indicated that this percentage of 77 percent represents an over-all picture.

Insofar as the claims of veterans, who are discharged from service on certificate of disability, are concerned, they are handled without delay. In fact the Veterans' Administration adjudicates these claims within 3 to 5 days of the receipt of the claim in our area offices. These offices were established for the specific purpose of rendering expedited action in this class of cases and this procedure has proven to be most effective. The area offices have adjudicated over 600,000 disability claims.

It is desired to emphasize that the Veterans' Administration is handling the claims of those veterans who are discharged on a certificate of disability without any delay whatsoever.

The Veterans' Administration has used every expedient possible to adjudicate the claims filed by veterans without delay. As indicated above, the veterans who have been discharged because of disability, numbering in excess of 600,000, certainly the most meritorious group, have been adjudicated through the area office procedure set up for this purpose. There has never been any appreciable delay in the adjudication of cases of this character. As those taper off, the area offices are being utilized to adjudicate cases initially claims of naval veterans discharged through naval discharge centers. This is made possible by the practice of the Navy Department which enables them to furnish, in the great majority of cases, the veterans' complete records. Special procedures have been set up with the Army separation centers whereby essential records are immediately forwarded to the Veterans' Administration when the veteran files claim at the center. These are used wherever adequate to allow the claim. Other records automatically follow which permit the adjudication of many cases. Recently the Army because of many reasons—the rapidity of demobilization, the move of records to St. Louis, the great influx of records from overseas—has been unable to furnish the military records with the desired dispatch. However, this is a temporary condition, and in order to assist the veterans it is immediately establishing a liaison group of its own employees in St. Louis.

Insofar as the withdrawal of the records of the living veterans from the regional offices to the branch offices is concerned it has never been contemplated that the branch offices will adjudicate the claims of the living veterans. The regional offices will continue to adjudicate the claims of the living veterans and, at the present time, it is contemplated that there will be a further decentralization of the claims of living veterans to the regional offices.

INSURANCE

Pertaining to the specific items cited in Commander Stelle's letter, concerning waiver of premiums on national service life insurance, 20,411 may seem a large pending load without analysis. It should be understood that over half of these pending claims cannot be acted upon by the Veterans' Administration until further evidence, which it has requested, has been supplied. During the week ending January 19, 1946, 6,506 claims for waiver of premiums were adjudicated so that the real pending load of claims we now have represent only 10 days' work. It is believed pertinent to state that in excess of 360,000 waiver-of-premium claims have been filed; almost half of this number, or over 153,000, have been received since August 1, 1945, with approximately 160,000 adjudications having been made subsequent to that date. It would seem that a load slightly in excess of 20,000 pending claims of a total of 360,000 claims of this character would not support an allegation of failure to take action.

HOSPITAL CONSTRUCTION

In our currently authorized construction program, 27 projects are now under construction, most of which consist of additions to existing hospitals. These projects include a total of 10,702 additional beds, the large majority of which are fast approaching completion. However, in our construction program, of the 41 new hospitals on which actual construction has not been started we have completed inspections at 35 locations and secured Presidential approval for the acquisition of 21 of these sites.

It must be understood that considerable time must of necessity be consumed in connection with the establishment of a new hospital and in making inspections and selection of available sites, in securing Presidential approval of the acquisition and in the actual acquisition of title to the property.

Estimated plans for hospitals of various capacities are being developed which, when approved, will greatly accelerate completion of this building program.

VOCATIONAL REHABILITATION AND EDUCATION (PUBLIC LAWS 16 AND 346)

It is alleged by your correspondent that 102,830 unprocessed applications for education and training under the Servicemen's Readjustment Act are pending. As of December 31, 1945, which is the latest figure we have on this item, there were 69,463 claims in a pending status.

On August 1, 1945, 96,828 had applied for education and training under Public Law 346. On December 31, 1945, 454,489 had applied for education and training under Public Law 346—22,813 applications were received during the month of August, 45,095 during the month of September, 62,114 month of October, 97,439 month of November, and 130,200 in the month of December. Prior to August 1, 1945, the monthly increase in claims approximated 7,000 applications a month.

In training, as of December 31, 1945, there were 91,176 veterans. Two hundred and fifty-eight thousand seven hundred and eighty-one veterans had received their certificates of eligibility and were awaiting entrance into training, i. e., they may not have elected courses of education or training or were waiting to begin their courses of education or training or acceptance by the educational or training institution.

While your correspondent did not mention the vocational rehabilitation program under Public Law 16, Seventy-eighth Congress, there were 14,771 veterans who had not initiated their advisement and guidance and 37,804 veterans were undergoing advisement and guidance on December 31, 1945. Twenty thousand one hundred and fifty-five veterans were awaiting induction into training. On August 1, 1945, 89,961 veterans had applied for courses of rehabilitation. On December 31, 1945, 202,884 had applied for vocational rehabilitation—14,641 applications were received in August, 24,031 in September, 27,990 in October, 24,586 in November, 21,675 in the month of December. There were in training, as of December 31, 1945, 40,222.

During the month of December, I issued instructions to speed up the payment of subsistence allowances to veterans receiving education or training under Public Law 346 which involved a major change in one of the established procedures of the Veterans' Administration. Because of the provisions of Public Law 268, approved on December 28, 1945, I was also able to issue instructions to speed up the payment of allowances to disabled veterans pursuing courses of vocational rehabilitation under Public Law 16. The instructions implementing the law which was passed on December 28, 1945, were issued to our field offices within 15 days after this law became effective.

I am convinced that with the perfection of our supervisory forces in the 13 branch offices, the extension of this work to subregional offices and constant study for the purpose of eliminating unnecessary operations, we should be able to handle the load under both Public Laws 16 and 346.

STATUS OF DEATH PENSION CLAIMS, WORLD WAR II AND NATIONAL SERVICE LIFE INSURANCE DEATH CLAIMS

The following is the status of these claims as of August 1, 1945, and February 1, 1946:

Death pension claims, World War II

	Aug. 1, 1945	Feb. 1, 1946
Total cases in file	154,952	213,000
Total cases pending	27,103	22,000
Total cases adjudicated	127,849	191,000
Total cases allowed	106,857	162,000
Total cases disallowed	20,992	29,000
Total pensioners on roll	103,882	157,000

National service life insurance death claims

	Total claims received	Allowed	Disallowed	Pending
Aug. 1, 1945	380,172	344,545	7,726	27,901
Feb. 1, 1946	486,668	459,400	10,820	16,448

Oct. 1, 1945, peak month in point of national service life insurance claims allowed, 29,963.

READJUSTMENT ALLOWANCES

In the first week of August 1945, 44,184 unemployed veterans received readjustment allowances, compared to 940,262 for the week

ending January 26, 1946. These payments during the 6 months' period totaled $167,851,366.

LOAN GUARANTIES

Forty-two thousand three hundred and fifty-six applications for loan guaranties were approved during the period August 1, 1945, to January 19, 1946, with 318,000 pending as of the latter date.

This office is fully aware of the tremendous job that lies before the Veterans' Administration as well as its pending load. With that in mind, and because of handicaps being experienced in respect to lack of sufficient administrative space and personnel, on January 19, 1946, I issued telegraphic instructions to all deputy administrators as follows:

"Following telegram sent all regional managers today: 'Although commendable reports have been made to reduce pending load, statistics available indicate work in arrears majority regional offices in mail and records, adjudication, rehabilitation, medical examinations for rating purposes. Authority has already been delegated for employment additional personnel to permit second or third shifts if necessary where delay is due to lack of space and where work cannot be kept current by overtime. Authority permits full utilization of physicians on fee basis. You are directed to exercise authority already delegated to employ second and third shifts if necessary to insure maintenance of currency in mail and records and other divisions of your office. Transfer unit must operate so as to clear transfer cases on 48-hour basis. All separation records must be alphabetized and cabinet filed immediately. You are directed to staff all divisions if necessary on three-shift basis with night differential to accommodate overload when mail and records clears.' Deputy Administrators will immediately assume supervisory authority to assure that instructions to managers are carried out. In event difficulty experienced in recruiting new employees advise Assistant Administrator for Personnel at once indicating specific needs by type of job."

Moreover, with a full appreciation of the tremendous load ahead in connection with carrying out the provisions of law pertaining to vocational rehabilitation and education, instructions are now in the process of completion to further decentralize certain activities of this work from regional offices to subregional offices, which would serve to accelerate the accomplishment of this program.

Sincerely yours,

OMAR N. BRADLEY,
General, United States Army,
Administrator.

Strikes Have Gone Far Enough

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, February 1 (legislative day of Friday, January 18), 1946

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Strikes Have Gone Far Enough," published in the Arkansas Democrat, of Little Rock, Ark., of January 14, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRIKES HAVE GONE FAR ENOUGH

The first duty of government is to maintain order, to insure the basic rights of all the people, so they may go on in security with their daily affairs, working, producing, selling, and buying.

All else comes after that. When government fails in that duty, it fails to govern in the true sense of the word. When it allows any group to flout the public welfare, to set itself up as a superior force, shoving the majority around to gain its own ends, then we do not have government.

We have anarchy. We have a lawless rule of the many by a few.

The Nation is perilously near that situation now, if not actually in it. Strikers have been swinging their picket lines across the land, closing plants which are essential to the Nation's welfare, and promising to close more.

A small fraction of the Nation's workers are paralyzing its economic life. Other workers refuse to cross their picket lines. Many related plants depend for supplies on the ones closed by strikes, and cannot operate without them.

Strikes cannot be stopped entirely, of course. It would be wrong to do so, if it were possible. There have been cases, and there may be more, when the strike was labor's only weapon of defense for fundamental rights. There is employer greed as well as labor greed.

But it is the Government's solemn duty to see that labor is brought under the law, just as was done with business when it became big and powerful, and sometimes ruthless. For the public good, and for the preservation of our democracy, the Government is obligated to act.

Frequently, labor now has no respect for its contracts. A steel strike has been voted in violation of a contract which pledged no strikes during its life, and it runs till next fall. There has been a plague of wildcat strikes, of strikes over which union had jurisdiction of certain work in a plant, and of sympathy strikes where there was no grievance—just to back up some union demand maybe hundreds of miles away.

For all of this the public pays. It is in effect a conspiracy against the public peace and welfare. It is a restraint of trade as vicious as any trust ever attempted. It is undemocratic, unchristian, outrageous.

President Truman's fact-finding proposal is not the required remedy. In a preliminary test, General Motors has refused to accept the findings. A union could refuse as well. The findings would have no force, even if sanctioned by the law the President wants.

It is up to Congress to draft something stronger. The remedy is to make the unions liable for irresponsible conduct. This near-anarchy of allowing labor and management to slug out their differences over any matter at all, at the public expense, has gone far enough. Tell your Congressman and Senators that you want action.

Veterans' Administration

REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. FULTON. Mr. Speaker, I am speaking today as a veteran of World War II about the other veterans that have not been taken care of. I, too, have received a letter from the American Legion, from John Stelle, national commander, of the Washington headquarters.

He states to me that there are now 500,000 applications for service-connected ratings for compensation purposes which have not been processed by the Veterans' Administration today. Also, that there is delay in new hospital construction required for the 500,000 applications for service-connected disabilities. He stated that these are not being taken care of because the available beds are not adequately being used and the hospitals are not being constructed immediately. I feel that unless something is done to open the thousands of unopened letters which he states are in the Veterans' Administration we will have a complete breakdown of the legislation passed for the protection of our World War II veterans. We in Congress want to see that these laws which we passed are enforced, and as a veteran myself I want to speak out, courageously I hope, against this threatened breakdown of the Veterans' Administration. I ask for an immediate answer from the Veterans' Administration, not to myself, but for public information.

(The letter referred to follows:)

THE AMERICAN LEGION,
Washington, D. C., January 31, 1946.

DEAR CONGRESSMAN: A survey conducted throughout the Nation by the American Legion discloses that in the central offices in Washington and regional offices throughout the country there has been a tragic break-down in the administration of the law pertaining to the care and the treatment of the veterans who are the special charges of the Veterans' Administration. Amongst other delinquencies we have found there are over 500,000 applications for service-connected ratings for compensation purposes, which have not been processed by the Veterans' Administration; 7,840 pending applications for hospitalization awaiting process; 102,830 applications for education and training under title II of the Servicemen's Readjustment Act which have not been processed; and literally hundreds of thousands of unopened letters pertaining to various phases of veterans' benefits and insurance claims in Veterans' Administration offices throughout the Nation; 20,411 pending claims for waivers of premium on national service life insurance due to total and permanent disability; and 18,847 pending death claims undisposed of.

It is apparent from the above figures that the great promise of our Government to the returning veteran that he would be adequately cared for, together with his widow and orphans, is not being fulfilled by the present administration of the act.

It must be borne in mind that the figures given above are absolute minimum figures reflecting the extent of the neglect, since the American Legion is unable to have access to the fullest extent to the records of the Veterans' Administration. Our investigation discloses that there has been an apparent unwillingness on the part of the Veterans' Administration to utilize the staffed hospital beds available in Army and Navy hospitals throughout the country to service those in need of hospitalization in this emergency.

It further appears that although the Veterans' Administration has been given authority and ample appropriations for the construction of hospitals in various States to meet the present and impending heavy hospital load reflected in the 500,000 pending applications for service-connected disabilities, nevertheless, there is undue and persistent delay in new hospital construction. The American Legion has been advised that thousands of beds are now available in Army and Navy hospitals throughout the country, adequately staffed with doctors and nurses which could be used in the emergency.

There appears to be no disposition on the part of the Veterans' Administration to make adequate or complete use of these beds. Only 7,848 of these beds have been accepted by the Veterans' Administration.

The American Legion feels that the time has come when it must speak positively of the dereliction of the Veterans' Administration in order that our people will see to it, through their Representatives in Congress, that the Government keeps faith with those who sacrificed in its defense.

The American Legion, and we believe the American people, demand that Congress take immediate action to see that its mandates are not longer ignored by the Veterans' Administration; that measures for emergency hospitalization be adopted at once; that the authorized program for hospital construction be immediately launched, and that the unjustifiable and unwarranted delay in processing claims for benefits under the law be eliminated.

Yours very sincerely,

JOHN STELLE,
National Commander.

Proposed Independent State of Trans-Jordan

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, February 1 (legislative day of Friday, January 18), 1946

Mr. HAWKES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter sent to Hon. Dean Acheson, Acting Secretary of State, by the Hebrew Committee of National Liberation, regarding the separation of the territory of Trans-Jordan from Palestine, as advocated by the Foreign Secretary of Great Britain, Mr. Ernest Bevin, in his speech before the United Nations Organization.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 19, 1946.

The Hon. DEAN ACHESON,
Acting Secretary of State,
Department of State,
Washington, D. C.

YOUR EXCELLENCY: On behalf of the Hebrew Committee of National Liberation, we are writing to request the consideration and assistance of the Government of the United States in the following matter.

The Government of Great Britain has announced its intention to proceed with the establishment of an "independent state of Trans-Jordan." While we welcome every instance of granting independence to peoples hitherto deprived of statehood, we wish to state our strongest objection to the announced intention of the Government of Great Britain in this particular case.

We submit that such action would be in strict violation of the clear international obligations undertaken by His Majesty's Government as specified in the Anglo-American Convention of 1924, as well as in utter disagreement with the mandate issued by the League of Nations for Palestine.

The territory referred to as Trans-Jordan is an integral part of Palestine, clearly included within the boundaries of Palestine as specified in the mandate of the League of Nations under which Palestine was entrusted to Great Britain for the purpose of reconstituting that country as the national home of the Hebrew people.

This territory, referred to as Trans-Jordan, comprises 34,740 square miles and is very sparsely populated. Even with the inclusion of the wandering Bedouin tribes, the population numbers around 400,000. In 1922 this province was separated from the rest of Palestine in its administration by enforcing an arbitrary interpretation of article 25 of the mandate, thus leaving some 10,000 square miles (western Palestine) with a total population of 1,700,000. But at all times the province of Trans-Jordan remained under the jurisdiction and the control of the High Commissioner of Palestine and its budget was provided by the Treasury of Palestine, raised through taxes from the people of Palestine. Thus, even the most far-reaching interpretation of article 25 and the practice and policy of the colonial office imply that Trans-Jordan was at all times considered part of Palestine.

Furthermore, such a separation is contrary to the basic interests and welfare of the population. The comparison between the status of the residents of the western and eastern parts of Palestine speaks for itself. The average resident in the western part of Palestine has an incomparably higher standard of living, of health and education than in the province of Trans-Jordan, where the population is largely illiterate, disease-ridden, and in a permanent state of semistarvation.

Any effort to grant independence to Trans-Jordan is an obvious endeavor of a coup d'état in order to deprive the Hebrew people of three-fourths of their national territory which is theirs from the time immemorial by the will of God and which has been recognized as such in modern times by the mandate of the League of Nations.

The British Government is in control of Palestine's 45,000 square miles as a trustee and guardian by virtue of authority given to her by the League of Nations. Now that the United Nations Organization is in existence, the British Government is duty-bound to return the authority over the territory of Palestine to the United Nations Organization, which will take the necessary steps to effectuate the fulfillment of the original League of Nations mandate. Pending such action by Great Britain, it could not possibly grant "independence" to any one part of Palestine over which it has no sovereignty.

As a small nation which is still denied a seat on the United Nations Organization, we appeal for the protection of the Government of the United States against this latest effort to deprive us of our own territory and our internationally recognized right to it.

This comes at a time when hundreds of thousands of Hebrews are being prevented by force of arms from entering their own country. We wish to condemn before the entire civilized world the cruel treatment thus offered a loyal and fighting ally in the common war that has just been won with so much sacrifice and blood.

Appealing for the assistance of the Government of the United States, the Hebrew committee wishes to stress that under the terms of the Anglo-American Convention of 1924 and preceding correspondence between the two governments, any change in the terms of the mandate requires previous consultation with and the consent of the Government of the United States. We wish to express, therefore, our most confident hope that Your Excellency will institute the necessary measures to provide for Great Britain's adherence to the terms of her treaty with your Government and to her other international obligations pertaining to Palestine.

With assurances of my highest esteem and appreciation, I beg to remain, Your Excellency,

Faithfully yours,

PETER H. BERGSON,
Chairman.

Increase in Wages and Inflation

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 1 (legislative day of Friday, January 18), 1946

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Strange Contradiction," dealing with proposed increases in wages and the danger of inflation, published in the Arkansas Democrat, of Little Rock, Ark., January 23, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRANGE CONTRADICTION

There is a strange contradiction in the President's message to Congress.

On the one hand, he warns of the danger of inflation—that is, a runaway of living costs. He suggests certain measures to halt this calamity, already started. Two of them look to holding down on the amount of money in circulation. They thus strike at the cause of inflation, which is people having more money to buy with than there are goods to buy.

One of these proposals is reduced Government spending. The Federal Budget would be balanced at a lower out-go figure, against estimated tax receipts, helped out by using a few billions of cash now in the Treasury.

Then, the President would keep taxes where they are—no further reduction.

So the Government would be pouring less money into circulation, and taxes would continue to soak up the present percentage of what people get.

In addition, the President wants his power to control prices extended.

So far, so good. But then the President swings right around and asks for a wide raising of wages. There you'd have increased buying power, more upward pressure on prices, to offset the cut in Government spending and the tax take.

It's true, the President says wages should be raised without putting prices any higher. If that could be done, the wage hikes wouldn't add to the total of money in circulation. For it would just mean that the workers would get more, and the plants would have less profit to use for plant expansion, new industries, stockholders' dividends, and the like.

But the Government has already admitted that this can't be done. Industrial profits aren't generally big enough. The Government has recommended higher steel prices, so the steelworkers can be paid an additional 18½ cents an hour. Other price increases are hinted.

And that isn't all. If union wages go up, and prices are lifted so industry can pay them, what about the millions of farmers, professional people and unorganized workers, who cannot expect increased incomes?

Their one good chance of a raise is to get the equivalent of it in lower prices and taxes. But the President's program would defeat that, and worse—they would pay higher prices.

It's a strange contradiction—a dangerous one for the majority of our people. They should speak out about it to their Congressmen.

Reasonable wage increases, where justified—yes. But, above all, get production to going. Enough goods to buy is the one sure way to prevent inflation.

Veterans' Affairs

REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. ANDERSON of California. Mr. Speaker, I was interested in the controversy between the gentleman from Pennsylvania [Mr. FULTON] and the gentleman from Mississippi [Mr. RANKIN]. Like every other Member of the House, I, too, received a letter this morning from the national commander of the American Legion. I receive complaints from veterans almost daily. I would like to know just where the trouble lies. About a month ago I referred a communication to General Bradley in connection with 20 boys in my district who have returned from the service and who are going to college and who are supposed to be paid, under the GI bill of rights, the benefits to which they are entitled. Why are those payments, some of which have been overdue since February and March of last year, not paid? Why is it I have to wait for a month or so to get some sort of a reply from General Bradley?

Mr. RANKIN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of California. Yes; I yield.

Mr. RANKIN. In the first place, the law was not passed that long ago. In the second place, the amended GI bill was only passed a month or two ago. In the third place, General Bradley told me himself that he was having trouble getting enough help.

Mr. ANDERSON of California. Is it lack of funds appropriated, or is it because he cannot get the personnel?

Mr. RANKIN. He just cannot get the personnel.

Mr. ANDERSON of California. The gentleman must agree there is something wrong somewhere, and if the Congress can correct it, we should take steps to do so.

Mr. RANKIN. The gentleman must understand that we had several times as many men in this war as in the First World War. Our casualty list was greater, and our disability list was a great deal larger. General Bradley has only been head of the Veterans' Administration for a short time. General Hawley has only been head of the Medical Service for a short time. They are doing the very best they can, and are working overtime trying to meet these conditions. A great deal of this stuff in Stelle's letter is exaggerated.

Mr. ANDERSON of California. I am particularly disturbed over Mr. Stelle's reference to the need for additional hospital beds, and the delay in new hospital construction. Two service hospitals in my district, the Dibble General Hospital, Army, and the Santa Cruz Convalescent Hospital, Navy, are to be closed prior to the end of the present fiscal year. The Veterans' Administration has indicated that they have no desire to use the excellent facilities at either of these institutions. Something is wrong somewhere, Mr. Speaker, and it is up to Congress to find the answer.

Ben Toland

REMARKS
OF
HON. SHERMAN ADAMS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. ADAMS. Mr. Speaker, there have been few boys like Ben Toland. In giving his life in the service of his country as a marine on Iwo Jima, his life closed not much differently than thousands of other boys. In that he loved his God and his country, and in that he believed in sound government, education, and in industrial peace—he shared the creed common to all American boys. But the unusual thing about Ben Toland was the way in which he expressed it. Before he died he made a will. On this day, when Congress and the people are considering the problems of those who work and those who hire, it is significant to recall that Ben Toland gave 40 percent of all he had to promote the peaceful settlement of the differences which are of common concern to us all. Ben Toland gave 20 percent of all that he had to the Congress to promote efficient government; he gave 30 percent to his schools, and 10 percent to charity and to his church. Ben Toland gave his life to his country, and his material possessions to make it a better place in which to live.

It seems to me appropriate that in the work in which we are presently engaged we, in all humility, recall the deeds of this New Hampshire boy who gave everything he had in the interest of a better country.

I include as a part of my remarks the following article:

HE, TOO, WAS SEEKING "GOOD WILL AMONG MEN"

No one ordered the 24-year-old marine lieutenant to take over the wounded officer's platoon, which was to storm the ridge.

First Lt. Ben Toland, of Concord, N. H., simply took command, charged the ridge "where every 10 yards cost a life," and was laying out air markers to show the new position when the mortar burst hit. He died instantly, there on the barren, bloody slopes of Iwo Jima just a few weeks after last Christmas, on February 21, 1945.

Later they found his will.

It was just a handwritten note from a marine going into battle. Perhaps it does not speak for all the 5,000 marines who died on Iwo Jima, but certainly there is a message for Americans in the last thoughts of this scholarly youth. He was a junior, a Phi Beta Kappa, at Yale; his mother, Mrs. Esther Toland, is Republican national committeewoman from New Hampshire.

Ben Toland wanted peace between labor and management.

He gave nearly half of his modest estate—40 percent (about $1,500)—for the settlement of their problems. Ten percent each goes to the C. I. O. and the A. F. of L.; 20 percent goes to the National Association of Manufacturers.

Ben Toland wanted a sound national government.

His attorney, Frank J. Sulloway, of Concord, who is national committeeman from New Hampshire, says that although it cannot be accepted, Lieutenant Toland wished to bequeath 20 percent "to the Congress * * * to promote efficient government in the interests of all the people in the country instead of merely the organized pressure groups, and to promote a farsighted foreign policy."

Ben Toland believed in education.

To his schools, St. Paul's, of Concord, and Yale University, he left 20 percent and 10 percent, respectively.

Ben Toland believed in God.

The remaining tenth—perhaps intended as his final tithe—was bequeathed 5 percent to the New York Times Christmas charity known as the One Hundred Neediest Cases, and 5 percent to the Protestant Episcopal Church "to bring the kingdom of God nearer to earth and the earth nearer to the kingdom of God."

This was the will of a marine who volunteered his life and gave all his worldly goods for a better America.

The Case Bill

EXTENSION OF REMARKS
OF
HON. BERKELEY L. BUNKER
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 1, 1946

Mr. BUNKER. Mr. Speaker, the Washington Post is one of the Nation's great newspapers. Its expressions on governmental affairs are sound and conservative. That is particularly true of the editorial, Coup in the House, that appeared in the Post's editorial columns this morning. It lends weight to the contentions of many of us that the House Rules Committee has drifted far from the Democratic paths and the judicial role its originators intended. The time when public opinion will demand an end to the practices in which the Rules Committee indulges can only be hastened by such decisions as it made in the Case bill. Here is the editorial:

COUP IN THE HOUSE

We see no prospect that the House Rules Committee's coup will give the Nation the sound labor disputes policy for which it is yearning. The Case bill which the committee is sponsoring embodies a number of constructive ideas, but it would also invoke some dangerous methods that might do more harm than good. To this must be added the fact that it is to be placed before the House by illegitimate means. It has not been passed upon by the Committee on Labor or by any other legislative committee. Instead it will go before the House by fiat of the Rules Committee, for the rule under which the fact-finding bill is being debated makes it possible to substitute the Case bill for the administration's measure when the general debate is over. No other bill may thus be substituted. In effect, the Rules Committee has usurped the right of initiating legislation.

The bill itself has grave defects which the House can scarcely be expected to correct on the floor. It would set up a "labor-management mediation board" composed of representatives of employers and employees as well as the public. Since the purpose of the board would be to protect the public interest and to aid the disputants in reaching an agreement, we think its members should represent only the Government. As a matter of good organization, moreover, such an agency should be set up within the Labor Department and should absorb the existing

Conciliation Service. However, no mention of that agency is made in the bill.

The specific duty of bargaining collectively would be laid upon both management and labor. In case of continued disagreement, the board or its local or regional agents could step in to assist a settlement. The chairman could order the parties not to strike or to change working conditions for 30 days. So far so good. But the bill goes on to provide for enforcement of such orders by court injunctions. We doubt that such enforcement would be either effective or proper. The Railway Labor Act after which this machinery is patterned is wholly voluntary. The board would have other means of making its influence felt in the end. Under effective board action the noncooperating party would likely come out on the losing end of the dispute. Cooperation would thus tend to become a national habit, as it is in the railway industry.

We are wholly in sympathy with the idea of making labor contracts binding, as this bill undertakes to do. Obviously, too, Congress should protect employers as well as employees against the use of violence and intimidation. Nowadays unions turn strikes into sieges of industrial plants. Ways must be found to combat such violence. Likewise we think it is wholly reasonable to withdraw the protection of the National Labor Relations Act from employees who are found guilty of violence, intimidation or unlawful destruction of property in connection with a strike.

The trouble with the Case bill is that a number of sound objectives have been tangled up with extreme and unworkable provisions. It needs precisely the sort of pruning and revision that a good legislative committee could give it. Considering the deficiencies of both the revised fact-finding bill before the House and the Case bill, it looks as if the country will have to rely upon the Senate for the initiation of well-balanced labor disputes legislation.

Relief for Starving People of Europe

REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 1, 1946

Mr. VURSELL. Mr. Speaker, yesterday I introduced in the House a companion resolution to Senate Concurrent Resolution 51, the purpose of which is to set up a joint committee to be composed of six Members of the Senate—three from the majority party and three from the minority parties—appointed by the President of the Senate and six Members of the House of Representatives—three from the majority party and three from the minority parties—appointed by the Speaker of the House of Representatives which will be directed to make an official visit to Germany and such other places in Europe as may be necessary for the purpose of enabling the committee to make studies and obtain information with respect to existing conditions in Germany and action which may be taken by the President or the Congress to improve such conditions. The joint congressional group shall make a report to the Congress at the earliest practicable date but not later than 1 month after the adoption of this resolution with respect to such conditions and its recommendation for legislative or other action designed to improve such conditions.

Very briefly, Mr. Speaker, under the Potsdam agreement, the United States Government has unwittingly become a partner to mass starvation, particularly in Germany, contrary to the established and humanitarian concepts of international law, which have always placed upon the victor the responsibility of protecting to the best of its ability the innocent victims of the population conquered. Our present policies and practices are contrary to every concept of the Christian religion which has made this country great against the humanitarian principles which have always prevailed in the thought, the heart, and soul of the American people. We now find our Government to be in partnership in the occupation of Germany in enforcing policies that are starving millions of innocent women and children to death in that occupied territory. I know this will be almost unbelievable to the rank and file of the American people, yet it is a fact that cannot be denied; and unless it is corrected the seeds of hate will be so widely sown in that industrial section of Europe against the American Nation that we will have planted the seeds of World War III in the future, and our actions will drive the people in our territory of occupation as soon as we quit our job there into the ranks of communism, which will doubtless bring about an amalgamation of these people with Russia which will overflow France, which is now greatly affected by that ideology of government, and will completely communize the continent of Europe.

The administration and the personal advisors and investigators of the President concur in the judgment that a major tragedy is rapidly developing in Europe. But in answer to a rising chorus of pleas for intercession and action, the administration has refused to move. It will be news to the people of America in general to learn that the people of Germany are receiving only 1,500 calories a day, and many less than that amount, which the highest medical authority in Europe or elsewhere regards as a starvation diet.

It will further be news to the people to know that a great many of the Protestant church relief organizations and the Catholic church relief organizations are aware of this condition and have been imploring the President and the Congress to do something about it, and it will be news to the American people to learn that even though these church organizations of which I have spoken have pleaded with the administration to allow such organizations and the people of this country to send packages of food and money to relatives and the people generally in Germany and for the purpose of preserving the lives of the mothers and children of Germany, all of these requests so far have been denied.

These church relief organizations, including the great Quaker relief organization, believe that the humanitarian instincts of the American people are so strong that if the administration in Washington will lift the ban and allow those who want to help, shiploads of flour, food, medicine, and clothing can be sent to Europe in such quantities purely on a volunteer basis, that it will to a great extent furnish such relief as will save the lives of hundreds of thousands of women and children who, without it, will die before spring.

Back in October, a delegation representing 43 international organizations in the United States headed by Mrs. Dwight W. Morrow, chairman of the Food for Freedom Organizations, called upon the President to urge more generous overseas relief for Europe. Among the more than 40 organizations included were the CIO, the A. F. of L., the Federal Council of Churches, the General Federation of Women's Clubs, the Farmers Union, and others.

Mrs. Morrow was the spokesman of the delegation. The report was that Mr. Truman's attitude was bristling, hostile. It is obvious that the slow awakening of the American people to the terrible tragedy and crime against humanity to which our Nation was committed at the Potsdam Conference is beginning to be understood by the American people.

A report on September 15 from one of the leading Quaker organizations on the ground in Europe made this statement:

> No child born in Germany this year will survive the coming winter. Only half the children aged less than 3 years will survive.

This was reported to the British press, which has been reporting such instances time and again while the American press seems to have been completely gagged.

On October 4 a British major is quoted in the London Daily Mirror as follows:

> The greatest horror in modern history is taking place in eastern Germany. Many millions of German people have been ejected onto the roads * * * are dying by the thousands on the roads from starvation, dysentery, and exhaustion. Even a cursory visit to the hospitals in Berlin is an experience which would make the sights in the concentration camps appear normal.

On October 12 a correspondent, writing for a publication known as the Friend, published in London, had the following to say:

> In the forest around Berlin countless dead are hanging from the trees. One becomes indifferent to death. Mothers see their children die and bury them by the wayside apparently with none of that pain which usually tears a mother's heart apart. If this misery cannot be checked it is no exaggeration to reckon on a figure of 20,000,000 dead this winter.

The London Observer stated that not only Germany but also Europe is threatened by a catastrophe which has no precedent since the Black death in 1348.

On November 14 the Christian Century carried the following plea which had been issued by a joint committee of the World Council of Churches, the International Red Cross, the World Jewish Congress, and the Save the Children International Union and Catholic Charities:

> Children by the millions are in imminent danger of starving and freezing as winter comes to Europe unless immediate help comes. Helpless children cannot survive much longer unless there is a united effort to save them.

The Christian Century continued:

It is time for the Christian conscience to cry, Stop, stop this torture of helpless war victims. The policy being followed in central Europe is ghastly. It is unnecessary. It is a repudiation of Christian charity and a defiance of Christian morality.

On November 28 the Christian Century made the further charge:

Silent concurrence by the churches in murder by starvation makes the church an accessory to the crime. As a result of the Potsdam decisions, millions of Germans are starving now.

In the November issue of the Lutheran Outlook the following protest was recorded:

Inhumanity and even brutality are being practiced in a manner that is shocking to the Christian conscience. Millions of human beings are on the verge of starvation, and yet, in America at least, there appears to be no official cognizance of the fact. The American people are being kept strangely in ignorance of the awful catastrophe that has befallen a large part of the world's population. We raise a voice in solemn protest against the inhumanity which today is being practiced by the victor nations against the German people and we do plead for pity and mercy for the millions of innocent children who are now become the chief victims of the judgment which has fall'

On December 11, a delegation of the Federal Council of Churches of Christ in America returned from an investigation of conditions in Germany. They warned that expulsion of millions of Germans from their homes had caused unspeakable hardship, and that the persons who were trying to get into the Reich were without food, shelter, clothing, or medical supplies. They voiced an urgent appeal for aid to the German people.

Mr. Speaker, the late President Roosevelt in a broadcast to the German people in asking them to overthrow Hitler and the Nazi regime assured them that our fight and effort was to destroy not the German people but the Nazi Fascist form of government and promised the German people protection.

None of us in Congress and few Americans believe in a soft peace for Germany. In our trial of war criminals we have begun at the top in rounding up the leaders of the Nazi Fascist Party in order to bring them to trial possibly by the thousands before we are through. Doubtless most of them will eventually be put to death as they should be. Our purpose, President Roosevelt proclaimed during the war, was to destroy the Nazi Fascist ideology of government with the hope that when the destruction had been brought about the people of Germany might be won over to a peaceful democratic type of government. We want to make it impossible for them to again develop the instruments for another war. But certainly, we have changed our course completely since the late President Roosevelt assured the German people in his broadcasts during the war that we would protect them and not attempt to destroy them.

We have not kept the word of the Nation. We are destroying the innocent women and children of that nation, we are sowing the seeds of hatred in the generations to come, we are planting the seeds of another war, we are going directly contrary to the Christian concepts and humanitarian ideals which have caused America to be honored and respected throughout the world.
